Minnesota Pollution Control Agency

Notice of Intent to Adopt Rules Without a Public Hearing

Proposed Amendment to Rules Governing Hazardous Waste, *Minnesota Rules*, Chapters 7001 and 7045. The MPCA is proposing to amend its existing hazardous waste rules in *Minnesota Rules* chapters 7001 and 7045. In conjunction with these amendments, the following rules are being repealed: *Minnesota Rules* parts 7045.0020, subpart 45a; 7045.0075, subparts 8 and 10; 7045.0135, subparts 1, 2, 2a, 3, and 4; 7045.0139, subpart 2; 7045.0141, subparts 2-23; 7045.0143, subparts 2, 3, 4, 5, 6, 7, 9, 10, 12, 13, 14, 15, 17, 20, 21, 23, 25, and 27; 7045.0544, subparts 2 and 3; 7045.1300; 7045.1305; 7045.1309; 7045.1310; 7045.1315; 7045.1320; 7045.1325; 7045.1330; 7045.1333; 7045.1334; 7045.1335; 7045.1339; 7045.1350; 7045.1355; 7045.1358; 7045.1360; and 7045.1380.

Introduction. The Minnesota Pollution Control Agency (MPCA or Agency) intends to adopt rules without a public hearing following the procedures in the rules of the Office of Administrative Hearings, *Minnesota Rules* 1400.2300 to 1400.2310, and the Administrative Procedure Act, *Minnesota Statutes* §§ 14.22 to 14.28. You may submit written comments on the proposed rules and may also submit a written request that a hearing be held on the rules until 4:30 p.m. on Thursday, August 14, 2008.

Agency Contact Person. You must submit comments or questions on the rules and written requests for a public hearing to the designated Agency contact. The Agency contact for this rule is: Nathan Cooley, email: nathan.cooley@pca.state.mn.us, phone 651-297-7544. You may also mail comments to the contact's attention at the Minnesota Pollution Control Agency, 520 Lafayette Road North, Saint Paul, Minnesota 55155, or fax to the contact's attention at 651-297-8676. TTY users may call the MPCA at 651-282-5332 or 800-657-3864.

Subject of Rules and Statutory Authority. The Agency proposes to amend its hazardous waste rules in *Minnesota Rules* chapters 7001 and 7045. The statutory authority to adopt the rules is contained in Minnesota Statutes § 116.07, subdivision 4. The proposed amendments fall into three general categories of change.

First, the Agency is proposing changes to its hazardous waste rules that are required to maintain Minnesota's hazardous waste program authorization from the U.S. Environmental Protection Agency (EPA). EPA program authorization allows the MPCA to operate its state hazardous waste program in lieu of the EPA enforcing federal hazardous waste requirements. The federal Resource Conservation and Recovery Act (RCRA) requires states with federally authorized hazardous waste programs to adopt those federal program amendments that increase stringency in order to maintain their program equivalence and authorization.

Some of the proposed rule changes have been in effect federally for at least several years. Those federal regulations that the EPA promulgated under its Hazardous and Solid Waste Amendments (HSWA) authority applied in all states on their federal effective date. In this rulemaking, the MPCA is adopting provisions from about 67 federal amendments. The EPA promulgated about 51 of these using its HSWA authority. Thus, most of these provisions already apply in Minnesota under the authority of the EPA. However, the EPA, rather than the MPCA, enforces these requirements until the MPCA adopts the changes into its rules. Some of the

remaining EPA amendments, while also required to maintain state authorization, do not apply in Minnesota until they are adopted into *Minnesota Rules*.

Second, the Agency is adopting certain other federal EPA amendments that are not required to maintain program authorization but which the MPCA believes will reduce unnecessary regulatory burdens while remaining protective of human health and the environment.

In adopting some of the federal changes, the MPCA has continued its existing practice of incorporating certain portions of the federal regulations by reference as amended. In this proposed rulemaking, examples of incorporation by reference as amended include incorporation of hazardous waste lists, land disposal restrictions, air emission standards, and testing methodologies and technical standards.

Finally, the MPCA is proposing a number of changes to correct errors or omissions in the existing rules and to improve or clarify existing rule language.

A copy of the proposed rules is published in the *State Register*, Web site: www.comm.media.state.mn.us/bookstore/state_register.asp, and is also available via the Agency Web site: www.pca.state.mn.us/waste/hazwaste-rulechanges.html, or from the Agency contact person listed above.

Comments. You have until 4:30 p.m. on Thursday, August 14, 2008, to submit written comment in support of or in opposition to the proposed rules and any part or subpart of the rules. Your comment must be in writing and the Agency contact person must receive it by the due date. The Agency is providing a 45-day comment period instead of the required 30-day comment period as part of the Agency's plan to provide additional public notice. The Agency encourages comment. Your comment should identify the portion of the proposed rules addressed and the reason for the comment. You are encouraged to propose any change desired. You must also make any comments about the legality of the proposed rules during this comment period.

Request for a Hearing. In addition to submitting comments, you may also request that the Agency hold a hearing on the rules. Your request must be in writing and the Agency contact person must receive it by 4:30 p.m. on Thursday, August 14, 2008. Your written request for a public hearing must include your name and address. You must identify the portion of the proposed rules that you object to or state that you oppose the entire set of rules. Any request that does not comply with these requirements is not valid and the Agency cannot count it when determining whether it must hold a public hearing. You are also encouraged to state the reason for the request and any changes you want made to the proposed rules.

Withdrawal of Requests. If 25 or more persons submit a valid written request for a hearing, the Agency will hold a public hearing unless a sufficient number withdraw their requests in writing. If enough requests for hearing are withdrawn to reduce the number below 25, the Agency must give written notice of this to all persons who requested a hearing, explain the actions the Agency took to effect the withdrawal, and ask for written comments on this action. If a public hearing is required, the Agency will follow the procedures in *Minnesota Statutes* §§ 14.131 to 14.20.

Alternative Format. Upon request, the Agency can make this Notice available in an alternative format, such as large print, Braille, or cassette tape. To make such a request, please contact the Agency contact person at the address or telephone number listed above.

Modifications. The Agency may modify the proposed rules as a result of public comment. The modifications must be supported by comments and information submitted to the Agency, and the adopted rules may not be substantially different than these proposed rules, unless the Agency follows the procedure under *Minnesota Rules* part 1400.2110. If the proposed rules affect you in any way, the Agency encourages you to participate in the rulemaking process.

Statement of Need and Reasonableness. The statement of need and reasonableness contains a summary of the justification for the proposed rules, including a description of who will be affected by the proposed rules and an estimate of the probable cost of the proposed rules. It is now available from the Agency contact person. As part of the Agency's plan to enhance public notice, the Agency is also making the statement of need and reasonableness and supporting documents available on compact disc and on the Agency's Web site: www.pca.state.mn.us/waste/hazwaste-rulechanges.html.

Request to Have the MPCA Citizens' Board (Board) Make a Decision on the Rule if No Hearing is Required. If a hearing is required, the Board will make the final decision on whether to adopt the proposed rules. However, even if no hearing is required, you may submit a request to the Commissioner or a Board member to have the Board make the decision on whether to adopt the proposed rules. Your request must be in writing; must state to whom it is directed and must be received by the Agency contact person by 4:30 p.m. on Thursday, August 14, 2008. Under *Minnesota Statutes* § 116.02, where a hearing is not required, the Board will only make the decision on the rule if the MPCA Commissioner grants your request or if a Board member makes a timely request that the decision be made by the Board. If you have questions regarding the process to have the Board make a decision on a final rule adoption if no hearing is required, or need Board member information, you should contact the Agency contact person identified in this Notice.

Lobbyist Registration. *Minnesota Statutes*, chapter 10A, requires each lobbyist to register with the State Campaign Finance and Public Disclosure Board. You should direct questions about this requirement to the Campaign Finance and Public Disclosure Board at: Suite 190, Centennial Building, 658 Cedar Street, St. Paul, Minnesota 55155, telephone 651-296-5148 or 1-800-657-3889.

Adoption and Review of Rules. If no hearing is required, the Agency may adopt the rules after the end of the comment period. The Agency will then submit the rules and supporting documents to the Office of Administrative Hearings (Office) for review for legality. You may ask to be notified of the date the Agency submits the rules to the Office. If you want to be so notified, or want to receive a copy of the adopted rules, or want to register with the Agency to receive notice of future rule proceedings, submit your request to the Agency contact person listed above.

Minnesota Pollution Control Agency
General Statement of Need and Reasonableness for
Proposed Amendment to Rules Governing Hazardous Waste
Minnesota Rules, Chapters 7001 and 7045

Table of Contents

I. Introduction and Background

The Minnesota Pollution Control Agency (MPCA) is amending *Minnesota Rules* (Minn. R.) chapters 7001 and 7045 governing permitting, generating, transporting and managing hazardous wastes. The main reason for these amendments is to adopt changes that the U.S. Environmental Protection Agency (EPA) has made to federal hazardous waste regulations in order to maintain Minnesota's (State) hazardous waste program authorization from the EPA. EPA program authorization allows the MPCA to operate its state hazardous waste regulatory program in Minnesota in lieu of the EPA enforcing the federal hazardous waste regulations. In this rulemaking, the MPCA is also adopting some optional federal amendments that the MPCA supports as beneficial for Minnesota. Finally, the MPCA is also making a number of corrections to the existing rules and improving existing rule language.

Congress authorized the EPA to adopt hazardous waste regulations under the Resource Conservation and Recovery Act of 1976 (RCRA) and the Hazardous and Solid Waste Amendments of 1984 (HSWA or non-RCRA). Both of these acts allow a state to operate a state hazardous waste program in lieu of the EPA implementing the federal hazardous waste regulations in that state if the EPA determines that the state's hazardous program is equivalent to and at least as stringent as the federal hazardous waste regulations. When a state applies for EPA program authorization, the EPA must determine whether the state's program is equivalent. If the EPA finds equivalence, the EPA then publishes notice of its authorization determination in the *Federal Register* and incorporates the state's hazardous waste rules by reference into the Code of Federal Regulations (CFR). The EPA has codified Minnesota's equivalent program at Title 40, CFR, Section 272.1201 (40 CFR § 272.1201). However, as the federal regulations are amended, states must reapply for and be granted updated authorization from EPA.

Any amendments to the federal regulations that the EPA promulgates under the authority of RCRA do not go into effect in authorized states until the state adopts the requirement into state rules. Required amendments adopted under the authority of HSWA go into effect in authorized states on the federal effective date, regardless of whether or not the state has adopted them. The result of this is that the majority of the amendments being adopted in this rulemaking have already been in effect in Minnesota (see attachment 6 for list of HSWA amendments). In the case of these types of federal amendments, the only consequences of this rulemaking to the regulated community will be to streamline the hazardous waste facility permitting process by allowing the MPCA to include those requirements in its permit and (currently, the EPA issues a federal permit containing the permit components for which the state does not have authority), and to allow the MPCA to enforce these requirements instead of the EPA.

The EPA frequently amends the federal regulations to enhance environmental protection, to correct errors, or to reduce undue burdens. As the EPA amends its regulations, the MPCA must adopt those changes that increase stringency in order to maintain program equivalence. If the MPCA does not adopt the regulations required to maintain program equivalence, the EPA could withdraw program approval and apply its regulations in Minnesota.

To maintain program equivalence, Minnesota must adopt those federal amendments that increase stringency; however, RCRA allows state programs to be more stringent than the federal program. Therefore, adopting those federal hazardous waste regulations that reduce stringency is optional for states with authorized programs.

Most of the hazardous waste amendments that the MPCA is adopting in this rulemaking increase the level of regulation and, therefore, are required to maintain the EPA's program authorization. For these more stringent new requirements, the MPCA is generally adopting rule language that is identical in substance to the federal amendments, or is incorporating federal rule language by reference.

Some of the hazardous waste amendments that the MPCA is adopting are considered optional by the EPA. Optional means that the regulations are not required to maintain program authorization. The MPCA has determined that certain optional provisions do not provide adequate protection for Minnesota or for other reasons are not appropriate for adoption by Minnesota. In those cases, the MPCA has chosen either not to adopt the optional federal provision, or has proposed revised language that modifies federal provisions in a way that MPCA believes is more protective to human health and the environment. In Attachment 1 (the detailed discussion of each proposed amendment), the MPCA identifies these optional amendments.

Rule Development: The MPCA published advance notice of its intent to amend its hazardous waste rules in the *State Register* on November 12, 2002. The MPCA received no substantive comments in response to that notice, but did add several respondents to its interested parties list. The MPCA did not establish a rule development work group because many of the amendments that the MPCA is adopting in this rulemaking are already in effect federally because the federal regulations were adopted under the authority of HSWA. The MPCA anticipates overall support for this effort to increase consistency between the state and federal programs and to update its hazardous waste rules.

Alternative Format: The MPCA can make this document available in alternative formats such as large print, Braille, or cassette tape. To make a request, please contact Nathan Cooley (651-297-7544) or Carol Nankivel (651-297-8371) at the MPCA, Municipal Division, 520 Lafayette Road North, St. Paul, MN 55155. You may also fax a request to 651-297-8676, or e-mail to nathan.cooley@pca.state.mn.us or carol.nankivel@pca.state.mn.us. TTY users may call the MPCA at 651-282-5332 or 800-657-3864.

II. Statutory Authority

The MPCA's authority to adopt these rules is found in Minn. Stat. § 116.07, the relevant language from which follows:

> ***Subdivision 4. Rules and standards.***
> *[…]*
> *Pursuant to chapter 14, the pollution control agency may adopt, amend, and rescind rules and standards having the force of law relating to any purpose within the provisions of this chapter for generators of hazardous waste, the management, identification, labeling, classification, storage, collection, treatment,*

transportation, processing, and disposal of hazardous waste and the location of hazardous waste facilities. A rule or standard may be of general application throughout the state or may be limited as to time, places, circumstances, or conditions.
[…]

Subdivision 4b. Permits; hazardous waste facilities.
[…]
(b) The agency shall promulgate rules pursuant to chapter 14 for all hazardous waste facilities. The rules shall require:
(1) contingency plans for all hazardous waste facilities which provide for effective containment and control in any emergency condition;
(2) the establishment of a mechanism to assure that money to cover the costs of closure and postclosure monitoring and maintenance of hazardous waste facilities will be available;
(3) the maintenance of liability insurance by the owner or operator of hazardous waste facilities during the operating life of the facility.

Under these statutes, the MPCA has the necessary authority to adopt the proposed rules. Minn. Stat. § 14.125 requires agencies to publish a notice of intent to adopt a rule within 18 months from the effective date of the law authorizing the rulemaking. The statute also provides that if rules are adopted within the deadline, the agency may subsequently amend or repeal the rules without additional legislative authorization. The MPCA's original authority to adopt these rules, and the MPCA's original promulgation of its hazardous waste rules, preceded the requirements of Minn. Stat. § 14.125. Since this rulemaking involves amending existing rules, the deadline in Minn. Stat. § 14.125 does not apply.

III. Need for the Amendments

Minn. Stat. chapter 14 requires the MPCA to make an affirmative presentation of facts establishing the need for and reasonableness of the rules as proposed. In general terms, this means that the MPCA must set forth the reasons for its proposal, and the reasons must not be arbitrary and capricious. However, to the extent that need and reasonableness are separate, need has come to mean that a problem exists which requires administrative attention, and reasonableness means that the proposed solution to that problem is appropriate. The MPCA discusses the general need for the proposed rules below and provides a more detailed discussion in the attachments.

There are two fundamental needs that prompt the amendment of the hazardous waste rules. The first need is to provide clear rules that protect public health and the environment while not unduly burdening the regulated community. The second need for these amendments is to keep Minnesota's hazardous waste rules consistent with the federal hazardous waste regulations in order to maintain the EPA's authorization for Minnesota's hazardous waste program.

With regard to the first need, the need for protective yet reasonable standards, most of the amendments being proposed increase the stringency of Minnesota's hazardous waste rules and

are needed to provide an acceptable level of environmental protection. However, in some cases, the amendments being proposed are based on federal amendments that EPA has promulgated to reduce regulatory burdens while remaining protective of human health and the environment. Since such provisions reduce program stringency, the EPA does not require Minnesota to adopt these to maintain its EPA program authorization. Although the MPCA is not required to adopt these less stringent amendments, the MPCA believes that there is still a valid reason to do so to keep the hazardous waste program as responsive as possible to the concerns of the regulated community while maintaining protection of human health and the environment. The MPCA plans to adopt many of the optional federal regulations because the MPCA has determined that these provisions will still provide adequate protection for human health and the environment while reducing regulatory burdens. For example, one optional federal amendment allows a generator to dispose of certain waste management records after three years instead of five. Although the MPCA has reviewed and considered all of the subject federal amendments, it has determined that in some cases, for economic, legal, policy or administrative reasons, Minnesota's rules need to remain more stringent than the federal regulations, and thus the MPCA will not be adopting all of the optional amendments to the federal regulations. An example of this is the MPCA's decision not to adopt a federal exclusion for hazardous debris in part because of Minnesota's concern that the exclusion may allow mercury containing waste to go to solid waste landfills.

With regard to the second need, the MPCA has received EPA hazardous waste program authorization for Minnesota. This assures a higher degree of consistency with federal regulations, provides access to some additional federal resources, and reduces the need for regulated parties to understand both the federal and the state hazardous waste programs since both the state hazardous waste program and the federal hazardous waste program would apply if Minnesota did not have EPA program authorization. In granting authorization to Minnesota, the EPA has determined that Minnesota's hazardous waste program is equivalent to the federal program. However, because the EPA amends its regulations over time, the EPA must periodically reassess the equivalence of Minnesota's program. In order for Minnesota to maintain the EPA's program authorization, the MPCA must amend its rules to insure that its hazardous waste program is equivalent to and at least as stringent as the federal hazardous waste program. Most of the proposed amendments relating to land disposal restriction listings and standards are examples of federal regulations that must be adopted by the State to maintain program authorization.

The EPA can promulgate its regulatory amendments using either RCRA or HSWA authorities. Regulations that the EPA promulgates using its HSWA authority take effect in all states and territories on their federal effective dates. When the EPA promulgates regulations using its RCRA authority, those RCRA regulations only take effect in states with EPA program authorization (such as Minnesota) when the state adopts them. In order for RCRA amendments to apply in Minnesota, the MPCA needs to adopt them into the State rules.

In this rulemaking the MPCA is adopting a large number of federal provisions that the EPA promulgated under either of its RCRA or HSWA authorities (or in the case of some amendments, both federal authorities). The need for adopting the HSWA-based provisions is not to make them effective in Minnesota, (they already are) but to establish the MPCA's authority to enforce

these provisions by putting the requirements into MPCA rules. Attachment 6 identifies the authority (RCRA or HSWA) under which each of the federal amendments being adopted in this rulemaking were promulgated.

There is a third need for some of the amendments. Minnesota originally adopted the main body of its hazardous waste rules in their current structure in 1984. The MPCA has revised these rules several times since then to incorporate various federal and State amendments. The MPCA has decided that it needs to make extensive changes in this rulemaking to correct errors, clarify existing requirements and in some instances to adopt federal regulations by reference. The regulated community, as well as the MPCA, needs to have rules that are clear, consistent and accurate.

IV. Reasonableness of the Amendments

Minn. Stat. chapter 14 requires the MPCA to make an affirmative presentation of facts establishing the need for and reasonableness of the rules as proposed. In general terms, this means that the MPCA must set forth the reasons for its proposal, and the reasons must not be arbitrary and capricious. However, to the extent that need and reasonableness are separate, need has come to mean that a problem exists which requires administrative attention, and reasonableness means that the solution proposed by the MPCA is appropriate. The MPCA discusses the general reasonableness of the proposed rules below and provides a more detailed discussion of the specific reasonableness of each amendment as it is identified in the rule text in Attachment 1.

The MPCA describes the adopted federal amendments in detail in Attachments 3 and 4. Very briefly, the most significant of the federal amendments being adopted in this rulemaking are amendments to the land disposal restrictions, the organic air emission standards for tanks, surface impoundments and containers at treatment, storage and disposal facilities (TSD's), and changes to the financial assurance standards for TSD facilities.

These major areas of amendment affect many different rule parts, although in most cases, the effect on supporting rule parts is only a correction to cross references or an adjustment of a range of cited rule parts. A number of additional changes are being made to the rules to address State-only concerns regarding the clarity and usefulness of the existing rules. The MPCA is also amending existing rules governing mixtures of hazardous waste (part 7045.0102) and the regulation of PCB wastes (part 7045.0135, subpart 5). In some instances, although it may appear that portions of the existing rules have been deleted, the MPCA is in fact simply replacing most of the deleted provisions by incorporating the corresponding federal regulations by reference. The amendments addressing the lists of hazardous wastes (part 7045.0131 to 7045.0135), and the land disposal restrictions in part 7045.1390, are examples of this type of change.

The MPCA is adopting a number of federal amendments that increase program stringency. It is reasonable for the MPCA to adopt minimum national standards in order to protect human health and the environment, to increase regulatory consistency with the EPA, and to increase rule clarity. These increased program stringency rules are also required for the MPCA to maintain hazardous waste program authorization from EPA. As described more fully in Part III on Need

for the Amendments, the MPCA is committed to maintaining its RCRA-equivalent hazardous waste program. It is reasonable to adopt amendments to the MPCA's rules in order to maintain an equivalent, authorized hazardous waste program from EPA.

Some of the federal amendments being adopted in this rulemaking are a reduction in the current level of regulation. The EPA intends these amendments to reduce regulatory burdens while still remaining protective of human health and the environment. The adoption of these reduced requirements is optional in authorized states such as Minnesota. The MPCA proposes to adopt most of these optional federal provisions. A primary goal of the MPCA's hazardous waste rules is to protect human health and the environment. Although most rules impose some level of burden on the regulated community, the MPCA believes that it is reasonable to reduce regulatory burdens when the remaining provisions adequately protect human health and the environment. In some cases, however, the MPCA has determined that certain optional federal regulations are not adequately protective for Minnesota and has decided not to adopt them into the state rules. Because the MPCA decided not to adopt these optional federal amendments, the MPCA does not discuss in Attachment 1 (the detailed SONAR) the reasonableness of its decision not to amend State rules to include these optional provisions. However, the MPCA has, for informational purposes, made references in Attachment 1 to the MPCA's decision to not adopt a particular optional provision. The reader may find more information regarding the disposition of optional provisions in an amendment in Attachment 4 (Proposed Revision Checklists).

In some cases the MPCA finds it reasonable to regulate more stringently than the EPA in order to protect Minnesota resources or to provide higher protection to human health or the environment. For example, Minnesota has numerous laws designed to protect its rich water resources. In this rule making, the MPCA has added an amendment to the rules to clarify that, while federal hazardous waste regulations reference the possibility of permitting the underground injection of hazardous wastes, existing Minnesota laws prohibit this practice.

The MPCA's rules and the EPA's regulations are different in some areas because the MPCA began promulgating its rules prior to the EPA and evolved a slightly different structure. Where the programs are congruent and when the MPCA intends to follow portions of the federal regulations most closely, the MPCA has successfully incorporated selected federal regulations by reference into existing Minnesota rules.

In this rulemaking, the MPCA continues its use of incorporation by reference. As the MPCA has done in the past, when it incorporates federal regulations by reference, it does this 'as amended.' Incorporation as amended means that any future amendments to the incorporated regulations will become part of Minnesota Rules when the EPA adopts changes. The MPCA has most frequently used this approach in situations where the MPCA agrees with the EPA's approach to the regulation and does not anticipate that future changes would raise concerns for the MPCA. For example, the MPCA has used this approach in the past to incorporate federal regulations related to universal waste, hazardous waste manifests, corrective action management units, temporary units, testing and sampling methodologies, drip pads, and references to the State fire codes or standards of the U.S. Department of Transportation. In this rulemaking, some examples of where the MPCA is incorporating federal regulations as amended are the federal regulations

related to land disposal restrictions, general lists of hazardous wastes and organic air emission standards for tanks, surface impoundments and containers.

When the EPA proposes federal regulations, it follows an open public process that invites national discussion. The MPCA believes that this national-level process will provide adequate and timely notice of any future changes to federal regulations that the MPCA incorporates by reference as amended. If the MPCA disagrees with any of the EPA's proposed future amendments, the MPCA (and the public) can comment on the proposal during the national comment period. Finally, if the MPCA disagrees with any provision of a regulation that the EPA ultimately adopts, the MPCA can amend its rules to provide an exception to that provision and to provide an equivalent or more stringent provision. Further, when MPCA incorporates federal regulations by reference as amended, the MPCA identifies specific exceptions to the incorporation that provides additional protections and reflects State-specific concerns. These exceptions show how the adopted federal regulations fit within Minnesota's regulatory structure in addition to helping the reader understand how Minnesota's rules differ from the federal regulations.

Incorporation by reference is especially appropriate when the State is required to adopt a federal regulation to maintain program authorization as discussed in Part III. When the EPA amends these provisions, RCRA requires the MPCA to amend its rules in order to maintain program equivalence. The MPCA believes that incorporation by reference as amended is a reasonable approach to maintaining its equivalent program, because the alternative would be to incorporate the regulations as of a specific year (e.g., 2007) which would require regulated parties to work from regulations of a specific year (requiring them to keep an older volume of the federal regulations) and would lock the State into rules that may become obsolete as the EPA makes changes to its regulations. The other alternative is for the MPCA to include the federal regulation language into MPCA rules and to amend those rules as often as the EPA makes changes that the MPCA is required to adopt to maintain program authorization. The MPCA does not believe that this is a reasonable alternative given the frequency of changes to the federal regulations and the complexity of Minnesota's rulemaking process. A simple amendment to the State rules takes an average of 18 months from start to finish. Amending the State rules to adopt every change to the federal regulation would mean that the rules were in a nearly constant need of revision. Even with a significant commitment of State resources solely to rulemaking, the rules would still always lag behind the federal counterparts.

The use of incorporation by reference as amended is not limited to incorporating EPA regulations. This practice also helps, for example, to maintain consistency with current versions of referenced fire codes, test methods or transportation requirements. The MPCA believes that it is reasonable to automatically follow the most recently adopted fire codes, test methods or transportation requirements referenced within the hazardous waste rules. Incorporating these types of codes and requirements "as amended" reduces delays in alerting the regulated party of what is required by other regulatory entities. The alternative is to incorporate the standard as of a certain date, or to remain silent on the intended version of the standard. Incorporating these as amended makes it clear that the most recent standard applies.

In this rulemaking the MPCA is also making a number of miscellaneous changes to clarify existing rules and to correct errors and omissions. It is inherently reasonable to correct and clarify rules whenever possible, and it is most reasonable to do this type of rule maintenance as part of a more substantive amendment.

V. Innovative Approaches in this SONAR

Many of the rule changes that the MPCA is making in this rulemaking are equivalent to those that the EPA has already adopted as part of its rulemaking process. The EPA follows a public process to promulgate federal hazardous waste regulations not unlike the process that the MPCA uses to promulgate rules. The EPA publishes proposed regulations in the *Federal Register* for public comment and provides its rationale for adopting or revising proposed regulations. The discussion provided in the *Federal Register*, along with the background documents cited by the EPA, are similar to Minnesota's Administrative Procedure Act requirements to establish the need for and reasonableness of the regulations that the EPA promulgates.

In the past, when the MPCA adopted federal hazardous waste regulations into State rules (whether required or optional to maintain program equivalence), the MPCA drafted a stand alone SONAR document to support the need for and reasonableness of the proposed rules. As a part of the SONAR, the MPCA usually included the relevant *Federal Register* as an exhibit to the rulemaking or summarized in the SONAR some of the information in the relevant *Federal Register*, intending that the technical basis and explanation of reasoning be part of the SONAR of the State amendment. The MPCA recognized and continues to recognize that when adopting rules that are also contained in federal regulations, the *Federal Register* provides the primary basis for the need for and reasonableness of these federal regulatory based amendments. In this rulemaking, the MPCA continues to rely on the discussion provided in the *Federal Register* to establish the reasonableness of the specific rule amendments; however, in this SONAR, the MPCA has greatly reduced the extent to which the MPCA repeats or summarizes the EPA's discussion. When the State either adopts language identical in substance to the federal language or incorporates federal language by reference, this SONAR will reference the EPA's discussion as a substantial part of the State's demonstration of the need for and reasonableness of those amendments. An example and explanation of this method of referencing the federal background follows:

"**36 7001.0635 SPECIFIC PART B INFORMATION REQUIREMENTS FOR**
37 **AIR EMISSION CONTROLS FOR TANKS, SURFACE IMPOUNDMENTS,**
38 **AND CONTAINERS.**
39 Except as otherwise provided in part 7045.0450, owners and operators of tanks, surface impoundments,
40 or containers that use air emission controls in accordance with the requirements of part 7045.0540 must
41 provide the additional information described in items A to G.
42 [In this part, the MPCA adopts a requirement that a permit applicant must submit specific information
43 regarding air emission controls. This requirement corresponds to federal language and is based on
44 required RCRA Amendments 154.52 and 154-1.39: "Consolidated Organic Air Emission Standards for

1 Tanks, Surface Impoundments, and Containers" = 40 CFR 270.27(a); this is justified at 59 FR 62896-
2 62953, December 6, 1994; as amended by 61 FR 59932-59997, November 25, 1996. The MPCA chooses
3 to reject the federal use of "shall" in favor of the term "must" which is a convention of Minnesota
4 rulemaking.]//"

As shown in the above extract, the MPCA provides line numbers in the left margin to assist in locating and communicating about particular rule changes. Also, within the body of an extract of rule text, the MPCA inserts a discussion its rationale in bracketed, boldfaced and highlighted text (e.g., **[Example of discussion format.]**). This discussion typically appears immediately following the amended rule language. In these discussions, the MPCA summarizes the changes being made, describes the rationale for State-initiated changes, and identifies language based on specified federal amendments. For changes based on a federal amendment, the discussion also provides a reference to the EPA's "revision checklist number" (herein also called the RCRA Amendment number) that the EPA uses to identify particular amendments to the federal regulations. The MPCA adds a decimal number to some of the RCRA Amendment numbers based on a paragraph number found in the *Federal Register* adopting that provision.

The revision checklists are provided as Attachment 4 to this SONAR and are a useful tool for understanding and tracking the federal amendments. The reader can use the amendment number to search for related documents in this SONAR that provide detailed information regarding the federal authority for a particular provision, whether it is optional or required to maintain authorization, a line-by-line description of where the federal language can be found in both the CFR and the proposed State rules, and information about related amendments. The EPA also uses the revision checklist number to track the status of State authorization for a particular federal provision. The discussion in this SONAR also provides a reference to one or more *Federal Registers* in which the EPA described why the federal amendment was being adopted. The MPCA, by citing to the discussion provided in the appropriate *Federal Registers*, is relying on the EPA's discussion to also support the need for and the reasonableness of the amendment that the MPCA is adopting into the State rules. The MPCA believes that this is a reasonable and efficient way to incorporate existing information without needless duplication of effort.

When the MPCA chooses to significantly diverge from parent federal amendment language (to be more stringent or to improve clarity), the MPCA provides further explanation in addition to the references to the relevant checklists and *Federal Registers*. In other cases, where a rule amendment is not based on a federal amendment, the SONAR will provide the MPCA's justification without reference to a federal amendment number or *Federal Register* citation.

Federal Registers and various other background documents referred to in this SONAR are available in electronic formats from various sources including libraries and online. The decision to rely on the EPA's rationale is supported by the availability of the federal documents and by the similarities between the State and federal processes for promulgating regulations. The MPCA is providing a variety of ways to find and access related federal documents—including posting primary background documents on the MPCA's Web site in order to support the ability of the public to review those documents.

In another innovative approach, the MPCA has structured the SONAR so that the discussion of each individual amendment (including references to the EPA's rationale when appropriate) is provided immediately following the proposed rule language. This sequence of rule language followed by explanation, provided in Attachment 1, shows new language underlined, deleted material ~~stricken~~, and the MPCA discussion **[bracketed, bolded, highlighted]** following each rule change.

One benefit of providing the discussion of reasonableness within an extract of the proposed rule is that it clearly ties the rationale to the proposed change—no small feat in a lengthy rulemaking with hundreds of changes. While the line numbers in the left margin of the extract do not relate directly to the certified (official) rule, they do help readers to identify and communicate about the location of language of interest. Finally, the MPCA is making electronic documents for this rule available that readers with basic skills can search for text of interest. This should prove invaluable due to the amount of text in the rule and associated documents.

Disclaimer: The Office of the Revisor of Statutes provides the electronic rule language extracts used in Attachment 1 (HTML) and Attachment 2 (PDF) to this SONAR in an electronic form that may differ in format and possibly content from the certified printed rule. In addition, the MPCA has modified the extract used for Attachment 1 to improve format and to imbed its discussion of rationale. Although content of these extracts is substantially identical to the official rules, certain special characters, tables or formats may have been changed or lost in converting to the electronic format. A Revisor certified printed version of Minnesota Rules remains the only official version. A certified version is published in the State Register as part of the public notice. This same possibility of errors or emissions applies to any other electronic documents that the MPCA is supplying or referencing to support this rulemaking.

VI. About the Documents Related to the EPA Amendments

The detailed SONAR (Attachment 1) is the key document that addresses the need for and reasonableness of each of the proposed amendments. This Part VI explains the other supporting documents that the reader may find helpful as it reviews the proposed rules and the detailed SONAR.

Each time the EPA significantly amends its rules, it assigns it a "revision checklist number" (herein also called RCRA Amendment number). This number is used throughout this SONAR to direct the reader to information and to associated documents. The MPCA has attached to this SONAR a certified copy of the proposed rule language (Attachment 2), extracts of the EPA revision checklist summaries (Attachment 3), completed draft revision checklists (Attachment 4) (subject to the EPA's review when the MPCA seeks an equivalence determination), the adopting *Federal Registers* for each adopted federal amendment (Attachment 5) and a list of the addressed federal amendments (Attachment 6). The MPCA is placing copies of these key documents on its Web site to support the public notice for this rule: www.pca.state.mn.us.

Readers can access both the CFR (see Title 40, Parts 260-268, 270 and 273, cites provided in Attachment 1 for rule changes based on a federal amendment), and the related *Federal Registers* (cited in Attachment 1), in which the EPA promulgated the subject amendments, through a variety of sources including the Federal Depository Libraries (often larger libraries or university libraries; see www.gpoaccess.gov/libraries.html). The following are links to federal Web sites for the *Federal Registers* (beginning in 1994), for the CFR, and for an EPA hazardous waste authorization Web site respectively: http://www.gpoaccess.gov/fr/index.html, http://www.gpoaccess.gov/cfr/index.html or http://www.epa.gov/epaoswer/hazwaste/state/revision/program.htm. The *Federal Register* also describes where each provision in an amendment would appear in the CFR. After the EPA promulgates its hazardous waste amendments, it places (codifies) the changes into the CFR (the

subject amendments mostly appear in 40 CFR parts 260 to 270). Once codified into the CFR, the changes related to a particular amendment are not readily distinguishable from surrounding text but can be viewed in their final context. The MPCA is also posting copies of key *Federal Registers* and supporting documents on its Web site: http://www.pca.state.mn.us/.

VII. Required SONAR Considerations (Minn. Stat. § 14.131)

Minn. Stat. § 14.131, entitled Statement of Need and Reasonableness, is supported by Minn. Stat. § 14.23, and Minn. R. 1400.2070, and requires the following considerations in a SONAR:

> *By the date of the section 14.14, subdivision 1a, notice, the agency must prepare, review, and make available for public review a statement of the need for and reasonableness of the rule. The statement of need and reasonableness must be prepared under rules adopted by the chief administrative law judge and must include the following to the extent the agency, through reasonable effort, can ascertain this information:*
> *(1) a description of the classes of persons who probably will be affected by the proposed rule, including classes that will bear the costs of the proposed rule and classes that will benefit from the proposed rule;*
> *(2) the probable costs to the agency and to any other agency of the implementation and enforcement of the proposed rule and any anticipated effect on state revenues;*
> *(3) a determination of whether there are less costly methods or less intrusive methods for achieving the purpose of the proposed rule;*
> *(4) a description of any alternative methods for achieving the purpose of the proposed rule that were seriously considered by the agency and the reasons why they were rejected in favor of the proposed rule;*
> *(5) the probable costs of complying with the proposed rule, including the portion of the total costs that will be borne by identifiable categories of affected parties, such as separate classes of governmental units, businesses, or individuals;*
> *(6) the probable costs or consequences of not adopting the proposed rule, including those costs or consequences borne by identifiable categories of affected parties, such as separate classes of government units, businesses, or individuals; and*
> *(7) an assessment of any differences between the proposed rule and existing federal regulations and a specific analysis of the need for and reasonableness of each difference. Also,*
> *(8) The statement must describe how the agency, in developing the rules, considered and implemented the legislative policy supporting performance-based regulatory systems set forth in section 14.002.*
> *(9) The statement must also describe the agency's efforts to provide additional notification under section 14.14, subdivision 1a, to persons or classes of persons who may be affected by the proposed rule or must explain why these efforts were not made.*
> *(10) The agency must consult with the commissioner of finance to help evaluate the fiscal impact and fiscal benefits of the proposed rule on units of local government.*

(11) The agency must send a copy of the statement of need and reasonableness to the Legislative reference Library when the notice of hearing is mailed under section 14.14, subdivision 1a.

These considerations are addressed below.

1. A description of the classes of persons who probably will be affected by the proposed rule, including classes that will bear the costs of the proposed rule and classes that will benefit from the proposed rule.

Who is affected? These amendments to existing MPCA rules will affect parties already regulated by the MPCA's hazardous waste rules for generating, storing, transporting, treating, or disposing of hazardous waste and parties who would generate, transport, treat or dispose of hazardous waste in the future. The MPCA estimates that there are approximately 9,400 entities that are currently regulated by Minnesota's hazardous waste rules. The MPCA does not believe that the amendments will cause any change to the existing regulated community.

Who bears the cost? Any added costs to comply with the proposed rule changes will primarily be borne by those persons and entities already subject to regulation by the hazardous waste rules. No new categories of persons subject to the rules are being added by these amendments. For example, a presently regulated party may incur added costs for managing hazardous waste if a rule becomes more stringent. Parties will also bear some administrative costs of learning about and complying with any rule changes. Any increased requirements incrementally change existing rules, so any increase in associated costs should also be incremental. When the EPA promulgated the amendments that the MPCA is adopting, it conducted an economic impact analysis of the costs associated with each amendment. The EPA's determination that any associated costs were not significant is provided in the background discussion in the applicable *Federal Register*. The MPCA believes that the cost to regulated parties of the MPCA adopting the more stringent (and thus required) federal regulations will be minimal.

Thus, the MPCA believes that the adoption of amendments that are: (1) either already in effect through the application of the federal regulations (those adopted under authority of HSWA), (2) that reduce stringency, or (3) that clarify existing rules, and should impose no significant additional costs to the regulated community or may in some instances reduce costs by eliminating duplication and confusion.

Who benefits? If hazardous waste is improperly managed, it can contaminate air, land and water resources, and can result in significant costs to Minnesotans to investigate and remediate the contamination. Since these rules are designed to protect human health and the environment from the improper management of hazardous wastes, the citizens of Minnesota benefit from these rules. Generators, transporters, and owners and operators of hazardous waste facilities also benefit from rules that are clearer and more consistent with federal hazardous waste regulations.

One significant benefit of this rulemaking to the regulated community will be to streamline the hazardous waste facility permitting process by allowing the MPCA to issue and enforce entire

permits. Currently, the EPA issues a federal permit containing the components for which the State does not have authority.

2. The probable costs to the MPCA and to any other agency of the implementation and enforcement of the proposed rule and any anticipated effect on state revenues.

What are the costs to the MPCA? The MPCA anticipates that the additional cost of implementing and enforcing the proposed rule changes will be relatively minor. The MPCA will spend some administrative effort to update agency fact sheets to reflect the changes, and to communicate the changes to the regulated community. The number of regulated parties affected by the hazardous waste rules will remain the same, so the MPCA anticipates continuing its compliance and enforcement efforts at the same level using existing staff resources.

What are the costs to other agencies? The MPCA does not anticipate that the rule changes will cause any additional costs to be incurred by other agencies. The rules will have an effect on some agencies to the extent that those agencies are regulated as generators, transporters, or owners or operators of hazardous waste facilities.

What is the effect on State revenue? The MPCA believes that these amendments are revenue neutral (e.g., no positive or negative impact on State revenues).

3. A determination of whether there are less costly methods or less intrusive methods for achieving the purpose of the proposed rule.

Since a primary need for these amendments is to keep Minnesota's rules consistent with a complex and highly-evolved federal hazardous waste program, the MPCA's ability to provide alternatives to these proposed amendments is limited. In addition, the MPCA is incorporating certain federal regulations by reference as an efficient means of keeping its rules current. Certain of the proposed amendments will reduce burdens for some regulated parties. Finally, adopting rules that are clear and consistent with the federal program should ultimately make compliance less costly and less intrusive for regulated parties.

4. A description of any alternative methods for achieving the purpose of the proposed rule that were seriously considered by the MPCA and the reasons why they were rejected in favor of the proposed rule.

Since a primary purpose for the proposed amendments is to keep Minnesota's rules consistent with the federal hazardous waste program, the MPCA's ability to achieve this purpose by alternative methods is highly limited. The MPCA must adopt certain federal amendments in order to maintain its EPA program authorization.

Minnesota could abandon its effort to maintain an equivalent program and its EPA program authorization. In that case, federal amendments would apply in Minnesota in addition to the MPCA's rules. The MPCA believes that providing a single, Minnesota-specific program is better for the regulated community than having to understand two separate programs. To provide a single program that is clear and consistent with the EPA, the MPCA has chosen to

maintain a RCRA-equivalent program—as have the vast majority of U.S. states and territories. The MPCA believes that there is no reasonable alternative to the process prescribed in Title 40, CFR, Part 271, for maintaining its hazardous waste program authorization.

5. The probable costs of complying with the proposed rule, including the portion of the total costs that will be borne by identifiable categories of affected parties, such as separate classes of government units, businesses, or individuals.

The MPCA believes that the cost of complying with hazardous waste rules will not increase substantially as a result of implementing the changes proposed in this rulemaking. The MPCA is primarily adopting EPA amendments to existing federal regulations and making corrections to improve rule clarity. The primary effect of this rulemaking is to keep the rules consistent with the federal regulations and to reduce uncertainty regarding the applicability of the rules.

Regulated parties are already complying with the federal provisions that the EPA promulgated under its HSWA authority because HSWA provisions apply in all states on their federal effective dates.

6. The probable costs or consequences of not adopting the proposed rule, including those costs or consequences borne by identifiable categories of affected parties, such as separate classes of government units, businesses, or individuals.

Adopting the proposed rules will keep Minnesota's hazardous waste rules consistent with the EPA's regulations and will reduce duplication of effort and confusion about the rules. If the MPCA failed to adopt the federal amendments and therefore failed to maintain a hazardous waste program equivalent to EPA, the EPA would eventually withdraw its authorization and would enforce the federal hazardous waste regulations in Minnesota. The regulated community would then have to comply with both the MPCA's hazardous waste rules (which would still be in effect) and the EPA's hazardous waste regulations. This could result in increased confusion and regulatory burden for the regulated community.

In addition, there would be no cost saving to the regulated community if the MPCA did not maintain EPA program authorization because federal hazardous waste regulations that were promulgated under authority of RCRA would also be in effect in Minnesota.

7. An assessment of any differences between the proposed rule and existing federal regulations and a specific analysis of the need for and reasonableness of each difference.

The proposed rules adopt requirements in federal regulations in order to keep Minnesota's hazardous waste rules consistent with the federal regulations. For most of the amendments, the MPCA is either adopting rule language that is identical in substance to the federal regulations or is incorporating the federal regulations by reference. The MPCA has, in some cases, slightly modified the federal language for consistency with standards or preferences used in Minnesota Rules, while still adhering to the intended federal meaning. Examples of this range from using terms that are unique to Minnesota to regulating Minnesota specific wastes. The MPCA describes these types of changes in its detailed SONAR discussion.

In some cases, the MPCA finds it necessary to intentionally diverge from the federal regulations to provide more stringent protections for Minnesota than offered by the federal program. This type of difference may be the result of the MPCA declining not to amend an existing rule to make it less stringent than the amended federal counterpart or it may be that the MPCA is adding conditions to a federal amendment being adopted in order to increase the level of stringency. In the former case, the MPCA is not required to justify previous rulemaking actions or explain why a less stringent federal amendment is not being adopted. In the later case, the MPCA discusses why it is reasonable to diverge from the federal requirements in the attached detailed SONAR discussion.

The MPCA's hazardous waste program slightly preceded the EPA's. As a result, existing early provisions have equivalent effect but have a different structure than federal program elements that evolved later. The two programs have increasingly converged over time since the MPCA has sought the EPA's program delegation. As a result, adopting the EPA's amendments to more recent provisions generally produces fewer differences.

8. Describe how the MPCA, in developing the rules, considered and implemented the legislative policy supporting performance-based regulatory systems set forth in section 14.002.

Minn. Stat. § 14.002, titled State Regulatory Policy, reads as follows:

> *The legislature recognizes the important and sensitive role for administrative rules in implementing policies and programs created by the legislature. However, the legislature finds that some regulatory rules and programs have become overly prescriptive and inflexible, thereby increasing costs to the state, local governments, and the regulated community and decreasing the effectiveness of the regulatory program. Therefore, whenever feasible, state agencies must develop rules and regulatory programs that emphasize superior achievement in meeting the agency's regulatory objectives and maximum flexibility for the regulated party and the agency in meeting those goals.*

The MPCA's options for considering performance-based standards are limited by the fact that in this rulemaking the MPCA is primarily adopting existing federal regulations necessary to maintain the federal hazardous waste program authorization—which is based on rule equivalence. The MPCA's rules must be least as stringent as the EPA's federal regulations. Equivalence could be lost if the MPCA does not amend its rules in a way that is at least as stringent as federal rules.

The MPCA has demonstrated regulatory flexibility by adopting EPA optional changes that reduce regulatory burdens.

9. Describe the MPCA's efforts to provide additional notification under Minn. Stat. § 14.14, subdivision 1a, to persons or classes of persons who may be affected by the proposed rule or must explain why these efforts were not made.

The MPCA is amending its current hazardous waste rules to maintain consistency with the federal hazardous waste regulations. These amendments do not significantly change the scope and effect of the MPCA's hazardous waste rules. Because the MPCA believes that these amendments are not controversial and are mostly of interest to the existing regulated community, the MPCA believes that regular means of notice, as required by Minn. Stat. § 14.22, will have provided adequate notice to those persons regulated by these proposed rules.

The MPCA plans to publish notice of its intent to adopt these rules in the *State Register* and to mail notices in accordance with Minn. Stat. § 14.22, to people on the MPCA's rulemaking mailing list as described by Minn. Stat. § 14.14, subdivision 1a.

The MPCA published advance notice of its intent to amend its rules in the *State Register* on November 12, 2002. The MPCA received three responses to this notice and placed the respondents on an interested parties mailing list. The MPCA has six other parties on this list from other discussions with outside parties during development of this rulemaking (for a total of nine interested parties). One additional party provided an email address and sought general notice of rulemaking activity but did not provide a standard mailing address. The MPCA will attempt to advise this party by email of the notice.

The MPCA will send a copy of the Notice of Intent to Adopt rules to the following people and organizations:

- All parties who have registered with the MPCA for the purpose of receiving notice of rulemaking proceedings as require by Minn. Stat. § 14.14, subdivision 1a;
- All interested parties who have contacted the MPCA with an interest in this specific rulemaking;
- The interested public. Advice about the notice, proposed rules and SONAR will be posted on the MPCA's Public Notice Web site at (www.pca.state.mn.us). The Web site will link to the Notice as published in the *State Register*, which includes information relevant to the comment period and the identification of a contact person;
- The EPA's Region 5 office in Chicago, IL;
- The environmental departments of the seven counties in the Twin Cities metropolitan area;
- The Minnesota Governor's Office; and
- Minnesota legislators as required by Minn. Stat. § 14.116.

The MPCA plans to provide a comment period of 45 days instead of the minimum 30 days. The proposed amendments are largely based on existing federal regulations, and the MPCA believes that adopting these will not significantly change the scope or effect of Minnesota's hazardous waste rules. However, there are a significant number of amendments, so the MPCA believes that it is reasonable to provide additional time for public review by extending this comment period by five days.

10. Consult with the commissioner of finance to help evaluate the fiscal impact and fiscal benefits of the proposed rule on units of local government.

In accordance with the interim process established by the Department of Finance on June 21, 2004, the MPCA will provide the Department of Finance with a copy of the proposed rule and SONAR at the same time as it sends these to the Governor's Office. This timing allows the fiscal impacts and fiscal benefits of a proposed rule to be reviewed by the Department of Finance concurrent with the Governor's Office review (up to 21 days).

The MPCA does not anticipate that amending its existing hazardous waste rules would substantively impact local units of government. These amendments will not significantly change the universe of those already regulated by this rule or the level of regulation.

11. The MPCA must send a copy of the statement of need and reasonableness to the Legislative Reference Library when the notice of hearing is mailed under Minn. Stat. § 14.14, subdivision 1a.

The MPCA plans to submit all required documentation.

VIII. Other Statutory Considerations

Minnesota Statutes contain several requirements to be addressed by agencies when proposing rules in addition to the required SONAR considerations in Minn. Stat. § 14.131:

1. Impact on Farming Operations per Minn. Stat. § 14.111
2. Legislative Notification per Minn. Stat. § 14.116
3. Consideration of Economic Impacts per Minn. Stat. § 116.07, subdivision 6, and identical provisions in Minn. Stat. § 115.43, subdivision 1
4. Notifying the Commissioner of Transportation per Minn. Stat. § 174.05
5. Cost Thresholds per Minn. Stat. § 14.127, subdivision 1

The MPCA addresses these below:

1. Minn. Stat. § 14.111, titled Farming Operations, requires the following:

> *Before an agency adopts or repeals rules that affect farming operations, the agency must provide a copy of the proposed rule change to the commissioner of agriculture, no later than 30 days prior to publication of the proposed rule in the State Register. A rule may not be invalidated for failure to comply with this section if an agency has made a good faith effort to comply.*

The MPCA believes that adopting rule amendments in order to maintain program equivalence with EPA hazardous waste regulations and to clarify existing rules will have no new impact on agricultural land or farming operations. The MPCA believes that the proposed rules will not negatively impact any farming operations that are required to manage hazardous waste under existing regulations.

2. Minn. Stat. § 14.116, titled Notice to Legislature, requires the following:

> *When an agency mails notice of intent to adopt rules under section 14.14 or 14.22, the agency must send a copy of the same notice and a copy of the statement of need and reasonableness to the chairs and ranking minority party members of the legislative policy and budget committees with jurisdiction over the subject matter of the proposed rules. In addition, if the mailing of the notice is within two years of the effective date of the law granting the agency authority to adopt the proposed rules, the agency shall make reasonable efforts to send a copy of the notice and the statement to all sitting legislators who were chief house and senate authors of the bill granting the rulemaking authority. If the bill was amended to include this rulemaking authority, the agency shall make reasonable efforts to send the notice and the statement to the chief house and senate authors of the amendment granting rulemaking authority, rather than to the chief authors of the bill.*

The MPCA plans to send copies of the notice, the proposed rule, and the SONAR to the chairs and ranking minority members of the Senate Environmental and Natural Resources Committee and the Senate Environment, Agriculture and Economic Budget Division. The MPCA will also copy the chairs and ranking minority members of the House Environment and Natural Resources Policy Committee, and the House Environment and Natural Resources Finance Committee.

This statute provides additional requirements but they do not apply since the MPCA's authority to adopt these rules is found in Minn. Stat. § 116.07, subdivision 4, and is not a new grant of rulemaking authority as addressed by Minn. Stat. § 14.116.

3. Minn. Stat. § 116.07, subdivision 6, and identical provisions in Minn. Stat. § 115.43, subdivision 1, state the following regarding the consideration of economic impacts:

> *In exercising all its powers the pollution control agency shall give due consideration to the establishment, maintenance, operation and expansion of business, commerce, trade, industry, traffic, and other economic factors and other material matters affecting the feasibility and practicability of any proposed action, including, but not limited to, the burden on a municipality of any tax which may result therefrom, and shall take or provide for such action as may be reasonable, feasible, and practical under the circumstances.*

The MPCA sees no substantive economic impacts from adopting the proposed rules. These rules will result in neither substantial cost savings nor substantial additional expenses to the regulated community or to any regulatory agencies. Most of the amendments to the federal regulations that the MPCA is adopting have been in effect in Minnesota and in other states that have already adopted those amendments, often for many years with no significant economic impact. Some minor, indirect cost savings may be realized by regulated parties that benefit from either the

MPCA adopting reduced requirements, or from the improved clarity provided by making corrections or by incorporating certain federal regulations by reference.

4. Minn. Stat. § 174.05, titled Pollution Control Agency; Rules and Standards, provides the following requirements regarding notifying the Commissioner of Transportation:

> *Subdivision 1.* ***Notification by Pollution Control Agency.*** *The commissioner of the Pollution Control Agency shall inform the commissioner of transportation of all activities of the Pollution Control Agency which relate to the adoption, revision, or repeal of any standard or rule concerning transportation established pursuant to section 116.07. Upon notification the commissioner shall participate in those activities. Participation may include, but is not limited to, access to all pertinent information collected or compiled by the Pollution Control Agency and transmittal to the commissioner of the Pollution Control Agency of information and expert opinions concerning the ability of affected modes of transportation to accomplish the desired objectives and the impact that alternative methods of attaining those objectives would have on present or planned transportation systems in the state.*
>
> *Subd. 2.* ***Commissioner to submit review of proposed rules.*** *Prior to public hearings on any rule concerning transportation proposed by the Pollution Control Agency, the commissioner of transportation shall submit a written review of those rules, including an analysis of their impact upon the state's transportation system, and may propose alternative rules or standards. This report shall be made part of the record of the hearing and shall be made available to any person prior to the hearing.*
>
> *Subd. 3.* ***Report by Pollution Control Agency.*** *Upon the adoption, revision or repeal of a rule concerning transportation, the commissioner of the Pollution Control Agency shall publish a written report of the manner in which the adopted rule reflects consideration of the factors specified in section 116.07, subdivision 6, and the specific issues raised in the commissioner of transportation's report.*

The MPCA believes that this rulemaking will present no special concern regarding transportation. However, the MPCA will provide the Commissioner of Transportation notice of the proposed rule amendments. The MPCA has incorporated Minnesota Department of Transportation staff suggestions to update certain outdated references to Department of Transportation regulations.

5. Minn. Stat. § 14.127, titled Legislative Approval Required, subd. 1, Cost thresholds, provides the following requirement:

> *An agency must determine if the cost of complying with a proposed rule in the first year after the rule takes effect will exceed $25,000 for: (1) any one business that has less than 50 full-time employees; or (2) any one statutory or home rule charter city that has less than ten full-time employees. For purposes of this section, "business" means a business entity organized for profit or as a nonprofit, and*

includes an individual, partnership, corporation, joint venture, association, or cooperative.

The MPCA believes that the cost of complying with the proposed amendments in the first year will not exceed the statutory $25,000 cost threshold for any one business with less than 50 full-time employees, or for any one statutory or home rule charter city with fewer than ten full-time employees. The proposed changes mostly amend existing rules incrementally for an existing regulated community. Also, most of the proposed changes already took effect on their federal effective date (those that the EPA promulgated under its HWSA authority). Many of the remaining changes are to improve/clarify existing rule language without changing the effect. Any increased costs should be incremental and minimal. If this cost threshold had been exceeded, the statute provides other requirements for the agency, and potential remedies for affected parties; however, the MPCA does not expect those to apply for this rulemaking.

IX. List of Authors, Witnesses, and Attachments

The following MPCA staff participated in the development of this rulemaking and SONAR:

a. Nathan Cooley, Municipal Division, Land Policy Unit
b. Carol Nankivel, Municipal Division, Land Policy Unit

In support of the need for and reasonableness of the proposed rules, the MPCA anticipates that it will enter the following exhibits into the hearing record:

Attachments:

1. Detailed Discussion of Need for and Reasonableness of Rule Changes.
This is an extract of the proposed rule language with a discussion of the reasonableness of each proposed change.

2. Certified Copy of Rule Language.
This is a certified copy of the proposed rule language.

3. Revision Checklist Summaries of Federal Amendments.
This is a compilation of the EPA summaries that briefly describe the intent and scope of each federal amendment and provide citations to related background documents for amendments addressed in this rulemaking.

4. Proposed Revision Checklists Linking Federal Amendments to Minnesota Rules.
This is a compilation of the numbered EPA checklists for each amendment that tie each adopted federal provision with the corresponding Minnesota rule provision in this rulemaking.

5. Federal Registers Adopting Federal Amendments.
This is a compilation of the *Federal Registers* addressing the amendments where the MPCA is relying on the EPA's explanation for the reasonableness of corresponding federal hazardous waste regulations adopted in this rule.

6. List of Federal Amendments Proposed for Adoption.
This is a table of the federal amendments arranged by revision checklist number showing the federal authority (RCRA or HSWA) and whether the amendment is optional or mandatory to maintain EPA authorization.

X. CONCLUSION

Based on the foregoing, the proposed rules are both needed and reasonable.

The **[bracketed, bolded, shaded]** discussion following each proposed rule change in the following extract describes the rationale for the proposed changes. This extract of the certified rule may contain errors associated with translation/editing. The certified rule is the official form of the proposed rule.

7001.0150 TERMS AND CONDITIONS OF PERMITS.

[For text of subpart 1, see M.R.]

Subp. 2. **Special conditions.** Each draft and final permit must contain conditions necessary for the permittee to achieve compliance with applicable Minnesota or federal statutes or rules, including each of the applicable requirements in parts 7045.0450 to ~~7045.0642~~ 7045.0651 and ~~7045.1300 to 7045.1380~~ 7045.1390, and any conditions that the agency determines to be necessary to protect human health and the environment. If applicable to the circumstances, the conditions must include:

[In subpart 2, the MPCA corrects a citation to a range of rules that changed as parts were added. The MPCA also provides the replacement citation for a repealed range of rules.]//

[For text of items A to D, see M.R.]

Subp. 3. **General conditions.** Unless specifically exempted by statute or rule, each draft and final permit must include the following general conditions and the agency shall incorporate these conditions into all permits either expressly or by specific reference to this part:

[For text of items A to O, see M.R.]

P. Compliance with ~~an~~ a RCRA permit during its term constitutes compliance, for purposes of enforcement, with subtitle C of RCRA except for those requirements not included in the permit which:

[In item P, the MPCA corrects grammar.]//

(1) become effective by statute;

(2) are adopted under ~~parts 7045.1300 to 7045.1380~~ part 7045.1390, restricting the placement of hazardous wastes in or on the land; ~~or~~

[In subitem (2), the MPCA provides the replacement citation for a repealed range of rules.]//

(3) are adopted under parts 7045.0450 to 7045.0551 regarding leak detection systems for new and replacement surface impoundment, waste pile, and landfill units, and lateral expansions of surface impoundment, waste pile, and landfill units. The leak detection system requirements include double liners, construction quality assurance programs, monitoring, action leakage rates, and response action plans, and will be implemented through the procedures of part 7001.0730, minor permit modifications; or

[In subitem (3), the MPCA corrects a citation to a range of rules that changed as parts were added.]//

(4) are adopted under parts 7045.0645, 7045.0647, and 7045.0648, limiting air emissions.

[In subitem (4), the MPCA adopts a reference to amendments being adopted in this rulemaking that correspond to the federally required amendments to RCRA regulations titled, "Consolidated Organic Air Emission Standards for Tanks, Surface Impoundments, and Containers," with the EPA assigned RCRA Revision Checklist #154-1, item 34 (abbreviated hereafter in the following format: [required/optional] RCRA Amendment 154-1.34). Adopting this amendment makes this rule provision equivalent to Title 40, Code of Federal Regulations, section 270.4(a)(4) (abbreviated hereafter in the following format: = 40 CFR 270.4(a)(4)). Hereafter, where the MPCA relies on the EPA's amendment rationale to establish the reasonableness of an amendment, the MPCA cites the supporting background discussion in the Federal Register (FR). The reasonableness of this specific amendment is supported at Volume 59, FR, pages 62896-62953 (abbreviated as 59 FR 62896), on December 6, 1994.]//

7001.0501 UNDERGROUND INJECTION.

References to underground injection of waste throughout this chapter are subject to Minnesota statutes and rules prohibiting the discharge of waste or pollutants to the saturated or unsaturated zones.

[In new part 7001.0501, the MPCA clarifies that, despite references to underground injection of waste found in chapter 7045 or incorporated federal regulations, underground injection is also subject to other Minnesota Statutes and Rules that prohibit underground injection of waste or pollutants. For example, part 7060.0100 prohibits the discharge of sewage, industrial waste, or other waste to the saturated zone (groundwater) or unsaturated zone (soil above the water table). The purpose of such a restriction, as stated in part 7060.0100, is to preserve and protect underground waters by preventing pollution. Thus, it is reasonable to include in the hazardous waste rules a clarification that reference to underground injection in chapter 7045 is not only subject to hazardous waste rules but also to other statutes and rules governing underground discharges of waste or pollutants.]//

7001.0520 PERMIT REQUIREMENTS.

[For text of subps 1 to 3, see M.R.]

Subp. 4. **Termination of eligibility for permit by rule.** The eligibility of an owner or operator of an elementary neutralization unit, a pretreatment unit, a wastewater treatment unit, or a combustion waste facility to be permitted under this part is subject to termination by the agency after notice and opportunity for a contested case hearing or a public informational meeting if the agency makes any of the findings set forth in items A to D. An owner or operator whose eligibility to be permitted under this part has been terminated shall apply for and obtain an individual permit under these parts. The following findings constitute justification for the commissioner to commence proceedings to terminate eligibility:

[For text of items A to C, see M.R.]

D. that under the circumstances, in order to protect human health or the environment, the permitted facility should be subject to the requirements of parts ~~7045.0452 to 7045.0544~~ 7045.0450 to 7045.0551.

[In item D, the MPCA corrects a citation to a range of rules that changed as parts were added.]//

Subp. 5. **Closure by removal.** Owners or operators of surface impoundments, land treatment units, and waste piles closing by removal or decontamination under parts 7045.0552 to ~~7045.0642~~ 7045.0651 must obtain a postclosure permit unless they can demonstrate to the agency that the closure met the requirements for closure by removal or decontamination in part 7045.0532, subpart 7; 7045.0534, subpart 7; or 7045.0536, subpart 8. The demonstration may be made in the following ways:

[In subp. 5, the MPCA corrects a citation to a range of rules that changed as parts were added.]//

[For text of items A and B, see M.R.]

[For text of subps 6 and 7, see M.R.]

7001.0550 CONTENTS OF PART A OF APPLICATION.

Part A of the application must contain the following information:

[For text of items A to D, see M.R.]

E. a list of the waste designated under parts 7045.0102 to ~~7045.0143~~ 7045.0155 as hazardous to be treated, stored, or disposed of by the applicant and an estimate of the quantity of each hazardous waste to be treated, stored, or disposed of annually by the applicant;

[In item E, the MPCA corrects a citation to a range of rules that changed as parts were added.]//

[For text of items F to J, see M.R.]

7001.0560 GENERAL INFORMATION REQUIREMENTS FOR PART B OF APPLICATION.

Part B of the application must contain the following information:

[For text of item A, see M.R.]

B. Chemical and physical analyses of the hazardous wastes to be handled at the facility. At a minimum, these analyses must contain all the information that ~~is necessary~~ must be known to treat, store, or dispose of the wastes properly in accordance with parts 7045.0450 to 7045.0551.

[In item B, the MPCA revises language slightly to improve clarity and corrects a citation to a range of rules that changed as parts were added.]//

[For text of items C and D, see M.R.]

E. A copy of the general inspection schedule required by part 7045.0452, subpart 5, item B, including, if applicable, the information in parts 7045.0526, subpart 5; 7045.0528, subpart 7; 7045.0532, subpart 5; 7045.0534, subparts 5 and 6; 7045.0536, subpart 4; 7045.0538, subpart 5; 7045.0539, subpart 3; and 7045.0542, subpart 7; and the process vent and equipment leak standards in Code of Federal Regulations, title 40, sections 264.1033, 264.1052, 264.1053, ~~and~~ 264.1058, as amended, and sections 264.1084, 264.1085, 264.1086, and 264.1088, as incorporated in part 7045.0540.

[In item E, the MPCA adopts cross references to federal regulations relating to Organic Air Emissions that are being adopted in part 7045.0540 and which are based on required RCRA Amendments 154.51 and 154-1.35: "Consolidated Organic Air Emission Standards for Tanks, Surface Impoundments, and Containers" = 40 CFR 270.14(b)(5), and justified at 59 FR 62896-62953, December 6, 1994; as amended by 61 FR 59932-59997, November 25, 1996; and required RCRA Amendment 163.40: "Organic Air Emission Standards for Tanks, Surface Impoundments, and Containers; Clarification and Technical Amendment" = 40 CFR 270.14(b)(5), and justified at 62 FR 64636-64671, December 8, 1997.]//

[For text of items F to U, see M.R.]

V. For land disposal facilities, if a case-by-case extension has been approved ~~under part 7045.0075, subpart 8~~ by the United States Environmental Protection Agency, under Code of Federal Regulations, title 40, section 268.5, or a petition has been granted under part 7045.0075, subpart 9, a copy of the notice of approval for the extension or petition is required.

[In item V, the MPCA revises language to clarify an existing requirement relating to the granting of case-by-case extensions for land disposal facilities. Only EPA has the authority to issue case-by-case extensions for land disposal facilities because this aspect of the RCRA program is not delegable to the states. In this rulemaking, the MPCA has removed specific references to part 7045.0075, subpart 8, (which formerly directed the reader to the federal requirements) and replaced them with direct citations to the appropriate federal citation. This is a clarifying change that does not alter the effect of the existing rules.]//

7001.0570 PART B INFORMATION REQUIREMENTS FOR FACILITIES THAT STORE CONTAINERS OF HAZARDOUS WASTE.

Except as otherwise provided in part 7045.0526, subpart 1, if the applicant proposes to store containers of hazardous waste, the applicant shall furnish the following information in addition to the information required by part 7001.0560:

[For text of items A to F, see M.R.]

G. Information on air emission controls as required in part 7001.0635.

[In item G, the MPCA adopts cross references to federal regulations relating to organic air emissions that are being adopted in this rulemaking in part 7045.0540 and which are based on required RCRA Amendment 154-1.36: "Consolidated Organic Air Emission Standards for Tanks, Surface Impoundments, and Containers" = 40 CFR 270.15(e); as supported by 59 FR 62896-62953, December 6, 1994. In this rulemaking the MPCA is also revising the adopted federal phrase "emission control equipment" to read "emission controls" because this phrase is already used in existing part 7001.0635, and because this phrase is more descriptive of the content of the rule because the rule also applies to non-equipment types of air emission controls.]//

7001.0580 PART B INFORMATION REQUIREMENTS FOR STORAGE OR TREATMENT TANKS.

Except as otherwise provided in part 7045.0528, subpart 1, if the applicant proposes to use tanks to store or treat hazardous waste, the applicant shall furnish the following information, in writing, in addition to the information required by part 7001.0560:

[For text of items A to H, see M.R.]

I. description of controls and practices to prevent spills and overflows, as required under part 7045.0528, subpart 6, item B; ~~and~~

J. for tank systems in which ignitable, reactive, or incompatible wastes are to be stored or treated, a description of how operating procedures and tank system and facility design will achieve compliance with the requirements of part 7045.0528, subparts 10 and 11 ; and

K. information on air emission controls as required in part 7001.0635.

[The reasonableness of this change is discussed in part 7001.0570, item G above.]//

7001.0590 PART B INFORMATION REQUIREMENTS FOR SURFACE IMPOUNDMENTS.

Except as otherwise provided in part 7045.0532, subpart 1, if the applicant proposes to store, treat, or dispose of hazardous waste in surface impoundment facilities, the applicant shall submit detailed plans and specifications accompanied by an engineering report which collectively includes the following information in addition to the information required by part 7001.0560:

[For text of items A to J, see M.R.]

K. A waste management plan for hazardous waste F028 and treatment residues and soil contaminated with hazardous wastes F020, F021, F022, F023, F026, F027, and F028 listed under part 7045.0135, subpart ~~2~~ 1a, item B, describing how the surface impoundment is or will be designed, constructed, operated, and maintained to meet the requirements of part 7045.0532, subpart 10. This plan must address the following items as specified in part 7045.0532, subpart 10:

[In item K, the MPCA replaces a citation to a repealed subpart with the correct, revised citation.]//

[For text of subitems (1) to (4), see M.R.]

[For text of items L and M, see M.R.]

N. Information on air emission controls as required in part 7001.0635.

[The reasonableness of this change is discussed in part 7001.0570, item G above.]//

7001.0600 PART B INFORMATION REQUIREMENTS FOR WASTE PILES.

Except as otherwise provided by part 7045.0534, subpart 1, if the applicant proposes to store or treat hazardous waste in waste piles, the applicant shall furnish the information required by items A to M in addition to the information required by part 7001.0560:

[For text of items A to K, see M.R.]

L. A waste management plan for hazardous waste F028 and treatment residues and soils contaminated with hazardous wastes F020, F021, F022, F023, F026, F027, and F028 listed under part 7045.0135, subpart ~~2~~ 1a, item B, describing how a waste pile that is not enclosed is or will be designed, constructed, operated, and maintained to meet the requirements of part 7045.0534, subpart 10. This submission must address the following items as specified in part 7045.0534, subpart 10:

[In item L, the MPCA replaces a citation to a repealed subpart with the correct citation.]//

[For text of subitems (1) to (4), see M.R.]

[For text of item M, see M.R.]

7001.0610 PART B INFORMATION REQUIREMENTS FOR LAND TREATMENT.

Except as otherwise provided by part 7045.0536, subpart 1, if the applicant proposes to use land treatment to dispose of hazardous waste, the applicant shall furnish the information designated in items A to I in addition to the information required by part 7001.0560:

[For text of items A to H, see M.R.]

I. A waste management plan for hazardous waste F028 and treatment residues and soils contaminated with hazardous wastes F020, F021, F022, F023, F026, F027, and F028 listed under part 7045.0135, subpart ~~2~~ 1a, item B, describing how a land treatment facility is or will be designed, constructed, operated, and maintained to meet the requirements of part 7045.0536, subpart 11. This plan must address the following items as specified in part 7045.0536, subpart 11:

[In item I, the MPCA replaces a citation to a repealed subpart with the correct revised citation.]//

[For text of subitems (1) to (4), see M.R.]

7001.0620 PART B INFORMATION REQUIREMENTS FOR LANDFILLS.

Except as otherwise provided by part 7045.0538, subpart 1, if the applicant proposes to dispose of hazardous waste in a landfill, the applicant shall furnish the information designated in items A to L in addition to the information required by part 7001.0560:

[For text of items A to I, see M.R.]

J. A waste management plan for hazardous waste F028 and treatment residues and soils contaminated with hazardous wastes F020, F021, F022, F023, F026, F027, and F028 listed under part 7045.0135, subpart ~~2~~ 1a, item B, describing how a landfill is or will be designed, constructed, operated, and maintained to meet the requirements of part 7045.0538, subpart 13. This plan must address the following items as specified in part 7045.0538, subpart 13:

[In item J, the MPCA replaces a citation to a repealed subpart with the correct citation.]//

[For text of subitems (1) to (4), see M.R.]

[For text of items K and L, see M.R.]

7001.0630 PART B INFORMATION AND SPECIAL PROCEDURAL REQUIREMENTS FOR THERMAL TREATMENT FACILITIES.

Except as provided in part 7045.0542, subpart 1, if the applicant proposes to treat or dispose of hazardous waste by using thermal treatment, the applicant shall fulfill the requirements of item A, B, or C in addition to the information requirements of part 7001.0560, and the commissioner shall fulfill the requirements of item D:

[For text of items A and B, see M.R.]

C. The applicant shall perform an analysis of each waste or mixture of waste to be treated by using the analytical techniques set forth in the Environmental Protection Agency document SW-846, as ~~referenced~~ incorporated in part 7045.0065, or by using techniques found by the commissioner to be equivalent to them. The applicant shall submit all of the following information:

[In item C, the MPCA adopts language (a hyphen) to make the reference to SW-846 identical to the way the document is cited in the corresponding federal regulations. This change relates to required RCRA amendment 126: "Testing and Monitoring Activities" = 40 CFR 270.19(c)(1)(iii); the EPA's rationale appears in 58 FR 46040-46051, August 31, 1993. In addition, the MPCA changes the terminology from 'referenced' to 'incorporated' to reflect changes made to part 7045.0065. For an explanation of why the terminology has changed, see part 7045.0065.]//

(1) The results of each waste analysis performed, including:

[For text of units (a) to (d), see M.R.]

(e) an approximate quantification of the hazardous constituents identified in the waste, within the precision specified by Environmental Protection Agency document SW-846, as incorporated in part 7045.0065;

[In unit (e), the MPCA adopts language (a hyphen) to make the reference to SW-846 identical to the corresponding federal regulations. This change relates to required RCRA Amendment 126: "Testing and Monitoring Activities" = 40 CFR 270.19(c)(1)(iv); as supported at 58 FR 46040-46051, August 31, 1993; as amended at 59 FR 47980-47982, September 19, 1994. The MPCA is also adding a reference to the rule that incorporates the reference documents.]//

[For text of units (f) and (g), see M.R.]

[For text of subitems (2) to (8), see M.R.]

[For text of item D, see M.R.]

7001.0635 SPECIFIC PART B INFORMATION REQUIREMENTS FOR AIR EMISSION CONTROLS FOR TANKS, SURFACE IMPOUNDMENTS, AND CONTAINERS.

Except as otherwise provided in part 7045.0450, owners and operators of tanks, surface impoundments, or containers that use air emission controls in accordance with the requirements of part 7045.0540 must provide the additional information described in items A to G.

[In this part, the MPCA adopts a requirement that a permit applicant must submit specific information regarding air emission controls. This requirement corresponds to

federal language and is based on required RCRA Amendments 154.52 and 154-1.39: "Consolidated Organic Air Emission Standards for Tanks, Surface Impoundments, and Containers" = 40 CFR 270.27(a); this is justified at 59 FR 62896-62953, December 6, 1994; as amended by 61 FR 59932-59997, November 25, 1996. The MPCA chooses to reject the federal use of "shall" in favor of the term "must" which is a convention of Minnesota rulemaking.]//

A. Documentation for each floating roof cover installed on a tank subject to Code of Federal Regulations, title 40, section 264.1084(d)(1) or (d)(2), as incorporated in part 7045.0540, that includes information prepared by the owner or operator or provided by the cover manufacturer or vendor describing the cover design, and certification by the owner or operator that the cover meets the applicable design specifications under Code of Federal Regulations, title 40, section 264.1084(e)(1) or (f)(1), as incorporated in part 7045.0540.

[In item A, the MPCA adopts a requirement that a permit applicant must submit specific information regarding air emission controls. This language is based on required RCRA Amendments 154.52 and 154-1.39: "Consolidated Organic Air Emission Standards for Tanks, Surface Impoundments, and Containers" = 40 CFR 270.27(a); as supported at 59 FR 62896-62953, December 6, 1994; as amended by 61 FR 59932-59997, November 25, 1996. In this rulemaking the MPCA is also adding a reference to the incorporated federal language and related conditions.]//

B. Identification of each container area subject to the requirements of part 7045.0540 and certification by the owner or operator that the requirements of this part are met.

[In item B , the MPCA adopts a requirement that a permit applicant must submit specific information regarding air emission controls. This language is based on required RCRA Amendments 154.52 and 154-1.39: "Consolidated Organic Air Emission Standards for Tanks, Surface Impoundments, and Containers" = 40 CFR 270.27(a); as supported at 59 FR 62896-62953, December 6, 1994; as amended by 61 FR 59932-59997, November 25, 1996.]//

C. Documentation for each enclosure used to control air pollutant emissions from tanks or containers in accordance with the requirements of Code of Federal Regulations, title 40, section 264.1084(d)(5) or 264.1086(e)(1)(ii), as incorporated in part 7045.0540, that includes records for the most recent set of calculations and measurements performed by the owner or operator to verify that the enclosure meets the criteria of a permanent total enclosure as specified in "Procedure T - Criteria for and Verification of a Permanent or Temporary Total Enclosure" under Code of Federal Regulations, title 40, section 52.741, Appendix B, as amended.

[In item C, the MPCA adopts a requirement that a permit applicant must submit specific information regarding air emission controls. This language is based on required RCRA Amendments 154.52 and 154-1.39: "Consolidated Organic Air Emission Standards for Tanks, Surface Impoundments, and Containers" = 40 CFR 270.27(a); as supported at 59 FR 62896-62953, December 6, 1994; as amended by 61 FR 59932-59997, November 25, 1996. In this rulemaking the MPCA is also adding a reference to the incorporated federal language and related conditions.]//

D. Documentation for each floating membrane cover installed on a surface impoundment in accordance with the requirements of Code of Federal Regulations, title

40, section 264.1085(c), as incorporated in part 7045.0540, that includes information prepared by the owner or operator or provided by the cover manufacturer or vendor describing the cover design, and certification by the owner or operator that the cover meets the specifications under Code of Federal Regulations, title 40, section 264.1085(c)(1), as incorporated in part 7045.0540.

[In item D, the MPCA adopts a requirement that a permit applicant must submit specific information regarding air emission controls. This language is based on required RCRA Amendments 154.52 and 154-1.39: "Consolidated Organic Air Emission Standards for Tanks, Surface Impoundments, and Containers" = 40 CFR 270.27(a); as supported at 59 FR 62896-62953, December 6, 1994; as amended by 61 FR 59932-59997, November 25, 1996. In this rulemaking the MPCA is also adding a reference to the incorporated federal language and related conditions.]//

E. Documentation for each closed-vent system and control device installed in accordance with the requirements of Code of Federal Regulations, title 40, section 264.1087, as incorporated in part 7045.0540, that includes design and performance information as specified in Code of Federal Regulations, title 40, section 270.24(c) and (d), as amended.

[In item E, the MPCA adopts a requirement that a permit applicant must submit specific information regarding air emission controls. This language is based on required RCRA Amendments 154.52 and 154-1.39: "Consolidated Organic Air Emission Standards for Tanks, Surface Impoundments, and Containers" = 40 CFR 270.27(a); as supported at 59 FR 62896-62953; December 6, 1994; as amended by 61 FR 59932-59997, November 25, 1996. In this rulemaking the MPCA is also adding a reference to the federal language being incorporated at part 7045.0540.]//

F. An emission monitoring plan for both Code of Federal Regulations, title 40, part 60, Appendix A, Method 21, as amended, and control device monitoring methods. This plan shall include the following information: monitoring points, monitoring methods for control devices, monitoring frequency, procedures for documenting exceedances, and procedures for mitigating noncompliances.

[In item F, the MPCA adopts a requirement that a permit applicant must submit specific information regarding air emission controls. This language is based on required RCRA Amendments 154.52 and 154-1.39: "Consolidated Organic Air Emission Standards for Tanks, Surface Impoundments, and Containers" = 40 CFR 270.27(a)(6); as supported at 59 FR 62896-62953, December 6, 1994; as amended by 61 FR 59932-59997, November 25, 1996.]//

G. The schedule of implementation required under Code of Federal Regulations, title 40, section 265.1082, as incorporated in part 7045.0645, when an owner or operator of a facility subject to part 7045.0645 cannot comply with part 7045.0540 by the date of permit issuance.

[In item G, the MPCA adopts a requirement that a permit applicant must submit specific information regarding air emission controls. This language is based on required RCRA Amendments 154.52 and 154-1.39: "Consolidated Organic Air Emission Standards for Tanks, Surface Impoundments, and Containers" = 40 CFR 270.27(a)(6); as supported at 59 FR 62896-62953, December 6, 1994; as amended by 61 FR 59932-59997, November 25, 1996. The MPCA also has added a reference to the federal language being adopted at part 7045.0645.]//

7001.0650 INTERIM STATUS.

Subpart 1. **Qualifying for interim status.** Except as provided in subpart 2, during the period after the submission of Part A of a hazardous waste facility permit application to the Environmental Protection Agency or to the commissioner and before a final determination by the agency on the permit application, the owner or operator of an existing hazardous waste facility or a facility in existence on the effective date of statutory or regulatory amendments under the Resource Conservation and Recovery Act that render the facility subject to the requirement to have a hazardous waste facility permit shall be considered to be in compliance with the requirement to obtain a permit if the commissioner finds that the Environmental Protection Agency has granted the owner or operator interim status or if the commissioner finds:

[For text of item A, see M.R.]

B. that the owner or operator is in compliance with parts 7045.0552 to ~~7045.0642~~ 7045.0651;

[In item B, the MPCA corrects a citation to a range of rules that changed as parts were added.]//

[For text of items C and D, see M.R.]

[For text of subps 2 and 3, see M.R.]

Subp. 4. **Prohibitions.** During the interim status period, an owner or operator shall not:

[For text of items A to C, see M.R.]

D. alter a hazardous waste facility in a manner that amounts to a reconstruction of the facility. For the purpose of this part, reconstruction occurs when the capital investment in the modification of the facility exceeds 50 percent of the capital cost of a comparable new hazardous waste facility. Reconstruction does not include changes made solely for the purpose of complying with the requirements of part 7045.0628, subpart 4, for tanks and ancillary equipment, or to treat or store in containers ~~or~~, tanks, or containment buildings hazardous wastes subject to the land disposal restrictions under ~~parts 7045.1300 to 7045.1380~~ part 7045.1390 or RCRA section 3004, if the changes are made solely to comply with ~~parts 7045.1300 to 7045.1380~~ part 7045.1390 or RCRA section 3004.

[Subpart 4 prohibits certain activities at unpermitted facilities regulated under interim status. In item D, the MPCA prohibits reconstruction of a facility without obtaining a permit and then identifies certain activities that do not constitute reconstruction. The amendments being made to item D establish the fact that reconstruction does not include changes made to comply with two of the rules being added in this rulemaking. The first reference being added is to the containment building requirements that are being adopted in this rulemaking in part 7045.0650. This change is based on a change identified in required RCRA Amendment 109: "Land Disposal Restrictions for Newly Listed Wastes and Hazardous Debris" = 40 CFR 270.42(e)(3)(ii)(B); as supported at 57 FR 37194-37282, August 18, 1992. Because of organizational differences between the State and federal permit regulations, there is no direct federal counterpart to this subpart of the State rules. The federal counterpart to subpart 4 is found at 270.72(b)(6). Although the MPCA

believes that the addition of this reference to the containment building standards is a reasonable way to address the concerns regarding reconstruction, the reference does not directly correlate to that specific federal regulation. The second amendment to item D provides the replacement citation for a range of rules governing land disposal that is being repealed and amended in this rulemaking.]//

Subp. 5. **Changes during interim status.** Except as provided in item F, an owner or operator who has interim status may conduct the activities prescribed in items A to F.

[For text of items A and B, see M.R.]

C. The owner or operator may add new processes or change the processes for the treatment, storage, or disposal of hazardous waste if, before implementation of the addition or change, the owner or operator submits a revised Part A of the permit application and an explanation of the need for the addition, and if the commissioner approves the addition or change in writing. The commissioner shall approve the addition or change if the commissioner finds that:

[For text of subitem (1), see M.R.]

(2) the addition or change is necessary for the owner or operator to comply with federal, Minnesota, or local requirements, including the interim status standards in parts 7045.0552 to ~~7045.0642~~ 7045.0651.

[In subitem (2), the MPCA corrects a citation to a range of rules that changed as additional parts were added.]//

[For text of items D and E, see M.R.]

F. Except as specifically allowed under this item, changes listed under items A to E may not be made if they amount to reconstruction of the hazardous waste management facility. Reconstruction occurs when the capital investment in the changes to the facility exceeds 50 percent of the capital cost of a comparable entirely new hazardous waste management facility. If all other requirements are met, the following changes may be made even if they amount to reconstruction:

[For text of subitems (1) to (5), see M.R.]

(6) changes to treat or store, in tanks ~~or,~~ containers, or containment buildings, hazardous wastes subject to land disposal restrictions imposed by ~~parts 7045.1300 to 7045.1380~~ part 7045.1390 or RCRA section 3004, provided that ~~the~~ such changes are made solely for the purpose of complying with ~~parts 7045.1300 to 7045.1380~~ part 7045.1390 or RCRA section 3004.

[In subitem (6), the MPCA is providing a reference to the containment building requirements that are being adopted in this rulemaking in part 7045.0650. This language is based on required RCRA Amendment 109: "Land Disposal Restrictions for Newly Listed Wastes and Hazardous Debris" = 40 CFR 270.72(b)(6); as supported at 57 FR 37194-37282, August 18, 1992. The MPCA also provides the replacement citation for a repealed range of rules.]//

Subp. 6. **Compliance with interim status standards.** During the interim status period the owner or operator shall comply with the interim status standards in parts 7045.0552 to ~~7045.0642~~ 7045.0651.

[In subpart 6, the MPCA corrects a citation to a range of rules that changed as additional parts were added.]//

Subp. 7. **Termination of interim status.** Interim status terminates automatically when the agency has taken final administrative action on the permit application or when

terminated by Code of Federal Regulations, title 40, section 270.73(c) to (g), as amended. The following constitute justification for the commissioner to commence proceedings to terminate interim status:

[For text of item A, see M.R.]

B. the commissioner finds that the owner or operator is in violation of any of the requirements of parts 7045.0552 to ~~7045.0642~~ 7045.0651.

[In item B, the MPCA corrects a citation to a range of rules that changed as additional parts were added.]//

7001.0690 EMERGENCY PERMITS.

[For text of subps 1 to 5, see M.R.]

Subp. 6. **Requirements.** The emergency permit must incorporate, to the extent possible under the circumstances, all applicable requirements of parts 7001.0500 to 7001.0730, ~~7045.0452 to 7045.0544~~ 7045.0450 to 7045.0551, 7045.0652, and 7045.0655.

[In subpart 6, the MPCA corrects a citation to a range of rules that changed as additional parts were added.]//

[For text of subps 7 and 8, see M.R.]

7001.0700 HAZARDOUS WASTE THERMAL TREATMENT FACILITY PERMITS.

[For text of subps 1 and 2, see M.R.]

Subp. 3. **Trial burn plan.** An applicant shall submit to the commissioner a trial burn plan with Part B of the permit application. The trial burn plan must include the following information:

A. the results of an analysis of each waste or mixture of wastes to be burned, that uses the analytical techniques set forth in the United States Environmental Protection Agency document SW-846 as ~~referenced~~ incorporated in part 7045.0065 or that uses analytical techniques found by the commissioner to be equivalent to them. This analysis must include:

[In item A, the MPCA adopts a clarification to more specifically identify the fact that the document SW-846 is incorporated as part of the rules and is not simply referenced. For an explanation for this terminology change, see part 7045.0065.]//

[For text of subitems (1) to (4), see M.R.]

(5) an approximate quantification of the hazardous constituents identified in the waste, within the precision specified by Environmental Protection Agency ~~document~~ publication SW-846, as incorporated in part 7045.0065;

[In subitem (5), the MPCA adopts language (a hyphen) to make the reference to SW-846 identical to the corresponding federal regulations. This change relates to required RCRA Amendment 126: "Testing and Monitoring Activities" = 40 CFR 270.62(b)(2)(i)(D); as supported at 58 FR 46040-46051, August 31, 1993. The MPCA is also amending the existing language to more accurately reflect the nature of the document and where it is found in the rules.]//

[For text of items B to I, see M.R.]

[For text of subps 4 to 11, see M.R.]

7001.0710 LAND TREATMENT DEMONSTRATION PERMITS.

Subpart 1. **Letters of approval.** A person who desires to conduct controlled laboratory demonstrations of hazardous waste land treatment for the purpose of collecting preliminary data shall request a letter of approval from the agency.

The agency shall issue a letter of approval if the demonstration will be conducted under supervised conditions in a closed system capable of providing adequate protection to human health and the environment, and if the data obtained will not be used as the only basis for the issuance of a facility permit. The letter of approval must specify the general conditions for conducting demonstrations, the duration of approval, and the specific waste types.

The letter of approval may only provide approval for controlled laboratory demonstrations of hazardous waste treatment and does not provide exemptions from the hazardous waste management and disposal requirements of chapter 7045. Materials resulting from the demonstration that meet the criteria of parts 7045.0102 to ~~7045.0143~~ 7045.0155 must be managed as hazardous waste.

[In subpart 1, the MPCA corrects a citation to a range of rules that changed as parts were added.]//

[For text of subps 2 to 6, see M.R.]

7001.0730 MODIFICATION OF PERMITS; REVOCATION AND REISSUANCE OF PERMITS.

[For text of subps 1 to 3, see M.R.]

Subp. 4. **Minor modifications of permits.** In addition to the corrections or allowances listed in part 7001.0190, subparts 2 and 3, if the permittee consents, the commissioner may modify a permit to make the corrections or allowances listed below without following the procedures in parts 7001.0100 to 7001.0130:

[For text of items A to K, see M.R.]

L. to allow treatment of hazardous wastes not previously specified in the permit if the following conditions are met:

(1) the hazardous waste has been prohibited from one or more methods of land disposal under ~~parts 7045.1320 to 7045.1330~~ Code of Federal Regulations, title 40, sections 268.30 to 268.39, as incorporated in part 7045.1390, or RCRA section 3004;

[In subitem (1), the MPCA replaces references to rules being repealed in this rulemaking with citations to the corresponding federal land disposal restrictions that are being incorporated in part 7045.1390.]//

(2) treatment is in accordance with ~~part 7045.1310~~ Code of Federal Regulations, title 40, section 268.4, as incorporated in part 7045.1390, if applicable, and ~~part 7045.1305~~ section 268.3, as incorporated in part 7045.1390, and applicable standards established under ~~parts 7045.1355 to 7045.1360 and part 7045.0075, subpart 10~~ Code of Federal Regulations, title 40, sections 268.41 to 268.49, and 268.5, as incorporated in part 7045.1390, or, where no treatment standards have been established, treatment renders the waste no longer subject to the applicable prohibitions of ~~part 7045.1330~~ Code of Federal

Regulations, title 40, section 268.32, as incorporated in part 7045.1390, or RCRA section 3004;

[In subitem (2), first, the MPCA replaces several cites to rules that are being repealed in this rulemaking with new cites to the corresponding federal land disposal restrictions being incorporated by reference in this rulemaking. Also, the MPCA deletes a reference to part 7045.0075, subpart 10 because the MPCA no longer has a cross reference to the EPA petition process for alternative treatment standards. The EPA petition process is contained in 40 CFR 268.44 which is added above.]//

[For text of subitems (3) and (4), see M.R.]

M. to allow permitted facilities to change their operations to treat or store hazardous wastes subject to land disposal restrictions imposed by ~~parts 7045.1300 to 7045.1380~~ part 7045.1390 or RCRA section 3004, provided the treatment or storage occurs in containers or tanks and the permittee:

[In item M, the MPCA provides the replacement citation for a repealed range of rules.]//

(1) requests a major permit modification under subparts 1 to 3;

(2) demonstrates in the request for a major permit modification that the treatment or storage is necessary to comply with the land disposal restrictions of ~~parts 7045.1300 to 7045.1380~~ part 7045.1390 or RCRA section 3004; and

[In subitem (2), the MPCA provides the replacement citation for a repealed range of rules.]//

(3) ensures that the treatment or storage units comply with the applicable standards of parts 7045.0552 to ~~7045.0642~~ 7045.0651 and ~~7045.1300 to 7045.1380~~ 7045.1390 pending final administrative disposition of the major modification request. The authorization to make the changes conferred in this item terminates upon final administrative disposition of the permittee's major modification request under subparts 1 to 3 or termination of the permit under part 7001.0180.

[In subitem (3), the MPCA corrects a citation to a range of rules that changed as parts were added. The MPCA also provides the replacement citation for a repealed range of rules.]//

[For text of subps 5 and 6, see M.R.]

7045.0020 DEFINITIONS.

[For text of subps 1 to 9a, see M.R.]

Subp. 9b. **Combustible liquid.** "Combustible liquid" has the meaning given in Code of Federal Regulations, title 49, section ~~173.115~~ 173.120, paragraph (b), as amended.

[In subpart 9b, following advice from the Minnesota Department of Transportation, the MPCA provides a corrected citation to a transportation related regulation.]//

[For text of subps 9c to 11, see M.R.]

Subp. 11a. **Containment building.** "Containment building" means a hazardous waste management unit that is used to store or treat hazardous waste under the provisions of parts 7045.0550 and 7045.0649.

[In subpart 11a, the MPCA adopts a definition of a containment building that is equivalent to the definition in 40 CFR 260.10. A definition is needed because the MPCA is amending its rules in parts 7045.0550 and 7045.0650 to incorporate federal

regulations on the storage of hazardous waste in containment buildings. It is reasonable to have the same definition that is in the federal regulations when the MPCA is adopting the same substantive standards as the EPA for containment buildings. This language is based on required RCRA Amendment 109.4: "Land Disposal Restrictions for Newly Listed Wastes and Hazardous Debris" = 40 CFR 260.10; as supported at 57 FR 37194-37282, August 18, 1992.]//

[For text of subps 12 to 22a, see M.R.]

Subp. 22b. **Excluded scrap metal.** "Excluded scrap metal" means processed scrap metal, unprocessed home scrap metal, and unprocessed prompt scrap metal.

[In subpart 22b, the MPCA adopts a definition of excluded scrap metal. This definition corresponds to a federal definition found at 40 CFR 261.1(c)(9). Adopting this definition is not required to maintain program authorization from EPA, but the MPCA believes it is reasonable to adopt into the State rules to provide clarification of the regulation of this type of scrap and also to maintain consistency between the State and federal regulations. This language is based on optional RCRA Amendment 157.4: "Land Disposal Restrictions Phase IV--Treatment Standards for Wood Preserving Wastes, Paperwork Reduction and Streamlining, Exemptions From RCRA for Certain Processed Materials; and Miscellaneous Hazardous Waste Provisions" = 40 CFR 261.1(c)(9); as supported at 62 FR 25998-26040, May 12, 1997.]//

Subp. 22c. **Existing drip pad.** "Existing drip pad" means a drip pad that:

A. is or was used to manage hazardous waste with the waste code of F032 and was constructed, or for which the owner or operator had a design and had entered into binding financial or other agreements for construction, before December 6, 1990; or

B. is used to manage hazardous waste with the waste code of F034 or F035 and was constructed, or for which the owner or operator had a design and had entered into binding financial or other agreements for construction, before July 25, 1994.

[In subpart 22c, the MPCA revises rule numbering to accept added subparts.]//

Subp. ~~22c.~~ 22d. **Existing hazardous waste management facility or existing facility.** "Existing hazardous waste management facility" or "existing facility" means a facility which was in operation or for which construction commenced on or before November 19, 1980. See subpart 10b for definition of "construction commenced."

[In subpart 22d, the MPCA revises rule numbering to accept added subparts.]//

[For text of subps 23 to 24a, see M.R.]

Subp. 24b. **Flammable liquid.** "Flammable liquid" has the meaning given in Code of Federal Regulations, title 49, section ~~173.115~~ 173.120, as amended.

[In subpart 24b, following advice from the Minnesota Department of Transportation, the MPCA provides a corrected citation to transportation related regulations.]//

[For text of subps 25 to 30, see M.R.]

Subp. 31. **Generator.** "Generator" means any person, by site, whose act or process produces hazardous waste identified or listed in parts 7045.0102 to ~~7045.0143~~ 7045.0155, or whose act first causes a hazardous waste to become subject to regulation. "Generator" means all size generators including large quantity generators, small quantity generators, and very small quantity generators, unless specifically stated otherwise.

[In subpart 31, the MPCA corrects a citation to a range of rules that changed as parts were added.]//

[For text of subps 32 to 37, see M.R.]

Subp. 37a. **Home scrap metal.** "Home scrap metal" means scrap metal as generated by steel mills, foundries, and refineries, such as turnings, cuttings, punchings, and borings.

[In subpart 37a, the MPCA adopts a federal definition of home scrap metal that corresponds to language found at 40 CFR 261.1(c)(11). Adopting this definition is not required in order to maintain program authorization from the EPA, but the MPCA believes that it is reasonable to adopt into the State rules to maintain consistency with these federal regulations. This language is based on optional RCRA Amendment 157.4: "Land Disposal Restrictions Phase IV--Treatment Standards for Wood Preserving Wastes, Paperwork Reduction and Streamlining, Exemptions From RCRA for Certain Processed Materials; and Miscellaneous Hazardous Waste Provisions" = 40 CFR 261.1(c)(11); as supported at 62 FR 25998-26040, May 12, 1997.]//

Subp. 37b. **Household.** "Household" has the meaning given in Minnesota Statutes, section 115A.96, subdivision 1, paragraph (a).

Subp. ~~37b.~~ 37c. **Household battery.** "Household battery" means a disposable or rechargeable dry cell, generated by a household and commonly used as a power source for household products. "Household battery" includes nickel-cadmium, alkaline, mercuric oxide, silver oxide, zinc oxide, zinc-air, lithium, and zinc-carbon batteries, but excludes lead-acid batteries.

Subp. ~~37c.~~ 37d. **Household hazardous waste.** "Household hazardous waste" has the meaning given in Minnesota Statutes, section 115A.96, subdivision 1, paragraph (b).

Subp. ~~37d.~~ 37e. **Household hazardous waste collection site or collection site.** "Household hazardous waste collection site" or "collection site" as used in part 7045.0310 has the meaning established under Minnesota Statutes, section 115A.96, subdivision 1, paragraph (c).

Subp. ~~37e.~~ 37f. **Household waste.** "Household waste" means any material including garbage, trash, and sanitary waste in septic tanks derived from households, including single and multiple residences, hotels and motels, bunkhouses, ranger stations, crew quarters, campgrounds, picnic grounds, and day-use recreation areas.

[In subparts 37b to 37f, the MPCA revises rule numbering to accept added subparts.]//

[For text of subps 38 to 45, see M.R.]

Subp. 45a. [See repealer.]

[In subpart 45a, the MPCA is repealing the definition of "inorganic solid debris" because this term is no longer used in chapter 7045. This term may have been used in a rule that was previously repealed. Because this term is not used in the current rules, it is reasonable to remove it from the definitions. This change is consistent with required RCRA Amendment 109: "Land Disposal Restrictions for Newly Listed Wastes and Hazardous Debris" = 40 CFR 268.2(h); as supported at 57 FR 37194-37282, August 18, 1992.]//

[For text of subps 45b to 64a, see M.R.]

Subp. 65. **Partial closure.** "Partial closure" means the closure of a hazardous waste management unit in accordance with the applicable closure requirements of parts 7045.0450 to ~~7045.0642~~ 7045.0651 at a facility that contains other active hazardous waste management units. For example, partial closure may include the closure of a tank,

including its associated piping and containment systems, a landfill cell, surface impoundment, waste pile, or other hazardous waste management unit, while other units of the same facility continue to operate.

[In subpart 65, the MPCA corrects citations to ranges of rules that changed as parts were added.]//

[For text of subps 66 to 69, see M.R.]

Subp. 70. **Pile.** "Pile" means any noncontainerized accumulation of solid, nonflowing hazardous waste that is used for treatment or storage and that is not a containment building.

[In subpart 70, the MPCA adds a reference to "containment buildings" to this existing definition in order to maintain equivalency with the corresponding federal regulation found at 40 CFR 260.10. This change is based on required RCRA Amendment 109.4: "Land Disposal Restrictions for Newly Listed Wastes and Hazardous Debris" = 40 CFR 260.10; as supported at 57 FR 37194-37282, August 18, 1992.]//

[For text of subps 70a to 71, see M.R.]

Subp. 71a. **Polychlorinated biphenyls, PCB, or PCB's.** "Polychlorinated biphenyls," "PCB," or "PCB's" ~~are halogenated organic compounds defined~~ have the meaning given "PCB" in ~~accordance with Code of Federal Regulations, title 40, section 761.3, as amended~~ Minnesota Statutes, section 116.36, subdivision 4.

[In subpart 71a, the MPCA revises this definition to include the abbreviation "PCB" and to clarify that "PCB," "PCB's" and "Polychlorinated Biphenyls" mean "PCB" as defined in Minnesota Statutes section 116.36, subdivision 4, in lieu of the previously referenced definition from the federal Toxic Substance Control Act regulations. Since the term PCB is already defined in the Minnesota Statutes that govern the management of PCB's as hazardous wastes, it is reasonable to use the same Minnesota definition for purposes of Minnesota's hazardous waste rules that govern the management of PCB's. The MPCA removes the phrase, "halogenated organic compounds" as superfluous to the statutory definition. The style used by the Office of the Revisor of Statutes is that plurals of abbreviations or acronyms are made by adding an apostrophe followed by a lower case "s" (e.g., PCB's is plural of PCB in State rules).]//

Subp. 72. **Pretreatment unit.** "Pretreatment unit" means a device which:

[For text of item A, see M.R.]

B. receives and treats or stores an influent wastewater which is a hazardous waste as defined in parts 7045.0102 to ~~7045.0143~~ 7045.0155; or generates and accumulates a wastewater treatment sludge which is a hazardous waste as defined in parts 7045.0102 to ~~7045.0143~~ 7045.0155; or treats or stores a wastewater treatment sludge which is a hazardous waste as defined in parts 7045.0102 to ~~7045.0143~~ 7045.0155; and

[In item B, the MPCA corrects 3 citations to ranges of rules that changed as parts were added.]//

C. meets the definition of "tank" as defined in subpart 90.

[For text of subp 72a, see M.R.]

Subp. 72b. **Processed scrap metal.** "Processed scrap metal" means scrap metal that has been manually or physically altered to either separate it into distinct materials to enhance economic value or to improve the handling of materials. Processed scrap metal

includes, but is not limited to, scrap metal that has been baled, shredded, sheared, chopped, crushed, flattened, cut, melted, or separated by metal type (i.e., sorted) and fines, drosses, and related materials that have been agglomerated. Shredded circuit boards being sent for recycling are not processed scrap metal. When recycled, shredded circuit boards are governed by part 7045.0125, subpart 4, item P.

[In subpart 72b, the MPCA adopts a definition of processed scrap metal that corresponds to 40 CFR 261.1(c)(10). Adopting this definition is not required to maintain program authorization from EPA, but the MPCA believes that it is reasonable to adopt into the State rules to provide clarification of the regulation of this type of scrap metal and also to maintain consistency between the State and federal regulations. This change is based on optional RCRA Amendment 157.4: "Land Disposal Restrictions Phase IV--Treatment Standards for Wood Preserving Wastes, Paperwork Reduction and Streamlining, Exemptions From RCRA for Certain Processed Materials; and Miscellaneous Hazardous Waste Provisions" = 40 CFR 261.1(c)(10); as supported at 62 FR 25998-26040, May 12, 1997. The adopted definition is slightly modified from the equivalent federal regulation because the MPCA does not use the same approach as the federal regulations to define "solid waste." As a result, the MPCA does not adopt the portion of the federal definition that removes "processed scrap metal" from the definition of solid waste. In Minnesota, this material remains a hazardous waste that is excluded only if recycled.]//

Subp. 72c. **Prompt scrap metal.** "Prompt scrap metal" means scrap metal as generated by the metal working or fabrication industries and includes such scrap metal as turnings, cuttings, punchings, and borings. Prompt scrap metal is also known as industrial or new scrap metal.

[In subpart 72c, the MPCA adopts a definition of "prompt scrap metal that corresponds to the federal definition at 40 CFR 261.1(c)(12). The MPCA is not required to adopt this definition to maintain program equivalence, but the MPCA believes it is a reasonable addition to the State rules to more clearly address the regulation of this type of scrap and to maintain consistency with federal regulations. This change is based on optional RCRA Amendment 157.4: "Land Disposal Restrictions Phase IV--Treatment Standards for Wood Preserving Wastes, Paperwork Reduction and Streamlining, Exemptions From RCRA for Certain Processed Materials; and Miscellaneous Hazardous Waste Provisions" = 40 CFR 261.1(c)(12); 62 FR 25998-26040; May 12, 1997.]//

[For text of subps 73 to 84, see M.R.]

Subp. 84a. **Sorbent or sorb.** "Sorbent" means a material that is used to soak up free liquids by either adsorption or absorption, or both. "Sorb" means to either adsorb or absorb, or both.

[In subpart 84a, the MPCA adopts a definition of "sorbent or sorb" that is referred to in the requirements that apply to hazardous waste liquids. This definition is the same as the federal definition in 40 CFR 260.10. This change is based on required RCRA Amendment 118.2: "Liquids in Landfills II" = 40 CFR 260.10; as supported at 57 FR 54452-54461, November 18, 1992.]//

Subp. 84b. **Speculative accumulation.** "Speculative accumulation" means accumulation of a hazardous waste before it is recycled. Speculative accumulation does

not include accumulation of a waste if there is a feasible method of recycling for the waste and at least 75 percent by volume or weight of the waste is recycled during a calendar year. The 75 percent requirement applies to each waste of the same type that is recycled in the same way.

Subp. ~~84b.~~ 84c. **Spent material.** "Spent material" means a material that has been used and as a result of contamination can no longer serve the purpose for which it was produced without processing.

[In subparts 84b and 84c, the MPCA revises rule numbering to accept added subparts.]//

[For text of subps 85 to 98a, see M.R.]

Subp. 98b. **Underlying hazardous constituent.** "Underlying hazardous constituent" means any constituent listed in Code of Federal Regulations, title 40, section 268.48, Table UTS - Universal Treatment Standards, as incorporated in part 7045.1390, except fluoride, selenium, sulfides, vanadium, and zinc, which can reasonably be expected to be present at the point of generation of the hazardous waste at a concentration above the constituent-specific UTS treatment standards.

[In subpart 98b, the MPCA adopts the federal definition of "underlying hazardous constituent" found at 40 CFR 268.2(i). The EPA requires the MPCA to adopt this definition in order to maintain program equivalence. The federal definition was the result of the following several amendments to the federal regulations:

- **required RCRA Amendment 124.2: "Land Disposal Restrictions for Ignitable and Corrosive Characteristic Wastes Whose Treatment Standards Were Vacated" = 40 CFR 268.2(i); as supported at 58 FR 29860-29887, May 24, 1993;**
- **required RCRA Amendment 137.4: "Universal Treatment Standards and Treatment Standards for Organic Toxicity Characteristic Wastes and Newly Listed Wastes" = 40 CFR 268.2(i); as supported at 59 FR 47982-48110, September 19, 1994, as amended at 60 FR 242-302, January 3, 1995;**
- **required RCRA Amendment 151: "Land Disposal Restrictions Phase III-Decharacterized Wastewaters, Carbamate Wastes, and Spent Potliners" = 40 CFR 268.2(i); as supported at 61 FR 15566-15660, April 8, 1996; as amended at 61 FR 15660-15668, April 8, 1996; 61 FR 19117, April 30, 1996; 61 FR 33680-33690, June 28, 1996; 61 FR 36419-36421, July 10, 1996; 61 FR 43924-43931, August 26, 1996; and 62 FR 7502-7600, February 19, 1997; and**
- **required RCRA Amendment 167A: "Land Disposal Restrictions Phase IV–Treatment Standards for Metal Wastes and Mineral Processing Wastes" = 40 CFR 268.2(i); as supported at 63 FR 28556-28753, May 26, 1998.]//**

Subp. 98c. **Unfit for use tank system.** "Unfit for use tank system" means a tank system that has been determined through an integrity assessment or other inspection to be no longer capable of storing or treating hazardous waste without posing a threat of release of hazardous waste to the environment.

Subp. ~~98c.~~ 98d. **Universal waste.** "Universal waste" has the meaning given at Code of Federal Regulations, title 40, section 273.9.

Subp. ~~98d.~~ 98e. **Universal waste handler.** "Universal waste handler" has the meaning given at Code of Federal Regulations, title 40, section 273.9.

Subp. ~~98e.~~ 98f. **Universal waste transporter.** "Universal waste transporter" has the meaning given at Code of Federal Regulations, title 40, section 273.9.

[In subparts 98c to 98f, the MPCA revises rule numbering to accept added subparts.]//

[For text of subps 99 to 102b, see M.R.]

Subp. 102c. **Wastewater.** "Wastewater" means waste that contains less than one percent by weight total organic carbon (TOC) and less than one percent by weight total suspended solids (TSS), with the following exceptions:

A. F001, F002, F003, F004, or F005 wastewaters are solvent-water mixtures that contain less than one percent by weight total organic carbon or less than one percent by weight total F001, F002, F003, F004, or F005 solvent constituents listed in ~~part 7045.1355~~ Code of Federal Regulations, title 40, section 268.40, as incorporated in part 7045.1390;

[In item A, the MPCA is replacing a reference to a State rule repealed in this rulemaking with a citation to the equivalent federal regulation being incorporated by reference in this rulemaking. The MPCA also describes where it incorporates the federal language.]//

[For text of items B and C, see M.R.]

Subp. 103. **Wastewater treatment unit.** "Wastewater treatment unit" means a device which:

[For text of item A, see M.R.]

B. receives and treats or stores an influent wastewater which is a hazardous waste as defined in parts 7045.0102 to ~~7045.0143~~ 7045.0155; or generates and accumulates a wastewater treatment sludge which is a hazardous waste as defined in parts 7045.0102 to ~~7045.0143~~ 7045.0155; or treats or stores a wastewater treatment sludge which is a hazardous waste as defined in parts 7045.0102 to ~~7045.0143~~ 7045.0155; and

[In item B, the MPCA corrects 3 citations to ranges of rules that changed as parts were added.]//

[For text of item C, see M.R.]

[For text of subps 104 to 109, see M.R.]

7045.0065 INCORPORATION AND AVAILABILITY OF REFERENCES.

The documents referred to in this ~~chapter may be obtained by contacting the appropriate offices as listed in this part.~~ part are incorporated by reference. The documents are not subject to frequent change, unless otherwise noted, and are available online or through the Minitex interlibrary loan system, unless otherwise noted:

[The MPCA is revising part 7045.0065 "Availability of References," to incorporate by reference in item D below, the documents found in 40 CFR 260.11, (References to Standard Methods, as amended). Because this incorporation by reference is to a more comprehensive list of documents, the MPCA is also repealing existing items below that are either already addressed by the incorporated references listed in 40 CFR 260.11, or that are no longer referenced in the State rules. The MPCA is also revising the numbering to accept added items. Because certain of the referenced documents are not widely published, the MPCA has filed copies of those documents

with Minnesota's State Law Library, as required by Minnesota's Administrative Procedures Act, to assure their availability.]//

~~A. standards of the American Society for Testing and Materials, in the Annual Book of ASTM Standards, 100 Barr Harbor Drive, West Conshohocken, PA 19428-2959, available at the Engineering Library of the University of Minnesota;~~

[The MPCA is removing this reference because references to the ASTM standards pertinent to this rule are now found in the newly incorporated federal references in 40 CFR 260.11.]//

~~B. Minnesota Uniform Fire Code, as incorporated by reference in part 7510.3510;~~

[The MPCA is removing this reference because it is not needed. Each reference to the Minnesota Uniform Fire Code found in these rules is accompanied by the statement, "as incorporated by reference in part 7511.0090," which references the current proper citation.]//

~~C.~~ A. the implicit price deflator for gross ~~national~~ domestic product ~~in~~ from the ~~Survey of Current Business,~~ Bureau of Economic Analysis, United States Department of Commerce~~, 110 4th Street South, Minneapolis, Minnesota 55401, available at the Saint Paul Public Library~~. This document is subject to frequent change and is readily available at the Bureau of Economic Analysis Web site: www.bea.gov;

[In former item C, now item A, the MPCA deletes an obsolete address for obtaining this document. The document is subject to frequent changes and a current version is readily available at the U.S. Department of Commerce's Bureau of Economic Analysis Web site: www.bea.gov**. Also, the MPCA is revising the term "gross national product" to the current federal replacement term, "gross domestic product."]//**

~~D. The Manual on Disposal of Refinery Wastes, volume 1, issued by the American Petroleum Institute, (Washington, D.C., 1969), available at the state of Minnesota Law Library;~~

[The MPCA repeals the language in former item D because it is no longer necessary to incorporate this reference in the State rules. This manual was formerly identified in conjunction with a waste listed in part 7045.0135, subpart 3, item G, subitem (4). In the amendments to part 7045.0135, the MPCA incorporates the federal lists of hazardous waste by reference. In the incorporated federal lists, there is no longer a reference to this manual.]//

~~E. Methods for Chemical Analysis of Water and Wastes, publication number 600/4-79-020, March 1979, issued by the Environmental Monitoring and Support Laboratory, 26 West St. Clair, Cincinnati, Ohio 45268, available at the state of Minnesota Law Library;~~

[The MPCA is removing the reference to Methods for Chemical Analysis of Water and Wastes, in old item E because this method is no longer found to be referenced in these rules.]//

~~F. Standard TM-01-69 of the National Association of Corrosion Engineers, P.O. Box 218340, Houston, Texas 77218, available at the state of Minnesota Law Library;~~

[The MPCA is removing the reference to Standard TM-01-69 in old item F because this method is included in the standardized "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods," EPA publication number SW-846, that the MPCA incorporates through item D of this part.]//

~~G. Test Methods for Evaluating Solid Waste, Physical/Chemical Methods, publication number SW-846 (Second Edition, 1982, as amended by Update I, April 1984, and Update II, April 1985) of the Office of Solid Waste, United States Environmental Protection Agency, 401 M Street S.W., Washington, D.C. 20460. The Second Edition of SW-846 and Updates I and II available at the Minnesota Law Library and from the National Technical Information Service, 5285 Port Royal Road, Springfield, Va. 22161, (703) 487-4600 as Document number PB 87-120-291;~~

[The MPCA is removing old item G because the MPCA now incorporates this reference, "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods," EPA publication number SW-846, through item D of this part.]//

~~H.~~ B. the most recent edition of the Uniform Customs and Practice for Documentary Credits ~~(Publication 290), 1975:~~, published by the International Chamber of Commerce ~~Publishing Corporation, Incorporated, 156 5th Avenue, Suite 820, New York, New York 10017~~; ~~and~~

[The MPCA revises former item H, new item B, both to cite the most recent edition and to remove information about an address provided for obtaining the referenced material. Since physical addresses are subject to periodic change, the MPCA believes that it is reasonable to provide the document title and publisher information from which a reader may obtain the document. The reader can obtain the document through a library or by use of the internet. The MPCA corrects this reference to cite the most recent edition of the referenced material as this is what was intended by the existing rule language found in part 7045.0524.]//

~~I.~~ C. Standard Industrial Classification Manual issued by the Office of Management and Budget, Executive Office of the President of the United States~~, available from the National Technical Information Service, 5285 Port Royal Road, Springfield, Virginia 22161~~ (1987); and

[The MPCA revises former item I, new item C, to remove information about an address provided for obtaining the referenced material. Since physical addresses are subject to periodic change, the MPCA believes that it is reasonable to provide the document title and publisher information from which a reader may obtain the document. The reader can obtain the document through a library or by use of the internet. The standard means for ordering this document is online via the publisher's Web site.]//

D. the documents found in Code of Federal Regulations, title 40, section 260.11, as amended.

[In added item D, the MPCA incorporates by reference the documents found in 40 CFR 260.11, "References to Standard Methods," as amended. Various State rules, many of which are based on federal regulations, refer to the federal standards or test methods. Since they can change over time, it is reasonable to make rules that incorporate the latest standards and test methods. The items incorporated by reference are either common and widely available, or the MPCA has filed copies with Minnesota's State Law Library to assure their availability. Item D includes language from the following RCRA amendments and results in equivalence to the language found in 40 CFR 260.11:

- **required RCRA Amendment 126: "Testing and Monitoring Activities" = 40 CFR 260.11(a); as supported at 58 FR 46040-46051, August 31, 1993. This is**

related to former item G.;

- **required RCRA Amendment 128: "Wastes From the Use of Chlorophenolic Formulations in Wood Surface Protection" = 40 CFR 260.11(a); as supported at 59 FR 458-469, January 4, 1994;**
- **required RCRA Amendment 132: "Wood Surface Protection; Correction" = 40 CFR 260.11(a); as supported at 59 FR 28484, June 2, 1994; and**
- **required RCRA Amendment 154-1.6-7: "Consolidated Organic Air Emission Standards for Tanks, Surface Impoundments, and Containers" = 40 CFR 260.11(a-b); as supported at 59 FR 62896-62953, December 6, 1994.]//**

7045.0071 UNDERGROUND INJECTION.

References to underground injection of waste throughout this chapter are subject to Minnesota statutes and rules prohibiting the discharge of waste or pollutants to the saturated or unsaturated zones.

[In new part 7045.0071, the MPCA clarifies that, despite references to underground injection of waste found in chapter 7045 or in incorporated federal regulations, underground injection is also subject to other Minnesota statutes and rules that prohibit underground injection of waste or pollutants. For example, part 7060.0100 prohibits the discharge of sewage, industrial waste, or other waste to the saturated zone (groundwater) or unsaturated zone (soil above the water table). The purpose of such a restriction, as stated in part 7060.0100, is to preserve and protect underground waters by preventing pollution. Thus, it is reasonable to include in the hazardous waste rules a clarification that reference to underground injection in chapter 7045 is not only subject to hazardous waste rules but also to other statutes and rules governing underground discharges of waste or pollutants.]//

7045.0075 PETITIONS.

Subpart 1. **Petitions for equivalent testing or analytical methods.** Any person seeking to use a testing or analytical method other than those described in parts 7045.0102 to ~~7045.0143,~~ 7045.0155 or 7045.0450 to ~~7045.0642~~ 7045.0651 may petition under these provisions. The person must demonstrate to the satisfaction of the commissioner that the proposed method is equal to or superior to the corresponding method prescribed in parts 7045.0102 to ~~7045.0143,~~ 7045.0155 or 7045.0450 to ~~7045.0642~~ 7045.0651 in terms of its sensitivity, accuracy, precision, and reproducibility. Each petition must include:

[In subpart 1, the MPCA corrects six citations to ranges of rules that changed as parts were added.]//

[For text of items A to D, see M.R.]

E. comparative results obtained from using the proposed method with those obtained from using the relevant or corresponding methods prescribed in parts ~~7045.0100~~ 7045.0102 to ~~7045.0143,~~ 7045.0155 or 7045.0450 to ~~7045.0642~~ 7045.0651;

[For text of items F and G, see M.R.]

After receiving a petition for an equivalent testing or analytical method, the commissioner may request any additional information on the proposed method which the commissioner may reasonably require to evaluate the method.

Subp. 2. **Petitions to exclude a waste produced at a particular facility.** Petitions to exclude a waste produced at a particular facility are as follows:

[For text of items A to D, see M.R.]

E. If the waste is listed with code "T" in part 7045.0135, subitems (1) to (4) apply.

(1) The petitioner must demonstrate that the waste:

(a) does not contain the constituent or constituents in part 7045.0141 that caused the agency to list the waste, using the appropriate test methods prescribed in ~~Code of Federal Regulations, title 40, part 261, appendix III, as amended~~ "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods," EPA publication SW-846, incorporated by reference in part 7045.0065, item D; or

[In unit (a), the MPCA revises the rules to include a specific reference to part 7045.0141, where the hazardous constituent list is located, so that it can be easily found. The MPCA also provides the name and revised citation for the appropriate test method that was formerly located in repealed 40 CFR part 261, Appendix III, but which is now at 40 CFR 260.11, which the MPCA has incorporated by reference at part 7045.0065, item D. This change relates to required RCRA Amendment 126: "Testing and Monitoring Activities" = 40 CFR 260.22(d)(1)(i); as supported at 58 FR 46040-46051, August 31, 1993.]//

[For text of unit (b), see M.R.]

[For text of subitems (2) to (4), see M.R.]

[For text of items F to H, see M.R.]

Subp. 3. **Petition for reduced regulation of hazardous waste being speculatively accumulated or reclaimed prior to use.** The agency may, upon presentation of a petition for those purposes, reduce any of the requirements of chapter 7045 applicable to reclamation, reuse, or recycling. The agency shall apply the standards and criteria set forth below in determining whether to grant a petition to reduce the regulatory requirements for the following recycled hazardous wastes.

[For text of item A, see M.R.]

B. Any person seeking a reduction in regulation of hazardous wastes that are reclaimed and then reused as feedstock within the original ~~primary~~ production process in which the hazardous wastes were generated if the reclamation is an essential part of the production process may petition under these provisions. The agency's decision regarding the petition shall be based on the following standards and criteria:

[In item B, the MPCA deletes the word "primary" from the discussion of feedstocks. Deleting the word "primary" is optional as the effect reduces regulatory stringency. The MPCA believes that adopting this federal change to allow a broader type of production process to qualify for feedstock reuse is reasonable and is adequately protective. This change relates to optional RCRA Amendment 137.5: "Universal Treatment Standards and Treatment Standards for Organic Toxicity Characteristic Wastes and Newly Listed Wastes" = 40 CFR 260.31(a-b); as supported at 59 FR 47982-48110, September 19, 1994; as amended at 60 FR 242-302, January 3, 1995.]//

[For text of subitems (1) to (8), see M.R.]

[For text of item C, see M.R.]

[For text of subp 4, see M.R.]

Subp. 5. **Petition for use of alternate manifest.** A person who meets the criteria in item A may submit a petition to the commissioner for approval of the use of an alternate

manifest system as described in item B. The criteria the commissioner shall use in determining whether to approve the use of the alternate manifest system are provided in item C.

[For text of item A, see M.R.]

B. Upon approval, an alternate manifest system may be used in lieu of the manifest system described in parts 7045.0261 ~~to~~ and 7045.0265. The commissioner shall only approve alternate manifest systems meeting the following criteria:

[In item B, the MPCA revises language to clarify that there are currently no parts between parts 7045.0261 and 7045.0265.]//

(1) The alternate manifest system must include a manifest form to be used by the generator to notify the commissioner each time waste is transported under this subpart. The manifest form must include: a space for the generator's name, mailing address, telephone number, and identification number; a space for the transporter's name and identification number; a space for the name, address, telephone number, and identification number of the recycling facility; a space for the United States Department of Transportation shipping name, hazard class, ~~and~~ identification number, and packing group of the waste as specified in the United States Department of Transportation Code, title 49, parts 171 to ~~179~~ 199; a space for the number and type of containers and total volume of the waste being shipped; a space for the waste identification number as specified in part 7045.0131, 7045.0135, or 7045.0137; a space for the signature of the generator or the generator's authorized representative affirming the correctness of the information; the mailing address of the commissioner; and a statement advising the generator to complete the form and submit it to the commissioner within five working days of transporting waste.

[In subitem (1), the MPCA corrects one of several citations to a range of regulations amended by the U.S. Department of Transportation. The MPCA also follows advice from Minnesota's Department of Transportation to revise language to conform with more recent changes to those federal regulations.]//

[For text of subitems (2) and (3), see M.R.]

[For text of item C, see M.R.]

[For text of subps 6 and 7, see M.R.]

Subp. 8. [See repealer.]

[The MPCA repeals subpart 8 because only the EPA may grant case-by-case extensions to an effective date for land disposal restrictions—the subject of this subpart. This repeal does not change the effect of the rule, which formerly referenced the EPA as the sole authority for granting this type of extension. The MPCA believes that it is reasonable to repeal this subpart since the State cannot accept the application or grant those types of extensions. The MPCA will refer anyone seeking this type of extension to the EPA.]//

Subp. 9. **Petitions to allow land disposal of a prohibited waste.** A person seeking an exemption from a prohibition for the disposal of a restricted hazardous waste in a particular unit or units must submit a petition to the agency and to the EPA demonstrating, to a reasonable degree of certainty, that there will be no migration of hazardous constituents from the disposal unit or injection zone for as long as the wastes remain hazardous. The demonstration to the EPA must include the provisions in Code of Federal Regulations, title 40, section 268.6. The demonstration to the agency must include an

identification of the specific waste and the specific unit for which the demonstration will be made, a waste analysis to describe fully the chemical and physical characteristics of the subject waste, and a comprehensive characterization of the disposal unit site including an analysis of background air, soil, and water quality. The demonstration must also include a monitoring plan that detects migration at the earliest practicable time, and sufficient information to assure the commissioner that the owner or operator of a land disposal unit receiving restricted wastes will comply with other applicable federal, state, and local laws. The person seeking the exemption must also comply with items A to L.

[For text of items A to C, see M.R.]

D. If the owner or operator determines that there is migration of hazardous constituents from the unit, the owner or operator must immediately suspend receipt of prohibited waste at the unit and notify the commissioner in writing within ten days of the determination that a release has occurred. Within 60 days of receiving the notification, the commissioner shall determine whether the owner or operator can continue to receive prohibited waste in the unit and whether the variance is to be revoked. The commissioner shall also determine whether further examination of any migration is warranted under applicable provisions of parts 7045.0450 to ~~7045.0642~~ 7045.0651.

[In item D, the MPCA corrects a citation to a range of rules that changed as parts were added.]//

[For text of items E to I, see M.R.]

J. Before the agency's decision, the applicant must comply with all restrictions on land disposal under ~~parts 7045.1300 to 7045.1380~~ part 7045.1390 when the effective date for the waste has been reached.

[In item J, the MPCA provides the replacement citation for a repealed range of rules.]//

[For text of items K and L, see M.R.]

Subp. 10. [See repealer.]

[The MPCA repeals Subpart 10 because only the EPA may grant petitions for alternate treatment standards or alternative technology, which are the subjects of the repealed subpart. This repeal does not change the effect of the rule, which formerly referenced the EPA as the sole authority for granting this type of petition. The MPCA believes that it is reasonable to repeal this subpart since the State cannot accept the application or grant those types of petitions. The MPCA will refer anyone seeking this type of extension to the EPA.]//

[For text of subps 11 and 12, see M.R.]

7045.0090 ADOPTION AND INCORPORATION BY REFERENCE.

Subpart 1. **Applicability.** Except as specified in subparts 2 and 3, the terms and standards identified in subparts 1a to ~~1e~~ 1h apply whenever federal regulations are ~~adopted or~~ incorporated by reference in this chapter whether or not this part is specifically referenced. Terms used in incorporated Code of Federal Regulations, title 40, and defined in part 7045.0020 or in Minnesota Statutes have the meaning given in part 7045.0020 or in Minnesota Statutes.

[The MPCA recently promulgated part 7045.0090 to address general conditions governing materials incorporated by reference and to list State counterparts to cited

federal regulations. Additional conditions specific to the incorporated material may appear in these rules at the place where the material is incorporated. The MPCA is revising part 7045.0090 in two ways. The first is to organize existing requirements by their federal part/topic. For example, subpart 1d addresses incorporated federal regulations that relate to hazardous waste generators, and subpart 1e addresses incorporated federal regulations relating to hazardous waste transporters. Organizing these subparts by their federal topic makes it easier for the reader to find conditions related to incorporated material. This type of change is only meant to clarify this part. The reasonableness of the existing material in this part was originally justified in the Statement of Need and Reasonableness for the rulemaking in which the MPCA first adopted this part (part 7045.0090 was originally adopted in a rulemaking, "Rules Governing Adoption of Rules by Reference, Corrective Action and Remediation Waste Management, Minnesota Rules Parts 7045.0020, 7045.0090, 7045.0450, 7045.0478, 7045.0485, 7045.0545, 7045.0546, 7045.0547, 7045.0548 and 7045.0552," dated September 8, 2004). In that rulemaking, the MPCA determined that it was reasonable to provide guidance on how cites and cross references within federal regulations would apply in rules when incorporated by reference. While the MPCA is now significantly rearranging existing guidance, the MPCA already established its reasonableness. The second type of change to this part addresses an expanded list of incorporations by reference in this rule. Below, the MPCA discusses added or revised references.]//

Subp. 1a.~~**General**~~ **Specific terms.** ~~Terms defined in Minnesota Rules and Minnesota Statutes that are also defined in Code of Federal Regulations, title 40,~~ The following terms and phrases have the meaning given ~~in part 7045.0020 and the applicable Minnesota statute~~.

[The MPCA revises and restructures old item A, into a new subpart 1a, under which it defines specific terms.]//

A. "EPA" and "agency" mean the Pollution Control Agency ~~and its commissioner~~.

[In item A, the MPCA clarifies that when it incorporates federal regulations into rule by reference, references in federal regulations to "EPA" or to "agency" mean the Minnesota Pollution Control Agency. The MPCA removes a reference to "commissioner" in this subpart since commissioner is addressed in item B.]//

~~B. "Generator" has the meaning given in part 7045.0020.~~

[The MPCA moves this definition into item D.]//

~~C. "Hazardous waste" has the meaning given in part 7045.0020.~~

[The MPCA moves this definition into item D.]//

~~D.~~ B. "Regional administrator," "administrator," and "director" mean the commissioner of the Pollution Control Agency.

[In item B, the MPCA adds the term administrator because that term is sometimes used in federal regulations that are incorporated by reference and clarifies that this term also means the MPCA commissioner.]//

~~E.~~ C. "State," "authorized state," "approved state," or "approved program" means Minnesota.

~~F. "Waste" has the meaning given in part 7045.0020.~~

[The MPCA moves this definition into a new item D.]//

D. "Generator," "hazardous waste," and "waste" have the meanings given in part 7045.0020.

[In item D, the MPCA consolidates terms that were previously defined in former items B, C, and F.]//

Subp. 1b. **Hazardous waste management system general standards; Code of Federal Regulations, title 40, part 260.** References to the petition processes established in ~~"~~Code of Federal Regulations, title 40, part 260, subpart C,~~" or "Code of Federal Regulations, title 40,~~ or Code of Federal Regulations, title 40, sections 260.20 to 260.41,~~"~~ mean the petition processes established in part 7045.0075.

[In subpart 1b, the MPCA clarifies that references in incorporated federal language to the petition process in 40 CFR part 260, subpart C, mean the State counterpart found in part 7045.0075.]//

Subp. 1c. **Identification and listing standards; Code of Federal Regulations, title 40, part 261.**

A. References to any section in ~~"~~Code of Federal Regulations, title 40, part 261, ~~subpart C," "~~ subparts A to C, or to Code of Federal Regulations, title 40, sections ~~261.20~~ 261.1 to 261.24,~~" or "characteristic hazardous waste"~~ mean ~~the characteristics established in part~~ parts 7045.0102 to 7045.0131 or part 7045.0214, subpart 3.

[In item A, the MPCA clarifies that references in incorporated federal language to 40 CFR part 261, subparts A to C, regarding the identification and listing of hazardous wastes, mean the State counterparts found in parts 7045.0102 to 7045.0131 and 7045.0214, subpart 3.]//

B. References to ~~"~~Code of Federal Regulations, title 40, section 261.4,~~"~~ mean the exclusions listed in part 7045.0120.

C. References to ~~"~~Code of Federal Regulations, title 40, section 261.6,~~"~~ mean the use, reuse, recycling, and reclamation requirements of part 7045.0125.

[In items B and C, the MPCA eliminates unnecessary quotation marks]//

D. References to any section in Code of Federal Regulations, title 40, part 261, subpart D, or to Code of Federal Regulations, title 40, sections 261.30 to 261.38, mean parts 7045.0135 to 7045.0145.

[In item D, the MPCA clarifies that references in incorporated federal language to 40 CFR part 261, subpart D, regarding the lists of hazardous wastes, mean the State counterparts found in parts 7045.0135 to 7045.0145.]//

Subp. 1d. **Standards applicable to generators of hazardous waste, Code of Federal Regulations, title 40, part 262.** References to Code of Federal Regulations, title 40, part 262, or to any section in Code of Federal Regulations, title 40, sections 262.10 to 262.70, mean parts 7045.0205 to 7045.0325.

[In subpart 1d, the MPCA clarifies that references in incorporated federal language to 40 CFR part 262, regarding generators of hazardous wastes, mean the State counterparts found in parts 7045.0205 to 7045.0325.]//

Subp. 1e. **Standards applicable to transporters of hazardous waste, Code of Federal Regulations, title 40, part 263.** References to any section in Code of Federal Regulations, title 40, sections 263.10 to 263.31, mean parts 7045.0351 to 7045.0397.

[In subpart 1e, the MPCA clarifies that references in incorporated federal language to 40 CFR sections 263.10 to 263.31, regarding the transportation of hazardous waste, mean the State counterparts found in parts 7045.0351 to 7045.0397.]//

Subp. ~~1d~~ 1f. **Permitted and interim status standards for owners and operators of hazardous waste treatment, storage, and disposal facilities; Code of Federal Regulations, title 40, parts 264 and 265.**

A. References to "~~Code~~ Code of Federal Regulations, title 40, part 264, subpart F," "~~Code~~ Code of Federal Regulations, title 40, sections 264.90 to 264.101," "~~Code~~ Code of Federal Regulations, title 40, part 265, subpart F," or "Code of Federal Regulations, title 40, sections 265.90 to 265.94," mean the requirements of parts 7045.0484, 7045.0485, 7045.0590, and 7045.0592 relating to groundwater protection, monitoring, and corrective action for releases.

[In item A, the MPCA clarifies that references in incorporated federal language to 40 CFR part 264, subpart F, or to 265, subpart F, regarding the operation of hazardous waste facilities, mean the State counterparts found in parts 7045.0484, 7045.0485, 7045.0590, and 7045.0592.]//

B. References to "~~Code~~ Code of Federal Regulations, title 40, part 264, subpart H," "~~Code~~ Code of Federal Regulations, title 40, sections 264.140 to 264.151," "~~Code~~ Code of Federal Regulations, title 40, part 265, subpart H," or "Code of Federal Regulations, title 40, sections 265.140 to 265.150," mean the financial assurance requirements of parts 7045.0498 to 7045.0524 and 7045.0608 to 7045.0624.

[In item B, the MPCA clarifies that references in incorporated federal language to 40 CFR part 264, subpart H, or to 265, subpart H, regarding financial assurance for hazardous waste facilities, mean the State counterparts found in parts 7045.0498 to 7045.0524 and 7045.0608 to 7045.0624.]//

C. References to "~~Code~~ Code of Federal Regulations, title 40, part 264, subpart O," "~~Code~~ Code of Federal Regulations, title 40, sections 264.340 to 264.351," "~~Code~~ Code of Federal Regulations, title 40, part 265, subpart O," or "Code of Federal Regulations, title 40, sections 265.340 to 265.352," mean the thermal treatment standards of parts 7045.0542 and 7045.0640.

[In item C, the MPCA clarifies that references in incorporated federal language to 40 CFR part 264, subpart O, or to 265, subpart O, regarding thermal treatment facilities, mean the State counterparts in parts 7045.0542 and 7045.0640.]//

D. References to "~~Code~~ Code of Federal Regulations, title 40, part 264, subpart N," "~~Code~~ Code of Federal Regulations, title 40, sections 264.300 to 264.317," "~~Code~~ Code of Federal Regulations, title 40, part 265, subpart N," or "Code of Federal Regulations, title 40, sections 265.300 to 265.316," mean the landfill standards of parts 7045.0538 and 7045.0638.

[In item D, the MPCA clarifies that references in incorporated federal language to 40 CFR part 264, subpart N, or to 265, subpart N, regarding landfills, mean the State counterparts in parts 7045.0538 and 7045.0638.]//

Subp. ~~1e~~ 1g. **Permit requirements; Code of Federal Regulations, title 40, part 270.** References to "~~Code~~ Code of Federal Regulations, title 40, part 270, subparts A to H," "~~Code~~ Code of Federal Regulations, title 40, sections 270.1 to 270.230," or any other reference to a hazardous waste facility permit mean the hazardous waste facility permit requirements in parts 7001.0500 to 7001.0730.

[In subpart 1g, the MPCA clarifies that references in incorporated federal language to 40 CFR part 270, subparts A to H, regarding hazardous waste permits mean the State counterparts in parts 7001.0500 to 7001.0730.]//

Subp. 1h. **Other standards.**

[The MPCA creates subpart 1h to address the adoption of standards that do not fit into any of the existing categories.]//

A. References to Code of Federal Regulations, title 40, part 273, mean part 7045.1400 (universal waste).

[In new item A, the MPCA clarifies that references in incorporated federal language to 40 CFR part 273, regarding universal wastes, mean the State counterparts in part 7045.1400.]//

B. References to Code of Federal Regulations, title 40, part 279, mean parts 7045.0692 to 7045.0990 (used oil).

[In new item B, the MPCA clarifies that references in incorporated federal language to 40 CFR part 279, regarding used oil, mean the State counterparts in parts 7045.0692 to 7045.0990.]//

C. References to underground injection of waste in any Code of Federal Regulations incorporated in this chapter are subject to Minnesota Statutes and rules prohibiting the discharge of waste or pollutants to the saturated or unsaturated zones.

[In new item C, the MPCA clarifies that Minnesota statutes and rules prohibit underground injection of waste or pollutants. This is not a change but only a clarification of existing rules and statutes.]//

D. References to Code of Federal Regulations, title 40, part 266, subpart C, mean part 7045.0665 (uses constituting disposal).

[In item D, the MPCA clarifies that references in incorporated federal language to 40 CFR part 266, subpart C, mean the State counterparts in part 7045.0665.]//

E. References to Code of Federal Regulations, title 40, part 266, subpart F, mean part 7045.0675 (precious metal recovery).

[In item E, the MPCA clarifies that references in incorporated federal language to 40 CFR part 266, subpart F, mean the State counterparts in part 7045.0675.]//

F. References to Code of Federal Regulations, title 40, part 266, subpart G, mean part 7045.0685 (spent lead-acid batteries being reclaimed).

[In item F, the MPCA clarifies that references in incorporated federal language to 40 CFR part 266, subpart G, mean the State counterparts in part 7045.0685.]//

[For text of subps 2 and 3, see M.R.]

Subp. 4. **Applicable law.** When federal regulations incorporated into this chapter cite additional federal regulations and when this chapter does not address whether the cited federal regulations or corresponding state rules apply, state rules shall apply.

[In subpart 4, the MPCA clarifies that, unless otherwise specified, when either Minnesota Rules or corresponding RCRA regulations could apply, the most stringent rule or regulation governs.]//

7045.0102 MIXTURES OF WASTES.

[The MPCA revises part 7045.0102 to clarify the existing requirements and to make the rule correspond more closely to parallel requirements in 40 CFR section 261.3. Except for several new federal exclusions being added to subpart 2, item E, subitems (6) and (7), the revisions to this rule part are intended to clarify the rule without changing its meaning. The MPCA intends to continue regulating the same mixtures

that were considered to be hazardous under the former rule, and, except for the newly added exceptions in Item E, to continue excluding those mixtures that were excluded from regulation under the former rule.]//

Subpart 1. **Scope.** Except as provided in part 7045.0665, subpart 1, mixtures of wastes are ~~listed in subparts 2 and 3~~ identified in subpart 2.

[In subpart 1, the MPCA replaces the word "listed," which has a special meaning in this chapter, with the more appropriate term "identified." The MPCA also removes an obsolete reference to subpart 3 that was repealed in a prior rulemaking.]//

Subp. 2. **Mixtures of hazardous and nonhazardous wastes.** The mixing of a hazardous waste with a nonhazardous waste as described in this subpart constitutes treatment. Generators who mix hazardous and nonhazardous wastes on site must meet the requirements of part 7045.0211 for generators with on-site facilities. Mixtures excluded under part 7045.0075, subpart 2, are excluded from regulation. Wastes excluded under this subpart are subject to part 7045.1390, even if they no longer exhibit a characteristic at the point of land disposal.

[In subpart 2, the MPCA adds two new sentences. The first clarifies that wastes excluded through the petition process in part 7045.0075, subpart 2, are not further addressed by this mixtures rule. The existing rule, and corresponding 40 CFR section 261.3, repeated a similar phrase at different units throughout the part. In this introductory paragraph, the MPCA adds one reference to the waste petition process to consolidate several redundant references. In the second new sentence, the MPCA is adding a requirement that corresponds to 40 CFR 261.3(g)(3). This is based on RCRA Amendment 192A.2: "Mixture and Derived-From Rules Revisions" = 40 CFR 261.3(g)(3); as supported at 66 FR 27266-27297, May 16, 2001. This sentence helps the reader to understand that treatment standards for land disposal may be more restrictive than the criteria used for determining whether the waste is characteristic waste.]//

A. A mixture is a hazardous waste if it ~~is a mixture of nonhazardous waste and any waste which is hazardous solely because it exhibits the characteristic of ignitability, corrosivity, oxidativity, or reactivity as described in part 7045.0131, unless the resulting mixture does not exhibit any of the characteristics of hazardous waste as defined in part 7045.0131~~ contains a waste that is hazardous solely because it exhibits any of the characteristics of ignitability, corrosivity, oxidativity, or reactivity identified in part 7045.0131, or contains a hazardous waste listed in part 7045.0135 solely because of ignitability, corrosivity, or reactivity, and the resulting mixture exhibits any characteristic of a hazardous waste identified in part 7045.0131.

[Former item A language stated that wastes that exhibit hazardous characteristics solely for ignitability, reactivity, corrosivity or oxidativity are not regulated as hazardous waste if, after mixing, they no longer display those characteristics. The MPCA intends the effect of item A to remain the same, however, it rephrases item A to make three changes.//

First, the MPCA changes the identified characteristics to plural form instead of singular in order to clarify that this item also applies when mixtures contain more than one of the characteristics (e.g., a waste that is both corrosive and ignitable).//

The use of the term "solely" is meant to clarify that the waste could only be hazardous because of those specific characteristics, not that it was limited to only one of those characteristics. To qualify for this provision, a waste must not be hazardous for any reason other than ignitability, corrosivity, oxidativity or reactivity (e.g., may not be characteristic for or listed based on toxicity or lethality).//

The second change is that the MPCA revised item A to address both listed and characteristic waste that, when mixed, continues to exhibit a characteristic of hazardous waste. This was done by incorporating the contents of three former items into item A. Item A addresses mixtures of characteristic wastes that had been addressed in former item A and in the second part of former item C. It also addresses mixtures of listed wastes formerly addressed in the first part of former item C and former item B. Former item B stated that mixtures containing wastes that were listed for ignitability, corrosivity, or reactivity were not hazardous if the resulting mixture was not characteristic. Former item E further addressed this concept by excluding from regulation sewered wastes that were listed for reasons of ignitability, corrosivity, and reactivity. The MPCA combines all of these types of mixtures into new item A.//

In new item A the MPCA addresses mixtures resulting from both categories of wastes—those that are hazardous because they are listed and those that are hazardous because they exhibit a characteristic. Regardless of how the waste is initially identified as hazardous, if, after mixing, the waste still exhibits one of the specified characteristics (ignitable, reactive, oxidative or corrosive), it continues to be regulated as a hazardous waste. A mixture of these types of wastes, whether it is derived from a listed waste or a characteristic waste, will be regulated as hazardous if the resulting mixture has a hazardous characteristic.//

Finally, the MPCA rephrases this part to use more affirmative language to state that the mixture is a hazardous waste if it exhibits a characteristic (in lieu of the previous language which said that it is a hazardous waste unless it does not exhibit a characteristic).//

Although the format of these mixture provisions has changed, the MPCA intends that mixtures of these types of waste are not hazardous wastes if they do not exhibit these characteristics of hazardous waste. This is not a changed requirement from the previous rule, but is only a rephrasing intended to simplify and clarify the existing requirement.//

The structure of the State mixtures rule differs significantly from the federal counterparts. However, there are many parallel elements, and the EPA determined that the State and federal rules are equivalent. The MPCA intends for its mixtures rule to continue to regulate the same wastes as the federal regulation and to remain equivalent to the federal mixtures rule.//

In addition to its initiative to reorganize and clarify its mixtures rules, the MPCA is also adopting changes based on changes the EPA made to corresponding federal

regulations. Further discussion of recent amendments to the federal mixtures language as it relates to the changes being made to this part are discussed in the following federal amendments:

- **RCRA Amendment 192A.2: "Mixture and Derived-From Rules Revisions" = 40 CFR 261.3(g)(1)-(3); as supported at 66 FR 27266-27297, May 16, 2001.**
- **RCRA Amendment 194: "Mixture and Derived-From Rules Revision II" = 40 CFR 261.3(g)(4); as supported at 66 FR 50332-50334, October 3, 2001.]//**

B. Except as provided in item D or E, a mixture is a hazardous waste if it ~~is a mixture of nonhazardous waste and any waste listed in part 7045.0135 solely because of ignitability, corrosivity, or reactivity, unless:~~ contains a waste listed for toxicity in part 7045.0135.

~~(1) the resulting mixture does not exhibit any of the characteristics of hazardous waste as defined in part 7045.0131;~~

~~(2) the resulting mixture has been excluded from regulation pursuant to part 7045.0075, subpart 2; or~~

~~(3) the nonhazardous waste is exempt from regulation under part 7045.0120, item I, and the resultant mixture no longer exhibits any characteristic of hazardous waste as defined in part 7045.0131 for which the hazardous waste listed in part 7045.0135 was listed.~~

[Item B is significantly revised to only refer to mixtures of wastes that are listed for reasons of toxicity. Mixtures of wastes that are listed for toxicity were formerly regulated in former items C, D and E, and their regulatory status has not changed as a result of this revision. A mixture that contains a waste listed for toxicity remains a hazardous waste.//

Although this is not a new requirement and need not be justified, the MPCA believes it is reasonable to repeat the reasoning behind this requirement. Unlike other waste characteristics in new item A, there is no provision in new item B that a listed toxic waste will somehow, after mixing, not exhibit a characteristic and, therefore, be excluded from regulation. This is because the MPCA has special concerns about the nature of toxic wastes and about disguising toxicity through dilution. This is different than the concerns with other waste characteristics. The types of wastes that are listed for toxicity can include carcinogens and other extremely hazardous or insidious chemicals. A listing for toxicity can be based on very complex reasons and toxicity cannot be evaluated as simply as a characteristic such as corrosivity, reactivity or ignitability. If a waste that is ignitable, corrosive or reactive is mixed with another waste so that those original properties are no longer present (i.e., it will no longer burn, corrode or react) then it is reasonable to cease to manage it as a hazardous waste for those characteristics. But, if a waste contains a toxic or lethal component, such as a carcinogen or poison, it is not reasonable to simply allow it to be diluted through mixing below a regulatory threshold for that carcinogen or poison. A waste may be listed for toxicity through a number of routes and there is no way, other than a complicated delisting petition, to determine whether it is safe to cease to regulate it as toxic. For this reason, and because of the concern that dilution does not constitute proper treatment for toxic materials, it is reasonable to provide specific limits on the

activity of mixing toxic wastes. The MPCA discusses regulating toxic wastes further below relating to changes to former item C.//

While the Minnesota-only characteristic "lethality" is related to toxicity, the MPCA provides no discussion of lethality in item B because lethality is solely a characteristic and is not currently used as the basis for any waste to be listed. The argument not to allow dilution of toxic waste would similarly apply to lethal waste.//

The MPCA adds the phrase, "except as provided in item E," to item B because it refers to specific exceptions for sewered wastes. These specific exceptions were formerly identified in old item F and are now provided in new item E.//

The MPCA is deleting the former introductory paragraph and former subitem (1) because those types of wastes are being addressed in new item A (a mixture containing waste listed for ignitability, corrosivity or reactivity is hazardous unless it no longer exhibits any of those characteristics).//

The MPCA is deleting former subitem (2) because its effect is addressed by a phrase added at the end of the introductory paragraph in subpart 2 (a mixture of a waste that has been removed from regulation as a hazardous waste as a result of a petition is no longer regulated as hazardous waste).//

The MPCA is removing former subitem (3) to delete the specific reference to mixtures of mining waste that are excluded from regulation in part 7045.0120, subpart 1, item I. The reference to this exclusion here is an unnecessary duplication, and is even confusing since the other exclusions in part 7045.0120 are not also referenced here. Wastes that are exempted from regulation in part 7045.0120 are not considered to be hazardous waste, and are not the subject of this mixtures rule. The type of mixture that was formerly addressed in this subpart (a mixture of a nonhazardous waste, excluded mining waste, and a waste that was listed for ignitability, reactivity or corrosivity) is now being addressed in new item A.//

C. Except as provided in item D, a mixture is a hazardous waste if it ~~is a nonsewered mixture of nonhazardous waste and any waste listed in part 7045.0135 (other than wastes listed solely because of ignitability, corrosivity, or reactivity) or any waste which is hazardous because it exhibits the characteristics of toxicity or lethality as identified in part 7045.0131 unless the resulting mixture has been excluded from regulation pursuant to part 7045.0075, subpart 2~~ contains a waste that exhibits the characteristic of toxicity or lethality identified in part 7045.0131.

[The MPCA has rephrased item C to more clearly state the existing requirement that mixtures of wastes that are characteristic for toxicity or lethality remain hazardous wastes. As discussed above for new item A, the MPCA believes that when mixtures contain wastes that are characteristic or listed for ignitability, corrosivity, oxidativity or reactivity and the mixture no longer exhibits any of those characteristics, it is reasonable to exempt these mixtures from regulation as a hazardous waste. However, as discussed in the note above, the MPCA views wastes that exhibit the characteristics of toxicity or lethality differently. The MPCA views the mixing of wastes that exhibit

the characteristics of toxicity or lethality as dilution and not a valid treatment and is not proposing any change to the effect of this item.//

In item C the MPCA also removes the reference to "nonsewered" mixtures because the changes made in this part eliminate the need to distinguish between sewered and nonsewered waste management. Item D and new item E provide specific exceptions for sewered mixtures, but in all other cases, the regulation of the wastes under this subpart does not change depending on whether they are sewered or not. The MPCA has also deleted a phrase addressing mixtures of wastes that are listed for toxicity because those types of mixtures are addressed in new item B. The MPCA deleted a phrase addressing mixtures of wastes that are characteristic for either toxicity or lethality because those types of mixtures are more clearly addressed in this item as it is rephrased.]//

D. A mixture is a hazardous waste if it is a sewered mixture of nonhazardous waste and any waste which is hazardous because it exhibits the characteristics of toxicity or lethality as defined in part 7045.0131 unless:

(1) prior to entering the sewer the resulting mixture no longer exhibits the characteristic of toxicity or lethality; and

(2) the sewering of the mixture has been approved by the agency pursuant to parts 7045.0221 to 7045.0255.

This provision does not apply to those mixtures defined as nonhazardous under item ~~F~~ E.

~~E. Except as provided in item F, a mixture is a hazardous waste if it is a sewered mixture of nonhazardous waste and any waste listed in part 7045.0135 (other than wastes listed solely because of ignitability, corrosivity, or reactivity) unless the resulting mixture has been excluded from regulation under part 7045.0075, subpart 2.~~

[The requirements of former item E are being deleted, because the wastes that were identified in former item E (wastes that are listed for toxicity) are being addressed in new item B without changing the effect of the rule. New item B does not distinguish between whether the waste is sewered or not. Except as specifically excluded under item E, if a waste is listed for toxicity, it remains a hazardous waste regardless of whether the resulting mixture is sewered or nonsewered.]//

~~F.~~ E. ~~Except as otherwise provided in item A, B, or D, the following sewered mixtures of nonhazardous wastes and hazardous wastes listed in part 7045.0135~~ Except as otherwise provided in item A, B, or D, the following sewered mixtures are not hazardous wastes if the generator can demonstrate that the mixture consists of wastewater, the discharge of which is subject to regulation under ~~the Federal Water Pollution Control Act Amendments of 1972, United States Code, title 33, section 1317(b) or 1342, as amended~~ either section 307(b) or 402 of the Clean Water Act, including wastewater at facilities which have eliminated the discharge of wastewater; and

[This new item E includes the provisions that were formerly in item F, mixtures of wastes that were discharged to the sewer under the Clean Water Act, without changing the effect of the existing rule. In this item the MPCA identifies a number of mixtures of specific listed hazardous wastes and excludes them from regulation as hazardous waste when they are discharged according to the Clean Water Act requirements. New item E and subitems (1), (2), (4) and (5) contain the same

provisions as the introduction and corresponding subitems found in former item F. Subitem (3) was also included in former item F, but has been revised to correspond to the exception provided in 261.3(a)(2)(iv)(C). Each exception in item E is based on the corresponding federal provision. Subitems (6) and (7) are new and are discussed below. The MPCA is also replacing an obsolete reference to the Federal Water Pollution Control Act with a reference to the Clean Water Act. The revised State language provides equivalence to the federal language and addresses changes found in RCRA Amendment 192A.2: "Mixture and Derived-From Rules Revisions" = 40 CFR 261.3(a)(2)(iv); as supported at 66 FR 27266-27297, May 16, 2001.]//

(1) one or more of the following spent solvents listed in part 7045.0135, subpart 1a, item B: carbon tetrachloride, tetrachloroethylene, trichloroethylene; provided that the solvents are discharged into the wastewater stream as a result of normal manufacturing operations and provided further that the maximum total weekly usage of these solvents, other than the amounts that can be demonstrated not to be discharged to wastewater, divided by the average weekly flow of wastewater into the headworks of the facility's wastewater treatment or pretreatment system does not exceed one part per million;

[In subitem (1), the MPCA corrects an existing citation to more accurately specify the correct listed wastes. The federal regulation that corresponds to this subitem (40 CFR 261.3(a)(2)(iv)(A)) cites 40 CFR part 261.31, which correlates to part 7045.0135, subpart 1a, item B.]//

(2) one or more of the following spent solvents listed in part 7045.0135, subpart 1a, item B: methylene chloride, 1,1,1-trichloroethane, chlorobenzene, o-dichlorobenzene, cresols, cresylic acid, nitrobenzene, toluene, methyl ethyl ketone, carbon disulfide, isobutanol, pyridine, spent chlorofluorocarbon solvents; provided that the solvents are discharged into the wastewater stream as a result of normal manufacturing operations and provided further that the maximum total weekly usage of these solvents, other than the amounts that can be demonstrated not to be discharged to wastewater, divided by the average weekly flow of wastewater into the headworks of the facility's wastewater treatment or pretreatment system does not exceed 25 parts per million;

[In subitem (2), the MPCA corrects an existing citation to more accurately specify the correct listed wastes. The federal regulation that corresponds to this subitem (40 CFR 261.3(a)(2)(iv)(B)) cites 40 CFR part 261.31, which correlates to part 7045.0135, subpart 1a, item B.]//

(3) heat exchanger bundle cleaning sludge from the petroleum refining industry, EPA Hazardous Waste No. K050 as listed in part 7045.0135, subpart 1a, item C;

[The MPCA amends subitem (3) to clarify that the number, K050, is an EPA Hazardous Waste Number.]//

(4) a discarded commercial chemical product, or chemical intermediate listed in part 7045.0135, subpart 1a, item D, arising from de minimis losses of these materials from manufacturing operations in which these materials are used as raw materials or are produced in the manufacturing process. De minimis losses include those from normal material handling operations (such as spills from the unloading or transfer of materials from bins or other containers or leaks from pipes, valves, or other devices used to transfer materials); minor leaks of process equipment, storage tanks or containers; leaks from well-maintained pump packings and seals; sample purgings; relief device discharges; discharges from safety showers and rinsing and cleaning of personal safety equipment;

and ~~rinsing~~ rinsate from empty containers or from containers that are rendered empty by that rinsing; ~~or~~

[In subitem (4), the MPCA corrects an existing citation to more accurately specify the correct listed wastes. The federal regulation that corresponds to this subitem (40 CFR 261.3(a)(2)(iv)(D)) cites 40 CFR part 261.33, which correlates to part 7045.0135, subpart 1a, item D. In addition, the MPCA is amending the rule to correspond to the federal regulation by changing this use of the verb "rinsing" to the more appropriate use of the noun "rinsate."]//

(5) wastewater resulting from laboratory operations containing toxic wastes listed in part 7045.0135, provided that the annualized average flow of laboratory wastewater does not exceed one percent of total wastewater flow into the headworks of the facility's wastewater treatment or pretreatment system, or provided the waste's combined annualized average concentration does not exceed one part per million in the headworks of the facility's wastewater treatment or pretreatment facility. Toxic wastes used in laboratories that are demonstrated not to be discharged to wastewater are not to be included in this calculation;

(6) one or more of the following wastes listed in part 7045.0135, subpart 1a, item C: wastewaters from the production of carbamates and carbamoyl oximes (EPA Hazardous Waste No. K157), provided that the maximum weekly usage of formaldehyde, methyl chloride, methylene chloride, and triethylamine, including all amounts that can not be demonstrated to be reacted in the process, destroyed through treatment, or is recovered (i.e., what is discharged or volatilized), divided by the average weekly flow of process wastewater prior to any dilutions into the headworks of the facility's wastewater treatment system does not exceed a total of five parts per million by weight; or

[In subitem (6), the MPCA adopts new language that corresponds to federal language found at 40 CFR 261.3(a)(2)(iv)(F). The MPCA believes that it is reasonable to exclude these waste streams because their discharge is adequately regulated through the Clean Water Act. This language is based on an optional provision in RCRA Amendment 140: "Carbamate Production Identification and Listing of Hazardous Waste" = 40 CFR 261.3(a)(2)(iv)(F); as supported at 60 FR 7824-7859, February 9, 1995; as amended at 60 FR 19165, April 17, 1995; and at 60 FR 25619, May 12, 1995.]//

(7) wastewaters derived from the treatment of one or more of the following wastes listed in part 7045.0135, subpart 1a, item C: organic waste, including heavy ends, still bottoms, light ends, spent solvents, filtrates, and decantates, from the production of carbamates and carbamoyl oximes (EPA Hazardous Waste No. K156), provided that the maximum concentration of formaldehyde, methyl chloride, methylene chloride, and triethylamine prior to any dilutions into the headworks of the facility's wastewater treatment system does not exceed a total of five milligrams per liter.

[In subitem (7), the MPCA adopts new language that corresponds to federal language found at 40 CFR 261.3(a)(2)(iv)(G). The MPCA believes that it is reasonable to exclude these waste streams because their discharge is adequately regulated through the Clean Water Act. This language is based on an optional provision in RCRA Amendment 140: "Carbamate Production Identification and Listing of Hazardous Waste" = 40 CFR 261.3(a)(2)(iv)(G); as supported at 60 FR 7824-7859, February 9,

1995; as amended at 60 FR 19165, April 17, 1995; and at 60 FR 25619, May 12, 1995.]//

~~G.~~ For the purpose of this ~~part~~ item, headworks refers to the influent plumbing of a privately owned national pollutant discharge elimination system, state disposal system, or pretreatment facility or to the facility's point of discharge to a municipal collection system when the treatment facility is a publicly owned wastewater treatment facility.

[The MPCA is amending former item G to become a paragraph at the end of new item E because the definition that it provides is only relevant to item E. The MPCA does not change the definition of "headworks" but clarifies that it applies only to item E, and not to all of part 7045.0102.]//

F. A mixture of used oil and a hazardous waste is a hazardous waste except as provided in part 7045.0800.

[The MPCA adds new item F, corresponding to 40 CFR part 261.3 (a)(2)(v), to address mixtures of used oil and hazardous waste. Item F does not provide new conditions for exceptions but instead refers readers to the rules that address used oil management. This item clarifies but does not change the regulatory status of used oil mixtures.]//

~~H.~~ G. Any mixture of a waste from the extraction, beneficiation, and processing of ores and minerals excluded under part 7045.0120, subpart 1, item I, and any other waste exhibiting a characteristic of hazardous waste under part 7045.0131 is a hazardous waste only if:

[The MPCA changes the numbering from former item H to item G. The MPCA also corrects the reference to accurately reflect that the citation is to part 7045.0120, subpart 1, item I.]//

[For text of subitems (1) and (2), see M.R.]

[For text of subp 3, see M.R.]

7045.0120 EXEMPTIONS AND SPECIAL REQUIREMENTS.

Subpart 1. **Exempt types of waste.** The following waste may be stored, labeled, transported, treated, processed, and disposed of without complying with the requirements of this chapter:

[For text of items A to H, see M.R.]

I. waste from the extraction, beneficiation, and processing of ores and minerals, including coal, ~~and including~~ phosphate rock, and overburden from the mining of uranium ore. For purposes of this item, beneficiation of ores and minerals is restricted to the following activities: crushing; grinding; washing; dissolution; crystallization; filtration; sorting; sizing; drying; sintering; pelletizing; briquetting; calcining to remove water or carbon dioxide; roasting, autoclaving, or chlorination in preparation for leaching (except where the roasting, autoclaving, or chlorination/leaching sequence produces a final or intermediate product that does not undergo further beneficiation or processing); gravity concentration; magnetic separation; electrostatic separation; flotation; ion exchange; solvent extraction; electrowinning; precipitation; amalgamation; and heap, dump, vat, tank, and in situ leaching. For the purposes of this item, waste from the processing of ores and minerals includes only the following wastes as generated:

(1) slag from primary copper processing;

(2) slag from primary lead processing;
(3) red and brown muds from bauxite refining;
(4) phosphogypsum from phosphoric acid production;
~~(2)~~ (5) slag from elemental phosphorus production;
~~(3)~~ (6) gasifier ash from coal gasification;
~~(4)~~ (7) process wastewater from coal gasification;
(8) calcium sulfate wastewater treatment plant sludge from primary copper processing;
~~(5)~~ (9) slag tailings from primary copper processing;
~~(6)~~ (10) fluorogypsum from hydrofluoric acid production;
(11) process wastewater from hydrofluoric acid production;
(12) air pollution control dust or sludge from iron blast furnaces;
~~(7)~~ (13) iron blast furnace slag;
~~(8)~~ (14) treated residue from the roasting/leaching of chrome ore; ~~and~~
(15) process wastewater from primary magnesium processing by the anhydrous process;
(16) process wastewater from phosphoric acid production;
(17) basic oxygen furnace and open hearth furnace air pollution control dust or sludge from carbon steel production;
~~(9)~~ (18) basic oxygen furnace and open hearth furnace slag from carbon steel production;
(19) chloride process waste solids from titanium tetrachloride production; and
(20) slag from primary zinc processing.

[In subitems (1) to (20), the MPCA adopts language to clarify the exclusion of specific mining wastes. The language of this item corresponds to 40 CFR 261.4(b)(7)(ii)(A)-(T) (with the exception that the MPCA is not adopting a reference to 40 CFR 266.112, dealing with Burning in Industrial Furnaces, because the MPCA has not yet adopted provisions equivalent to that portion of the federal regulations. (Further information regarding this amendment can be found at required RCRA Amendment 167E: "Bevill Exclusion Revisions and Clarifications" = 40 CFR 261.4(b)(7)(ii)(A)-(T); as supported at 63 FR 28556-28753, May 26, 1998.]//

A residue derived from coprocessing mineral processing secondary materials with normal beneficiation raw materials or with normal mineral processing raw materials remains excluded under this subpart if the owner or operator processes at least 50 percent by weight normal beneficiation raw materials or normal mineral processing raw materials and legitimately reclaims the secondary mineral processing materials;

[In this paragraph at the end of item I, the MPCA adopts a clarification of the exclusions being added above it. The clarification corresponds to federal language found at 40 CFR 261.4(b)(7)(iii) (The federal rule language is the result of two amendments). Further information about the clarification can be found at required RCRA Amendment 167E: "Bevill Exclusion Revisions and Clarifications" = 40 CFR 261.4(b)(7)(iii); as supported at 63 FR 28556-28753, May 26, 1998 and also at required RCRA Amendment 179.3: "Land Disposal Restrictions Phase IV -- Technical Corrections and Clarifications to Treatment Standards" = 40 CFR 261.4(b)(7)(iii); as supported at 64 FR 25408-25417, May 11, 1999.]//

[For text of items J to S, see M.R.]

T. spent wood preserving solutions that have been reclaimed and reused for their original intended purpose, and wastewaters from the wood preserving process that have been reclaimed and are reused to treat wood~~;~~ if, prior to reuse, the wood preserving wastewaters and spent wood preserving solutions described in this item meet all of the following conditions:

[In item T, the MPCA adopts language that clarifies the exclusion of certain wood preserving solutions to narrow the scope of what is being excluded. This more stringent clarification corresponds to federal language found at 40 CFR 261.4(a)(9)(iii). This change relates to required RCRA Amendment 167 F: "Exclusion of Recycled Wood Preserving Wastewaters" = 40 CFR 261.4(a)(9)(iii); as supported at 63 FR 28556-28753, May 26, 1998.]//

(1) the wood preserving wastewaters and spent wood preserving solutions are reused on site at waterborne plants in the production process for their original intended purpose;

[In subitem (1), the MPCA adopts language corresponding to 40 CFR 261.4(a)(9)(iii)(A). This is a continuation of the same federal revision discussed in item T.]//

(2) prior to reuse, the wood preserving wastewaters and spent wood preserving solutions are managed to prevent release to land resources or waters of the state;

[In subitem (2), the MPCA adopts language corresponding to 40 CFR 261.4(a)(9)(iii)(B). This is a continuation of the same federal revision discussed in item T. The MPCA has revised the adopted language to change "land" to "land resources" and "groundwater" to "waters of the state" to use Minnesota terms without changing the intended meaning.]//

(3) any unit used to manage wood preserving wastewaters or spent wood preserving solutions prior to reuse can be visually or otherwise determined to prevent such releases;

[In subitem (3), the MPCA adopts language corresponding to 40 CFR 261.4(a)(9)(iii)(C). This is a continuation of the same federal revision discussed in item T. The MPCA has revised the adopted language to clarify that these wastewaters are from wood preserving.]//

(4) any drip pad used to manage the wood preserving wastewaters or spent wood preserving solutions prior to reuse complies with the standards governing drip pads in part 7045.0644; and

[In subitem (4), the MPCA adopts language corresponding to 40 CFR 261.4(a)(9)(iii)(D). This is a continuation of the same federal revision discussed in item T. The MPCA has revised the adopted language to clarify that these wastewaters are related to wood preserving. The MPCA replaces a federal citation with the corresponding Minnesota Rules citation. The MPCA has not adopted a reference found in the federal counterpart to a conditional exemption for generators of less than 100kg/month because this conditional exemption is not provided in the Minnesota Rules.]//

(5) prior to operating pursuant to this exclusion, the plant owner or operator submits to the commissioner a onetime notification stating that the plant intends to claim the exclusion, giving the date on which the plant intends to begin operating under the exclusion, and containing the following language: "I have read the applicable regulation

establishing an exclusion for wood preserving wastewaters and spent wood preserving solutions and understand it requires me to comply at all times with the conditions set out in the regulation." The plant must maintain a copy of that document in its on-site records until closure of the facility. The exclusion applies only so long as the plant meets all of the conditions. If the plant goes out of compliance with any condition, the plant owner or operator may apply to the commissioner for reinstatement. Reinstatement is conditioned on the commissioner finding that the plant has returned to compliance with all conditions and that violations are not likely to recur;

[In subitem (5), the MPCA adopts language corresponding to 40 CFR 261.4(a)(9)(iii)(E). This is a continuation of the same federal revision discussed in item T. The MPCA revises the adopted federal language to clarify that the owner or operator must submit the notification to the MPCA commissioner and that the owner or operator (not the plant) would need to apply for reinstatement. The MPCA clarifies that reinstatement is based on the plant returning to compliance with all conditions. An additional change to this subitem is based on required RCRA Amendment 213: "Burden Reduction Initiative" = 40 CFR 261.4(a)(9)(iii)(E); as supported at 71 FR 16862-16915, April 4, 2006. This change requires the owner/operator to keep a copy of the exemption notice onsite until closure of the facility instead of just 3-years from the date specified in the notice. It should cost very little to retain this record, and the ability to prove that the rule was followed should benefit the owner or operator and the regulating agencies.]//

[For text of item U, see M.R.]

[In subitem (5), the MPCA adopts language corresponding to 40 CFR 261.4(a)(9)(iii)(E). This is a continuation of the same federal revision discussed in item T. The MPCA revises the adopted federal language to clarify that the owner or operator must submit the notification to the MPCA commissioner and that the owner or operator (not the plant) would need to apply for reinstatement. The MPCA clarifies that reinstatement is based on the plant returning to compliance with all conditions. An additional change to this subitem is based on required RCRA Amendment 213: "Burden Reduction Initiative" = 40 CFR 261.4(a)(9)(iii)(E); as supported at 71 FR 16862-16915, April 4, 2006. This change requires the owner/operator to keep a copy of the exemption notice onsite until closure of the facility instead of just 3-years from the date specified in the notice. It should cost very little to retain this record, and the ability to prove that the rule was followed should benefit the owner or operator and the regulating agencies.]//

V. used oil rerefining distillation bottoms that are used as feedstock to manufacture asphalt products; ~~or~~

[In item V, the MPCA removes the "or" to accommodate expanding this list.]//

W. sorbents, soil, and debris contaminated with petroleum fuel from spills and emergencies that are contained and reported in accordance with Minnesota Statutes, section 115.061, except for used oil spills and emergencies~~.~~; or

[In item W, the MPCA replaces a period with a semicolon to accommodate expanding this list.]//

X. spent materials, other than hazardous wastes listed in part 7045.0135, generated within the primary mineral processing industry from which minerals, acids, cyanide,

water, or other values are recovered by mineral processing or by beneficiation, provided that:

[In item X, the MPCA adopts an exemption that corresponds to the federal regulations found at 40 CFR 261.4(a)(17). This exemption addresses spent materials generated in the mineral processing industry. Because this rule is essential to the operation of the Land Disposal Restrictions adopted later in this rulemaking, adopting this amendment is required to maintain program authorization. This change relates to required RCRA Amendment 179.3: "Land Disposal Restrictions Phase IV -- Technical Corrections and Clarifications to Treatment Standards" = 40 CFR 261.4(a)(17); as supported at 64 FR 25408-25417, May 11, 1999, and to RCRA Amendment 199.3: "Vacatur of Mineral Processing Spent Materials Being Reclaimed as Solid Wastes and TCLP Use with MGP Waste" = 40 CFR 261.4(a)(17); as supported at 67 FR 11251-11254, March 13, 2002.]//

(1) the spent material is legitimately recycled to recover minerals, acids, cyanide, water, or other values;

[In subitem (1), the MPCA adopts language corresponding to 40 CFR 261.4(a)(17)(i). This change relates to RCRA Amendment 199.3: "Vacatur of Mineral Processing Spent Materials Being Reclaimed as Solid Wastes and TCLP Use with MGP Waste" = 40 CFR 261.4(a)(17)(i); as supported at 67 FR 11251-11254, March 13, 2002.]//

(2) the spent material is not accumulated speculatively;

[In subitem (2), the MPCA adopts language corresponding to 40 CFR 261.4(a)(17)(ii). This change relates to RCRA Amendment 199.3: "Vacatur of Mineral Processing Spent Materials Being Reclaimed as Solid Wastes and TCLP Use with MGP Waste" = 40 CFR 261.4(a)(17)(ii); as supported at 67 FR 11251-11254, March 13, 2002.]//

(3) except as provided in subitem (4), the spent material is stored in tanks, containers, or buildings meeting the following minimum integrity standards: a building must be an engineered structure with a floor, walls, and a roof, all of which are made of nonearthen materials providing structural support (except smelter buildings may have partially earthen floors provided the spent material is stored on the nonearthen portion), and have a roof suitable for diverting rainwater away from the foundation; a tank must be freestanding, not be a surface impoundment, and be manufactured of a material suitable for containment of its contents; a container must be freestanding and be manufactured of a material suitable for containment of its contents. If tanks or containers contain any particulate that may be subject to wind dispersal, the owner or operator must operate these units in a manner that controls fugitive dust. Tanks, containers, and buildings must be designed, constructed, and operated to prevent releases to the environment of these materials;

[In subitem (3), the MPCA adopts language corresponding to 40 CFR 261.4(a)(17)(iii). This change relates to RCRA Amendment 199.3: "Vacatur of Mineral Processing Spent Materials Being Reclaimed as Solid Wastes and TCLP Use with MGP Waste" = 40 CFR 261.4(a)(17)(iii); as supported at 67 FR 11251-11254, March 13, 2002. The MPCA replaces "nonearthen" with "non-earthen" and "secondary materials" with "spent materials" to clarify the intended meaning of the federal counterparts.]//

(4) the commissioner may make a site-specific determination, upon application by the owner or operator and after public review and comment, that only solid mineral processing spent material may be placed on pads rather than in tanks, containers, or

buildings. Solid mineral processing spent materials must not contain any free liquid. The commissioner must affirm that pads are designed, constructed, and operated to prevent releases of the spent material into the environment. Pads must provide the same degree of containment afforded by the tanks, containers, and buildings eligible for exclusion in subitem (3):

[In subitem (4), the MPCA adopts language corresponding to 40 CFR 261.4(a)(17)(iv). This change relates to RCRA Amendment 199.3: "Vacatur of Mineral Processing Spent Materials Being Reclaimed as Solid Wastes and TCLP Use with MGP Waste" = 40 CFR 261.4(a)(17)(iv); as supported at 67 FR 11251-11254, March 13, 2002. The MPCA adds language to clarify that the owner or operator must apply for a commissioner's determination (rather than an EPA Administrator's determination as would be required under the federal regulations). The MPCA also replaces one use of the term "secondary materials" with the term "spent materials" to be consistent within the paragraph.]//

(a) the commissioner must also consider if storage on pads poses the potential for releases via groundwater, surface water, and air exposure pathways. Factors to be considered for assessing the groundwater, surface water, and air exposure pathways are the volume and physical and chemical properties of the spent material, including its potential for migration off the pad; the potential for human or environmental exposure to hazardous constituents migrating from the pad via each exposure pathway; and the possibility and extent of harm to human and environmental receptors via each exposure pathway;

[In unit (a), the MPCA adopts language corresponding to 40 CFR 261.4(a)(17)(iv)(A). This change relates to RCRA Amendment 199.3: "Vacatur of Mineral Processing Spent Materials Being Reclaimed as Solid Wastes and TCLP Use with MGP Waste" = 40 CFR 261.4(a)(17)(iv)(A); as supported at 67 FR 11251-11254, March 13, 2002; also, to required RCRA Amendment 167 D – REVISED: "Mineral Processing Secondary Materials Exclusion" = 40 CFR 261.4(a)(17)(iv)(A); as supported at 63 FR 28556-28753, May 26, 1998.]//

(b) pads must meet the following minimum standards: be designed of nonearthen material that is compatible with the chemical nature of the mineral processing spent material, be capable of withstanding physical stresses associated with placement and removal, have run-on/runoff controls, be operated in a manner that controls fugitive dust, and have integrity assurance through inspections and maintenance programs; and

[In unit (b), the MPCA adopts language corresponding to 40 CFR 261.4(a)(17)(iv)(B). This change relates to RCRA Amendment 199.3: "Vacatur of Mineral Processing Spent Materials Being Reclaimed as Solid Wastes and TCLP Use with MGP Waste" = 40 CFR 261.4(a)(17)(iv)(B); as supported at 67 FR 11251-11254, March 13, 2002; also, to required RCRA Amendment 167 D – REVISED: "Mineral Processing Secondary Materials Exclusion" = 40 CFR 261.4(a)(17)(iv)(B); as supported at 63 FR 28556-28753, May 26, 1998.]//

(c) before making a determination under this subitem, the commissioner must provide notice and the opportunity for comment to all persons potentially interested in the determination in accordance with part 7001.0100, subpart 5;

[In unit (c), the MPCA adopts language corresponding to 40 CFR 261.4(a)(17)(iv)(C). This change relates to RCRA Amendment 199.3: "Vacatur of Mineral Processing

Spent Materials Being Reclaimed as Solid Wastes and TCLP Use with MGP Waste" = 40 CFR 261.4(a)(17)(iv)(C); 67 FR 11251-11254, March 13, 2002; also, to required RCRA Amendment 167 D – REVISED: "Mineral Processing Secondary Materials Exclusion" = 40 CFR 261.4(a)(17)(iv)(A); 63 FR 28556-28753; May 26, 1998.]//

(5) the owner or operator provides a notice to the commissioner, providing the following information: the types of materials to be recycled, the type and location of the storage units and recycling processes, and the annual quantities expected to be placed in land-based units. This notification must be updated when there is a change in the type of materials recycled or the location of the recycling process; and

[In subitem (5), the MPCA adopts language corresponding to 40 CFR 261.4(a)(17)(v). This change relates to RCRA Amendment 199.3: "Vacatur of Mineral Processing Spent Materials Being Reclaimed as Solid Wastes and TCLP Use with MGP Waste" = 40 CFR 261.4(a)(17)(v); as supported at 67 FR 11251-11254, March 13, 2002; also, to required RCRA Amendment 167 D – REVISED: "Mineral Processing Secondary Materials Exclusion" = 40 CFR 261.4(a)(17)(v); as supported at 63 FR 28556-28753, May 26, 1998.]//

(6) for purposes of this item, mineral processing spent materials must be the result of mineral processing and may not include any listed hazardous wastes. Listed hazardous wastes and characteristic hazardous wastes generated by nonmineral processing industries are not eligible for the exemption in this item.

[In subitem (6), the MPCA adopts language corresponding to 40 CFR 261.4(a)(17)(vi). This change relates to RCRA Amendment 199.3: "Vacatur of Mineral Processing Spent Materials Being Reclaimed as Solid Wastes and TCLP Use with MGP Waste" = 40 CFR 261.4(a)(17)(vi); as supported at 67 FR 11251-11254, March 13, 2002; also, to required RCRA Amendment 167 D – REVISED: "Mineral Processing Secondary Materials Exclusion" = 40 CFR 261.4(a)(17)(vi); as supported at 63 FR 28556-28753, May 26, 1998.]//

Subp. 2. **Special requirements.** The following waste is exempt from the general requirements of this chapter if managed as specified:

A. waste collected as a result of a household hazardous waste management program under part 7045.0310;

B. spent or waste household batteries collected under part 7045.0686;

C. waste collected as a result of a very small quantity generator hazardous waste collection program under part 7045.0320;

D. feedstocks and by-products under part 7045.0125, subparts 5 and 6;

E. comparable fuels or comparable syngas fuels that meet the specifications and other requirements of Code of Federal Regulations, title 40, section 261.38, as amended, which is adopted and incorporated by reference; ~~and~~

[In item E, the MPCA deletes the word "and" to accommodate this expanded list.]//

F. universal waste managed under part 7045.1400~~.~~; and

[In item F, the MPCA replaces a period with a semicolon and adds the word "and" to accommodate this expanded list.]//

G. hazardous waste containing radioactive waste when it meets the eligibility criteria and conditions of Code of Federal Regulations, title 40, part 266, subpart N, Conditional Exemption for Low-Level Mixed Waste Storage, Treatment, Transportation and Disposal, as amended. This exemption also pertains to:

(1) any mixture of a waste and an eligible radioactive mixed waste; and

(2) any waste generated from treating, storing, or disposing of an eligible radioactive mixed waste.

Waste exempted under this item must meet the eligibility criteria and specified conditions in Code of Federal Regulations, title 40, sections 266.225 and 266.230 (for storage and treatment), as amended, and 266.310 and 266.315 (for transportation and disposal), as amended. Waste that fails to satisfy these eligibility criteria and conditions is regulated as hazardous waste.

[In item G, the MPCA adopts an exemption for radioactive waste mixtures that corresponds to federal regulations found at 40 CFR 261.3(h)(1-3). The exemption is not required to maintain program equivalency but the MPCA believes that it is a reasonable clarification of the existing State hazardous waste requirements. Minnesota Statute, section 116.06, subdivision 11, says that hazardous waste does not include "source, special nuclear, or by-product material as defined by the Atomic Energy Act of 1954, as amended." However, mixtures of radioactive waste and hazardous waste are regulated under the land disposal restrictions in part 7045.1390 of this chapter. This amendment clarifies that the EPA regulations apply to such mixtures. This change relates to RCRA Amendment 192A.2: "Mixture and Derived-From Rules Revisions" = 40 CFR 261.3(h)(1-3); as supported at 66 FR 27266-27297, May 16, 2001.]//

7045.0121 TREATABILITY STUDY EXEMPTIONS.

[For text of subps 1 and 2, see M.R.]

Subp. 3. **Facilities and sample handling.** A mobile treatment unit may qualify as a laboratory or testing facility subject to requirements of this subpart. Where a group of mobile treatment units are located at the same site, the limitations specified in this subpart apply to the entire group of mobile treatment units involved in treatability studies collectively as if the group were one mobile treatment unit. Samples undergoing treatability studies and the laboratory or testing facility conducting the treatability studies, to the extent the facilities are engaged directly in treatability studies and are not otherwise subject to the Resource Conservation and Recovery Act requirements, United States Code, title 42, section 6901 et seq., as amended, are not subject to any requirements of Code of Federal Regulations, title 40, part 124, as amended; parts 7045.0102 to 7045.0685 except this part and applicable references; ~~parts 7023.9000 to 7023.9050; 7045.1300 to 7045.1380~~ part 7045.1390; chapter 7001; or to the notification requirements of the Resource Conservation and Recovery Act, United States Code, title 42, section 6930, as amended, providing that the conditions in items A to K are met.

[In subpart 3, the MPCA deletes a citation to chapter 7023 that was repealed and is no longer applicable. There are several corrections to this citation in this rulemaking. The MPCA also provides the replacement citation for a repealed range of rules.]//

[For text of items A to K, see M.R.]

7045.0125 MANAGEMENT OF WASTE BY USE, REUSE, RECYCLING, AND RECLAMATION.

[For text of subps 1 to 3a, see M.R.]

Subp. 4. **Management of specific hazardous wastes.** Management of the following wastes when recycled, is not subject to regulation under parts 7045.0205 to 7045.0695 and ~~7045.1300 to 7045.1380~~ 7045.1390:

[In subpart 4, the MPCA provides the replacement citation for a repealed range of rules.]//

[For text of items A and B, see M.R.]

C. scrap metal and excluded scrap metal;

[In item C, the MPCA is extending the exclusion of scrap metal to also include "excluded scrap metal." The corresponding federal exclusion is found at 40 CFR 261.4(a)(13). A definition of "excluded scrap metal" is being added in this rulemaking in part 7045.0020 and includes several categories of scrap metal that are also being defined through these amendments. Because excluding additional types of scrap metal makes the existing rules less stringent, the MPCA is not required to adopt this provision of the federal regulations to maintain authorization. However, the MPCA believes it is reasonable to exclude those types of wastes because they do not present an environmental risk when properly recycled. This change relates to RCRA Amendment 157.6: "Land Disposal Restrictions Phase IV--Treatment Standards for Wood Preserving Wastes, Paperwork Reduction and Streamlining, Exemptions From RCRA for Certain Processed Materials; and Miscellaneous Hazardous Waste Provisions" = 40 CFR 261.4(a)(13) and 40 CFR 261.6(a)(3)(ii), as supported at 62 FR 25998-26040, May 12, 1997.]//

[For text of items D and E, see M.R.]

F. coke and coal tar from the iron and steel industry that contain EPA Hazardous Waste No. K087 listed under part 7045.0135, subpart 3, item Q, subitem (2), (decanter tank tar sludge from coking operations) from the iron and steel production process EPA Hazardous Waste Nos. K060, K087, K141, K142, K143, K144, K145, K147, and K148, and any wastes from the coke by-products processes that are hazardous only because they exhibit the toxicity characteristic, specified in part 7045.0131, subpart 7, when, subsequent to generation, these materials are recycled to coke ovens, recycled to the tar recovery process as a feedstock to produce coal tar, or mixed with coal tar prior to the tar's sale or refining. This exclusion is conditioned on there being no land disposal of the wastes from the point they are generated to the point they are recycled to coke ovens, tar recovery, or refining processes or mixed with coal tar;

[The MPCA revises item F to delete the previous exclusion for coke and coal tar wastes and to adopt the more specific federal exclusion found at 40 CFR 261.4(a)(10). The adopted language is more specific regarding the types of wastes that are excluded and is required to maintain hazardous waste program authorization. This change is based on required RCRA Amendment 110.2: "Coke By-Products Listings" = 40 CFR 261.4(a)(10); as supported at 57 FR 37284-37306, August 18, 1992.]//

[For text of items G to M, see M.R.]

N. recyclable fuel, if the following conditions are met:

(1) the recyclable fuel is immediately removed from the generation site by a transporter in compliance with all applicable Minnesota Department of Transportation

requirements in Minnesota Statutes, sections 221.033 to ~~221.035~~ 221.0355, and Code of Federal Regulations, title 49, parts 171 to ~~179~~ 199;

[In the amendments to subitem (1), the MPCA corrects a citation to a section of Minnesota Statutes that was repealed and provides the correct citation to the replacement section. The MPCA also follows advice from Minnesota's Department of Transportation to correct one of several citations to a range of regulations amended by the U.S. Department of Transportation.]//

[For text of subitems (2) to (4), see M.R.]

(5) if, because of a need to conduct waste analysis, recyclable fuel cannot be placed into the recycling process within 24 hours of receipt, the owner or operator of the fuel recycling facility shall contact the commissioner to request an extension of the storage time. A request for an extension can be for a single event or to address an ongoing need for additional time. A request for an extension must be submitted in writing to the commissioner and must include:

[For text of units (a) and (b), see M.R.]

(c) a description of how the waste will be managed during the storage period, including the measures that will be in place to prevent releases and how spills will be contained and cleaned up.

The commissioner's decision to approve holding the waste longer than 24 hours will be based on an evaluation of whether the owner or operator of the recycling facility can provide adequate protection of human health and the environment until the recyclable fuel is placed into the recycling process; ~~and~~

[In unit (c), at the end of item N, the MPCA removes "and" to accommodate this expanded list.]//

O. petroleum fuel filters if they are burned for energy recovery under subpart 3a, or recycled as scrap metal under item C, and are managed during accumulation and transportation ~~according to~~ in accordance with the requirements of part 7045.0990, subparts 3 to 5~~.~~; and

[In item O, the MPCA revises language to clarify the intended meaning. The MPCA also adds "and" to accommodate this expanded list.]//

P. circuit boards or shredded circuit boards being recycled, provided that they are:

(1) stored in containers sufficient to prevent a release to the environment prior to recovery; and

(2) free of mercury switches, mercury relays, and nickel-cadmium batteries and lithium batteries.

[In item P, the MPCA adopts a new exclusion for circuit boards that are being recycled. The MPCA has for many years excluded circuit boards that are being recycled from regulation by considering them to be scrap metal (which is excluded from regulation in the existing rules) and this amendment merely formalizes that previous interpretation. The exclusion corresponds to 40 CFR 261.4(a)(14). Because this is an exclusion from regulation and makes the State rules less stringent, the adoption of this federal provision is optional. However, the MPCA believes that adopting this amendment is reasonable as it clarifies the MPCA's existing interpretation of this rule. The MPCA also believes that it is reasonable to facilitate the recycling of circuit boards because proper recycling of circuit boards is protective of human health and the environment. This change relates to optional RCRA

Amendment 157.6: "Land Disposal Restrictions Phase IV--Treatment Standards for Wood Preserving Wastes, Paperwork Reduction and Streamlining, Exemptions From RCRA for Certain Processed Materials; and Miscellaneous Hazardous Waste Provisions" = 40 CFR 261.4(a)(14); as supported at 62 FR 25998-26040, May 12, 1997.]//

Subp. 5. **Requirements for use of hazardous waste as feedstock.**

A. Except as provided in items B to D, hazardous wastes that are shown to be recycled by being used in a manner specified in subitems (1) to (3), are not subject to regulation under parts 7045.0205 to 7045.0990 and ~~7045.1300 to 7045.1380~~ 7045.1390. This subpart does not apply to wastes being accumulated speculatively as defined in part 7045.0020, subpart 84a, or being managed by use constituting disposal as regulated under part 7045.0665 or burning for energy recovery, as regulated in part 7045.0692. Hazardous wastes are considered to be used as feedstock if they are:

[The MPCA provides the replacement citation for a repealed range of rules.]//

[For text of subitems (1) to (3), see M.R.]

[For text of item B, see M.R.]

C. Transporters of hazardous wastes for use as feedstock must comply with all applicable requirements of Minnesota Statutes, sections 221.033 and ~~221.034~~ 221.0341, and with ~~221.035~~ 221.0355 if applicable, and Code of Federal Regulations, title 49, parts 171 to ~~179~~ 199, as amended.

[In item C, the MPCA corrects a citation to sections of Minnesota Statutes that were repealed and provides citations to the replacement sections. The MPCA also follows advice from Minnesota's Department of Transportation to correct one of several citations to a range of regulations amended by the U.S. Department of Transportation.]//

[For text of item D, see M.R.]

Subp. 6. **Requirements for reclamation of specific hazardous waste.**

A. A by-product or a sludge that is hazardous only because it exhibits a characteristic of hazardous waste as defined in part 7045.0131 and is reclaimed is subject to only the following requirements:

(1) A generator of such a hazardous waste is subject to the requirements of subpart 5, item B.

(2) Transporters of such a hazardous waste must comply with all applicable requirements of Minnesota Statutes, sections 221.033 and ~~221.034~~ 221.0341, and with ~~221.035~~ 221.0355 if applicable, and Code of Federal Regulations, title 49, parts 171 to ~~179~~ 199, as amended.

[In subitem (2), the MPCA corrects a citation to sections of Minnesota Statutes that were repealed and provides citations to the replacement sections. The MPCA also follows advice from Minnesota's Department of Transportation to correct one of several citations to a range of regulations amended by the U.S. Department of Transportation.]//

[For text of subitem (3), see M.R.]

[For text of item B, see M.R.]

[For text of subps 7 and 8, see M.R.]

Subp. 9. **Facility requirements.** Unless exempted specifically in this part or parts 7045.0692 and 7045.0790 to 7045.0990, owners ~~or~~ and operators of facilities ~~which~~ that recycle hazardous waste are subject to the following requirements:

[In subpart 9, the MPCA revises language to clarify the intended meaning.]//

A. If the recyclable hazardous waste is stored before it is recycled, the owners or operators are subject to the requirements of parts 7045.0450 to 7045.0534, 7045.0540, 7045.0547, 7045.0548, 7045.0552 to 7045.0632, 7045.0645, 7045.0647, 7045.0648, 7045.0652 to 7045.0686, and ~~7045.1300 to 7045.1380~~ 7045.1390, and chapter 7001. The recycling process itself is exempt from regulation except as provided in item C.

[In item A, the MPCA deletes a citation to chapter 7023 that has been repealed and also provides the replacement citation for a range of rules being repealed in this rulemaking (the land disposal restrictions being added at part 7045.1390). The MPCA also adopts a number of cross references to requirements being added to the rules in this rulemaking. The references being cited identify rules that provide standards for organic air emissions from tanks, surface impoundments and containers and are discussed elsewhere in this SONAR where those air emission standards are being adopted. Further information about the added citations can also be found at required RCRA Amendment 154, 154-1.39: "Consolidated Organic Air Emission Standards for Tanks, Surface Impoundments, and Containers" = 40 CFR 261.6(c)(1); as supported at 59 FR 62896-62953, December 6, 1994; and as amended by 60 FR 26828-26829, May 19, 1995; 60 FR 50426-50430, September 29, 1995; 60 FR 56952-56954, November 13, 1995; 61 FR 4903-4916, February 9, 1996; 61 FR 28508-28511, June 5, 1996; and 61 FR 59932-59997, November 25, 1996.]//

[For text of items B to D, see M.R.]

[For text of subps 10 to 13, see M.R.]

7045.0127 RESIDUES IN EMPTY CONTAINERS AND EMPTY INNER LINERS.

Subpart 1. **Scope.** Any hazardous waste remaining in an empty container or an empty inner liner removed from an empty container, as defined in subparts 2 to 4 is not subject to regulation under parts 7045.0102 to 7045.1030 and ~~7045.1300 to 7045.1380~~ 7045.1390, or a hazardous waste facility permit. Any hazardous waste in a container or an inner liner removed from a container that is not empty, as defined in subparts 2 to 4, is subject to regulation under parts 7045.0102 to 7045.1030 and ~~7045.1300 to 7045.1380~~ 7045.1390, and the agency's permitting procedures.

[In subpart 1, the MPCA provides the replacement citations for repealed ranges of rules.]//

Subp. 2. **Empty containers or inner liners; definition.** A container or an inner liner removed from a container that has held any hazardous waste, except a waste that is a compressed gas or that is identified as an acute hazardous waste in part 7045.0135, subpart ~~2, 3, or 4, item E~~ 1a, items B and C, and Code of Federal Regulations, title 40, section 261.33(e), as incorporated in part 7045.0135, is empty if:

[In subpart 2, the MPCA replaces references to part 7045.0135, subparts 2, 3, and 4 (lists of hazardous wastes) which are being repealed and replaced with new citations that address the same requirements. The MPCA intends that the same lists are

addressed as in the former rules. By referencing 40 CFR 261.33(e), the MPCA provides a more accurate citation to a specific list in the federal regulations than can be provided by a reference to its State counterpart. The list of commercial chemical products in the federal regulations is being incorporated by reference in part 7045.0135 but that State citation is too general to identify this specific list. The final phrase in the amendment to subpart 2 refers to the rule part incorporating the federal reference so that any associated conditions of incorporation can be assessed.]//

[For text of items A to D, see M.R.]

Subp. 3. **Other empty containers or inner liners.** A container or inner liner that has held an acute hazardous waste identified in part 7045.0135, subpart ~~2, 3, or 4, item E~~ 1a, items B and C, and Code of Federal Regulations, title 40, section 261.33(e), as incorporated in part 7045.0135, is empty if:

[In subpart 3, the MPCA replaces references to part 7045.0135, subparts 2, 3, and 4 (lists of hazardous wastes) which are being repealed and replaced with new citations that address the same requirements. The MPCA intends that the same lists are addressed as in the former rules. By referencing 40 CFR 261.33(e), the MPCA provides a more accurate citation to a specific list in the federal regulations than can be provided by a reference to its State counterpart. The list of commercial chemical products in the federal regulations is being incorporated by reference in part 7045.0135 but that State citation is too general to identify this specific list. The final phrase in the amendment to subpart 2 refers to the rule part incorporating the federal reference so that any associated conditions of incorporation can be assessed.]//

[For text of items A to C, see M.R.]

[For text of subp 4, see M.R.]

7045.0131 CHARACTERISTICS OF HAZARDOUS WASTE.

Subpart 1. **In general.** A waste which is not excluded from regulation as a hazardous waste under part 7045.0120 is a hazardous waste if it exhibits ignitability, corrosivity, reactivity, toxicity, lethality, or is an oxidizer, as described in subparts 2 to 7. A hazardous waste which is identified by a characteristic in this part is assigned every hazardous waste number that is applicable. This number must be used in complying with the notification requirements of section 3010 of the federal Resource Conservation and Recovery Act and all applicable record keeping and reporting requirements under parts ~~7023.9000 to 7023.9050,~~ 7045.0205 to ~~7045.0642 and 7045.1300~~ 7045.0651 and 7045.1390, and chapter 7001. For purposes of this part, the commissioner shall consider a sample obtained using any of the applicable sampling methods specified in Code of Federal Regulations, title 40, part ~~260~~ 261, Appendix I ~~or part 261, Appendix II~~, as ~~amended~~ incorporated in part 7045.0155, or Toxicity Characteristic Leaching Procedure, Method 1311 in "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods," EPA publication SW-846, incorporated by reference in part 7045.0065, item D, to be a representative sample.

In subpart 1, the MPCA deletes a citation to chapter 7023 because that rule has been repealed. The MPCA is also revising a citation to a range of rules that has changed as parts were added as part of this rulemaking, and that included an error. The error was that previous reference to "…7045.0205 to 7045.0642 and 7045.1300" needed to

be extended to include added parts. Also, it should have included all of the land disposal restrictions—not just those found in part 7045.1300. The MPCA discovered this error as a result of this rulemaking and is changing it to include part 7045.1390, which incorporates all of the land disposal restrictions by reference. The MPCA is correcting an additional error by changing "40 CFR 260" to "40 CFR 261." 40 CFR Part 261 is the correct citation for the sampling methods identified in the corresponding federal regulations. The MPCA is changing a reference from Part 260, Appendix I to Part 261, Appendix I because that is the accurate cite. Finally, the MPCA is providing a reference to the State rule that incorporates and establishes any conditions regarding the federal Appendices to Part 261.]//

Subp. 2. **Ignitability.** A waste exhibits the characteristic of ignitability if a representative sample of the waste has any of the following properties:

[For text of items A and B, see M.R.]

C. it is an ignitable compressed gas as defined in Code of Federal Regulations, title 49, section ~~173.300~~ 173.115, as amended, and as determined by the test methods described in that regulation or equivalent test methods approved by the commissioner under part 7045.0075, subpart 1.

[In item C, the MPCA follows advice from Minnesota's Department of Transportation to correct an error in a citation to a regulation that was amended by the U.S. Department of Transportation.]//

A waste that exhibits the characteristic of ignitability has the hazardous waste number of D001.

[For text of subp 3, see M.R.]

Subp. 4. **Corrosivity.** A waste exhibits the characteristic of corrosivity if a representative sample of the waste has any of the following properties:

A. It is aqueous and has a pH less than or equal to 2.0 or greater than or equal to 12.5, as determined by a pH meter using ~~either the test method~~ Method 9040C in ~~the~~ "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods ~~issued by the United States Environmental Protection Agency~~," EPA publication ~~number~~ SW-846 ~~(First Edition, 1980 as updated by Revisions A (August 1980), B (July 1981), and C (February 1982) or Second Edition, 1982) also described in Methods for Chemical Analysis of Water and Waste issued by the Environmental Monitoring and Support Laboratory, publication number 600/7-79-020 (March 1979), or an equivalent test method approved by the commissioner under the procedures set forth in part 7045.0075, subpart 1~~, incorporated by reference in part 7045.0065, item D; or

[In item A, the MPCA is revising the rule to accurately identify the reference documents used in the determination of the corrosivity characteristic. This amendment is required to maintain consistency with the federal counterpart found at 40 CFR 261.22(a)(1). This change relates to required RCRA Amendment 126: "Testing and Monitoring Activities" = 40 CFR 261.22(a)(1); as supported at 58 FR 46040-46051, August 31, 1993. The MPCA also provides a reference to part 7045.0065, item D, which incorporates and establishes any conditions regarding the specified test method.]//

B. It is liquid and corrodes steel (SAE 1020) at a rate greater than 6.35 mm (0.250 inch) per year at a test temperature of 55 degrees Celsius (130 degrees Fahrenheit) as determined by the test method specified in National Association of Corrosion Engineers

Standard TM-01-69 as standardized in" Test Methods for Evaluating Solid Waste, Physical/Chemical Methods," ~~issued by the United States Environmental Protection Agency,~~ EPA publication ~~number~~ SW-846 ~~(First Edition, 1980 as updated by Revisions A (August 1980), B (July 1981), and C (February 1982) or Second Edition, 1982) or an equivalent test method approved by the commissioner under the procedures set forth in part 7045.0075, subpart 1~~, incorporated by reference in part 7045.0065, item D.

[In item B, the MPCA is revising the rule to accurately identify the reference documents used in the determination of the corrosivity characteristic. This amendment is required to maintain consistency with the federal counterpart found at 40 CFR 261.22(a)(2). This change relates to required RCRA Amendment 126: "Testing and Monitoring Activities" = 40 CFR 261.22(a)(2); as supported at 58 FR 46040-46051, August 31, 1993. The MPCA also provides a reference to part 7045.0065, item D, which incorporates and establishes any conditions regarding the specified test method.]//

A waste that exhibits the characteristic of corrosivity has the hazardous waste number of D002.

Subp. 5. **Reactivity.** A waste exhibits the characteristic of reactivity if a representative sample of the waste has any of the following properties:

[For text of items A to G, see M.R.]

H. it is a forbidden explosive as defined in Code of Federal Regulations, title 49, section ~~173.51~~ 173.54, as amended, a ~~Class A~~ Division 1.1 or 1.2 explosive as defined in Code of Federal Regulations, title 49, section ~~173.53~~ 173.50, as amended, or a ~~Class B~~ Division 1.2 or 1.3 explosive as defined in Code of Federal Regulations, title 49, section ~~173.88~~ 173.50, as amended.

A waste that exhibits the characteristic of reactivity has the hazardous waste number of D003.

[In item H, the MPCA follows advice from Minnesota's Department of Transportation to revise language and citations to conform with U.S. Department of Transportation amendments to the cited material.]//

[For text of subp 6, see M.R.]

Subp. 7. **Toxicity.** Toxicity is determined as follows:

A. A waste, except manufactured gas plant waste, exhibits the characteristic of

[In this line of item A, the MPCA adds an exception for manufactured gas plant waste to the regulation of the toxicity characteristic. This exception corresponds to the federal regulations found at 40 CFR 261.24(a). Although this is an optional amendment, the MPCA is adopting it because the MPCA concurs with the reasoning presented by the EPA and because adopting the federal exemption will maintain consistency with the federal regulations. This change relates to RCRA Amendment 199.4: "Vacatur of Mineral Processing Spent Materials Being Reclaimed as Solid Wastes and TCLP Use with MGP Waste" = 40 CFR 261.24(a); as supported at 67 FR 11251-11254, March 13, 2002.]//

toxicity if, using the ~~test methods described in Code of Federal Regulations, title 40, part 261, appendix II, as amended, or equivalent methods approved by the commissioner under the procedures in part 7045.0075, subpart 1~~ Toxicity Characteristic Leaching Procedure, Method 1311 in "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods," EPA publication SW-846, incorporated by reference in part

7045.0155, subpart 1, item B, the extract from a representative sample of the waste contains any of the contaminants listed in subpart 8 at a concentration equal to or greater than the respective ~~value given in that table~~ contaminant values listed. Where the waste contains less than 0.5 percent filterable solids, the waste itself, after filtering using the methodology outlined in Method 1311, is considered to be the extract for the purpose of this evaluation.

[In item A, the MPCA is revising the rule to accurately identify the reference documents used in the determination of the toxicity characteristic. The existing rule referenced the test method where it was formerly located in 40 CFR part 261, Appendix II. The federal regulations have changed so that this test method is no longer found at 261, Appendix II so the MPCA is here identifying the name of the test method and referring to the State rule where the test method is being incorporated by reference. This amendment is required to maintain consistency with the federal counterpart found at 40 CFR 261.24(a). This change relates to required RCRA Amendment 126.6: "Testing and Monitoring Activities" = 40 CFR 261.24(a); as supported at 58 FR 46040-46051, August 31, 1993. The MPCA also refers to part 7045.0065, item D that incorporates and establishes any conditions regarding the specified test method. In this rulemaking, the MPCA is also deleting the phrase "or equivalent methods approved by the commissioner under 7045.0075, subpart 1." The MPCA believes that this is a reasonable deletion that does not change the effect of the rule or the availability of this option. The process for obtaining approval for the use of alternative test methods is still provided in 7045.0075. However, the federal regulations that correspond to this part have been amended to remove a specific reference to the petition process. The EPA explains in the August 31, 1993 Federal Register that this is a clarifying change and that removing this term does not alter the availability of the petition process to the regulated community.]//

[For text of items B and C, see M.R.]

[For text of subp 8, see M.R.]

7045.0133 EXEMPTION FROM REGULATION DUE TO LETHALITY.

Subpart 1. **In general.** A generator's waste that exhibits the characteristics of lethality as described in part 7045.0131, subpart 6, may be exempted from regulation under parts 7045.0102 to ~~7045.1380~~ 7045.1390 if the generator can demonstrate to the satisfaction of the agency that the waste is not capable of posing a present or potential hazard to human health and the environment if the waste were to be improperly treated, transported, stored, disposed, or managed under routine waste management methods.

[In subpart 1, the MPCA corrects a citation to a range of rules that changed as parts were added.]//

Subp. 2. **Factors to be considered.** In demonstrating that a waste should be exempt from regulation under parts 7045.0102 to ~~7045.1380~~ 7045.1390, the generator must present information related to the following factors:

[In subpart 2, the MPCA corrects a citation to a range of rules that changed as parts were added.]//

[For text of items A to G, see M.R.]

7045.0135 LISTS OF HAZARDOUS WASTES.

Subpart 1. [See repealer.]

[In this part, the MPCA is incorporating by reference the corresponding federal regulations that list hazardous wastes. Maintaining equivalence with the federal lists of hazardous wastes is an essential component of maintaining the MPCA's program authorization from EPA. The State rules must, at a minimum, include the same wastes that are listed in the federal regulations. While the State rules may be more comprehensive, they cannot be less. The MPCA has, with the exception of a State listing for PCB wastes, maintained lists identical to the corresponding federal regulations and continuing that commitment in this rulemaking. The MPCA believes that it is reasonable to follow the federal lists closely, whether the EPA adds or removes wastes from the lists, to provide consistency between states to support interstate commerce. It would be difficult for regulators and the regulated community to manage wastes shipped between states with different lists of wastes as the EPA adds or removes wastes from regulation. To efficiently match federal changes, the MPCA believes it is reasonable to incorporate the federal lists prospectively by reference. This provides the regulated community with the most current and accurate list of wastes that are regulated as hazardous in Minnesota. The reasonableness of adoption by reference as amended, is further discussed in part IV of this Statement. In order to incorporate the corresponding federal lists, the MPCA repealed existing subparts 1, 2, 2a, 3 and 4.]//

Subp. 1a.**Incorporation by reference of federal regulations.** The following lists of hazardous wastes found in Code of Federal Regulations, title 40, part 261, subpart D, as amended, are incorporated by reference:

A. section 261.30, general;

B. section 261.31, hazardous wastes from nonspecific sources;

[In subpart 1a, the MPCA incorporates by reference, as amended, the hazardous waste lists found in 40 CFR 261, subpart D. In items A and B, the MPCA incorporates existing 40 CFR sections 261.30 (general listing information) and 261.31 (hazardous waste from nonspecific sources), and hazardous wastes added by EPA in the future. This incorporation picks up federal listings not yet adopted by Minnesota. Further information regarding one such listing addressing petroleum refining wastes can be found at optional RCRA Amendment 187: "Petroleum Refining Process Wastes – Clarification" = 40 CFR 261.31(a)/table; as supported at 65 FR 36365-36367, June 8, 2000.]//

C. section 261.32, hazardous wastes from specific sources;

[In item C, the MPCA incorporates 40 CFR section 261.32 which identifies hazardous wastes from specific sources. The following RCRA Amendments discuss hazardous wastes added to this list since 1992:

- **required RCRA Amendment 110.3: "Coke By-Products Listings" = 40 CFR 261.32; as supported at 57 FR 37284-37306, August 18, 1992;**
- **required RCRA Amendment 115.2: "Chlorinated Toluenes Production Waste Listing" = 40 CFR 261.32; as supported at 57 FR 47376-47386, October 15, 1992;**
- **Optional RCRA Amendment 159.2: "Conformance With the Carbamate Vacatur" = 40 CFR 261.32/table; 62 FR 32974-32980, June 17, 1997;**

- **RCRA Amendment 183.2: "Land Disposal Restrictions Phase IV -- Technical Corrections" = 40 CFR 261.32; as supported at 64 FR 56469-56472, October 20, 1999;**
- **Optional RCRA Amendment 185.4: "Organobromine Production Wastes Vacatur" = 40 CFR 261.32/table; as supported at 65 FR 14472-14475, March 17, 2000; and**
- **required RCRA Amendment 189.4: "Chlorinated Aliphatics Listing and LDRs for Newly Identified Wastes" = 40 CFR 261.32/table; as supported at 65 FR 67068-67133, November 8, 2000.]//**

D. section 261.33, discarded commercial chemical products, off-specification species, container residues, and spill residues thereof;

[In item D, the MPCA incorporates 40 CFR section 261.33. The following RCRA Amendments discuss hazardous wastes added to this list since 1994:

- **required RCRA Amendment 134.2: "Correction of Beryllium Powder (P015) Listing" = 40 CFR 261.33(e); as supported at 59 FR 31551-31552, June 20, 1994;**
- **Optional RCRA Amendment 159.3: "Conformance With the Carbamate Vacatur" = 40 CFR 261.33(f); 62 FR 32974-32980, June 17, 1997; and**
- **Optional RCRA Amendment 185.5: "Organobromine Production Wastes Vacatur" = 40 CFR 261.33(f)/table; as supported at 65 FR 14472-14475, March 17, 2000.]//**

E. section 261.35, deletion of certain hazardous waste codes following equipment cleaning and replacement; and

[In item E, the MPCA incorporates 40 CFR section 261.35. This federal list provides conditions under which certain listed wastes would not be regulated. The MPCA had previously included this federal list in the State rules at part 7045.0145.]//

F. section 261.38, comparable/syngas fuel exclusion.

[In item F, the MPCA incorporates 40 CFR section 261.38 This is a federal exclusion that specifies conditions relating to comparable/syngas fuel. The MPCA has, in a previous rulemaking, adopted an exclusion for comparable/syngas fuel and believes that it is reasonable to incorporate this supporting federal list into the State rules.]//

Subp. 2. [See repealer.]

Subp. 2a. [See repealer.]

Subp. 2b. Additions, modifications, or exceptions to incorporated provisions.

[In new subpart 2b, the MPCA provides exceptions to its incorporations in subpart 1a.]//

A. Part 7045.0090, adoption and incorporation by reference, also applies.

[In new item A, the MPCA refers readers to a general part of the State hazardous waste rules that establishes conditions and criteria governing the adoption and incorporation by reference of federal rules into State rules.]//

B. The hazardous waste number in the "U" listing for paraldehyde in Code of Federal Regulations, title 40, section 261.33(f)/Table, should be U182.

C. In Code of Federal Regulations, title 40, section 261.38, Table 1, under "metals," in the listing for "cadmium, total," "ND" is the "composite value" and "1.2" is the "Concentration limit."

[In items B and C, the MPCA lists corrections offered by EPA guidance for states that adopt RCRA rules by reference. The EPA has identified errors in two lists. The MPCA follows the EPA guidance to correct these errors when adopting these lists: item B clarifies that the hazardous waste number in the "U" listing for Paraldehyde should be U182, and item C clarifies that in 40 CFR 261.38, table 1, under "metals," in the listing for "cadmium, total," "ND" is the "composite value" and "1.2" is the "Concentration limit." The EPA had shifted the data in this row to the right one column in the table. The EPA compiles and periodically corrects errors in the federal regulations. These corrections should become moot when that occurs.]//

Subp. 3. [See repealer.]

Subp. 4. [See repealer.]

Subp. 5. **PCB wastes.** Requirements for PCB wastes are as follows:

[In existing subpart 5, the MPCA retains its listing of PCB waste as a hazardous waste. Minnesota Rules differ from the federal regulations which do not list PCB as a hazardous waste; rather, the EPA regulates PCB waste under the Toxic Substances Control Act (TSCA). In this subpart, the MPCA is revising existing language to improve clarity and to improve consistency with changes in Minnesota Statutes, section 116.07, subdivision 2b, for managing PCB waste. The specific changes are discussed in the paragraphs below.]//

A. For ~~the~~ purposes of this ~~part, "PCB" means the class of organic compounds known as polychlorinated biphenyls at a concentration of 50 parts per million or greater and includes any of several compounds produced by replacing one or more hydrogen atoms on the biphenyl molecule with chlorine. "PCB" does not include chlorinated biphenyl compounds that have functional groups attached other than chlorine.~~ subpart:

[The MPCA revises item A to provide definitions of terms used in this subpart. In addition, the MPCA has moved the definition of PCB above to general definitions in part 7045.0020 because PCB is used elsewhere in chapter 7045. The specific level at which a PCB becomes a hazardous waste (50 parts per million or greater) is provided in new subitem (2) below. This is not a change in the regulatory status of PCB wastes in Minnesota, the same level was specified in revised item A.]//

(1) "commercial storer of PCB waste" has the meaning given in Code of Federal Regulations, title 40, section 761.3, as amended;

[In subitem (1), the MPCA defines a "commercial storer of PCB waste" based on the corresponding federal TSCA definition. The MPCA adds this definition because in this rulemaking this term is added to part 7045.0208, item G, which allows certain generators to deliver their PCB waste to a commercial storer of PCB waste.]//

(2) "PCB" means a substance that contains PCB's at a concentration of 50 parts per million or greater;

[In subitem (2), the MPCA defines the point at which PCB's, generally defined in part 7045.0020, subpart 71a, become a listed hazardous waste in Minnesota. It is important to provide the threshold at which PCB's become regulated as a listed hazardous waste so generators can properly manage their PCB wastes. The MPCA is not changing the "50 parts per million or greater" concentration at which PCB's become a hazardous waste.]//

(3) "PCB lighting ballast" means a device that electrically controls light fixtures and that contains a PCB small capacitor or potting material that contains PCB's; and

[In subitem (3), the MPCA defines PCB lighting ballast because it is a term used in item D and because Minnesota Statutes, section 116.07, subdivision 2b(a), which addresses the management of PCB wastes, states that PCB lighting ballasts are subject to MPCA requirements. The definition of "PCB small capacitor" limits the amount of dielectric material in a PCB lighting ballast. This definition applies to PCB lighting ballasts used in any type of lighting fixture. Potting material is an electrical insulating material used in lighting ballasts which may contain PCB's and is also identified as a potential PCB waste in the TSCA regulations at 40 CFR 761.3. The MPCA believes it is reasonable to ensure that all lighting ballasts that contain PCB's (including ballasts that contain PCB's in the potting material) are properly managed.]//

(4) "PCB small capacitor" means a capacitor that contains less than 1.36 kilograms (3 pounds) of PCB dielectric fluid.

[In subitem (4) the MPCA uses the same definition of "PCB small capacitor" used by TSCA in 40 CFR 761.3, because Minnesota Statutes, section 116.07, subdivision 2b(a), states that PCB small capacitors are subject to MPCA regulation. The MPCA believes that using the federal definition is reasonable to ensure consistency as these types of wastes are transported between states.]//

B. PCB materials or items are hazardous waste if and when they are discarded or stored prior to being discarded.

C. A generator of PCB wastes ~~who stores on-site prior to disposal~~ is subject to the requirements of Minnesota Statutes, section 116.07, subdivision 2b, and is exempt from the agency's hazardous waste ~~storage facility permit~~ requirements ~~and parts 7045.0292 and 7045.0450 to 7045.0642 for the storage of those wastes~~ except for ~~the following requirements~~:

[In item C, the MPCA revises language to clarify that Minnesota Statutes, section 116.07, subdivision 2b, apply to generators of PCB waste. Minnesota amended this statute to address issues of duplication and overlap within the State program for regulating PCB wastes. Most of the management requirements that apply to PCB wastes are imposed through TSCA and are applicable regardless of Minnesota rules or statutes. The statute imposes Minnesota-specific requirements for certain types of PCB wastes and management activities. The revised statute created confusion regarding the application of these subpart 5 requirements. In this rulemaking, the MPCA believes it is reasonable to delete obsolete requirements and to clarify which requirements apply. A person who generates waste containing PCB at a concentration of 50 parts per million or greater is subject to the federal TSCA requirements and is also subject to Minnesota's hazardous waste rules for proper disposal, licensing, and fees as described in this item.]//

~~(1) the storage standards described in Code of Federal Regulations, title 40, section 761.65, as amended; and~~

~~(2) the requirements applicable to the generator based on generator size of part 7045.0292, subpart 1, 5, or 6, regarding proper labeling, personnel training, preparedness, prevention, and contingency planning. However, PCB items in use or in storage prior to disposal that are labeled as PCBs according to Code of Federal Regulations, title 40, sections 761.40, 761.45, and 761.65, as amended, are not subject to the hazardous waste labeling requirements of part 7045.0292.~~

(1) the hazardous waste management requirements of part 7045.0208;

(2) the evaluation requirements of part 7045.0214;

(3) the licensing requirements of parts 7045.0225 to 7045.0250; and

(4) the fee requirements of chapter 7046, unless a generator demonstrates performance of a PCB phase-out agreement under Minnesota Statutes, section 116.07, subdivision 2b, paragraph (b).

[The MPCA replaces existing subitems (1) and (2) with new subitems (1) to (4) which affirm the State requirements that apply to generators of PCB waste. These amendments are reasonable in order to clarify in rules the requirements already established in Minnesota Statutes, section 116.07, subdivision 2b(a). This statute requires that PCB generators comply with the State hazardous waste requirements for proper disposal, licensing and fees in addition to the federal requirements of TSCA. New subitems (1) and (2) address requirements that relate to disposing of hazardous waste. Subitem (1) refers to part 7045.0208, which is the rule that lists acceptable waste disposal options, including a new item G that specifically addresses PCB waste. Pointing to the existing requirement to evaluate waste in subitem (2) is reasonable because properly managing PCB waste requires evaluating the concentration of PCB in that waste. Subitem (3) identifies the rule parts that govern the issuance of licenses described in the governing statute. Finally, subitem (4) describes the hazardous waste fee provisions described in the statute. The intent is to clarify the applicability of existing requirements.]//

D. ~~PCB wastes may be transported without a hazardous waste manifest if transportation is via the owner's own vehicle and if that transportation is between the owner's facilities or premises.~~ In addition to the requirements of item C, a generator or commercial storer of PCB waste who generates or stores PCB ballasts or PCB small capacitors must comply with the requirements of part 7045.0566, subpart 2. A commercial storer of PCB waste storing only PCB ballasts and PCB small capacitors is not subject to the facility standards in parts 7045.0450 to 7045.0651, except for the requirements of part 7045.0566, subpart 2, or to the hazardous waste facility permit requirements in chapter 7001.

[In item D, the MPCA is deleting the requirement regarding the transportation of PCB wastes by the owner's own vehicle. This provision is no longer needed because of the clarification regarding the application of the federal TSCA requirements governing PCB management. The federal regulations have always applied and have provided more comprehensive requirements regarding transportation. It is appropriate to delete this one particular transportation requirement to eliminate the potential misunderstanding that this is the only transportation related requirement that applies. The MPCA is adding new language to item D to address the generators or commercial storers of PCB waste, PCB ballasts or PCB small capacitors. Minnesota Statute section 116.07, subdivision 2b(a), establishes that PCB small capacitors and lighting ballasts are, in addition to the requirements for licensing, fees and proper disposal, also subject to State on-site accumulation requirements. The statute allows the MPCA to apply appropriate accumulation standards. The accumulation standards applied to most hazardous wastes are found at part 7045.0292 and are based on generator size. They are protective for all types and characteristics of wastes that may be generated, including liquids and highly reactive

and ignitable wastes. The MPCA believes it is more appropriate to apply the preparedness and prevention rules in part 7045.0566 to the accumulation of PCB ballast and capacitors. These rules, while less prescriptive than those in part 7045.0292, provide the MPCA with the authority to require reasonable precautions for the storage of PCB ballasts and capacitors. The MPCA believes that the requirements in part 7045.0566, subp. 2 provide adequate environmental protection for the accumulation of these types of wastes.]//

E. Thermal treatment of PCB wastes at concentrations less than 500 parts per million. High efficiency boilers as defined in Code of Federal Regulations, title 40, section 761.60(a), as amended, which are used for treatment of mineral oil dielectric fluid containing less than 500 ppm PCB, are exempt from the agency's hazardous waste facility permit requirements in chapter 7001 and parts ~~7023.9000 to 7023.9050,~~ 7045.0292~~,~~ and 7045.0450 to ~~7045.0642 for storage and treatment of those wastes~~ 7045.0651, except for the following requirements:

[In item E, the MPCA deletes a citation to chapter 7023 that was repealed by another MPCA rulemaking. The MPCA also corrects a citation to a range of rules that changed as parts were added.]//

(1) parts 7045.0526 and 7045.0528;

(2) parts 7045.0556 and 7045.0558;

(3) parts 7045.0564 to 7045.0588; and

(4) parts 7045.0594 and 7045.0596.

[In subitems (1) to (4), the MPCA adds "and" to clarify that all of the requirements of the listed rule ranges apply to thermal treatment in this item]//

F. PCB wastes have the hazardous waste number of MN03.

7045.0139 BASIS FOR LISTING HAZARDOUS WASTES.

Subpart 1. **General.** ~~The tables in subpart 2 list the constituents which caused the agency to list wastes as hazardous in part 7045.0135, subparts 2 and 3. The notation "N.A." indicates the waste is hazardous because it fails the test for the characteristics of ignitability, corrosivity, reactivity, or toxicity, and the listing of a chemical name is not applicable.~~ The basis for listing hazardous waste is found in part 7045.0155, subpart 1, item D, which incorporates Code of Federal Regulations, title 40, part 261, Appendix VII, Basis for Listing Hazardous Waste. Part 7045.0155, subpart 2, provides any applicable exceptions.

Subp. 2. [See repealer.]

[In part 7045.0139, the MPCA revises language to direct readers to a new part 7045.0150, Subpart 1, item D, which incorporates by reference the "basis for listing hazardous waste" in 40 CFR part 261, Appendix VII. The MPCA considered simply repealing part 7045.0139 in conjunction with the adoption of the same information in new part 7045.0150. However, the MPCA decided that there is value in retaining part 7045.0139, even though the text of the list is being deleted, because of the complexity of removing all existing cross references, and because this rule part still retains a listing of the topic in the chapter index which the MPCA believes will be an aid to readers.]//

7045.0141 HAZARDOUS CONSTITUENTS.

Subpart 1. **Scope.** ~~Hazardous constituents and their corresponding Chemical Abstract Service registry numbers and hazardous waste numbers, if available, are listed in subparts 2 to 22.~~ The hazardous constituents list is found in part 7045.0155, subpart 1, item E, which incorporates Code of Federal Regulations, title 40, part 261, Appendix VIII, Hazardous Constituents. Part 7045.0155, subpart 2, provides any applicable exceptions.

Subp. 2. [See repealer.]
Subp. 3. [See repealer.]
Subp. 4. [See repealer.]
Subp. 5. [See repealer.]
Subp. 6. [See repealer.]
Subp. 7. [See repealer.]

Subp. 9. [See repealer.]
Subp. 10. [See repealer.]
Subp. 11. [See repealer.]
Subp. 12. [See repealer.]
Subp. 13. [See repealer.]
Subp. 14. [See repealer.]
Subp. 15. [See repealer.]
Subp. 16. [See repealer.]
Subp. 17. [See repealer.]
Subp. 18. [See repealer.]
Subp. 19. [See repealer.]
Subp. 20. [See repealer.]
Subp. 21. [See repealer.]
Subp. 22. [See repealer.]
Subp. 23. [See repealer.]

[In part 7045.0141, the MPCA revises language to point readers to a new part 7045.0150, Subpart 1, item E, which incorporates by reference the "hazardous constituents" list in 40 CFR part 261, Appendix VIII. The MPCA considered simply repealing part 7045.0141 in conjunction with the incorporation of the same information in new part 7045.0150. However, the MPCA decided that there is value in retaining part 7045.0141, even though the text of the list is being deleted, because of the complexity of removing all existing cross references, and because this rule part still retains a listing of the topic in the chapter index which the MPCA believes will be an aid to readers.]//

7045.0143 GROUNDWATER PROTECTION HAZARDOUS CONSTITUENTS LIST.

Subpart 1. **Scope.** ~~For the purposes of the groundwater protection requirements in parts 7001.0640, subpart 1, item D, subitem (2); and 7045.0484, subparts 12, item G, subitem (2), and 13, item E, the hazardous constituents are listed with their corresponding Chemical Abstract Service registry numbers in subparts 2 to 27. Where "total" is entered for the Chemical Abstract Service registry number, all species in the groundwater that~~

~~contain this element are included.~~ The groundwater protection hazardous constituents list is found in part 7045.0543, subpart 1, item D, which incorporates Code of Federal Regulations, title 40, part 264, Appendix IX, Ground Water Monitoring List. Part 7045.0543, subpart 2, provides any applicable exceptions.

Subp. 2. [See repealer.]

Subp. 3. [See repealer.]

Subp. 4. [See repealer.]

Subp. 5. [See repealer.]

Subp. 6. [See repealer.]

Subp. 7. [See repealer.]

Subp. 9. [See repealer.]

Subp. 10. [See repealer.]

Subp. 12. [See repealer.]

Subp. 21. [See repealer.]

Subp. 23. [See repealer.]

Subp. 25. [See repealer.]

Subp. 27. [See repealer.]

[In part 7045.0143, the MPCA revises language to point readers to a new part 7045.0543, Subpart 1, item D, which incorporates by reference the "Groundwater Monitoring List" in 40 CFR part 264, Appendix IX. The MPCA considered simply repealing part 7045.0143 in conjunction with the incorporation of the same information in new part 7045.0543. However, the MPCA decided that there is value in retaining part 7045.0143, even though the text of the list is being deleted, because of the complexity of removing all existing cross references, and because this rule part still retains a listing of the topic in the chapter index which the MPCA believes will be an aid to readers.]//

7045.0155 APPENDICES TO IDENTIFICATION AND LISTING OF HAZARDOUS WASTE.

[In new part 7045.0150, the MPCA incorporates by reference federal appendices that relate to the identification and listing of hazardous waste.]//

Subpart 1. **Incorporation of federal regulations.** The following appendices found in Code of Federal Regulations, title 40, part 261, as amended, are incorporated by reference:

[In subpart 1, the MPCA is incorporating by reference appendices to 40 CFR part 261, as amended (to include future amendments). These appendices address sampling methods, the basis for listing hazardous wastes, and a list of hazardous constituents. These appendices replace the same lists previously located in parts of these rules as described below. Further discussion of the reasonableness of incorporating these references as amended is provided in Part IV of the general discussion in this Statement. The MPCA believes that the same reasons why it is reasonable to adopt

the federal lists of hazardous wastes by reference also apply to adopting the appendices addressed below. The MPCA believes that maintaining consistency with the federal program is the most reasonable regulatory strategy.]//

A. Appendix I, Representative Sampling Methods;

[In item A, the MPCA incorporates the representative sampling methods in 40 CFR 261, Appendix I. Certain representative sampling methods also apply through the reference to SW-846 provided in 7045.0065. However, the MPCA believes it is reasonable to provide consistency with the federal standards by directly referencing the federal appendix that establishes these standard methods.]//

B. Appendix VII, Basis for Listing Hazardous Waste; and

[In item B, the MPCA incorporates a list in 40 CFR 261, Appendix VII which contains the basis for listing hazardous waste formerly found in 7045.0139. For each EPA hazardous waste number, this appendix identifies the hazardous constituents which form the basis for the hazardous waste listing. The EPA has amended this appendix several times since it was last amended by the MPCA. Information about those changes is available in the following RCRA Amendments:

- **required RCRA Amendment 110.4: "Coke By-Products Listings" = 40 CFR 261 VII; as supported at 57 FR 37284-37306, August 18, 1992;**
- **required RCRA Amendment 115.3: "Chlorinated Toluenes Production Waste Listing" = 40 CFR 261 VII; as supported at 57 FR 47376-47386, October 15, 1992;**
- **Optional RCRA Amendment 159.4: "Conformance With the Carbamate Vacatur" = 40 CFR 261 VII; as supported at 62 FR 32974-32980, June 17, 1997;**
- **Optional RCRA Amendment 185.6: "Organobromine Production Wastes Vacatur" = 40 CFR 261 VII; as supported at 65 FR 14472-14475, March 17, 2000; and**
- **required RCRA Amendment 189.5: "Chlorinated Aliphatics Listing and LDRs for Newly Identified Wastes" = 40 CFR 261 VII; as supported at 65 FR 67068-67133, November 8, 2000.]//**

C. Appendix VIII, Hazardous Constituents.

[In item C, the MPCA incorporates 40 CFR 261, Appendix VIII, which is a list of the hazardous constituents that was formerly found in 7045.0141. This list contains the hazardous constituents that the MPCA must consider in evaluating whether to list a waste as hazardous under part 7045.0129. The EPA has amended this appendix several times since it was last amended by the MPCA. Information about those changes is available in the following RCRA Amendments:

- **required RCRA Amendment 128: "Wastes From the Use of Chlorophenolic Formulations in Wood Surface Protection" = 40 CFR 261 VIII; as supported at 59 FR 458-469, January 4, 1994;**
- **required RCRA Amendment 134.3: "Correction of Beryllium Powder (P015) Listing" = 40 CFR 261 VIII; as supported at 59 FR 31551-31552, June 20, 1994;**
- **Optional RCRA Amendment 159.5: "Conformance With the Carbamate Vacatur" = 40 CFR 261 VIII; as supported at 62 FR 32974-32980, June 17, 1997;**

- **Optional RCRA Amendment 185.7: "Organobromine Production Wastes Vacatur" = 40 CFR 261 VIII; as supported at 65 FR 14472-14475, March 17, 2000; and**
- **required RCRA Amendment 189.6: "Chlorinated Aliphatics Listing and LDRs for Newly Identified Wastes" = 40 CFR 261 VIII; as supported at 65 FR 67068-67133, November 8, 2000.]//**

Subp. 2. **Additions, modifications, or exceptions to incorporated regulations.**

[In subpart 2, the MPCA provides exceptions to the incorporations listed in subpart 1.]//

A. Part 7045.0090, adoption and incorporation by reference, also applies.

[In item A, the MPCA refers readers to the part of the State rules that establishes certain conditions that apply when rules are adopted or incorporated by reference.]//

B. The chemical abstracts name for physostigmine listed in Code of Federal Regulations, title 40, part 261, Appendix VIII, is "Pyrrolo [2,3-b]indol-5-o1."

C. The chemical abstracts number for potassium pentachlorophenate in Code of Federal Regulations, title 40, part 261, Appendix VIII, should be "7778-73-6."

[In items B and C, the MPCA is amending the rules to follow EPA guidance regarding corrections for states incorporating by reference Appendix VIII (hazardous constituent list). These changes have not yet been made to the federal regulations, but EPA has identified errors in its hazardous constituent list and has recommended that states correct these errors when states adopt this list.]//

7045.0208 HAZARDOUS WASTE MANAGEMENT.

Subpart 1. **Management by generator.** A generator must manage hazardous waste by using one of the methods described in items A to ~~G~~ H, unless otherwise specifically exempted under this chapter.

A. A generator may treat or dispose of hazardous waste at an on-site facility as provided under part 7045.0211.

B. A generator may ensure delivery of hazardous waste to an off-site storage, treatment, or disposal facility. If located in the United States, the facility used must be permitted to accept hazardous waste under the agency's permitting procedures, have interim status under parts 7045.0552 to ~~7045.0642~~ 7045.0651, or be authorized to manage hazardous waste by the Environmental Protection Agency or by a state with a hazardous waste management program authorized by the Environmental Protection Agency.

[In item B, the MPCA corrects a citation to a range of rules that changed as parts were added.]//

[For text of items C to G, see M.R.]

H. A generator may ensure delivery of PCB waste to a commercial storer of PCB waste, as defined in part 7045.0135, subpart 5.

[The MPCA adds a new item H to clarify that it is acceptable for a generator to deliver PCB waste to a commercial storer of PCB waste. The concept of waste management at a "commercial storer of PCB waste" is based on provisions of the federal regulations in the Toxic Substances Control Act governing PCB wastes. The MPCA requirements that apply to management of PCB waste are in part 7045.0135,

subpart 5. New item H identifies a management option that is provided in part 7045.0135, subpart 5. Further discussion of the reasonableness of the requirements for PCB management is provided in that part.]//

[For text of subps 1a to 3, see M.R.]

Subp. 4. **Land disposal.** ~~Except as specified in part 7045.1300, subparts 2 and 3,~~ Hazardous wastes are subject to the requirements of ~~parts 7045.1300 to 7045.1380~~ part 7045.1390.

[In subpart 4, the MPCA is deleting references to specific provisions of the land disposal restrictions that were formerly found in parts 7045.1300 to 7045.1380. These land disposal restrictions have been repealed and the MPCA has incorporated the federal land disposal restrictions by reference as amended in part 7045.1390. The revised language simply clarifies the continued applicability of the land disposal restrictions found at the revised rule part with no change in effect.]//

7045.0213 FARMERS; PESTICIDES.

[For text of subpart 1, see M.R.]

Subp. 2. **Special conditions.** A farmer who generates waste pesticides which are hazardous waste and who triple rinses each emptied pesticide container and disposes of the pesticide residues on the farmer's farm in a manner consistent with the disposal instructions on the pesticide label is not required with respect to those pesticides to comply with other standards in parts 7045.0205 to 7045.0320 or to comply with parts 7045.0450 to ~~7045.1380~~ 7045.1390, or to obtain a hazardous waste facility permit, provided that:

[In subpart 2, the MPCA corrects a citation to a range of rules that changed as parts were added.]//

[For text of items A to C, see M.R.]

7045.0214 EVALUATION OF WASTES.

Subpart 1. **General requirement.** Any person who produces a waste within the state of Minnesota or any person who produces a waste outside the state of Minnesota that is managed within the state of Minnesota, must evaluate the waste to determine if it is hazardous within 60 days of initially generating the waste. The generation start date must be recorded and available for inspection. Waste that is not evaluated within 60 days of the generation start date must be managed as a hazardous waste and the person who produces the waste must be considered a generator until the waste is determined to be nonhazardous under parts 7045.0214 to 7045.0218. A material is determined to be a waste in accordance with the conditions specified under the definition of other waste material in part 7045.0020. Any waste evaluated and exempted under part 7045.0075 or 7045.0120 does not need to be reevaluated under this part. If the waste is determined to be hazardous, the generator must refer to parts 7045.0075, 7045.0450 to ~~7045.0685~~ 7045.0990, ~~and 7045.1300 to 7045.1380~~ 7045.1390, and 7045.1400 for possible exclusions or restrictions relating to management of the specific waste.

[In subpart 1, the MPCA makes two changes. The first corrects an error in a citation to a range of rules that the MPCA believes was incomplete in the existing rules and

that should have included the spent household battery requirements in part 7045.0686 and also all the used oil provisions in parts 7045.0692 to 7045.0990. The MPCA believes it is reasonable to provide a complete reference to all the rules that may be applicable to a hazardous waste. This correction does not change the requirements of the battery and used oil rules; it merely provides a more accurate identification of the rules that may already apply. The MPCA also provides the replacement citation for a repealed range of rules addressing the land disposal restrictions that are being amended in this rulemaking.]//

[For text of subp 2, see M.R.]

Subp. 3. **Wastes generated by treatment, storage, or disposal.** Wastes generated by treatment, storage, or disposal of hazardous waste are as follows:

A. Except as provided in items B to E, or in part 7045.0102, any waste generated from the treatment, storage, or disposal of hazardous waste, including any sludge, spill residue, ash, emission control dust or leachate, but not including precipitation ~~run-off~~ runoff, is a hazardous waste if it meets the criteria of subpart 2 or if it is derived from a waste that is listed in part 7045.0135.

[In item A, the MPCA adds a reference to the State rules that govern mixtures of hazardous wastes. This reference is being added to this rule to make it consistent with its federal counterpart in 40 CFR 261.3(c)(2)(i). Further information about this amendment can be found at RCRA Amendment 192A: "Mixture and Derived-From Rules Revisions" = 40 CFR 261.3(c)(2)(i).); as supported 66 FR 27266-27297, May 16, 2001. The corresponding federal requirement at 40 CFR 261.3 (c)(2)(i) includes references to two types of wastes, in addition to the reference to the mixtures rule at 40 CFR 261.3(c)(2)(g), that are not being addressed in this rulemaking. The first of these references is to wastes governed under 40 CFR 261.3(c)(2)(h), which regulates mixtures of radioactive and hazardous waste. The MPCA believes that these types of wastes are adequately addressed in the exemption provided in part 7045.0120, subpart 2, item G. The second type of waste that is addressed in the federal counterpart that is not being addressed in this rulemaking is the parenthetical reference to reclaimed wastes. The MPCA believes that the requirements governing the reuse and recycling of hazardous waste in part 7045.0125 adequately address this type of waste management activity and is not adding further conditions to this part.]//

[For text of items B to D, see M.R.]

E. Nonwastewater residues, such as slag, resulting from high temperature metals recovery (HTMR) processing of K061, K062, or F006 waste, in units identified as rotary kilns, flame reactors, electric furnaces, plasma arc furnaces, slag reactors, rotary hearth furnace/electric furnace combinations, or industrial furnaces~~, as defined in~~ that are blast furnaces or smelting, melting, and refining furnaces, including pyrometallurgical devices, such as cupolas, reverberator furnaces, sintering machines, roasters, or foundry furnaces, or that are other devices that the commissioner determines qualify for inclusion as an industrial furnace under part 7045.0020, subpart 43b, that are disposed ~~of~~ in solid waste disposal units, provided that these residues meet the generic exclusion levels identified ~~below~~ in the tables in this item for all constituents, and exhibit no characteristics of hazardous waste. Testing requirements must be incorporated in a facility's waste analysis plan or a generator's self-implementing waste analysis plan. At a minimum, composite samples of residues must be collected and analyzed quarterly and/or when the process or

operation generating the waste changes. Persons claiming this exclusion in an enforcement action have the burden of proving by clear and convincing evidence that the material meets all of the exclusion requirements. The generic exclusion levels ~~are~~ for K061 and K062 nonwastewater HTMR residues are as follows:

[Item E corresponds to language found at 40 CFR 261.3(c)(2)(ii)(C)(1). In item E, the MPCA first adds two new waste codes (K062 and F006) to the description of the types of wastes excluded. The MPCA then adds a list of the types of systems that qualify as HTMR processing systems to the cited definition of those systems. The MPCA then removes the word "of" as superfluous for clarity. Next, the MPCA revises the word "below" into the phrase "in the tables in this item" to clarify where to find the generic exclusion levels. Then, the MPCA clarifies the responsibilities of those who claim this exclusion. The MPCA then clarifies that the table of generic exclusion levels address nonwastewater residues for K061 and K062 wastes. This language corresponds to the federal requirements discussed above for the addition of K061 and K062. Finally, the MPCA completes the sentence by adding, "are as follows" to improve clarity. These changes are based on required RCRA Amendment 109.4: "Land Disposal Restrictions for Newly Listed Wastes and Hazardous Debris" = 40 CFR 261.3(c)(2)(ii)(C)(1); as found in 57 FR 37194-37282, August 18, 1992.]//

Constituent	Maximum for any single composite sample (mg/l)
Antimony	~~0.063~~ 0.10
Arsenic	~~0.055~~ 0.50
Barium	~~6.3~~ 7.6
Beryllium	~~0.0063~~ 0.010
Cadmium	~~0.032~~ 0.050
Chromium (total)	0.33
Lead	~~0.095~~ 0.15
Mercury	0.009
Nickel	~~0.63~~ 1.0
Selenium	0.16
Silver	0.30
Thallium	~~0.013~~ 0.020
~~Vanadium~~	~~1.26~~
Zinc	70

[In this table to item E, the MPCA adopts changes to the concentrations identified in the second column, adds a standard for "zinc" and deletes all reference to "vanadium." These changes correspond to 40 CFR 261.3(c)(2)(ii)(C)(1) and relate to required RCRA Amendment 109.4: "Land Disposal Restrictions for Newly Listed Wastes and Hazardous Debris." Further information about these amendments can be found at 57 FR 37194-37282, August 18, 1992.]//

The generic exclusion levels for F006 nonwastewater HTMR residues are as follows:

Constituent	Maximum for any single composite sample (mg/l)
Antimony	0.10
Arsenic	0.50
Barium	7.6
Beryllium	0.010
Cadmium	0.050
Chromium (total)	0.33
Cyanide (total)	1.8 (mg/kg)
Lead	0.15
Mercury	0.009
Nickel	1.0
Selenium	0.16
Silver	0.30
Thallium	0.020
Zinc	70

[In this newly added table in item E, the MPCA adopts language that corresponds to 40 CFR 261.3(c)(2)(ii)(C)(1) addressing nonwastewater residues for F006 wastes. This language relates to required RCRA Amendment 109.4: "Land Disposal Restrictions for Newly Listed Wastes and Hazardous Debris." Further information about this amendment is available at 57 FR 37194-37282, August 18, 1992.]//

For ~~each shipment of~~ K061 ~~high temperature metals recovery~~, K062, or F006 HTMR residues sent to ~~a~~ solid waste disposal ~~unit that meets~~ units, the treatment facility must prepare and send to the commissioner a onetime notification and certification certifying that the residues meet the generic exclusion levels for all constituents~~,~~ and ~~does~~ do not exhibit any ~~characteristic, a~~ characteristics of hazardous waste. The notification and certification must also be kept in the facility's files. The notification and certification must be updated if the process or operation generating the waste changes or if the solid waste disposal unit receiving the waste changes. However, the treatment facility need only notify the commissioner on an annual basis if these changes occur. The notification and certification must be sent to the commissioner no later than December 31. The notification and certification must include the following information:

(1) the name and address of the solid waste disposal unit receiving the waste ~~shipment~~ shipments;

(2) the EPA hazardous waste ~~number~~ numbers and treatability ~~group~~ groups at the initial point of generation; and

(3) the treatment standards applicable to the waste at the initial point of generation.

The certification must be signed by an authorized representative of the treatment facility and must state as follows: "I certify under penalty of law that the generic exclusion levels for all constituents have been met without impermissible dilution and that no characteristic of hazardous waste is exhibited. I am aware that there are

significant penalties for submitting a false certification, including the possibility of fine and imprisonment."

[In the above paragraph of item E, and subitems (1) to (3), the MPCA adopts further conditions and clarifications of the exclusion of K061, K062 and F006 wastes that correspond to 40 CFR 261.3(c)(2)(ii)(C)(2). These changes are based on required RCRA Amendment 109.4: "Land Disposal Restrictions for Newly Listed Wastes and Hazardous Debris." Further information about these amendments is available at 57 FR 37194-37282, August 18, 1992. The MPCA slightly revised the federal language to add reference to the treatment facility being the entity that must meet the requirements in order to clarify the intended meaning of EPA requirements. The MPCA consulted with EPA, who advised the MPCA that EPA's intent was for the facility that undertakes the HTMR treatment to keep the records, notify the EPA/state, and make the certification. The MPCA believes that the language proposed is a reasonable interpretation of the federal intent.]//

7045.0255 ~~ONE-TIME~~ ONETIME DISPOSAL REQUIREMENTS.

A person having hazardous waste subject to regulation under this chapter who is only a hazardous waste generator for the ~~one-time~~ onetime disposal of hazardous waste which is not currently being produced, must comply with this chapter except as provided in items A to D. The exemptions in this part do not apply to generators that generate hazardous waste more than one time.

A. The generator is exempt from parts 7045.0225 to 7045.0250, license and license reporting.

B. A large quantity generator is exempt from part 7045.0292, subpart 1, but must instead comply with part 7045.0292, subpart 5, items A to F, and must meet the requirements of part 7045.0566, relating to preparedness and prevention, and ~~part 7045.1315, subpart 1, item D~~ Code of Federal Regulations, title 40, section 268.7(a)(5), as incorporated in part 7045.1390, relating to waste analysis for restricted wastes.

[In item B, the MPCA replaces a citation to a repealed rule with the corresponding federal regulation as incorporated by reference.]//

C. A small quantity generator is exempt from the requirements of part 7045.0292, subpart 5, items G and H, but instead must meet the requirements of part 7045.0566, relating to preparedness and prevention, and ~~part 7045.1315, subpart 1, item D~~ Code of Federal Regulations, title 40, section 268.7(a)(5), as incorporated in part 7045.1390, relating to waste analysis for restricted wastes.

[In item C, the MPCA replaces a citation to a repealed rule with the corresponding federal regulation as incorporated by reference.]//

D. A very small quantity generator is exempt from part 7045.0292, subpart 6, but instead must comply with part 7045.0292, subpart 5, items A to F, and must meet the requirements of part 7045.0566, relating to preparedness and prevention, and ~~part 7045.1315, subpart 1, item D~~ Code of Federal Regulations, title 40, section 268.7(a)(5), as incorporated in part 7045.1390, relating to waste analysis for restricted wastes.

[In item D, the MPCA replaces a citation to a repealed rule with the corresponding federal regulation as incorporated by reference.]//

7045.0270 PRETRANSPORT REQUIREMENTS.

Subpart 1. **Marking.** Before transporting or offering hazardous waste for transportation off-site, a generator must:

A. mark each package of hazardous waste in accordance with the applicable United States Department of Transportation regulations on hazardous materials under Code of Federal Regulations, title 49, part 172, subpart D, as amended; and

[In item A, the MPCA follows advice from Minnesota's Department of Transportation to provide a more correct citation.]//

[For text of item B, see M.R.]

[For text of subps 2 and 3, see M.R.]

Subp. 4. **Packaging.** Before transporting hazardous waste or offering a hazardous waste for transportation off-site, a generator must package the waste in accordance with the applicable United States Department of Transportation regulations on packaging under Code of Federal Regulations, title 49, parts 173, 178, ~~and~~ 179, and 180, as amended.

[In subpart 4, following advice from the Minnesota Department of Transportation, the MPCA corrects one of several citations to a range of regulations amended by the U.S. Department of Transportation.]//

Subp. 5. **Labeling.** Before transporting or offering hazardous waste for transportation off-site, a generator must label each package in accordance with the applicable United States Department of Transportation regulations on hazardous materials under Code of Federal Regulations, title 49, part 172, subpart E, as amended.

[In subpart 5, the MPCA follows advice from Minnesota's Department of Transportation to provide a more correct citation.]//

[For text of subps 6 and 7, see M.R.]

7045.0292 ACCUMULATION OF HAZARDOUS WASTE.

[In part 7045.0292, the MPCA is proposing several rule changes based on corresponding amended federal regulations. The MPCA is not adopting one federal provision found in 40 CFR 262.34 in which the EPA allows waste accumulation in containment buildings by generators who are not subject to permit or interim status standards. The MPCA is adopting language that allows permitted and interim status facilities do accumulate in containment buildings in this rulemaking in parts 7045.0550 and 7045.0650. However, the MPCA rejects this option, which reduces regulations, for non-permitted generators. Generators are subject to much less inspection scrutiny, so allowing this practice for generators is not the same as allowing it for permitted or interim status facilities. The MPCA believes that allowing this practice by generators would result in an unacceptably high risk of mismanagement. The MPCA believes that a reduction in regulation that allows accumulation in containment buildings by generators is not adequately protective of human health and the environment. The federal containment building requirements are identified in required RCRA Amendment 109.17: "Land Disposal Restrictions for Newly Listed Wastes and Hazardous Debris," = 40 CFR 264.1100-1102, Subpart DD. Further information about the federal amendment can be found at 57 FR 37194-37282, August 18, 1992.]//

Subpart 1. **Large quantity generator.** A large quantity generator may accumulate hazardous waste on site without a permit or without having interim status if:

[For text of item A, see M.R.]

B. the waste is placed as follows:

(1) in containers which meet the standards of part 7045.0270, subpart 4, and are managed in accordance with applicable requirements of parts 7045.0594, subpart 2~~,~~; 7045.0596, subpart 3~~, and~~; 7045.0626; 7045.0645; 7045.0647; and 7045.0648;

[In item B, subitem (1), the MPCA extends the range of applicable rules to include the existing air emission standards in parts 7045.0647 and 7045.0648 and new air emission standards being adopted in part 7045.0645. This provision corresponds to 40 CFR 262.34(a)(1)(i). This change relates to required RCRA Amendments 154, 154-1.8a, and 154-5.2: "Consolidated Organic Air Emission Standards for Tanks, Surface Impoundments, and Containers." Further information can be found at 59 FR 62896-62953, December 6, 1994; 61 FR 4903-4916, February 9, 1996; and 61 FR 59932-59997, November 25, 1996. Subsequent amendments and clarifications to the federal air emission standards relate to required RCRA Amendment 177: "Organic Air Emission Standards: Clarification and Technical Amendments;" as supported at 64 FR 3382, January 21, 1999. In addition, the MPCA breaks the paragraph into subitems (1)-(3) to improve readability.]//

(2) in tanks provided the generator complies with the applicable requirements of parts 7045.0594, subpart 2~~,~~; 7045.0596, subpart 3~~, and~~; 7045.0628; 7045.0645; 7045.0647; and 7045.0648, except part 7045.0628, ~~subpart~~ subparts 9, item C, and ~~subpart~~ 12; ~~or~~

[In subitem (2), the MPCA extends the range of applicable rules to include the existing air emission standards in parts 7045.0647 and 7045.0648 and new air emission standards being adopted in part 7045.0645. This provision corresponds to 40 CFR 262.34(a)(1)(ii). This change relates to required RCRA Amendments 154, 154-1.8a, 154-5.2: "Consolidated Organic Air Emission Standards for Tanks, Surface Impoundments, and Containers." Further information supporting this amendment can be found at 59 FR 62896-62953, December 6, 1994; 61 FR 4903-4916, February 9, 1996; and 61 FR 59932-59997, November 25, 1996. Subsequent changes relate to required RCRA Amendment 177: "Organic Air Emission Standards: Clarification and Technical Amendments," as supported at 64 FR 3382, January 21, 1999.]//

(3) for wood preserving operations on drip pads, provided the generator complies with parts 7045.0594, subpart 2~~,~~; 7045.0596, subpart 3~~,~~; and 7045.0644 and maintains records containing a description of procedures that will be followed to ensure that all wastes are removed from drip pads and associated collection systems at least once every 90 days, and maintains documentation of the quantities, dates, and times of each waste removal. ~~These~~ Records relating to drip pads must be maintained at the licensed site and must be easily available for agency inspection;

[In item B, the MPCA makes minor changes in grammar and punctuation.//

[For text of items C to F, see M.R.]

G. the requirements of parts 7045.0558; 7045.0562, subparts 1 and 2; 7045.0566 to 7045.0576; and ~~7045.1315, subpart 1, item D~~ Code of Federal Regulations, title 40, section 268.7(a)(5), as incorporated in part 7045.1390, are fulfilled regarding personnel

training, ignitable, reactive, or incompatible waste, preparedness and prevention, contingency planning, and waste analysis for restricted wastes.

[In item G, the MPCA replaces a citation to a repealed rule with the corresponding federal regulation as incorporated by reference. This is based on RCRA Amendment 183.4: "Land Disposal Restrictions Phase IV -- Technical Corrections," which corresponds to 40 CFR 262.34(a)(4). Further information can be found at 64 FR 56469-56472, October 20, 1999.]//

[For text of subps 2 to 4, see M.R.]

Subp. 5. **Small quantity generator.** A small quantity generator may accumulate up to 3,000 kilograms of hazardous waste that is not acute hazardous waste on site without a permit or without having interim status if:

[For text of item A, see M.R.]

B. the waste is placed in containers which meet the standards of part 7045.0270, subpart 4, and are managed in accordance with parts 7045.0594, subpart 2~~,~~; 7045.0596, subpart 3~~,~~; and 7045.0626, subparts 1 to 8; in tanks provided the generator complies with the requirements of parts 7045.0594, subpart 2~~,~~; 7045.0596, subpart 3~~,~~; and 7045.0629; or for wood preserving operations on drip pads, provided the generator complies with parts 7045.0594, subpart 2~~,~~; 7045.0596, subpart 3 ~~,~~; and 7045.0644 and maintains records containing a description of procedures that will be followed to ensure that all wastes are removed from drip pads and associated collection systems at least once every 180 days, and maintains documentation of the quantities, dates, and times of each waste removal. These records relating to drip pads must be maintained at the licensed site and must be easily available for agency inspection;

[In item B, the MPCA specifies that a generator can accumulate waste in containers under certain conditions, but that the air emission standards for containers being adopted in this rulemaking in part 7045.0626, subpart 9, do not apply to the accumulation of waste in containers by small quantity generators. This amendment corresponds to 40 CFR 262.34(d)(2), and is based on required RCRA Amendment 154-1.8a: "Consolidated Organic Air Emission Standards for Tanks, Surface Impoundments, and Containers." Further information regarding this amendment can be found at 59 FR 62896-62953, December 6, 1994.]//

[For text of items C to F, see M.R.]

G. the generator meets the requirements of parts 7045.0566, relating to preparedness and prevention; 7045.0568, relating to the arrangements with local authorities for emergencies; and ~~7045.1315, subpart 1, item D~~ Code of Federal Regulations, title 40, section 268.7(a)(5), as incorporated in part 7045.1390, relating to waste analysis for restricted wastes; and

[In item G, the MPCA replaces a citation to a repealed Rule with a citation to the corresponding federal rule incorporated by reference. This amendment corresponds to 40 CFR 262.34(d)(4), and is based on required RCRA Amendment 179.5: "Land Disposal Restrictions Phase IV -- Technical Corrections and Clarifications to Treatment Standards." Further information regarding this amendment can be found at 64 FR 25408-25417, May 11, 1999.]//

[For text of item H, see M.R.]

Subp. 6. **Very small quantity generator.** A very small quantity generator may accumulate up to 1,000 kilograms of hazardous waste that is not acute hazardous waste on site without a permit or without having interim status if:

[For text of item A, see M.R.]

B. the waste is placed in containers which meet the standards of part 7045.0270, subpart 4, and are managed in accordance with parts 7045.0594, subpart 2~~,~~; 7045.0596, subpart 3~~,~~; and 7045.0626, subparts 1 to 8; in tanks provided the generator complies with the requirements of parts 7045.0594, subpart 2~~,~~; 7045.0596, subpart 3~~,~~; and 7045.0629; or for wood preserving operations on drip pads, provided the generator complies with parts 7045.0594, subpart 2~~,~~; 7045.0596, subpart 3~~,~~; and 7045.0644 and maintains records containing a description of procedures that will be followed to ensure that all wastes are removed from drip pads and associated collection systems at least once every 180 days, and maintains documentation of the quantities, dates, and times of each waste removal. These records relating to drip pads must be maintained at the licensed site and must be easily available for agency inspection;

[In item B, the MPCA adds a reference to part 7045.0626, subparts 1-8 to make it clear that very small quantity generators do not have to meet the air emission standards for containers in subpart 9. This change is not based on federal language because the EPA does not regulate generators that Minnesota refers to as very small quantity generators. In adopting this provision, Minnesota continues to apply the same requirements to very small quantity generators who accumulate waste in containers as it applies to small quantity generators in subpart 5, item B above.]//

[For text of items C to H, see M.R.]

Subp. 7. **Acute hazardous waste accumulation.** A small quantity generator or a very small quantity generator who generates acute hazardous waste ~~may accumulate that waste on site indefinitely until one kilogram of acute hazardous waste or 100 kilograms of residue, contaminated soil, water, or other debris resulting from the cleanup of a spill of an acute hazardous waste into or on any land or water, is accumulated. From the date the applicable limit is reached, the entire quantity of waste must be treated on site in compliance with part 7045.0211 or shipped off site in compliance with part 7045.0208 within 90 days. A generator accumulating wastes under this subpart must meet the requirements in items A and B.~~ that is not exempt under subpart 8 must comply with items A and B:

[In subpart 7, the MPCA simplifies existing language and clarifies that a small or very small quantity generator accumulating acute hazardous waste is subject to this subpart, except that acute hazardous waste accumulated under the satellite accumulation requirements of subpart 8 is exempt from the requirements of subpart 7.]//

A. ~~For the period preceding the accumulation start date,~~ A generator may accumulate acute hazardous waste on site indefinitely in quantities equal to or less than one kilogram of acute hazardous waste and equal to or less than 100 kilograms of residue, contaminated soil, water, or other debris resulting from cleaning up spilled acute hazardous waste. The generator must comply with subpart 5, items B to H.

[In Item A, the MPCA revises existing rule language to clarify that, up to a certain threshold, a small quantity generator or a very small quantity generator may accumulate acute hazardous waste indefinitely. Also, up to that threshold, the

requirements of subpart 5, items B to H apply. If this waste totals equal to or less than the mass limits specified in subpart 7, then the generator, if a very small quantity generator, must meet the planning and preparedness requirements applicable to a small quantity generator of hazardous waste contained in subpart 5. The MPCA believes that the changes to this item are not changes to the intended meaning or application of the rules, but are reasonable clarifications of the original intent of this item, which was intended to apply requirements equivalent to those contained in 40 CFR 261.5(f).]//

B. ~~For the period following the accumulation start date, the generator~~ A generator who accumulates on site more than one kilogram of acute hazardous waste, or more than 100 kilograms of residue, contaminated soil, water, or other debris resulting from cleaning up spilled acute hazardous waste must comply with subpart 1.

[In Item B, the MPCA revises existing rule language to clarify that the requirements of subpart 1 apply to generators of acute hazardous waste when a certain quantity threshold is reached. If the generator accumulates acute hazardous waste quantities that exceed the limits specified in subpart 7, item B, regardless of generator size, they must meet all requirements applicable to a large quantity generator of hazardous waste contained in subpart 1. The MPCA believes the changes to this item are not significant changes to the intended meaning or application of the rules, but are reasonable clarifications of the original intent of this item, which was intended to apply requirements equivalent to those contained in 40 CFR 261.5(e).]//

Subp. 8. **Satellite accumulation.** Items A to D apply to all generators of hazardous waste.

A. A generator may, without a permit or interim status and without complying with subparts 1 to 7, accumulate as much as 55 gallons of hazardous waste or one quart of acute hazardous waste listed in part 7045.0135, ~~subparts 2 and 4, item E~~ subpart 1a, items B to D, per waste stream per each point of generation provided the generator complies with items B to D.

[In item A, first, the MPCA corrects citations to rules that were revised elsewhere in this rulemaking. The rule formerly referred to part 7045.0135, subparts 2 and 4, item E. Subpart 2 was the list of hazardous waste from non-specific sources and subpart 4, item E, was the list of discarded chemical products, off specification species, containers and spill residues. Due to the revision of part 7045.0135, subparts 2 and 4 are now replaced by subpart 1a, items B and D, respectively. Part 7045.0135, subpart 3, the list of wastes from specific sources, is now represented by subpart 1a, item C. This was not originally included here because there were no acutely toxic wastes on that list. Now, the MPCA proposes to replace the former references to part 7045.0135, subparts 2 and 4, item E, with a reference to part 7045.0135, subpart 1a, items B to D (newly including item C, "Hazardous Waste from Specific Sources"). The MPCA believes that it is just as reasonable to allow the satellite accumulation of hazardous waste from the list of specific sources as it is from the list of non-specific sources. Although there are currently no acutely hazardous wastes on the specific sources list, the MPCA anticipates that this list could change in the future to include such wastes and intends that, if so, their accumulation would be allowed at satellite locations. This is different than the federal satellite accumulation provision, but the MPCA believes that it is a reasonable addition to the State rules. Note that, as discussed in Part IV of

this Statement, the MPCA is adopting the lists of hazardous wastes prospectively by reference so that future changes to the lists will become effective in Minnesota without rulemaking. Adding a reference to part 7045.0135, subpart 1a, item C here will accommodate future changes to that list. Another difference is that part 7045.0135, subpart 1a, item D, is equivalent to 40 CFR 261.33(a-f). The federal rule equivalent to this subpart 8, only refers to section 261.33(e). The MPCA's incorporation of 40 CFR 261.33 is too coarse to make that specific of reference; however, looking at the material in the range encompassed by 40 CFR 261.33(a-f), the MPCA believes it is harmless to reference the entire section 261.33.]//

[For text of items B to D, see M.R.]

[For text of subps 9 and 10, see M.R.]

Subp. 11. **Accumulation requiring a permit.** A large quantity generator who accumulates hazardous waste for more than 90 days, or a small quantity generator who accumulates more than 3,000 kilograms of hazardous waste at any time, is an operator of a storage facility and is subject to the requirements of parts 7045.0450 to ~~7045.0642~~ 7045.0651 and the agency's permitting procedures in chapter 7001 ~~and parts 7023.9000 to 7023.9050~~ unless the generator has been granted a time extension under subpart 10.

[In subpart 11, the MPCA corrects a citation to a range of rules that changed as parts were added. The MPCA also deletes a citation to chapter 7023 that was repealed in a prior rulemaking.]//

[For text of subp 12, see M.R.]

7045.0294 RECORD KEEPING.

[For text of subps 1 to 3, see M.R.]

Subp. 3a.**Training records.** A generator must keep training records required under part 7045.0292, subparts 1, item G, and 5, item ~~G~~ H, subitem (3), on current personnel until closure of the licensed site. Training records on former employees must be kept for at least three years from the date of the employee's termination. Personnel training records may accompany personnel transferred within the same company.

[In subpart 3a, the MPCA corrects an error in the citation. The rule requires that generators keep records related to employee training required in part 7045.0292, subpart 5, item G. This citation is incorrect because the training and recording keeping requirement is specified in item H, subitem (3).]//

[For text of subps 4 and 5, see M.R.]

7045.0300 ADDITIONAL REPORTING.

The commissioner, when necessary to determine compliance with the requirements of this chapter, may require generators to furnish additional reports concerning the quantities and disposition of waste identified or listed in parts ~~7045.0100~~ 7045.0102 to ~~7045.0143~~ 7045.0155.

[In part 7045.0300, the MPCA corrects a citation to a range of rules that changed as parts were added. In addition, the MPCA is correcting an error in the previous range of rules. There is no part 7045.0100, this section of the rules starts at part 7045.0102.]//

7045.0302 INTERNATIONAL SHIPMENTS; SPECIAL CONDITIONS.

[For text of subps 1 and 1a, see M.R.]

Subp. 2. **Notification.** When shipping hazardous waste outside the state of Minnesota to a foreign country the primary exporter must notify the commissioner and the EPA of an intended export before the waste is scheduled to leave the United States. A complete notification should be submitted 60 days before the initial shipment is intended to be shipped off site. This notification may cover export activities extending over a 12-month or lesser period.

The notification must be sent to the commissioner at 520 Lafayette Road, Saint Paul, Minnesota 55155-4194, and to the Office of Enforcement and Compliance Assurance, Office of Federal Activities, International Compliance Assurance Division (2254A), Environmental Protection Agency, 1200 Pennsylvania Avenue N.W., Washington, DC 20460. Hand-delivered notifications must be sent to the Office of Enforcement and Compliance Assurance, Office of Federal Activities, International Compliance Assurance Division (2254A), Environmental Protection Agency, Ariel Rios Building, 12th Street and Pennsylvania Avenue N.W., Washington, DC 20460. In both cases, the following must be prominently displayed on the front of the envelope: "Attention: Notification of Intent to Export."

The primary exporter must provide the commissioner and the EPA with written renotification of any changes to the notification, except for changes to the telephone number, decreases in the quantity indicated in item B, subitem (3), and changes in the means of transport in item B, subitem (5). The waste shall not be shipped until the primary exporter receives an EPA Acknowledgment of Consent reflecting the receiving country's consent to the changes.

The notification must be in writing, signed by the primary exporter, and include the following information:

A. name, mailing address, telephone number, and identification number of the primary exporter; and

B. by consignee, for each hazardous waste type:

(1) a description of the hazardous waste and the EPA hazardous waste number (from Code of Federal Regulations, title 40, part 261, subpart C or D, as amended), United States Department of Transportation proper shipping name, hazard class, ~~and~~ identification number (UN/NA), and packing group for each hazardous waste as identified in Code of Federal Regulations, title 49, parts 171 to 177, as amended;

[In item B, the MPCA follows advice from Minnesota's Department of Transportation to revise language to conform with amended U.S. Department of Transportation regulations.]//

[For text of subitems (2) to (9), see M.R.]

[For text of subps 3 to 7, see M.R.]

7045.0365 TRANSFER FACILITY REQUIREMENTS.

Subpart 1. **Applicability.** A transporter who stores manifested shipments of hazardous waste in containers meeting the requirements of part 7045.0270, subpart 4, at a transfer

facility for a period of ten days or fewer is not subject to regulation under parts 7045.0450 to ~~7045.0642~~ 7045.0651 and ~~7045.1300 to 7045.1380~~ 7045.1390, and a hazardous waste facility permit with respect to the storage of those wastes. The owner or operator must notify the commissioner in writing of his or her activity.

[In subpart 1, the MPCA corrects a citation to a range of rules that changed as parts were added. The MPCA also provides the replacement citation for a repealed range of rules.]//

[For text of subps 2 and 3, see M.R.]

7045.0371 TRANSPORTATION OF HAZARDOUS WASTE.

Hazardous waste shall be transported in accordance with all applicable requirements of Minnesota Statutes, sections 221.033 and ~~221.034~~ 221.0341, and with ~~221.035~~ 221.0355 if applicable, and Code of Federal Regulations, title 49, parts 171 to ~~179~~ 199, as amended.

[In part 7045.0371, the MPCA corrects citations to sections of Minnesota Statutes that were repealed and provides citations to the correct replacement sections. The MPCA also corrects one of several occurrences of a citation to a range of federal transportation regulations that changed as the U.S. Department of Transportation added a part.]//

7045.0395 HAZARDOUS WASTE DISCHARGES.

[For text of subps 1 to 4, see M.R.]

Subp. 5. **Reporting.** Any air, rail, highway, or water transporter who has discharged hazardous waste must:

A. report in writing as required by Code of Federal Regulations, title 49, section 171.16, as amended, to the ~~Director, Office of Hazardous Materials Regulations, Materials Transportation Bureau~~ Information Systems Manager, PHH-63, Pipeline and Hazardous Materials Safety Administration, Department of Transportation, Washington, D.C. 20590-0001, or submit an electronic hazardous materials incident report to the Information Systems Manager, DHM-63, Pipeline and Hazardous Materials Safety Administration, Department of Transportation, Washington, D.C. 20590-0001 at http://hazmat.dot.gov;

[In item A, the MPCA follows advice from Minnesota's Department of Transportation to revise language to conform with amended U.S. Department of Transportation regulations.]//

[For text of items B and C, see M.R.]

7045.0450 FACILITIES GOVERNED BY FACILITY STANDARDS.

Subpart 1. General requirements.

[For text of items A to C, see M.R.]

D. Parts 7045.0450 to 7045.0551 apply to the owners and operators of all facilities that treat, store, or dispose of hazardous waste referred to in ~~parts 7045.1300 to 7045.1380~~ part 7045.1390.

[In item D, the MPCA provides the replacement citation for a repealed range of rules. The MPCA labels this paragraph as item D.]//

[For text of item E, see M.R.]

Subp. 2. **Relationship to interim status standards.** A facility owner or operator who has fully complied with the requirements for interim status under part 7045.0554 shall comply with parts 7045.0552 to ~~7045.0642~~ 7045.0651 in lieu of parts 7045.0450 to 7045.0551 until final administrative disposition of the permit application is made. The treatment, storage, or disposal of hazardous waste is prohibited except in accordance with a permit and except for the extent to which parts 7045.0552 to ~~7045.0642~~ 7045.0651 provide for the continued operation of an existing facility which meets certain conditions until final administrative disposition of the owner's or operator's permit application is made, except as provided under parts 7045.0485, 7045.0545, and 7045.0546.

[In subpart 2, the MPCA corrects several citations to a range of rules that changed as parts were added.]//

Subp. 3. **Exemptions.** The requirements of parts 7045.0450 to 7045.0551 do not apply to the following specific waste management units, facilities, or activities, although all other waste management activities of the owner or operator may be regulated:

[For text of items A to D, see M.R.]

E. an elementary neutralization unit, a pretreatment unit, or a wastewater treatment unit, but only if the unit does not receive hazardous waste from generators other than the owner or operator of the unit, provided that if the owner or operator is diluting hazardous ignitable (D001) wastes (other than the D001 High TOC Subcategory defined in Code of Federal Regulations, title 40, section 268.40, Table of Treatment Standards for Hazardous Wastes, as incorporated in part 7045.1390) or reactive (D003) waste to remove the characteristic before land disposal, the owner or operator must comply with part 7045.0456, subpart 2;

[In item E, the MPCA adopts qualifying conditions to an existing exemption for certain types of treatment units. The conditions only apply to those units treating ignitable or reactive waste, and reference existing required precautions for the management of ignitable and reactive wastes. The additional conditions correspond to requirements in 40 CFR 264.1(g)(6) and are derived from required RCRA Amendment 124.2: "Land Disposal Restrictions for Ignitable and Corrosive Characteristic Wastes Whose Treatment Standards Were Vacated." Further information about the amendments is found in 58 FR 29860-29887, May 24, 1993. The additions also correspond to requirements from RCRA Amendment 137.5 and 137.11: "Universal Treatment Standards and Treatment Standards for Organic Toxicity Characteristic Wastes and Newly Listed Wastes" = 40 CFR 264.1(g)(6). Further information about these amendments is found in 59 FR 47982-48110, September 19, 1994, as amended at 60 FR 242-302, January 3, 1995. While the language being added at this time is essentially the same as the federal regulations (except for the substitution of cross references to State rule parts and the removal of a reference to the definitions part of the rules), this exclusion remains more restrictive than the federal counterpart because the existing language restricts this exemption to waste generated onsite. This is reasonable as the MPCA has consistently not allowed accepting waste from off-site at unpermitted facilities. This is an existing difference and is not being changed as a result of this rulemaking.]//

[For text of items F to I, see M.R.]

J. (1) except as provided in subitem (2), treatment or containment activities during immediate response to any of the following situations: a discharge of a hazardous waste, an imminent and substantial threat of a discharge of hazardous waste, or a discharge of a material which, when discharged, becomes a hazardous waste;

[For text of subitem (2), see M.R.]

(3) a person who is covered by subitem (1) and who continues or initiates hazardous waste treatment or containment activities after the immediate response is over is subject to all applicable requirements of parts 7045.0450 to ~~7045.0544~~ 7045.0551 and the agency's permitting procedures for those activities;

[In subitem (3), the MPCA corrects a citation to a range of rules that changed as parts were added.]//

K. treatment of hazardous waste by a generator in the generator's accumulation tanks or containers in accordance with part 7045.0292. If the treatment involves evaporation of aqueous waste or polymerization of polyester or other chemical fixation treatment processes in open containers, the generator is exempt from parts 7045.0450 to ~~7045.0544~~ 7045.0551, but before beginning the treatment process must submit to the commissioner the information required under part 7045.0539, subpart 2, items A to C, that is relevant to the treatment activity and must be notified by the commissioner that the treatment activity is approved. The commissioner shall approve the treatment activity if the commissioner finds that the treatment activity will not endanger human health and the environment; or

[In item K, the MPCA corrects a citation to a range of rules that changed as parts were added.]//

[For text of item L, see M.R.]

7045.0452 GENERAL FACILITY STANDARDS.

[For text of subps 1 to 4, see M.R.]

Subp. 5. **General inspection requirements.** General inspection requirements include the following:

[For text of items A and B, see M.R.]

C. The frequency of inspection may vary for the items on the schedule. However, ~~it must~~ the frequency must be based on the rate of possible deterioration of the equipment and the probability of an environmental or human health incident if the deterioration ~~or malfunctions~~, malfunction, or any operator error goes undetected between inspections. Areas subject to spills, such as loading and unloading areas, must be inspected daily when in use. At a minimum, the inspection schedule must include the terms and frequencies called for in parts 7045.0526, subpart 5; 7045.0528, subparts 4 and 7; 7045.0532, subpart 5; 7045.0534, subpart 6; 7045.0536, subpart 6; 7045.0538, subpart 5; 7045.0539, subpart 3; and 7045.0542, subpart 7; and the process vent ~~and~~, equipment leak, and tank, surface impoundment, and container standards in Code of Federal Regulations, title 40, sections 264.1033, 264.1052, 264.1053, ~~and~~ 264.1058, as amended, and sections 264.1083 to 264.1089, as incorporated in part 7045.0540, where applicable. The inspection schedule must be submitted with the permit application. The commissioner shall evaluate the schedule along with the rest of the application to ensure

that it adequately protects human health and the environment. As part of this review, the commissioner may modify or amend the schedule as necessary.

[In the first sentences of item C, the MPCA simply revised existing language to clarify the intended meaning. These changes do not alter the effect of the rule and are not based on federal amendments. The MPCA also adopts references to newly added requirements addressing air emissions from tanks, surface impoundments and containers that correspond to amendments to 40 CFR 264.15(b)(4). These changes are from required RCRA Amendment 154-1.12: "Consolidated Organic Air Emission Standards for Tanks, Surface Impoundments, and Containers." Further information about the amendment can be found at 59 FR 62896-62953, December 6, 1994; as amended by 60 FR 26828-26829, May 19, 1995; 60 FR 50426-50430, September 29, 1995; 60 FR 56952-56954, November 13, 1995; 61 FR 4903-4916, February 9, 1996; 61 FR 28508-28511, June 5, 1996; and 61 FR 59932-59997, November 25, 1996. This amendment also adopts language from required RCRA Amendment 163.2: "Organic Air Emission Standards for Tanks, Surface Impoundments, and Containers; Clarification and Technical Amendment" = 40 CFR 264.15(b)(4). Further information about the amendment can be found at 62 FR 64636-64671, December 8, 1997.]//

[For text of items D and E, see M.R.]

7045.0458 WASTE ANALYSIS REQUIREMENTS.

Subpart 1. **Waste analysis.** Waste analysis procedures are listed in items A to D.

A. Before an owner or operator treats, stores, or disposes of any hazardous waste, or nonhazardous waste if applicable under part 7045.0488, subpart 2a, the owner or operator shall obtain a detailed chemical and physical analysis of a representative sample of the waste. This analysis must contain all the information which must be known in order to treat, store, or dispose of the waste in accordance with the requirements of parts 7045.0450 to 7045.0551 and ~~7045.1300 to 7045.1380~~ 7045.1390, or with the conditions of a permit issued under the agency's permitting procedures.

[In item A, the MPCA provides the replacement citation for a repealed range of rules.]//

B. The analysis may include data developed under parts 7045.0102 to ~~7045.0143~~ 7045.0155 and existing published or documented data on the hazardous waste or on hazardous waste generated from similar processes, including data obtained from the generator.

[In item B, the MPCA corrects a citation to a range of rules that changed as parts were added.]//

[For text of items C and D, see M.R.]

Subp. 2. **Waste analysis plan.** The owner or operator shall develop and follow a written waste analysis plan which describes the procedures that will be used to comply with subpart 1. The owner or operator shall keep this plan at the facility. The plan must specify:

[For text of items A to E, see M.R.]

F. where applicable, the methods that will be used to meet the additional waste analysis requirements for specific waste management methods as specified in parts

7045.0456; 7045.0538, subpart 10; 7045.0542, subpart 2; and ~~7045.1315~~ Code of Federal Regulations, title 40, section 268.7, as incorporated in part 7045.1390; and the process vent ~~and,~~ equipment leak, and tank, surface impoundment, and container test methods and procedures in Code of Federal Regulations, title 40, sections 264.1034(d) ~~and,~~ 264.1063(d), as amended, and section 264.1083, as incorporated in part 7045.0540;

[In item F, the MPCA amends the rules to replace a reference to a land disposal restriction requirement, which is being repealed, with a citation to that same requirement in the federal regulations. The amendment refers directly to the federal counterpart because, in part 7045.1390, where this information is being incorporated by reference, the incorporation does not provide the necessary level of specificity to identify the applicable section. This amendment corresponds to 40 CFR 264.13(b)(6), and is from required RCRA Amendment 154-1: "Consolidated Organic Air Emission Standards for Tanks, Surface Impoundments, and Containers." Further information about this amendment can be found at 59 FR 62896-62953, December 6, 1994, as amended by 61 FR 59932-59997, November 25, 1996.]//

G. for off-site facilities, the waste analysis plan must also specify the procedures ~~which~~ that will be used to inspect and, if necessary, analyze each movement of hazardous waste received at the facility to ensure that it matches the identity of the waste designated on the accompanying manifest or shipping paper. The plan must describe:

[In item G, the MPCA makes a clarifying change for grammatical purposes.]//

(1) the procedures ~~which~~ that will be used to determine the identity of each movement of waste managed at the facility; ~~and~~

[In subitem (1), the MPCA makes a grammatical word change. The MPCA also removes the word "and" to accommodate this expanded list.]//

(2) the sampling method ~~which~~ that will be used to obtain a representative sample of the waste to be identified, if the identification method includes sampling. The waste analysis plan must be submitted with the permit application; and

[In subitem (2), the MPCA makes a clarifying change for grammatical purposes. The MPCA also adds the word "and" to accommodate this expanded list.]//

(3) the procedure that the owner or operator of an off-site landfill receiving containerized hazardous waste will use to determine whether a hazardous waste generator or treater has added a biodegradable sorbent to the waste in the container;

[In subitem (3), the MPCA requires the plan to contain information about the use of sorbents to eliminate free liquid in waste being landfilled. This requirement corresponds to 40 CFR 264.13(c)(3) and is based on required RCRA Amendment 118.2: "Liquids in Landfills II." Further information regarding this amendment can be found at 57 FR 54452-54461, November 18, 1992.]//

H. for surface impoundments exempted from the land disposal restrictions under ~~part 7045.1310~~ Code of Federal Regulations, title 40, section 268.4, as incorporated in part 7045.1390, the procedures and schedules for:

(1) the sampling of impoundment contents;

(2) the analysis of test data; and

(3) the annual removal of residues which are not delisted under part 7045.0075, subpart 2, or which exhibit a characteristic of hazardous waste under part 7045.0131, and either do not meet the treatment standards of ~~parts 7045.1350 to 7045.1360~~ Code of Federal Regulations, title 40, sections 268.40 to 268.42, as incorporated in part

7045.1390, or, where no treatment standards have been established, such residues are prohibited from land disposal under ~~parts 7045.1320 to 7045.1333~~ Code of Federal Regulations, title 40, sections 268.30 to 268.35, as incorporated in part 7045.1390, or RCRA section 3004(d)~~.~~; and

[In item H, the MPCA replaces repealed cites with references to corresponding federal land disposal restriction requirements that were incorporated by reference in part 7045.1390 of this rule. The MPCA cites directly to the appropriate federal provisions because the incorporation by reference of the federal land disposal restrictions in part 7045.1390 does not provide a sufficient level of specificity to identify the particular provisions being addressed. The MPCA also adds "and" to accommodate this expanded list.]//

I. for owners and operators seeking an exemption to the air emission standards of part 7045.0540 in accordance with Code of Federal Regulations, title 40, section 264.1082, as incorporated in part 7045.0540:

(1) if direct measurement is used for the waste determination, the procedures and schedules for waste sampling and analysis and the results of the analysis of test data to verify the exemption; and

(2) if knowledge of the waste is used for the waste determination, any information prepared by the facility owner or operator or by the generator of the hazardous waste, if the waste is received from off site, that is used as the basis for knowledge of the waste.

[In item I, the MPCA is adding requirements that apply to waste analysis at facilities that are subject to the air emission standards being added in this rulemaking. This requirement corresponds to 40 CFR 264.13(b)(8) and is based on required RCRA Amendment 154-1.11: "Consolidated Organic Air Emission Standards for Tanks, Surface Impoundments, and Containers." Further information about the air emission standards can be found at 59 FR 62896-62953, December 6, 1994, as amended by 61 FR 4903-4916, February 9, 1996. The MPCA has slightly revised the language of the federal counterpart by removing an extraneous "the" to clarify the intended meaning.]//

7045.0478 OPERATING RECORD.

[For text of subps 1 and 2, see M.R.]

Subp. 3. **Record information.** The information in items A to T must be recorded, as it becomes available, and maintained in the operating record until closure of the facility.

[For text of items A and B, see M.R.]

C. A description and the quantity of each hazardous waste received, and the method and date of treatment, storage, or disposal at the facility in accordance with the record-keeping instructions in Code of Federal Regulations, title 40, part 264, Appendix I, as incorporated in part 7045.0543.

[In item C, the MPCA adds a reference to recordkeeping instructions that must be followed. This change corresponds to provisions in 40 CFR 264.73(b)(1).]//

[For text of item D, see M.R.]

E. Records and results of waste analyses and waste determinations performed as specified in parts 7045.0456~~,~~; 7045.0458~~,~~; 7045.0538, subpart 10~~,~~; and 7045.0542,

subpart 2, ~~7045.1310, and 7045.1315~~ and Code of Federal Regulations, title 40, sections 264.1034 and 264.1063, as amended, and sections 264.1083, 268.4(a), and 268.7, as incorporated in part 7045.0540 or 7045.1390; and the process vent and equipment leak test methods and procedures in Code of Federal Regulations, title 40, sections 264.1034 and 264.1063, as amended.

[In item E, the MPCA is adding requirements that apply to the operating records at facilities that are subject to the air emission standards being added in this rulemaking. This requirement corresponds to 40 CFR 264.74(b)(3); and is based on required RCRA Amendment 154-1.13: "Consolidated Organic Air Emission Standards for Tanks, Surface Impoundments, and Containers." Further information about the air emission standards can be found at 59 FR 62896-62953, December 6, 1994. The MPCA also replaces citations to repealed State rules with citations to equivalent federal rules as incorporated by reference.]//

[For text of items F and G, see M.R.]

H. Monitoring, testing, or analytical data and corrective action where required by parts 7045.0461; 7045.0484; 7045.0528, subparts 2, 4, and 7; 7045.0532, subparts 4a, 4b, and 5; 7045.0534, subparts 4a, 5, 5a, and 6; 7045.0536, subparts 5, 6, and 8; 7045.0538, subparts 4a, 5, 5a, and 6; 7045.0539, subpart 3; and 7045.0542, subpart 7; and the process vent ~~and~~, equipment leak, and tank, surface impoundment, and container test methods and procedures and record keeping requirements in Code of Federal Regulations, title 40, sections 264.1034(c) to (f), 264.1035, 264.1063(d) to (i), and 264.1064, as amended, and sections 264.1082 to 264.1090, as incorporated in part 7045.0540.

[In item H, the MPCA is adding requirements that apply to the operating record at facilities that are subject to the air emission standards being added in this rulemaking. This requirement corresponds to 40 CFR 264.73(b)(6), and is based on required RCRA Amendment 154-1.13: "Consolidated Organic Air Emission Standards for Tanks, Surface Impoundments, and Containers." Further information about the air emission standards can be found at 59 FR 62896-62953, December 6, 1994. This amendment also addresses changes based on required RCRA Amendment 163.3: "Organic Air Emission Standards for Tanks, Surface Impoundments, and Containers; Clarification and Technical Amendment." Further information about these amendments can be found at 62 FR 64636-64671, December 8, 1997.]//

[For text of items I to K, see M.R.]

L. The certification in item K signed by the owner or operator of the facility or an authorized representative.

[In item L, the MPCA clarifies where to find the referenced certification.]//

M. Records of the quantities and date of placement for each shipment of hazardous waste placed in land disposal units under an extension to the effective date of any land disposal restriction granted ~~under part 7045.0075, subpart 8~~ by the United States Environmental Protection Agency under Code of Federal Regulations, title 40, section 268.5, a petition under part 7045.0075, subpart 9, or a certification under Code of Federal Regulations, title 40, section 268.8, as ~~amended~~ incorporated in part 7045.1390, and the applicable notice required of a generator under ~~part 7045.1315, subpart 1~~ Code of Federal Regulations, title 40, section 268.7(a), as incorporated in part 7045.1390.

[In item M, the MPCA clarifies that any extensions to the effective date of land disposal restrictions may only be granted by the EPA. Throughout this rulemaking,

the MPCA is replacing citations to repealed part 7045.0075, subpart 8, with the corresponding CFR citation. The reason for this change is that the case-by-case extensions to an effective date for applicable land disposal restrictions are only granted by the EPA, so the MPCA believes it is most reasonable to refer readers directly to those federal provisions. In item M, the MPCA also replaces a citation to repealed part 7045.1315, subpart 1, with a citation to equivalent 40 CFR 268.7(a), as incorporated by reference in part 7045.1390. This is necessary because part 7045.1390 lacks the level of specificity to identify this exact incorporated federal provision.]//

N. For an off-site treatment facility, a copy of the notice, and the certification and demonstration, if applicable, required of the generator or the owner under Code of Federal Regulations, title 40, section 268.7(a)(1) or 268.8, as ~~amended, or part 7045.1315, subpart 1, item A~~ incorporated in part 7045.1390.

[In item N, the MPCA replaces a citation to repealed part 7045.1315, subpart 1, item A, with a citation to equivalent 40 CFR 268.7(a)(1), as incorporated by reference in part 7045.1390. This is necessary because part 7045.1390 lacks the level of specificity to identify this exact incorporated federal provision.]//

O. For an on-site treatment facility, the information contained in the notice, except the manifest number, and the certification and demonstration, if applicable, required of the generator or owner or operator under Code of Federal Regulations, title 40, section 268.7(a)(1) or 268.8, as ~~amended, or part 7045.1315, subpart 1, item A~~ incorporated in part 7045.1390.

[In item O, the MPCA replaces a citation to repealed part 7045.1315, subpart 1, item A, with a citation to equivalent 40 CFR 268.7(a)(1), as incorporated by reference in part 7045.1390. This is necessary because part 7045.1390 lacks the level of specificity to identify this exact incorporated federal provision.]

P. For an off-site land disposal facility, a copy of the notice, and the certification and demonstration, if applicable, required of the generator or the owner or operator of a treatment facility under Code of Federal Regulations, title 40, ~~section~~ sections 268.7 and 268.8, as ~~amended, and part 7045.1315~~ incorporated in part 7045.1390, whichever is applicable.

[In item P, the MPCA replaces a citation to repealed part 7045.1315, with a citation to equivalent 40 CFR 268.7, as incorporated by reference in part 7045.1390. This is necessary because part 7045.1390 lacks the level of specificity to identify this exact incorporated federal provision.]

Q. For an on-site land disposal facility, the information contained in the notice required of the generator or owner or operator of a treatment facility under ~~part 7045.1315~~ Code of Federal Regulations, title 40, section 268.7, as incorporated in part 7045.1390, except for the manifest number, and the certification and demonstration, if applicable, required under Code of Federal Regulations, title 40, section 268.8, as ~~amended~~ incorporated in part 7045.1390, whichever is applicable.

[In item Q, the MPCA replaces a citation to repealed part 7045.1315, with a citation to equivalent 40 CFR 268.7, and advises where sections of 40 CFR 268 are incorporated by reference in part 7045.1390. This is necessary because part 7045.1390 lacks the level of specificity to identify this exact incorporated federal provision.]

R. For an off-site storage facility, a copy of the notice, and the certification and demonstration if applicable, required of the generator or the owner or operator under Code of Federal Regulations, title 40, section 268.7 or 268.8, as ~~amended, or part 7045.1315~~ incorporated in part 7045.1390.

[In item R, the MPCA replaces a citation to repealed part 7045.1315, with a citation to equivalent 40 CFR 268.7, as incorporated by reference in part 7045.1390. This is necessary because part 7045.1390 lacks the level of specificity to identify this exact incorporated federal provision.]

S. For an on-site storage facility, the information contained in the notice, except the manifest number, and the certification and demonstration if applicable, required of the generator or the owner or operator under Code of Federal Regulations, title 40, section 268.7 or 268.8, as ~~amended, or part 7045.1315~~ incorporated in part 7045.1390.

[In item S, the MPCA replaces a citation to repealed part 7045.1315, with a citation to equivalent 40 CFR 268.7, as incorporated by reference in part 7045.1390. This is necessary because part 7045.1390 lacks the level of specificity to identify this exact incorporated federal provision.]

[For text of item T, see M.R.]

7045.0482 REQUIRED REPORTS.

[For text of subps 1 to 3, see M.R.]

Subp. 4. **Additional reports.** In addition to submitting the manifest discrepancy report described in part 7045.0476, subpart 3, and the annual reports and the unmanifested waste reports described in subparts 2 and 3, the owner or operator shall also report to the commissioner:

[For text of items A and B, see M.R.]

C. as otherwise required by parts 7045.0484, 7045.0532 to 7045.0538; and the process vent ~~and~~, equipment leak, and tank, surface impoundment, and container standards in ~~Code of Federal Regulations, title 40, part 264, subparts AA and BB, as amended~~ parts 7045.0540, 7045.0547, and 7045.0548.

[In item C, the MPCA is adding requirements that apply to the reports required from facilities that are subject to the air emission standards being added in this rulemaking. This requirement corresponds to 40 CFR 264.77(c) and is based on required RCRA Amendment 154-1.14: "Consolidated Organic Air Emission Standards for Tanks, Surface Impoundments, and Containers." Further information about the air emission standards can be found at 59 FR 62896-62953, December 6, 1994.]//

7045.0484 GROUNDWATER PROTECTION.

Subpart 1. **Scope.** This part applies as follows:

A. Except as provided in item B, the requirements of this part apply to owners or operators of facilities that treat, store, or dispose of hazardous waste. The owner or operator must comply with the requirements in subitems (1) to (3) for all wastes or waste constituents contained in solid or hazardous waste management units at the facility regardless of the time the waste was placed in such units:

(1) all solid waste management units must comply with part 7045.0485;

(2) a surface impoundment, waste pile, land treatment unit, ~~or~~ landfill, or containment building that is required under Code of Federal Regulations, title 40, section 264.1102, as incorporated in part 7045.0550, to meet the requirements of a landfill, that receives hazardous waste after July 26, 1982, is a regulated unit and must comply with the requirements of subparts 2 to 14 for detecting, characterizing, and responding to releases; and

[The MPCA is amending subitem (2) to add a reference to the standards that apply to containment buildings that must be closed as a landfill. Adding this reference completes the list of facilities that are considered to be regulated units and therefore subject to the groundwater protection requirements. In this rulemaking, the MPCA adds required federal standards that apply to containment buildings. However, the State rules governing ground water protection differ from the federal regulations, so there is no federal counterpart to this provision. The MPCA believes that adding containment buildings that are required to close as landfills to the list of regulated units is a reasonable extension of the State's existing commitment to the application of the ground water protection standards. The MPCA does not expect that containment buildings will normally be required to close as a landfill or that ground water monitoring will be necessary, however, the MPCA believes it is essential to anticipate this possibility and is therefore adding this provision to the ground water standards.]//

(3) the financial responsibility requirements of part 7045.0485 apply to regulated units.

[For text of items B to D, see M.R.]

[For text of subps 2 to 14, see M.R.]

7045.0486 CLOSURE.

[For text of subpart 1, see M.R.]

Subp. 2. **Closure performance standard.** The owner or operator shall close the facility in a manner minimizing the need for further maintenance. Closure procedures must result in controlling, minimizing, or eliminating, to the extent necessary to protect human health and the environment, postclosure escape of hazardous waste, hazardous constituents, leachate, contaminated runoff, or hazardous waste decomposition products to the ground or surface waters or to the atmosphere, in accordance with the closure requirements, including the requirements of parts 7045.0526, subpart 9; 7045.0528, subpart 9; 7045.0532, subpart 7; 7045.0534, subpart 7; 7045.0536, subpart 8; 7045.0538, subpart 7; 7045.0539, subparts 2 to 4; and 7045.0542, subpart 8; and Code of Federal Regulations, title 40, section 264.1102, as incorporated in part 7045.0550.

[In subpart 2, the MPCA adds a reference to closure and post closure care requirements for tanks and containment buildings. This language is based on required RCRA Amendment 109.13: "Land Disposal Restrictions for Newly Listed Wastes and Hazardous Debris" = 40 CFR 264.111(c). Further information about the federal amendment can be found at 57 FR 37194-37282, August 18, 1992.]//

Subp. 3. **Submittal and contents of closure plan.** The owner or operator of a hazardous waste facility shall submit a closure plan with the permit application, and the closure plan must be approved by the agency as part of the permit issuance procedure. The approved closure plan shall become a condition of any permit. The agency's approval

must ensure that the approved closure plan is consistent with subparts 2, 4, and 5~~, and part~~; parts 7045.0484, groundwater protection, and 7045.0488, closure activities; and the applicable closure requirements of parts 7045.0526, subpart 9; 7045.0528, subpart 9; 7045.0532, subpart 7; 7045.0534, subpart 7; 7045.0536, subpart 8; 7045.0538, subpart 7; 7045.0539, subpart 2; ~~and~~ 7045.0542, subpart 8; and Code of Federal Regulations, title 40, section 264.1102, as incorporated in part 7045.0550.

[In subpart 3, the MPCA adopts cross references to specific provisions for groundwater protection and the closure of tanks and containment buildings based on the federal counterpart to this rule in 40 CFR 264.112(a)(2). This amendment is based on required RCRA Amendment 109.14: "Land Disposal Restrictions for Newly Listed Wastes and Hazardous Debris." Additional information can be found at 57 FR 37194-37282, August 18, 1992.]//

A copy of the approved closure plan and all revisions to the plan must be furnished to the commissioner upon request, including request by mail, until final closure is completed and certified. The plan must identify steps necessary to completely or partially close the facility at any point during its intended operating life and to completely close the facility at the end of its intended operating life. The closure plan must at least include all of the following:

[For text of items A to F, see M.R.]

[For text of subps 4 to 6, see M.R.]

7045.0490 POSTCLOSURE.

Subpart 1. **Scope.** Except as otherwise provided in part 7045.0450, the provisions of subparts 2, 3, and parts 7045.0492 to 7045.0496 apply to:

A. the owner or operator of a hazardous waste disposal facility;

B. the owner or operator of a waste pile or surface impoundment that is required by part 7045.0532, subpart 7, or 7045.0534, subpart 7, to have a postclosure plan; ~~and~~

C. the owner or operator of tank systems that are required under part 7045.0528, subpart 9, to meet the requirements for landfills; and

D. the owner or operator of containment buildings that are required under Code of Federal Regulations, title 40, section 264.1102, as incorporated in part 7045.0550, to meet the requirement for landfills.

[In item D, the MPCA adds language to apply postclosure care requirements to the owner or operator of containment buildings. Containment building standards are being added to the State rules in this rulemaking at the part cited. This language is based on required RCRA Amendment 109.15: "Land Disposal Restrictions for Newly Listed Wastes and Hazardous Debris" = 40 CFR 264.110(b)(4); Additional information about the federal amendment can be found at 57 FR 37194-37282, August 18, 1992.]

[For text of subps 2 and 3, see M.R.]

7045.0498 FINANCIAL REQUIREMENTS.

[Existing State rules governing financial assurance are similar, but in some cases, more restrictive than their federal counterparts (the EPA deems them equivalent). In

this rulemaking the MPCA is adopting certain changes based on federal amendments, but is also declining to adopt certain federal amendments. As a result, certain State rules remain more stringent than corresponding federal financial requirements. Although the MPCA is not required to justify changes that it is not addressing in this rulemaking, the MPCA believes it is helpful to explain some of the background of those decisions.//

In drafting the existing financial requirements, the MPCA decided not to adopt certain financial assurance mechanisms based on concerns regarding their performance. In this rulemaking, the MPCA is adopting many changes intended to make the State rules consistent with their federal counterparts. However, the MPCA continues to decline adopting certain federal financial assurance mechanisms. For example, while the MPCA is including the newly available federal mechanisms of trust funds and letters of credit for liability coverage, the MPCA declines to adopt the federal option of a surety bond for this purpose. Further discussion of the specific reasonableness of the addition of the financial assurance options is discussed in part 7045.0518.//

The MPCA has also declined, at a number of points throughout the financial assurance rules, to adopt the federal changes that expand the list of entities that can provide a corporate guarantee for an owner or operator of a facility. The amended federal rules have been expanded to allow the corporate guarantee to be provided by a firm with a "substantial business relationship" with the owner or operator. The MPCA has chosen to continue to limit the corporate guarantee to the previous relationship, only the parent corporation. The MPCA believes that this is a reasonable limitation that facilitates settling claims while maintaining a clear source of financial assurance. In this regard, the existing State rules are not becoming more stringent. They will continue to limit who may be considered a corporate guarantor to only the owner or operator of the facility or its parent corporation.]//

Subpart 1. **Scope.** Parts 7045.0502, 7045.0504, and 7045.0518 to 7045.0524 apply to owners and operators of all hazardous waste facilities, except as provided otherwise in this part or in part 7045.0450, subpart 3.

Parts 7045.0506 and 7045.0508 apply only to owners and operators of:

A. disposal facilities;

B. waste piles, and surface impoundments from which the owner or operator intends to remove the wastes at closure, to the extent that he or she is required to develop a contingent closure and postclosure care plan in parts 7045.0532, subpart 7; and 7045.0534, subpart 7; ~~and~~

C. tank systems that are required under part 7045.0528, subpart 9, to meet the requirements for landfills; and

D. containment buildings that are required under Code of Federal Regulations, title 40, section 264.1102, as incorporated in part 7045.0550, to meet the requirements for landfills.

[In item D, the MPCA applies financial assurance requirements to the owners and operators of containment buildings. These requirements are based on required RCRA Amendment 109.15: "Land Disposal Restrictions for Newly Listed Wastes and

Hazardous Debris" = 40 CFR 264.140(b)(4). Further information can be found in 57 FR 37194-37282, August 18, 1992.]//

Parts 7045.0512 to 7045.0516 apply only to owners and operators of facilities that treat, store, or dispose of hazardous waste in surface impoundments, waste piles, land treatment units, ~~or~~ landfills, or containment buildings that are required under Code of Federal Regulations, title 40, section 264.1102, as incorporated in part 7045.0550, to meet the requirements of landfills.

The state and the federal government are exempt from the requirements of parts 7045.0498 to 7045.0524.

[The MPCA is amending the above paragraph to require corrective action financial assurance for containment buildings that must close as landfills. The MPCA is adding new containment building standards in this rulemaking in part 7045.0550, and it is reasonable to make corresponding changes to those aspects of the rules that will be affected by these types of facilities. There is no federal counterpart to this paragraph, which requires land disposal facilities to prepare a cost estimate for corrective action (part 7045.0512) and applies financial assurance requirements for corrective actions (parts 7045.0514 and 7045.0516). Minnesota's rules are different than the federal financial assurance requirements because Minnesota not only requires financial assurance for closure and post-closure care but also for corrective action. The MPCA believes that it is reasonable to extend this existing requirement for financial assurance for corrective action to also include containment buildings since containment buildings are required to meet the closure and post-closure care requirements of a landfill. The same concerns regarding the funding of necessary corrective actions that apply to land disposal facilities also apply to containment buildings. Although the MPCA believes that it is reasonable to allow waste to be stored in containment buildings, this option carries certain risks that may result in the need to perform corrective actions. Requiring financial assurance will assure that those risks are addressed and that corrective action is performed.]//

[For text of subp 2, see M.R.]

7045.0502 COST ESTIMATE FOR FACILITY CLOSURE.

Subpart 1. **Cost estimate requirements.** The owner or operator shall have a detailed written estimate, in current dollars, of the cost of closing the facility in accordance with parts 7045.0486 and 7045.0488 and applicable closure requirements in parts 7045.0526, subpart 9; 7045.0532, subpart 7; 7045.0534, subpart 7; 7045.0536, subpart 8; 7045.0538, subpart 7; 7045.0539, subparts 2 to 4; and 7045.0542, subpart 8; and Code of Federal Regulations, title 40, section 264.1102, as incorporated in part 7045.0550. The closure cost estimate must equal the cost of final closure at the point in the facility's active life when the extent and manner of its operation would make closure the most expensive, as indicated by its closure plan. The closure cost shall be estimated as follows:

[For text of items A to C, see M.R.]

[For text of subps 2 to 4, see M.R.]

[In subpart 1, the MPCA adds a reference to the requirements being adopted in this rulemaking that apply to containment buildings. The reference to this part is based on language from required RCRA Amendment 109.16: "Land Disposal Restrictions

for Newly Listed Wastes and Hazardous Debris" = 40 CFR 264.142(a). Further information regarding the need for and reasonableness of this amendment is found in 57 FR 37194-37282, August 18, 1992.]//

7045.0504 FINANCIAL ASSURANCE FOR FACILITY CLOSURE.

[For text of subps 1 to 3, see M.R.]

Subp. 4. **Surety bond guaranteeing performance of closure.** The following apply to surety bonds that guarantee performance of closure:

[For text of item A, see M.R.]

B. The wording of the surety bond must be identical to the wording specified in part 7045.0524, subpart ~~2~~ 3.

[In item B, the MPCA corrects an error in existing language. This item previously referred to the wording provided in 7045.0524, subpart 2, which applies to a surety bond guaranteeing payment into a trust fund. Subpart 3 of that rule provides wording for a surety bond guaranteeing performance for corrective action, closure and/or post closure care. Since this subpart addresses the performance of closure, the wording in part 7045.0542, subpart 3, is the proper cite to apply.]//

[For text of items C to J, see M.R.]

[For text of subps 5 and 6, see M.R.]

Subp. 7. **Financial test and corporate guarantee for closure.** The financial test and corporate guarantee for closure is as follows:

[For text of items A to K, see M.R.]

L. An owner or operator may meet the requirements of this part by obtaining a written guarantee, hereafter referred to as "corporate guarantee." The guarantor must be the parent corporation of the owner or operator. The guarantor must meet the requirements for owners or operators in items A to J, and must comply with the terms of the corporate guarantee. The wording of the corporate guarantee must be identical to the wording specified in part 7045.0524, subpart 8. The certified copy of the corporate guarantee must accompany the items sent to the commissioner as specified in item E. The terms of the corporate guarantee must provide that:

[The MPCA is amending item L by clarifying that the owner or operator must send a certified copy of the corporate guarantee to the commissioner. The rule formerly implied that the original document had to be sent to the commissioner. This part of the State rules is similar to the existing financial assurance requirements that apply to closure in 40 CFR 264.143(f)(10). In this rulemaking the MPCA is also making a similar clarifying amendment to parts 7045.0508, subpart 7, item M, and to part 7045.0514, subpart 7, item L. This change is based on optional RCRA Amendment 113: "Consolidated Liability Requirements" = 40 CFR 264.143(f)(10). The EPA's justification for its financial assurance rules is found in 53 FR 33938-33960, September 1, 1988; as amended by 56 FR 30200, July 1, 1991; and 57 FR 42832-42844, September 16, 1992.]//

[For text of subitems (1) and (2), see M.R.]

(3) If the owner or operator fails to provide alternate financial assurance as specified in this part and obtain the written approval of alternate assurance from the commissioner within 90 days after receipt by both the owner or operator and the

commissioner of a notice of cancellation of the corporate guarantee from the guarantor, the guarantor ~~shall~~ must provide alternative financial assurance in the name of the owner or operator.

[In item L, subitem (3), the MPCA changes "shall" to "must" to conform to State rulemaking conventions.]//

[For text of subps 8 to 10, see M.R.]

7045.0508 FINANCIAL ASSURANCE FOR POSTCLOSURE CARE.

[For text of subps 1 to 6, see M.R.]

Subp. 7. **Financial test and corporate guarantee for postclosure care.** The financial test and corporate guarantee for postclosure care is as follows:

[For text of items A to L, see M.R.]

M. An owner or operator may meet the requirements ~~of~~ for this part by obtaining a written guarantee, hereafter referred to as "corporate guarantee." The guarantor must be the parent corporation of the owner or operator. The guarantor ~~shall~~ must meet the requirements for owners or operators in items A to K, and ~~shall~~ must comply with the terms of the corporate guarantee. The wording of the corporate guarantee ~~shall~~ must be identical to the wording specified in part 7045.0524, subpart 8. A certified copy of the corporate guarantee must accompany the items sent to the commissioner as specified in item E. The terms of the corporate guarantee must provide that:

(1) If the owner or operator fails to perform postclosure care of a facility covered by the corporate guarantee in accordance with the postclosure plan and other permit requirements whenever required to do so, the guarantor ~~shall~~ must do so or establish a trust fund as specified in subpart 2 in the name of the owner or operator.

[For text of subitem (2), see M.R.]

(3) If the owner or operator fails to provide alternate financial assurance as specified in this part and to obtain the written approval of alternate assurance from the commissioner within 90 days after receipt by both the owner or operator and the commissioner of a notice of cancellation of the corporate guarantee from the guarantor, the guarantor ~~shall~~ must provide alternate financial assurance in the name of the owner or operator.

[The MPCA is making several minor changes to item M, and subitems (1) and (3). As discussed above for part 7045.0504, subpart 7, item L, in item M, the MPCA has added the requirement that the copy of the corporate guarantee sent to the commissioner must be a certified copy. The MPCA is also changing the word "of" to "for" in the first sentence of item M to better clarify the meaning. Finally, in item M and also in subitems (1) and (3), the MPCA changes "shall" to "must" to conform to State rulemaking convention. None of these changes alter the effect of this item.]//

[For text of subps 8 to 10, see M.R.]

7045.0514 FINANCIAL ASSURANCE FOR CORRECTIVE ACTION.

[For text of subps 1 to 6, see M.R.]

Subp. 7. **Financial test and corporate guarantee for corrective action.** The financial test and corporate guarantee for corrective action is as follows:

[For text of items A to K, see M.R.]

L. An owner or operator may meet the requirements of this part by obtaining a written guarantee, hereafter referred to as "corporate guarantee." The guarantor must be the parent corporation of the owner or operator. The guarantor must meet the requirements for owners or operators in items A to J and must comply with the terms of the corporate guarantee. The wording of the corporate guarantee must be identical to the wording specified in part 7045.0524, subpart 8. A certified copy of the corporate guarantee must accompany the items sent to the commissioner as specified in item E. The terms of the corporate guarantee must provide that:

[In item L, the MPCA adds language using the same reasoning as discussed above for part 7045.0504, subpart 7, item L. The MPCA adds the requirement that the owner or operator must send a certified copy of the corporate guarantee to the commissioner. There is no direct federal counterpart to this State rule, but this requirement is derived from similar provisions addressed by the federal regulations for financial assurance for closure and post-closure care. The EPA's justification for its financial assurance rules are based on optional language from RCRA Amendment 113 Error! Bookmark not defined.**: "Consolidated Liability Requirements." Further information can be found in 53 FR 33938-33960, September 1, 1988; as amended by 56 FR 30200, July 1, 1991; and 57 FR 42832-42844, September 16, 1992.]//**

[For text of subitems (1) and (2), see M.R.]

(3) If the owner or operator fails to provide alternate financial assurance as specified in this part and to obtain the written approval of alternate assurance from the commissioner within 90 days after receipt by both the owner or operator and the commissioner of a notice of cancellation of the corporate guarantee from the guarantor, the guarantor ~~will~~ must provide alternative financial assurance in the name of the owner or operator.

[In subitem (3), the MPCA is making a minor, clarifying change to conform to the State rulemaking convention which requires the use of the more authoritative term "must" instead of the term "will." This change does not alter the effect of this requirement.]//

[For text of subps 8 to 10, see M.R.]

7045.0518 LIABILITY REQUIREMENTS.

[The MPCA is amending the requirements governing liability requirements for hazardous waste facilities to incorporate certain of the changes that have been made to the corresponding federal regulations. However, not all of federal requirements are being incorporated in these amendments. In the existing State liability rule, the MPCA had originally limited the owners and operators of facilities to specific options for providing liability coverage. The State rules currently only provide the options of covering liability through insurance, the use of a financial test, a corporate guarantee, or a combination of these three mechanisms. The federal liability regulations, found at 40 CFR 264.147, provide three additional options (use of a surety bond, letter of credit or trust fund) to provide liability coverage. In this rulemaking, the MPCA continues to support its previous decision to limit the options available for meeting the liability requirements to only those options which the MPCA believes are most

effective. The MPCA is proposing in this part, in addition to restructuring the language of the requirements, to expand the list of financial assurance mechanisms to also allow the use of letters of credit and trust funds. Although the existing State rules that address financial assurance for closure and post closure care provide for the use of all of the federally available financial assurance mechanisms, (including surety bonds) the MPCA continues to decline to adopt the use of surety bonds for providing liability coverage, even though they are provided in the federal counterpart to this rule. The MPCA believes that, based on previous experience with the difficulty of accessing surety bonds, the financial assurance mechanisms of letter of credit and trust fund are the only reasonable additions to the State options. The specific reasonableness for each change, including references to the federal background discussion, is provided following each proposed change below.]//

Subpart 1. **Coverage for sudden accidental occurrences.** An owner or operator of a hazardous waste treatment, storage, or disposal facility, or a group of facilities, shall demonstrate financial responsibility for bodily injury and property damage to third parties caused by sudden accidental occurrences arising from operations of the facility or group of facilities. The owner or operator shall have and maintain liability coverage for sudden accidental occurrences in the amount of at least $1,000,000 per occurrence with an annual aggregate of at least $2,000,000, exclusive of legal defense costs. This liability coverage may be demonstrated in one of the following ways:

[For text of items A and B, see M.R.]

C. An owner or operator may ~~demonstrate the required liability coverage through use of the financial test, insurance, the corporate guarantee, a combination of the financial test and insurance, or a combination of the corporate guarantee and insurance, as these mechanisms are specified in this part. The amounts of coverage demonstrated must total at least the minimum amounts required by subpart 1~~ meet the requirements of this part by obtaining a letter of credit for liability coverage as specified in subpart 8.

[In item C, the MPCA has deleted existing language regarding combinations of financial assurance (which is being moved to new item E) and is adding the option of using a letter of credit for liability coverage. This option is provided in the federal counterpart found at 40 CFR 264.147(a)(3). The changes are based on optional language from RCRA Amendment 113: "Consolidated Liability Requirements." Further information can be found in 53 FR 33938-33960, September 1, 1988, as amended by 56 FR 30200, July 1, 1991, and 57 FR 42832-42844, September 16, 1992.]//

D. An owner or operator may meet the requirements of this part by obtaining a trust fund for liability coverage as specified in subpart 9.

[Item D is being added to provide the owner or operator of a facility with an additional option of a trust fund. This option is provided in the federal counterpart found at 40 CFR 264.147(a). This change is based on optional language from RCRA Amendment 113: "Consolidated Liability Requirements." Further information can be found in 53 FR 33938-33960, September 1, 1988; as amended by 56 FR 30200, July 1, 1991; and 57 FR 42832-42844, September 16, 1992.]//

E. An owner or operator may demonstrate the required liability coverage through the use of combinations of insurance, financial test, corporate guarantee, letter of credit, and trust fund, except that the owner or operator may not combine a financial test

covering part of the liability coverage requirement with a corporate guarantee unless the financial statement of the owner or operator is not consolidated with the financial statement of the guarantor. The amounts of coverage demonstrated must total at least the minimum amounts required by this part. If the owner or operator demonstrates the required coverage through the use of a combination of financial assurances under this item, the owner or operator shall specify at least one such assurance as "primary" coverage and shall specify other assurance as "excess" coverage.

[In item E, the MPCA adopts language that revises and replaces former item C, to establish the ability to use combinations of financial assurance options for the owner or operator of a facility to demonstrate its liability coverage. This item is based on the previous requirements of item C and optional language found at RCRA Amendment 113: "Consolidated Liability Requirements" = 40 CFR 264.147(a)(6). Further information can be found in 53 FR 33938-33960; September 1, 1988; as amended by 56 FR 30200; July 1, 1991; and 57 FR 42832-42844; September 16, 1992.]//

F. An owner or operator shall notify the commissioner in writing within 30 days whenever:

(1) a claim results in a reduction in the amount of financial assurance for liability coverage provided by a financial instrument authorized in items A to E;

(2) a certification of valid claim for bodily injury or property damages caused by a sudden or nonsudden accidental occurrence arising from the operation of a hazardous waste treatment, storage, or disposal facility is entered between the owner or operator and third-party claimant for liability coverage under items A to E; or

(3) a final court order establishing a judgment for bodily injury or property damage caused by a sudden or nonsudden accidental occurrence arising from the operation of a hazardous waste treatment, storage, or disposal facility is issued against the owner or operator or an instrument that is providing financial assurance for liability coverage under items A to E.

[In item F, subitems (1) to (3), the MPCA adopts required language from RCRA Amendment 113: "Consolidated Liability Requirements" = 40 CFR 264.147(a)(7). Further information can be found in 53 FR 33938-33960, September 1, 1988; as amended by 56 FR 30200, July 1, 1991; and 57 FR 42832-42844, September 16, 1992.]//

Subp. 2. **Coverage for nonsudden accidental occurrences.** An owner or operator of a surface impoundment, landfill, land treatment facility, or disposal miscellaneous ~~disposal~~ unit ~~which~~ that is used to manage hazardous waste, or a group of such facilities, ~~shall~~ must demonstrate financial responsibility for bodily injury and property damage to third parties caused by nonsudden accidental occurrences arising from operations of the facility or group of facilities. The owner or operator ~~shall~~ must have and maintain liability coverage for nonsudden accidental occurrences in the amount of at least $3,000,000 per occurrence with an annual aggregate of at least $6,000,000, exclusive of legal defense costs. An owner or operator who must meet the requirements of this part may combine the required per-occurrence coverage levels for sudden and nonsudden accidental occurrences into a single per-occurrence level, and combine the required annual aggregate coverage levels for sudden and nonsudden accidental occurrences into a single annual aggregate level. Owners or operators who combine coverage levels for sudden and nonsudden accidental occurrences must maintain liability coverage in the

amount of at least $4,000,000 per occurrence and $8,000,000 annual aggregate. This liability coverage may be demonstrated in one of the following ways:

[In subpart 2, the MPCA is adopting language to make this subpart correspond to the federal counterpart in 40 CFR 264.147(b). The amendments to this subpart change the term "miscellaneous disposal units" to "disposal miscellaneous units" which is a more accurate term. The phrasing of this term is important because under part 7045.0518, subpart 2, only land disposal units (such as disposal miscellaneous units) are required to carry non-sudden accidental liability coverage. In contrast, under subpart 1 of that part, all hazardous waste facilities (those that treat, store or dispose) are required to carry sudden accidental liability coverage. The MPCA believes it is reasonable to amend the rules so that the term used in this part is "disposal miscellaneous units" rather than "miscellaneous disposal units" since "miscellaneous units" is the defined term. The EPA uses the same term and the MPCA believes it is reasonable to maintain consistency with the federal regulations. The MPCA also changes "shall" to "must" choosing preferred wording to convey the intended meaning. At the end of subpart 2, the MPCA adds language that addresses methods for combining liability coverage that corresponds to equivalent federal language. The MPCA believes that these requirements are reasonable to address issues regarding combined coverage. The amended language is addressed at RCRA Amendment 113: "Consolidated Liability Requirements" = 40 CFR 264.147(b). Further information can be found in 53 FR 33938-33960, September 1, 1988; as amended by 56 FR 30200, July 1, 1991; and 57 FR 42832-42844, September 16, 1992.]//

[For text of items A and B, see M.R.]

C. An owner or operator may ~~demonstrate the required liability coverage through use of the financial test, insurance, the corporate guarantee, a combination of the financial test and insurance, or a combination of the corporate guarantee and insurance, as these mechanisms are specified in this part. The amounts of coverage must total at least the minimum amounts required by subpart 2~~ meet the requirements of this part by obtaining a letter of credit for liability coverage as specified in subpart 8.

[In items C (and D), the MPCA is making the same type of changes to the options provided for coverage for non-sudden accidental occurrences as it did for sudden accidental occurrences, the reasonableness of which is address in the introductory discussion to subpart 1 above. In item C the MPCA adopts optional language from RCRA Amendment 113: "Consolidated Liability Requirements" = 40 CFR 264.147(b)(3). Further information can be found in 53 FR 33938-33960, September 1, 1988; as amended by 56 FR 30200, July 1, 1991; and 57 FR 42832-42844, September 16, 1992.]//

~~D. For existing facilities, the required liability coverage for nonsudden accidental occurrences must be demonstrated by the dates listed below. The total sales or revenues of the owner or operator in all lines of business, in the fiscal year preceding July 16, 1984 will determine which of the dates applies. If the owner and operator of a facility are two different parties, or if there is more than one owner or operator, the sales or revenues of the owner or operator with the largest sales or revenues will determine the date by which the coverage must be demonstrated. The dates are as follows:~~

~~(1) for an owner or operator with sales or revenues totaling $10,000,000 or more, six months after July 16, 1984;~~

~~(2) for an owner or operator with sales or revenues greater than $5,000,000 but less than $10,000,000, 18 months after July 16, 1984;~~

~~(3) for all other owners or operators, 30 months after July 16, 1984;~~

~~(4) for an owner or operator subject to the requirements of Code of Federal Regulations, title 40, section 264.147 (1983) on the date he or she is required to demonstrate coverage under Code of Federal Regulations, title 40, section 264.147 (1983) or on July 16, 1984, whichever is later.~~

D. An owner or operator may meet the requirements of this part by obtaining a trust fund for liability coverage as specified in subpart 9.

[In item D, the MPCA revises language to make the State rules correspond more closely to the federal counterparts. The requirements in existing item D are being deleted because the cited dates are obsolete. The new language, which adds the option of providing liability coverage through the establishment of a trust fund, is based on optional language from RCRA Amendment 113: "Consolidated Liability Requirements" = 40 CFR 264.147(b)(5). Further information can be found in 53 FR 33938-33960, September 1, 1988; as amended by 56 FR 30200, July 1, 1991; and 57 FR 42832-42844, September 16, 1992.]//

E. An owner or operator may demonstrate the required liability coverage through the use of combinations of insurance, financial test, corporate guarantee, letter of credit, and trust fund, except that the owner or operator may not combine a financial test covering part of the liability coverage requirement with a corporate guarantee unless the financial statement of the owner or operator is not consolidated with the financial statement of the guarantor. The amounts of coverage demonstrated must total at least the minimum amount required by this part. If the owner or operator demonstrates the required coverage through the use of a combination of financial assurances under this item, the owner or operator shall specify at least one such assurance as "primary" coverage and shall specify other assurance as "excess" coverage.

[In item E, the MPCA adopts most of the optional language from RCRA Amendment 113: "Consolidated Liability Requirements" = 40 CFR 264.147(b)(6). Further information can be found in 53 FR 33938-33960, September 1, 1988; as amended by 56 FR 30200, July 1, 1991; and 57 FR 42832-42844, September 16, 1992. The exceptions to the federal counterpart are that (1) the MPCA chooses not to adopt the EPA's expanded use of surety bonds for this area of financial assurance, and (2) the MPCA chooses not to follow the EPA in expanding the scope of who can provide the corporate guarantee. The reasonableness of these decisions is discussed in the introductory discussion for this rule part.]//

F. An owner or operator must notify the commissioner in writing within 30 days whenever:

(1) a claim results in a reduction in the amount of financial assurance for liability coverage provided by a financial instrument authorized in items A to E;

(2) a certification of valid claim for bodily injury or property damage caused by a sudden or nonsudden accidental occurrence arising from the operation of a hazardous waste treatment, storage, or disposal facility is entered between the owner or operator and third-party claimant for liability coverage under items A to E; or

(3) a final court order establishing a judgment for bodily injury or property damage caused by a sudden or nonsudden accidental occurrence arising from the

operation of a hazardous waste treatment, storage, or disposal facility is issued against the owner or operator or an instrument that is providing financial assurance for liability coverage under items A to E.

[In item F, the MPCA adopts required language from RCRA Amendment 113: "Consolidated Liability Requirements" = 40 CFR 264.147(b)(7)(i-iii). Further information can be found in 53 FR 33938-33960, September 1, 1988; as amended by 56 FR 30200, July 1, 1991; and 57 FR 42832-42844, September 16, 1992.]//

[For text of subps 3 to 5, see M.R.]

Subp. 6. **Financial test for liability coverage.** The financial test for liability coverage is as follows:

[For text of items A to G, see M.R.]

H. If the owner or operator no longer meets the requirements of item A, ~~he or she~~ the owner or operator shall obtain insurance, a letter of credit, a trust fund, or a corporate guarantee for the entire amount of required liability coverage as specified in this part. Evidence of ~~insurance~~ liability coverage must be submitted to the commissioner within 90 days after the end of the fiscal year for which the year-end financial data show that the owner or operator no longer meets the test requirements.

[In item H, the MPCA adopts language that expands the options available for providing liability coverage if the owner or operator no longer meets the requirements for the financial test. Except as previously discussed in the introduction to this part, the amendments include most of the optional language from RCRA Amendment 113: "Consolidated Liability Requirements" = 40 CFR 264.147(f)(6). Further information can be found in 53 FR 33938-33960, September 1, 1988; as amended by 56 FR 30200, July 1, 1991; and 57 FR 42832-42844, September 16, 1992.]//

[For text of item I, see M.R.]

Subp. 7. **Corporate guarantee for liability coverage.** The corporate guarantee for liability coverage is as follows:

A. Subject to item B, an owner or operator may meet the requirements of this part by obtaining a written corporate guarantee. The guarantor must be the parent corporation of the owner or operator. The guarantor must meet the requirements for owners or operators in subpart 6. The wording of the corporate guarantee must be identical to the wording specified in part 7045.0524, subpart 8a. The corporate guarantee must be signed by two corporate officers of the parent corporation. A corporate resolution authorizing the parent corporation to provide the corporate guarantee for the subsidiary must be attached to the corporate guarantee. A certified copy of the corporate guarantee must accompany the items sent to the commissioner as ~~provided~~ specified in subpart 6, item E. The terms of the corporate guarantee must provide that:

[For text of subitems (1) and (2), see M.R.]

B. A corporate guarantee may be used to satisfy the requirements of this part only if:

(1) in the case of corporations incorporated in the United States, the attorney general or insurance commissioner of the state in which the guarantor is incorporated and of each state in which a facility covered by the corporate guarantee is located has submitted a written statement to the commissioner and the United States Environmental

Protection Agency that a corporate guarantee executed as described in this part and part 7045.0524, subpart 8a, is a legally valid and enforceable obligation in that state; and

(2) in the case of corporations incorporated outside the United States, the non-United States corporation has identified a registered agent for service of process in each state in which a facility covered by the corporate guarantee is located and in the state in which it has its principal place of business, and the attorney general or insurance commissioner of each state in which a facility covered by the corporate guarantee is located and the state in which the guarantor corporation has its principal place of business, has submitted a written statement to the commissioner and to the United States Environmental Protection Agency that a corporate guarantee executed as described in this part and part 7045.0524, subpart 8a, is a legally valid and enforceable obligation in that state.

[In items A and B of subpart 7, the MPCA is amending the rules to insert the term 'corporate' in front of 'guarantee' so that meaning is clear and consistent with other uses of the phrase in this chapter. The MPCA is also amending the rules to change the term "provided" to "specified" to improve the clarity of this requirement.]//

Subp. 8. **Letter of credit for liability coverage.**

A. An owner or operator may satisfy the requirements of this part by obtaining an irrevocable standby letter of credit that conforms to the requirements of this subpart and submitting a copy of the letter of credit to the commissioner.

B. The financial institution issuing the letter of credit must be an entity that has the authority to issue letters of credit and whose letter of credit operations are regulated and examined by a federal or state agency.

C. The wording of the letter of credit must be identical to the wording in part 7045.0524, subpart 11.

D. An owner or operator who uses a letter of credit to satisfy the requirements of this part may also establish a standby trust fund. Under the terms of a letter of credit, all amounts paid pursuant to a draft by the trustee of the standby trust will be deposited by the issuing institution into the standby trust in accordance with instructions from the trustee. The trustee of the standby trust fund must be an entity that has the authority to act as a trustee and whose trust operations are regulated and examined by a federal or state agency.

E. The wording of the standby trust fund must be identical to the wording in part 7045.0524, subpart 13.

[In subpart 8, items A to E, the MPCA adopts language addressing the use of a letter of credit and a standby trust fund to meet liability coverage requirements. The adopted language is from optional RCRA Amendment 113: "Consolidated Liability Requirements" = 40 CFR 264.147(h)(1-5). Further information can be found in 53 FR 33938-33960, September 1, 1988; as amended by 56 FR 30200, July 1, 1991; and 57 FR 42832-42844, September 16, 1992.]//

Subp. 9. **Trust fund for liability coverage.**

A. An owner or operator may satisfy the requirements of this part by establishing a trust fund that conforms to the requirements of this subpart and submitting an originally signed duplicate of the trust agreement to the commissioner.

B. The trustee must be an entity that has the authority to act as a trustee and whose trust operations are regulated and examined by a federal or state agency.

C. The trust fund for liability coverage must be funded for the full amount of the liability coverage to be provided by the trust fund before it may be relied upon to satisfy the requirements of this part. If at any time after the trust fund is created the amount of funds in the trust fund is reduced below the full amount of the liability coverage to be provided, the owner or operator, by the anniversary date of the establishment of the fund, must either add sufficient funds to the trust fund to cause its value to equal the full amount of liability coverage to be provided or obtain other financial assurance as specified in this part to cover the difference. For purposes of this item, "the full amount of the liability coverage to be provided" means the amount of coverage for sudden or nonsudden occurrences required to be provided by the owner or operator under this part, less the amount of financial assurance for liability coverage that is being provided by other financial assurance mechanisms being used to demonstrate financial assurance by the owner or operator.

D. The wording of the trust fund must be identical to the wording in part 7045.0524, subpart 13.

[In subpart 9, items A to D the MPCA adopts provisions regarding the establishment of a trust fund to meet liability insurance requirements. The amendments are based on optional language from RCRA Amendment 113: "Consolidated Liability Requirements" = 40 CFR 264.147(j)(1-4). Further information can be found in 53 FR 33938-33960, September 1, 1988; as amended by 56 FR 30200, July 1, 1991; and 57 FR 42832-42844, September 16, 1992.]//

7045.0524 WORDING OF INSTRUMENTS.

[In this part especially (and some other parts), please note that some non-heading rule language that appears in bold would appear as a bracketed option (e.g., [insert owner or operator]) in the official rule. The inadvertent replacement of bracketed language with bold language in this SONAR document is the result of an error in transcribing the official rule into an electronic extract of the rule from which this document was produced.]//

[For text of subps 1 to 5, see M.R.]

Subp. 6. **Letter from chief financial officer for corrective action, closure, and/or postclosure care.** A letter from the chief financial officer as specified in part 7045.0504, subpart 7; 7045.0508, subpart 7; 7045.0514, subpart 7; 7045.0612, subpart 6; or 7045.0616, subpart 6 must be worded as specified in this subpart, except that instructions in brackets must be replaced with the relevant information and the brackets deleted.

LETTER FROM CHIEF FINANCIAL OFFICER FOR CORRECTIVE ACTION, CLOSURE, AND/OR POSTCLOSURE CARE

[Agency Commissioner] Minnesota Pollution Control Agency

I am the chief financial officer of [name and address of firm]. This letter is in support of this firm's use of the financial test to demonstrate financial assurance for corrective action, closure, or postclosure costs, as specified in Minnesota Rules, parts 7045.0498 to 7045.0524 and 7045.0608 to 7045.0624.

[In this paragraph of subpart 6, the MPCA revises wording of the letter from the chief financial officer for closure and/or post-closure care to match language found at 40 CFR 264.151(f). This change clarifies that the cited rules in the paragraph relate to financial assurance for costs associated with corrective action, closure or post closure care. The EPA's justification for this change is based on optional RCRA Amendment 113 Error! Bookmark not defined.**: "Consolidated Liability Requirements." Find further information in 57 FR 42832-42844, September 16, 1992.]//**

[Fill out the following five paragraphs regarding facilities and associated cost estimates. If your firm has no facilities that belong in a particular paragraph, write "None" in the space indicated. For each facility, include its identification number, name, address, and current corrective action, closure, and/or postclosure cost estimates. Identify each cost estimate as to whether it is for corrective action, closure, or postclosure care.]

1. This firm is the owner or operator of the following facilities for which financial assurance for corrective action, closure, or postclosure care is demonstrated through the financial test specified in Minnesota Rules, parts 7045.0498 to 7045.0524 and 7045.0608 to 7045.0624. The current corrective action, closure, and/or postclosure cost estimates covered by the ~~text~~ test are shown for each facility: _____.

[In paragraph 1 of subpart 6, the MPCA corrects a typographical error by changing the word "text" to "test."]//

2. This firm guarantees, through the corporate guarantee specified in Minnesota Rules, parts 7045.0498 to 7045.0524 and 7045.0608 to 7045.0624, the corrective action, closure, or postclosure care of the following facilities owned or operated by subsidiaries of this firm. The current cost estimates for the corrective action, closure, or postclosure care so guaranteed are shown for each facility: _____.

3. In states other than Minnesota, this firm, as owner or operator or guarantor, is demonstrating financial assurance for the corrective action, closure, or postclosure care of the following facilities either to the United States Environmental Protection Agency through the use of the financial test specified in Code of Federal Regulations, title 40, parts 264 or 265, subpart H, as amended, or to an authorized state through the use of a test equivalent or substantially equivalent to the specified financial test. The current corrective action, closure, and/or postclosure cost estimates covered by such a test are shown for each facility: _____.

4. This firm is the owner or operator of the following hazardous waste management facilities for which financial assurance for corrective action, if required, closure, or if a disposal facility, postclosure care, is not demonstrated either to the United States Environmental Protection Agency or a state through the financial test or any other financial assurance mechanism specified in Code of Federal Regulations, title 40, parts 264 or 265, subpart H, as amended, or equivalent or substantially equivalent state mechanisms. The current corrective action, closure, and/or postclosure cost estimates not covered by such financial assurance are shown for each facility: _____.

5. This firm is the owner or operator of the following underground injection control (UIC) facilities for which financial assurance for plugging and abandonment is required under Code of Federal Regulations, title 40, part 144, as amended. The current closure cost estimates as required by Code of Federal Regulations, title 40, section 144.62, as amended, are shown for each facility.

This firm [insert "is required" or "is not required"] to file a Form 10K with the Securities and Exchange Commission (SEC) for the latest fiscal year.

The fiscal year of this firm ends on [month, day]. The figures for the following items marked with an asterisk are derived from this firm's independently audited, year end financial statements for the latest completed fiscal year, ended [date].

[Fill in Alternative I if the criteria of Minnesota Rules, part 7045.0504, subpart 7, item B; 7045.0508, subpart 7, item B; 7045.0514, subpart 7, item B; 7045.0612, subpart 6, item B; 7045.0616, subpart 6, item B are used. Fill in Alternative II if the criteria of Minnesota Rules, part 7045.0504, subpart 7, item C; 7045.0508, subpart 7, item C; 7045.0514, subpart 7, item C; or 7045.0612, subpart 6, item C; or 7045.0616, subpart 6, item C are used.]

ALTERNATIVE I

1. Sum of current corrective action, closure, and postclosure cost estimate [total of all cost estimates shown in the five paragraphs above]	$_____
*2. Total liabilities [if any portion of the corrective actions, closure, or postclosure cost estimates is included in total liabilities, you may deduct the amount of that portion from this line and add that amount to lines 3 and 4]	$_____
*3. Tangible net worth	$_____
*4. Net worth	$_____
*5. Current assets	$_____
*6. Current liabilities	$_____
7. Net working capital [line 5 minus line 6]	$_____
*8. The sum of net income plus depreciation, depletion, and amortization	$_____
*9. Total assets in United States (required only if less than 90 percent of firm's assets are located in United States)	$_____

	YES	NO
10. Is line 3 at least $10,000,000?	___	___
11. Is line 3 at least 6 times line 1?	___	___
12. Is line 7 at least 6 times line 1?	___	___
*13. Are at least 90 percent of firm's assets located in the United States? If not, complete line 14	___	___
14. Is line 9 at least 6 times line 1?	___	___
15. Is line 2 divided by line 4 less than 2.0?	___	___

16. Is line 8 divided by line 2 greater than 0.1? ___ ___

17. Is line 5 divided by line 6 greater than 1.5? ___ ___

ALTERNATIVE II

1. Sum of current corrective action, closure, and postclosure cost estimates [total of all cost estimates shown in the five paragraphs above] $_____

2. Current bond rating of most recent issuance of this firm and name of rating service _____

3. Date of issuance of bond _____

4. Date of maturity of bond _____

*5. Tangible net worth [if any portion of the corrective action, closure, and postclosure costs estimates is included in "total liabilities" on your firm's financial statements, you may add the amount of that portion to this line] $_____

*6 Total assets in United States (required only if less than 90 percent of firm's assets are located in United States) $_____

	YES	NO
7. Is line 5 at least $10,000,000?	___	___
8. Is line 5 at least 6 times line 1?	___	___
*9. Are at least 90 percent of firm's assets located in United States? If not, complete line 10	___	___
10. Is line 6 at least 6 times line 1?	___	___

I hereby certify that the wording of this letter is identical to the wording specified in Minnesota Rules, part 7045.0524, subpart 6, as such rules were constituted on the date shown immediately below.

[SIGNATURE] [NAME] [TITLE] [DATE]

[For text of subp 7, see M.R.]

Subp. 8. **Corporate guarantee for corrective action, closure, or postclosure care.** A corporate guarantee as specified in part 7045.0504, subpart 7; 7045.0508, subpart 7; 7045.0514, subpart 7; 7045.0612, subpart 6; or 7045.0616, subpart 6 must be worded as specified in this subpart, except that instructions in brackets must be replaced with the relevant information and the brackets deleted.

CORPORATE GUARANTEE FOR CORRECTIVE ACTION, CLOSURE, OR POSTCLOSURE CARE

Guarantee made this [date] by [name of guaranteeing entity], a business corporation organized under the laws of the state of [insert name of state], herein referred to as guarantor, to the Minnesota Pollution Control Agency (Agency), obligee, on behalf of our subsidiary [owner or operator] of [business address].

Recitals

1. Guarantor meets or exceeds the financial test criteria and agrees to comply with the reporting requirements for guarantors as specified in Minnesota Rules, parts 7045.0504, subpart 7; 7045.0508, subpart 7; 7045.0514, subpart 7; 7045.0612, subpart 6; and 7045.0616, subpart 6.

2. [Owner or operator] owns or operates the following hazardous waste management facility(ies) covered by this guarantee: [List for each facility: identification number, name, and address. Indicate for each whether guarantee is for corrective action, closure, postclosure care, or a combination of the three.]

3. "Closure plans" and "postclosure plans" as used below refer to the plans maintained as required by Minnesota Rules, parts 7045.0486 to 7045.0494 and 7045.0594 to 7045.0606 for the closure and postclosure care of facilities as identified above. "Corrective action plans" as used below refers to the plans maintained as required by Minnesota Rules, part 7045.0484, subpart 2, item D; and subpart 14 for corrective action for the facilities as identified above.

4. For value received from [owner or operator], guarantor guarantees to the Agency that in the event that [owner or operator] fails to perform [insert "corrective action," "closure," "postclosure care," or any combination of the three] of the above facility(ies) in accordance with the corrective action, closure, or postclosure plans and other permit or interim status requirements whenever required to do so, the guarantor shall do so or establish a trust fund as specified in Minnesota Rules, parts 7045.0498 to 7045.0524 or 7045.0608 to 7045.0624 as applicable, in the name of [owner or operator] in the amount of the current corrective action, closure, or postclosure cost estimates as specified in Minnesota Rules, parts 7045.0498 to 7045.0524 and 7045.0608 to 7045.0624.

5. Guarantor agrees that if, at the end of any fiscal year before termination of this guarantee, the guarantor fails to meet the financial test criteria, guarantor shall send within 90 days, by certified mail, notice to the Agency Commissioner and to [owner or operator] that he or she intends to provide alternate financial assurance as specified in Minnesota Rules, parts 7045.0498 to 7045.0524 or 7045.0608 to 7045.0624, as applicable, in the name of [owner or operator]. Within 120 days after the end of such fiscal year, the guarantor shall establish financial assurance unless [owner or operator] has done so.

6. The guarantor agrees to notify the Agency Commissioner by certified mail of a voluntary or involuntary proceeding under United States Code, title 11, Bankruptcy, as amended, naming guarantor as debtor, within ten days after commencement of the proceeding.

7. Guarantor agrees that within 30 days after being notified by the Agency Commissioner of a determination that guarantor no longer meets the financial test criteria or that he or she is disallowed from continuing as a guarantor of corrective action, closure,

or postclosure care, the guarantor shall establish alternate financial assurance as specified in Minnesota Rules, parts 7045.0498 to 7045.0524 or 7045.0608 to 7045.0624, as applicable, in the name of [owner or operator] unless [owner or operator] has done so.

8. Guarantor agrees to remain bound under this guarantee notwithstanding any or all of the following: amendment or modification of the corrective action, closure or postclosure plan, amendment or modification of the permit, the extension or reduction of the time of performance of corrective action, closure, postclosure, or any other modification or alteration of an obligation of the owner or operator pursuant to Minnesota Rules, parts 7045.0450 to ~~7045.0642~~ 7045.0651.

[In subpart 8, paragraph 8, the MPCA corrects citations to ranges of rules that changed as parts were added.]//

9. Guarantor agrees to remain bound under this guarantee for so long as [owner or operator] must comply with the applicable financial assurance requirements of Minnesota Rules, parts 7045.0498 to 7045.0524 and 7045.0608 to 7045.0624 for the above listed facilities, except that guarantor may cancel this guarantee by sending notice by certified mail to the Agency Commissioner and to [owner or operator], the cancellation to become effective no earlier than 120 days after receipt of notice by both the Agency Commissioner and [owner or operator], as evidenced by the return receipts.

10. Guarantor agrees that if [owner or operator] fails to provide alternate financial assurance as specified in Minnesota Rules, parts 7045.0498 to 7045.0524 or 7045.0608 to 7045.0624, as applicable, and obtain written approval of such assurance from the Agency Commissioner within 90 days after a notice of cancellation by the guarantor is received by the Agency Commissioner from guarantor, guarantor shall provide alternate financial assurance in the name of [owner or operator].

11. Guarantor expressly waives notice of acceptance of this guarantee by the Agency or by [owner or operator]. Guarantor also expressly waives notice of amendments or modifications of the corrective action, closure, and/or postclosure plan and of amendments or modifications of the facility permit(s).

I hereby certify that the wording of this guarantee is identical to the wording specified in Minnesota Rules, part 7045.0524, subpart 8, as such rules were constituted on the date first above written.

Effective date: _____ [NAME OF GUARANTOR] [AUTHORIZED SIGNATURE FOR GUARANTOR] [NAME OF PERSON SIGNING] [TITLE OF PERSON SIGNING] [SIGNATURE OF WITNESS OR NOTARY]

Subp. 8a. **Corporate guarantee for liability coverage.** A corporate guarantee as specified in part 7045.0518, subpart 7, or 7045.0620, subpart 6, must be worded as follows, except that instructions in brackets are to be replaced with the relevant information and the brackets deleted:

CORPORATE GUARANTEE FOR LIABILITY COVERAGE

Guarantee made this [date] by [name of guaranteeing entity], a business corporation organized under the laws of [if incorporated within the United States, insert "the State of _____" and insert name of state; if incorporated outside the United States, insert the name of the country in which incorporated, the principal place of business within the United States, and the name and address of the registered agent in the state of the principal place of business], referred to in this guarantee as the guarantor. This guarantee is made on behalf of our subsidiary [owner or operator] of [business address], to any and all third parties who have sustained or may sustain bodily injury or property damage caused by [sudden and/or nonsudden] accidental occurrences arising from operation of the facility(ies) covered by this guarantee.

Recitals

1. Guarantor meets or exceeds the financial test criteria and agrees to comply with the reporting requirements for guarantors as specified in Minnesota Rules, parts 7045.0518, subpart 7, and 7045.0620, subpart 6.

2. [Owner or operator] owns or operates the following hazardous waste management facility(ies) covered by this guarantee: [List for each facility: Identification Number, name, and address; and if guarantor is incorporated outside the United States, list the name and address of the guarantor's registered agent in each state.] This corporate guarantee satisfies RCRA third party liability requirements for [insert "sudden" or "nonsudden" or "both sudden and nonsudden"] accidental occurrences in above named owner or operator facilities for coverage in the amount of [insert dollar amount] for each occurrence and [insert dollar amount] annual aggregate.

3. For value received from [owner or operator], guarantor guarantees to any and all third parties who have sustained or may sustain bodily injury or property damage caused by [sudden and/or nonsudden] accidental occurrences arising from operations of the facility(ies) covered by this guarantee that in the event that [owner or operator] fails to satisfy a judgment or award based on a determination of liability for bodily injury or property damage to third parties caused by [sudden and/or nonsudden] accidental occurrences, arising from the operation of the above named facilities, or fails to pay an amount agreed to in settlement of a claim arising from or alleged to arise from such injury or damage, the guarantor will satisfy such judgment(s), award(s), or settlement agreement(s), up to the limits of coverage identified above.

4. Such obligation does not apply to any of the following:

(a) Bodily injury or property damage for which [insert owner or operator] is obligated to pay damages by reason of the assumption of liability in a contract or agreement. This exclusion does not apply to liability for damages that [insert owner or operator] would be obligated to pay in the absence of the contract or agreement.

(b) Any obligation of [insert owner or operator] under a workers' compensation, disability benefits, or unemployment compensation law, or any similar law.

(c) Bodily injury to:

(1) an employee of [insert owner or operator] arising from, and in the course of, employment by [insert owner or operator]; or

(2) the spouse, child, parent, brother, or sister of that employee as a consequence of, or arising from, and in the course of employment by [insert owner or operator]. This exclusion applies: (A) whether [insert owner or operator] may be liable as an employer or in any other capacity; and (B) to any obligation to share damages with or repay another person who must pay damages because of the injury to persons identified in paragraphs (1) and (2). (d) Bodily injury or property damage arising out of the ownership, maintenance, use, or entrustment to others of any aircraft, motor vehicle, or watercraft. (e) Property damage to:

(1) any property owned, rented, or occupied by [insert owner or operator];

(2) premises that are sold, given away, or abandoned by [insert owner or operator] if the property damage arises out of any part of those premises;

(3) property loaned to [insert owner or operator];

(4) personal property in the care, custody, or control of [insert owner or operator]; or

(5) that particular part of real property on which [insert owner or operator] or any contractors or subcontractors working directly or indirectly on behalf of [insert owner or operator] are performing operations, if the property damage arises out of these operations.

[In subpart 8a, paragraph 4, the MPCA moves the discussion of exclusions here from existing paragraph 12, and slightly modifies the introductory sentence to more accurately identify to whom the exclusions apply and to provide consistency with 40 CFR 264.151(h)(2). Moving the content of paragraph 12 to paragraph 4 is optional, but the MPCA believes it is reasonable to provide consistency with corresponding federal language. The language in this paragraph is from RCRA Amendment 113: "Consolidated Liability Requirements" = 40 CFR 264.151(h)(2). Further information can be found in 53 FR 33938-33960, September 1, 1988; as amended by 56 FR 30200, July 1, 1991; and 57 FR 42832-42844, September 16, 1992.]//

5. Guarantor agrees that if, at the end of any fiscal year before termination of this guarantee, the guarantor fails to meet the financial test criteria, guarantor shall send within 90 days, by certified mail, notice to the commissioner and to [owner or operator]

that (s)he intends to provide alternate liability coverage as specified in Minnesota Rules, parts 7045.0518 and 7045.0620, as applicable, in the name of [owner or operator]. Within 120 days after the end of that fiscal year, the guarantor shall establish the liability coverage unless [owner or operator] has done so.

~~5.~~ 6. The guarantor agrees to notify the commissioner by certified mail of a voluntary or involuntary proceeding under Title 11 (bankruptcy), United States Code, as amended, naming guarantor as debtor, within ten days after commencement of the proceeding.

~~6.~~ 7. Guarantor agrees that within 30 days after being notified by the commissioner of a determination that guarantor no longer meets the financial test criteria or that (s)he is disallowed from continuing as a guarantor, (s)he shall establish alternate liability coverage as specified in Minnesota Rules, part 7045.0518 or 7045.0620 in the name of [owner or operator], unless [owner or operator] has done so.

~~7.~~ 8. Guarantor reserves the right to modify this agreement to take into account amendment or modification of the liability requirements established by Minnesota Rules, parts 7045.0518 and 7045.0620, but the modification becomes effective only if the commissioner does not disapprove the modification within 30 days of receipt of notification of the modification.

~~8.~~ 9. Guarantor agrees to remain bound under this guarantee for so long as [owner or operator] must comply with the applicable requirements of Minnesota Rules, parts 7045.0518 and 7045.0620 for the above listed facility(ies), except as provided in paragraph ~~9~~ 10 of this agreement.

~~9.~~ 10. Guarantor may terminate this guarantee by sending notice by certified mail to the commissioner and to [owner or operator] but this guarantee may not be terminated unless and until [owner or operator] obtains, and the commissioner approves alternate liability coverage complying with Minnesota Rules, parts 7045.0518 and/or 7045.0620.

~~10.~~ 11. Guarantor hereby expressly waives notice of acceptance of this guarantee by any party.

~~11.~~ 12. Guarantor agrees that this guarantee is in addition to and does not affect any other responsibility or liability of the guarantor with respect to the covered facilities.

[In paragraphs 5 through 12, the MPCA is re-numbering the paragraphs. None of these amendments change the effect of the rules.]//

~~12. Exclusions~~

~~This corporate guarantee does not apply to:~~

~~A. Bodily injury or property damage for which the owner or operator is obliged to pay damages by reason of the assumption of liability in a contract or agreement. This~~

~~exclusion does not apply to liability for damages that the owner or operator would be obligated to pay in the absence of the contract or agreement.~~

~~B. Any obligation of the owner or operator under a workers' compensation, disability benefits, or unemployment compensation law or any similar law.~~

~~C. Bodily injury to:~~

~~(1) an employee of the owner or operator arising from, and in the course of, employment by the owner or operator; or~~

~~(2) the spouse, child, parent, brother, or sister of that employee as a consequence of, or arising from, and in the course of, employment by the owner or operator.~~

~~This exclusion applies whether the owner or operator is liable as an employer or in any other capacity. This exclusion also applies to any obligation to share damages with or repay another person who must pay damages because of the injury to persons identified in item C.~~

~~D. Bodily injury or property damage arising out of the ownership, maintenance, use, or entrustment to others of any aircraft, motor vehicle, or watercraft.~~

~~E. Property damage to:~~

~~(1) any property owned, rented, or occupied by the owner or operator;~~

~~(2) premises that are sold, given away, or abandoned by the owner or operator if the property damage arises out of any part of those premises;~~

~~(3) property loaned to the owner or operator;~~

~~(4) personal property in the care, custody, or control of the owner or operator; and~~

~~(5) that particular part of real property on which the owner or operator or any contractors or subcontractors working directly or indirectly on behalf of the owner or operator are performing operations, if the property damage arises out of these operations.~~

In paragraph 12, the MPCA moves existing language, with slight modifications, to paragraph 4 above. The same types of exclusions formerly addressed in this paragraph are now being addressed in the amendments to paragraph 4 above.]//`

13. The guarantor shall satisfy a third-party liability claim only on receipt of one of the following documents:

(a) Certification from the principal and the third-party claimant(s) that the liability claim should be paid. The certification must be worded as follows, except that

instructions in brackets are to be replaced with the relevant information and the brackets deleted:

Certification of Valid Claim

The undersigned, as parties [insert principal] and [insert name and address of third-party claimant(s)], hereby certify that the claim of bodily injury and/or property damage caused by a [sudden or nonsudden] accidental occurrence arising from operating [principal's hazardous waste treatment, storage, or disposal facility] should be paid in the amount of $.....

[Signatures] Principal (Notary) Date [Signatures] Claimant(s) (Notary) Date

(b) A valid final court order establishing a judgment against the principal for bodily injury or property damage caused by sudden or nonsudden accidental occurrences arising from the operation of the principal's facility or group of facilities.

[In subpart 8a, paragraph 13, the MPCA adopts language to address third party claims. This optional language is from RCRA Amendment 113: "Consolidated Liability Requirements" = 40 CFR 264.151(h)(2). Further information can be found in 53 FR 33938-33960, September 1, 1988; as amended by 56 FR 30200, July 1, 1991; and 57 FR 42832-42844, September 16, 1992.]//

14. In the event of combination of this guarantee with another mechanism to meet liability requirements, this guarantee will be considered [insert "primary" or "excess"] coverage.

[In subpart 8a, paragraph 14, the MPCA adopts language to address combined mechanisms for liability coverage. This is optional language from RCRA Amendment 113: "Consolidated Liability Requirements" = 40 CFR 264.151(h)(2). Further information can be found in 53 FR 33938-33960, September 1, 1988; as amended by 56 FR 30200, July 1, 1991; and 57 FR 42832-42844, September 16, 1992.]//

I hereby certify that the wording of the guarantee is identical to the wording specified in Minnesota Rules, part 7045.0524, subpart 8a.

Effective date: _____ [Name of guarantor] [Authorized signatures for guarantor] [Names of persons signing] [Titles of persons signing (Two corporate officers must sign for parent corporation.)] Corporate resolution attached [(Attach resolution adopted by parent corporation authorizing parent corporation to provide the corporate guarantee for subsidiary)] Signature of witness or notary: _____

[For text of subps 9 and 10, see M.R.]

Subp. 11. **Letter of credit for liability coverage.** A letter of credit, as specified in part 7045.0518, subpart 8, or 7045.0620, subpart 7, must be worded as follows, except

that instructions in brackets are to be replaced with the relevant information and the brackets deleted:

IRREVOCABLE STANDBY LETTER OF CREDIT

[Name and Address of Issuing Institution]

[Agency Commissioner]

Minnesota Pollution Control Agency

Dear Sir or Madam: We hereby establish our Irrevocable Standby Letter of Credit No. ... in the favor of ["any and all third-party liability claimants" or insert name of trustee of the standby trust fund], at the request and for the account of [owner or operator's name and address] for third-party liability awards or settlements of ..... [insert dollar amount of the letter of credit] per occurrence and the annual aggregate amount of ..... [insert dollar amount of the letter of credit] for sudden accidental occurrences and/or for third-party liability awards or settlements of ..... [insert dollar amount of the letter of credit] per occurrence, and the annual aggregate amount of ..... [insert dollar amount of the letter of credit] for nonsudden accidental occurrences available on presentation of a sight draft bearing reference to this letter of credit No. ..., and [insert the following language if the letter of credit is being used without a standby trust fund:

"(1) a signed certificate reading as follows:

CERTIFICATE OF VALID CLAIM

The undersigned, as parties [insert principal] and [insert name and address of third party claimant(s)], hereby certify that the claim of bodily injury and/or property damage caused by a [sudden or nonsudden] accidental occurrence arising from operations of [principal's] hazardous waste treatment, storage, or disposal facility should be paid in the amount of $..... We hereby certify that the claim does not apply to any of the following:

(a) Bodily injury or property damage for which [insert principal] is obligated to pay damages by reason of the assumption of liability in a contract or agreement. This exclusion does not apply to liability for damages that [insert principal] would be obligated to pay in the absence of the contract or agreement.

(b) Any obligation of [insert principal] under a workers' compensation, disability benefits or unemployment compensation law or any similar law.

(c) Bodily injury to:

(1) an employee of [insert principal] arising from, and in the course of, employment by [insert principal]; or

(2) the spouse, child, parent, brother, or sister of that employee as a consequence of, or arising from, and in the course of employment by [insert principal].

This exclusion applies:

(A) whether [insert principal] may be liable as an employer or in any other capacity; and (B) to any obligation to share damages with or repay another person who must pay damages because of the injury to persons identified in paragraphs (1) and (2). (d) Bodily injury or property damage arising out of the ownership, maintenance, use, or entrustment to others of any aircraft, motor vehicle, or watercraft. (e) Property damage to:

(1) any property owned, rented, or occupied by [insert principal];

(2) premises that are sold, given away, or abandoned by [insert principal] if the property damage arises out of any part of those premises;

(3) property loaned to [insert principal];

(4) personal property in the care, custody, or control of [insert principal]; or

(5) that particular part of real property on which [insert principal] or any contractors or subcontractors working directly or indirectly on behalf of [insert principal] are performing operations, if the property damage arises out of these operations.

[Signatures]

Grantor

[Signatures]

Claimant(s)

; or

(2) a valid final court order establishing a judgment against the Grantor for bodily injury or property damage caused by sudden or nonsudden accidental occurrences arising from the operation of the Grantor's facility or group of facilities.

This letter of credit is effective as of [date] and shall expire on [date at least one year later], but such expiration date shall be automatically extended for a period of [at least one year] on [date] and on each successive expiration date, unless, at least 120 days before the current expiration date, we notify you, the commissioner, and [owner's or operator's name] by certified mail that we have decided not to extend this letter of credit beyond the current expiration date.

Whenever this letter of credit is drawn on under and in compliance with the terms of this credit, we shall duly honor such draft upon presentation to us.

[Insert the following language if a standby trust fund is not being used: "In the event that this letter of credit is used in combination with another mechanism for liability

coverage, this letter of credit shall be considered [insert "primary" or "excess" coverage."]

We certify that the wording of this letter of credit is identical to the wording specified in Minnesota Rules, part 7045.0524, subpart 11, as such rule was constituted on the date shown immediately below. [Signature(s) and title(s) of official(s) of issuing institution] [Date].

This credit is subject to [insert "the most recent edition of the Uniform Customs and Practice for Documentary Credits, published and copyrighted by the International Chamber of Commerce," or "the Uniform Commercial Code"].

[In subpart 11 the MPCA is adopting optional federal language regarding the wording of an irrevocable standby letter of credit to meet liability requirements. The MPCA is slightly modifying the federal wording to reduce the potential for confusion. The same clarifying changes are being made in subparts 12 and 13 below. The existing federal language calls for third party liability awards of "up to [in words] U.S. dollars $ ……." The MPCA chooses to modify the phrasing in this document, as well as the phrasing of the same terms in Section 3 of subparts 12 and 13 to replace the counter-intuitive phrase "up to" in addressing liability (which normally requires "at least" some amount). Without understanding the larger context of the wording of this document, the phrase "up to" seems to set no minimum required amount of coverage. This is not the case and the EPA has explained to MPCA staff that it intends this language to apply in the larger context that any of the financial assurance instruments may be used in combination to provide the minimum coverage required by federal 40 CFR 264.147(h), also found in Minnesota Rules part 7045.0518. By using the phrase "up to," the EPA intends to allow the letter of credit to make up any shortage between the other financial assurance instruments and the required coverage. The MPCA does not believe that the existing federal language makes this context clear. The federal language fails to acknowledge the minimum amount of coverage required by part 7045.0518. The MPCA believes that replacing the federal "up to" phrase with the phrase "[insert dollar amount of the fund]" clarifies the intent of the federal language and removes potential confusion. The adopted language, except the change discussed above, is from RCRA Amendment 113: "Consolidated Liability Requirements" = 40 CFR 264.151(k). Further information can be found in 53 FR 33938-33960, September 1, 1988; as amended by 56 FR 30200, July 1, 1991; and 57 FR 42832-42844, September 16, 1992.]//

Subp. 12.**Trust agreement for liability coverage.**

A. A trust agreement, as specified in part 7045.0518, subpart 10, or 7045.0620, subpart 9, must be worded as follows, except that instructions in brackets are to be replaced with the relevant information and the brackets deleted:

TRUST AGREEMENT

Trust Agreement, the "Agreement," entered into as of [date] by and between [name of the owner or operator] a [name of State] [insert "corporation," "partnership," "association," or "proprietorship"], the "Grantor," and [name of corporate trustee], [insert "incorporated in the State of _____" or "a national bank"], the "trustee."

Whereas, the Minnesota Pollution Control Agency (Agency), an agency of the state of Minnesota, has established certain rules applicable to the Grantor, requiring that an owner or operator of a hazardous waste management facility or group of facilities must demonstrate financial responsibility for bodily injury and property damage to third parties caused by sudden accidental and/or nonsudden accidental occurrences arising from operations of the facility or group of facilities.

Whereas, the Grantor has elected to establish a trust to assure all or part of such financial responsibility for the facilities identified herein.

Whereas, the Grantor, acting through its duly authorized officers, has selected the Trustee to be the trustee under this agreement, and the Trustee is willing to act as trustee.

Now, therefore, the Grantor and the Trustee agree as follows:

Section 1. Definitions. As used in this Agreement:

(a) The term "Grantor" means the owner or operator who enters into this Agreement and any successors or assigns of the Grantor.

(b) The term "Trustee" means the Trustee who enters into this Agreement and any successor Trustee.

Section 2. Identification of Facilities. This agreement pertains to the facilities identified on attached schedule A [on Schedule A, for each facility list the EPA Identification Number, name, and address of the facility(ies) and the amount of liability coverage, or portions thereof, if more than one instrument affords combined coverage as demonstrated by this Agreement].

Section 3. Establishment of Fund. The Grantor and the Trustee hereby establish a trust fund, hereinafter the "Fund," for the benefit of any and all third parties injured or damaged by [sudden and/or nonsudden] accidental occurrences arising from operation of the facility(ies) covered by this guarantee, in the amounts of _____ [insert dollar amount of the fund] per occurrence and _____ [insert dollar amount of the fund] annual aggregate for sudden accidental occurrences and _____ [insert dollar amount of the fund] per occurrence and _____ [insert dollar amount of the fund] annual aggregate for nonsudden occurrences, except that the Fund is not established for the benefit of third parties for the following:

(a) Bodily injury or property damage for which [insert Grantor] is obligated to pay damages by reason of the assumption of liability in a contract or agreement. This

exclusion does not apply to liability for damages that [insert Grantor] would be obligated to pay in the absence of the contract or agreement.

(b) Any obligation of [insert Grantor] under a workers' compensation, disability benefits, or unemployment compensation law or any similar law.

(c) Bodily injury to:

(1) an employee of [insert Grantor] arising from, and in the course of, employment by [insert Grantor]; or

(2) the spouse, child, parent, brother, or sister of that employee as a consequence of, or arising from, and in the course of employment by [insert Grantor].

This exclusion applies:

(A) whether [insert Grantor] may be liable as an employer or in any other capacity; and (B) to any obligation to share damages with or repay another person who must pay damages because of the injury to persons identified in paragraphs (1) and (2). (d) Bodily injury or property damage arising out of the ownership, maintenance, use, or entrustment to others of any aircraft, motor vehicle, or watercraft. (e) Property damage to:

(1) any property owned, rented, or occupied by [insert Grantor];

(2) premises that are sold, given away, or abandoned by [insert Grantor] if the property damage arises out of any part of those premises;

(3) property loaned to [insert Grantor];

(4) personal property in the care, custody, or control of [insert Grantor]; or

(5) that particular part of real property on which [insert Grantor] or any contractors or subcontractors working directly or indirectly on behalf of [insert Grantor] are performing operations, if the property damage arises out of these operations.

In the event of combination with another mechanism for liability coverage, the fund shall be considered [insert "primary" or "excess"] coverage.

The Fund is established initially as consisting of the property, which is acceptable to the Trustee, described in Schedule B attached hereto. Such property and any other property subsequently transferred to the Trustee is referred to as the Fund, together with all earnings and profits thereon, less any payments or distributions made by the Trustee pursuant to this Agreement. The Fund shall be held by the Trustee, IN TRUST, as hereinafter provided. The Trustee shall not be responsible nor shall it undertake any responsibility for the amount or adequacy of, nor any duty to collect from the Grantor, any payments necessary to discharge any liabilities of the Grantor established by the Agency.

Section 4. Payment for Bodily Injury or Property Damage. The Trustee shall satisfy a third party liability claim by making payments from the Fund only upon receipt of one of the following documents:

(a) Certification from the Grantor and the third party claimant(s) that the liability claim should be paid. The certification must be worded as follows, except that instructions in brackets are to be replaced with the relevant information and the brackets deleted:

CERTIFICATION OF VALID CLAIM

The undersigned, as parties [insert Grantor] and [insert name and address of third party claimant(s)], hereby certify that the claim of bodily injury and/or property damage caused by a [sudden or nonsudden] accidental occurrence arising from operating [Grantor's] hazardous waste treatment, storage, or disposal facility should be paid in the amount of $[.....].

[Signatures]

Grantor

[Signatures]

Claimant(s)

(b) A valid final court order establishing a judgment against the Grantor for bodily injury or property damage caused by sudden or nonsudden accidental occurrences arising from the operation of the Grantor's facility or group of facilities.

Section 5. Payments Comprising the Fund. Payments made to the Trustee for the Fund shall consist of cash or securities acceptable to the Trustee.

Section 6. Trustee Management. The Trustee shall invest and reinvest the principal and income, in accordance with general investment policies and guidelines which the Grantor may communicate in writing to the Trustee from time to time, subject, however, to the provisions of this section. In investing, reinvesting, exchanging, selling, and managing the Fund, the Trustee shall discharge his duties with respect to the trust fund solely in the interest of the beneficiary and with the care, skill, prudence, and diligence under the circumstance then prevailing which persons of prudence, acting in a like capacity and familiar with such matters, would use in the conduct of an enterprise of a like character and with like aims; except that:

(a) securities or other obligations of the Grantor, or any other owner or operator of the facilities, or any of their affiliates as defined in the Investment Company Act of 1940, as amended, 15 U.S.C. 80a-2.(a), shall not be acquired or held unless they are securities or other obligations of the Federal or State government;

(b) the Trustee is authorized to invest the Fund in time or demand deposits of the Trustee, to the extent insured by an agency of the Federal or State government; and

(c) the Trustee is authorized to hold cash awaiting investment or distribution uninvested for a reasonable time and without liability for the payment of interest thereon.

Section 7. Commingling and Investment. The Trustee is expressly authorized in its discretion:

(a) to transfer from time to time any or all of the assets of the Fund to any common commingled, or collective trust fund created by the Trustee in which the fund is eligible to participate, subject to all of the provisions thereof, to be commingled with the assets of other trusts participating therein; and

(b) to purchase shares in any investment company registered under the Investment Company Act of 1940, 15 U.S.C. 81a-1 et seq., including one which may be created, managed, underwritten, or to which investment advice is rendered or the shares of which are sold by the Trustee. The Trustee may vote such shares in its discretion.

Section 8. Express Powers of Trustee. Without in any way limiting the powers and discretions conferred upon the Trustee by the other provisions of this Agreement or by law, the Trustee is expressly authorized and empowered:

(a) to sell, exchange, convey, transfer, or otherwise dispose of any property held by it, by public or private sale. No person dealing with the Trustee shall be bound to see to the application of the purchase money or to inquire into the validity or expediency of any such sale or other disposition;

(b) to make, execute, acknowledge, and deliver any and all documents of transfer and conveyance and any and all other instruments that may be necessary or appropriate to carry out the powers herein granted;

(c) to register any securities held in the Fund in its own name or in the name of a nominee and to hold any security in bearer form or in book entry, or to combine certificates representing such securities with certificates of the same issue held by the Trustee in other fiduciary capacities, or to deposit or arrange for the deposit of such securities in a qualified central depository even though, when so deposited, such securities may be merged and held in bulk in the name of the nominee of such depository with other securities deposited therein by another person, or to deposit or arrange for the deposit of any securities issued by the United States Government, or any agency or instrumentality thereof, with a Federal Reserve bank, but the books and records of the Trustee shall at all times show that all such securities are part of the Fund;

(d) to deposit any cash in the Fund in interest-bearing accounts maintained or savings certificates issued by the Trustee, in its separate corporate capacity, or in any other banking institution affiliated with the Trustee, to the extent insured by an agency of the Federal or State government; and

(e) to compromise or otherwise adjust all claims in favor of or against the Fund.

Section 9. Taxes and Expenses. All taxes of any kind that may be assessed or levied against or in respect of the Fund and all brokerage commissions incurred by the Fund shall be paid from the Fund. All other expenses incurred by the Trustee in connection with the administration of this Trust, including fees for legal services rendered to the Trustee, the compensation of the Trustee to the extent not paid directly by the Grantor, and all other proper charges and disbursements of the Trustee shall be paid from the Fund.

Section 10. Annual Valuations. The Trustee shall annually, at least 30 days prior to the anniversary date of establishment of the Fund, furnish to the Grantor and to the Agency Commissioner a statement confirming the value of the Trust. Any securities in the Fund shall be valued at market value as of no more than 60 days prior to the anniversary date of establishment of the Fund. The failure of the Grantor to object in writing to the Trustee within 90 days after the statement has been furnished to the Grantor and the Agency Commissioner shall constitute a conclusively binding assent by the Grantor barring the Grantor from asserting any claim or liability against the Trustee with respect to matters disclosed in the statement.

Section 11. Advice of Counsel. The Trustee may from time to time consult with counsel, who may be counsel to the Grantor with respect to any question arising as to the construction of this Agreement or any action to be taken hereunder. The Trustee shall be fully protected, to the extent permitted by law, in acting upon the advice of counsel.

Section 12. Trustee Compensation. The Trustee shall be entitled to reasonable compensation for its services as agreed upon in writing from time to time with the Grantor.

Section 13. Successor Trustee. The Trustee may resign or the Grantor may replace the Trustee, but such resignation or replacement shall not be effective until the Grantor has appointed a successor trustee and this successor accepts the appointment. The successor trustee shall have the same powers and duties as those conferred upon the Trustee hereunder. Upon the successor trustee's acceptance of the appointment, the Trustee shall assign, transfer, and pay over to the successor trustee the funds and properties then constituting the Fund. If for any reason the Grantor cannot or does not act in the event of the resignation of the Trustee, the Trustee may apply to a court of competent jurisdiction for the appointment of a successor trustee or for instructions. The successor trustee shall specify the date on which it assumes administration of the trust in a writing sent to the Grantor, the Agency Commissioner, and the present Trustee by certified mail ten days before such change becomes effective. Any expenses incurred by the Trustee as a result of any of the acts contemplated by this section shall be paid as provided in Section 9.

Section 14. Instructions to the Trustee. All orders, requests, and instructions by the Grantor to the Trustee shall be in writing, signed by such persons as are designated in the attached Exhibit A or such other designees as the Grantor may designate by amendments to Exhibit A. The Trustee shall be fully protected in acting without inquiry in accordance with the Grantor's orders, requests, and instructions. All orders, requests, and instructions by the Agency Commissioner to the Trustee shall be in writing, signed by the Agency

Commissioner, or the Commissioner's designees, and the Trustee shall act and shall be fully protected in acting in accordance with such orders, requests, and instructions. The Trustee shall have the right to assume, in the absence of written notice to the contrary, that no event constituting a change or a termination of the authority of any person to act on behalf of the Grantor or the Agency hereunder has occurred. The Trustee shall have no duty to act in the absence of such orders, requests, and instructions from the Grantor and/or the Agency, except as provided for herein.

Section 15. Notice of Nonpayment. If a payment for bodily injury or property damage is made under Section 4 of this trust, the Trustee shall notify the Grantor of such payment and the amount(s) thereof within five (5) working days. The Grantor shall, on or before the anniversary date of the establishment of the Fund following such notice, either make payments to the Trustee in amounts sufficient to cause the trust to return to its value immediately prior to the payment of claims under Section 4, or shall provide written proof to the Trustee that other financial assurance for liability coverage has been obtained equaling the amount necessary to return the trust to its value prior to the payment of claims. If the Grantor does not either make payments to the Trustee or provide the Trustee with such proof, the Trustee shall within ten working days after the anniversary date of the establishment of the Fund provide a written notice of nonpayment to the Agency Commissioner.

Section 16. Amendment of Agreement. This Agreement may be amended by an instrument in writing executed by the Grantor, the Trustee, and the Agency Commissioner, or by the Trustee and the Agency Commissioner if the Grantor ceases to exist.

Section 17. Irrevocability and Termination. Subject to the right of the parties to amend this Agreement as provided in Section 16, this Trust shall be irrevocable and shall continue until terminated at the written agreement of the Grantor, the Trustee, and the Agency Commissioner, or by the Trustee and the Agency Commissioner, if the Grantor ceases to exist. Upon termination of the Trust, all remaining trust property, less final trust administration expenses, shall be delivered to the Grantor.

The Agency Commissioner will agree to termination of the Trust when the owner or operator substitutes alternate financial assurance as specified in this section.

Section 18. Immunity and Indemnification. The Trustee shall not incur personal liability of any nature in connection with any act or omission, made in good faith, in the administration of this Trust, or in carrying out any directions by the Grantor or the Agency Commissioner issued in accordance with this Agreement. The Trustee shall be indemnified and saved harmless by the Grantor or from the Trust Fund, or both, from and against any personal liability to which the Trustee may be subjected by reason of any act or conduct in its official capacity, including all expenses reasonably incurred in its defense in the event the Grantor fails to provide such defense.

Section 19. Choice of Law. This Agreement shall be administered, construed, and enforced according to the laws of the State of Minnesota.

Section 20. Interpretation. As used in Agreement, words in the singular include the plural and words in the plural include the singular. The descriptive headings for each section of this Agreement shall not affect the interpretation or the legal efficacy of this Agreement.

In Witness Whereof the parties have caused this Agreement to be executed by their respective officers duly authorized and their corporate seals to be hereunto affixed and attested as of the date first above written. The parties below certify that the wording of this Agreement is identical to the wording specified in part 7045.0524, subpart 12, as such regulations were constituted on the date first above written.

B. The following is an example of the certification of acknowledgment which must accompany the trust agreement for a trust fund as specified in parts 7045.0518, subpart 10, or 7045.0620, subpart 9.

State of _____

County of _____

On this [date], before me personally came [owner or operator] to me known, who, being by me duly sworn, did depose and say that she/he resides at [address], that she/he is [title] of [corporation], the corporation described in and which executed the above instrument; that she/he knows the seal of said corporation; that the seal affixed to such

instrument is such corporate seal; that it was so affixed by order of the Board of Directors of said corporation, and that she/he signed her/his name thereto by like order.

[Signature of Notary Public]

[In subpart 12, the MPCA is adopting optional federal language regarding the wording of a trust agreement to meet liability requirements. The MPCA is slightly modifying a set of four related parenthetical phrases in Section 3 to reduce the potential for confusion. Similar clarifying changes were made to subparts 11 and 13. The existing federal language calls for a fund of "[up to ($1, 2, 3 or 6) million]" (towards various liability coverages). To a reasonable person, the phrase "[up to…]" is a counter-intuitive way to address liability which normally sets minimum amounts of required coverage (often "at least" some millions of dollars). Without understanding the larger context of the wording of this document, the phrase "up to" seems to set no minimum required amount of coverage. This is not the case and the EPA has explained to MPCA staff that it intends this language to apply in the larger context that any of the allowed financial assurance instruments may be used in combination to provide the minimum coverage required by federal 40 CFR 264.147(j), also found in Minnesota Rules part 7045.0518. By using the phrase "up to," the EPA intends the trust fund to make up any shortage between the other financial assurance instruments and the required coverage. The MPCA does not believe that existing federal Section 3 language makes this context clear. The federal language fails to acknowledge the minimum amount of coverage required by part 7045.0518. The MPCA believes that replacing the federal "[up to …]" phrase with the phrase "[insert dollar amount of the fund]" clarifies the intent of the federal language and removes potential confusion. The language of this subpart, except the change discussed above, is adopted from optional RCRA Amendment 113: "Consolidated Liability Requirements" = 40 CFR 264.151(m). Further information can be found in 53 FR 33938-33960, September 1, 1988; as amended by 56 FR 30200, July 1, 1991; and 57 FR 42832-42844, September 16, 1992.]//

Subp. 13.**Standby trust agreement for liability coverage.**

A. A standby trust agreement, as specified in part 7045.0518, subpart 8, or 7045.0620, subpart 7, must be worded as follows, except that instructions in brackets are to be replaced with the relevant information and the brackets deleted:

STANDBY TRUST AGREEMENT

Trust Agreement, the "Agreement," entered into as of [date] by and between [name of the owner or operator] a [name of a State] [insert "corporation," "partnership," "association," or "proprietorship"], the "Grantor," and [name of corporate trustee], [insert, "incorporated in the State of _____" or "a national bank"], the "trustee."

Whereas, the Minnesota Pollution Control Agency (Agency), an agency of the State of Minnesota, has established certain regulations applicable to the Grantor, requiring that an owner or operator of a hazardous waste management facility or group of facilities must

demonstrate financial responsibility for bodily injury and property damage to third parties caused by sudden accidental and/or nonsudden accidental occurrences arising from operations of the facility or group of facilities.

Whereas, the Grantor has elected to establish a standby trust into which the proceeds from a letter of credit may be deposited to assure all or part of such financial responsibility for the facilities identified herein.

Whereas, the Grantor, acting through its duly authorized officers, has selected the Trustee to be the trustee under this agreement, and the Trustee is willing to act as trustee.

Now, therefore, the Grantor and the Trustee agree as follows:

Section 1. Definitions. As used in this Agreement:

(a) The term Grantor means the owner or operator who enters into this Agreement and any successors or assigns of the Grantor.

(b) The term Trustee means the Trustee who enters into this Agreement and any successor Trustee.

Section 2. Identification of Facilities. This Agreement pertains to the facilities identified on attached Schedule A [on Schedule A, for each facility list the identification number, name, and address of the facility(ies) and the amount of liability coverage, or portions thereof, if more than one instrument affords combined coverage as demonstrated by this Agreement].

Section 3. Establishment of Fund. The Grantor and the Trustee hereby establish a standby trust fund, hereafter the "Fund," for the benefit of any and all third parties injured or damaged by [sudden and/or nonsudden] accidental occurrences arising from operation of the facility(ies) covered by this guarantee, in the amounts of _____ [insert dollar amount of the fund] per occurrence and _____ [insert dollar amount of the fund] annual aggregate for sudden accidental occurrences and _____ [insert dollar amount of the fund] per occurrence and _____ [insert dollar amount of the fund] annual aggregate for nonsudden occurrences, except that the Fund is not established for the benefit of third parties for the following:

(a) Bodily injury or property damage for which [insert Grantor] is obligated to pay damages by reason of the assumption of liability in a contract or agreement. This exclusion does not apply to liability for damages that [insert Grantor] would be obligated to pay in the absence of the contract or agreement.

(b) Any obligation of [insert Grantor] under a workers' compensation, disability benefits, or unemployment compensation law or any similar law.

(c) Bodily injury to:

(1) an employee or [insert Grantor] arising from, and in the course of, employment by [insert Grantor]; or

(2) the spouse, child, parent, brother, or sister of that employee as a consequence of, or arising from, and in the course of employment by [insert Grantor].

This exclusion applies:

(A) whether [insert Grantor] may be liable as an employer or in any other capacity; and (B) to any obligation to share damages with or repay another person who must pay damages because of the injury to persons identified in paragraphs (1) and (2). (d) Bodily injury or property damage arising out of the ownership, maintenance, use, or entrustment to others of any aircraft, motor vehicle, or watercraft. (e) Property damage to:

(1) any property owned, rented, or occupied by [insert Grantor];

(2) premises that are sold, given away, or abandoned by [insert Grantor] if the property damage arises out of any part of those premises;

(3) property loaned [insert Grantor];

(4) personal property in the care, custody, or control of [insert Grantor]; or

(5) that particular part of real property on which [insert Grantor] or any contractors or subcontractors working directly or indirectly on behalf of [insert Grantor] are performing operations, if the property damage arises out of these operations.

In the event of combination with another mechanism for liability coverage, the fund shall be considered [insert "primary" or "excess"] coverage.

The Fund is established initially as consisting of the proceeds of the letter of credit deposited into the Fund. Such proceeds and any other property subsequently transferred to the Trustee is referred to as the Fund, together with all earnings and profits thereon, less any payments or distributions made by the Trustee pursuant to this Agreement. The Fund shall be held by the Trustee, IN TRUST, as hereinafter provided. The Trustee shall not be responsible nor shall it undertake any responsibility for the amount or adequacy of, nor any duty to collect from the Grantor, any payments necessary to discharge any liabilities of the Grantor established by the Agency.

Section 4. Payment for Bodily Injury or Property Damage. The Trustee shall satisfy a third-party liability claim by drawing on the letter of credit described in Schedule B and by making payments from the Fund only upon receipt of one of the following documents:

(a) Certification from the Grantor and the third-party claimant(s) that the liability claim should be paid. The certification must be worded as follows, except that instructions in brackets are to be replaced with the relevant information and the brackets deleted: The Trustee shall satisfy a third-party liability claim by drawing on the letter of credit described in Schedule B and by making payments from the Fund only upon receipt of one of the following documents:

CERTIFICATION OF VALID CLAIM

The undersigned, as parties [insert Grantor] and [insert name and address of third party claimant(s)], hereby certify that the claim of bodily injury and/or property damage caused by a [sudden or nonsudden] accidental occurrence arising from operating [Grantor's] hazardous waste treatment, storage, or disposal facility should be paid in the amount of $[_____].

[Signature] Grantor

[Signature(s)] Claimant(s)

(b) A valid final court order establishing a judgment against the Grantor for bodily injury or property damage caused by sudden or nonsudden accidental occurrences arising from the operation of the Grantor's facility or group of facilities.

Section 5. Payments Comprising the Fund. Payments made to the Trustee for the Fund shall consist of the proceeds from the letter of credit drawn upon by the Trustee in accordance with the requirements of Minnesota Rules, part 7045.0524, subpart 11, and Section 4 of this Agreement.

Section 6. Trustee Management. The Trustee shall invest and reinvest the principal and income, in accordance with general investment policies and guidelines which the Grantor may communicate in writing to the Trustee from time to time, subject, however, to the provisions of this Section. In investing, reinvesting, exchanging, selling, and managing the Fund, the Trustee shall discharge the trustee's duties with respect to the trust fund solely in the interest of the beneficiary and with the care, skill, prudence, and diligence under the circumstances then prevailing which persons of prudence, acting in a like capacity and familiar with such matters, would use in the conduct of an enterprise of a like character and with like aims; except that:

(a) securities or other obligations of the Grantor, or any other owner or operator of the facilities, or any of their affiliates as defined in the Investment Company Act of 1940, as amended, United States Code, title 15, section 80a-2(a), shall not be acquired or held, unless they are securities or other obligations of the Federal or State government;

(b) the Trustee is authorized to invest the Fund in time or demand deposits of the Trustee, to the extent insured by an agency of the Federal or a State government; and

(c) the Trustee is authorized to hold cash awaiting investment or distribution uninvested for a reasonable time and without liability for the payment of interest thereon.

Section 7. Commingling and Investment. The Trustee is expressly authorized in its discretion:

(a) to transfer from time to time any or all of the assets of the Fund to any common, commingled, or collective trust fund created by the trustee in which the Fund is eligible

to participate, subject to all of the provisions thereof, to be commingled with the assets of other trusts participating therein; and

(b) to purchase shares in any investment company registered under the Investment Company Act of 1940, United States Code, title 15, section 80a-1 et seq., including one which may be created, managed, underwritten, or to which investment advice is rendered or the shares of which are sold by the Trustee. The Trustee may vote such shares in its discretion.

Section 8. Express Powers of Trustee. Without in any way limiting the powers and discretions conferred upon the Trustee by the other provisions of the Agreement or by law, the Trustee is expressly authorized and empowered:

(a) to sell, exchange, convey, transfer, or otherwise dispose of any property held by it, by public or private sale. No person dealing with the Trustee shall be bound to see to the application of the purchase money or to inquire into the validity or expediency of any such sale or other disposition;

(b) to make, execute, acknowledge, and deliver any and all documents of transfer and conveyance and any and all other instruments that may be necessary or appropriate to carry out the powers herein granted;

(c) to register any securities held in the Fund in its own name or in the name of a nominee and to hold any security in bearer form or in book entry, or to combine certificates representing such securities with certificates of the same issue held by the Trustee in other fiduciary capacities, or to deposit or arrange for the deposit of such securities in a qualified central depositary even though, when so deposited, such securities may be merged and held in bulk in the name of the nominee of such depositary with other securities deposited therein by another person, or to deposit or arrange for the deposit of any securities issued by the United States Government, or any agency or instrumentality thereof, with a Federal Reserve Bank, but the books and records of the Trustee shall at all times show that all such securities are part of the Fund;

(d) to deposit any cash in the Fund in interest-bearing accounts maintained or savings certificates issued by the Trustee, in its separate corporate capacity, or in any other banking institution affiliated with the Trustee, to the extent insured by an agency of the Federal or State government; and

(e) to compromise or otherwise adjust all claims in favor of or against the Fund.

Section 9. Taxes and Expenses. All taxes of any kind that may be assessed or levied against or in respect of the Fund and all brokerage commissions incurred by the Fund shall be paid from the Fund. All other expenses incurred by the Trustee in connection with the administration of this Trust, including fees for legal services rendered to the Trustee, the compensation of the Trustee to the extent not paid directly by the Grantor, and all other proper charges and disbursements to the Trustee shall be paid from the Fund.

Section 10. Advice of Counsel. The Trustee may from time to time consult with counsel, who may be counsel to the Grantor, with respect to any question arising as to the construction of this Agreement or any action to be taken hereunder. The Trustee shall be fully protected, to the extent permitted by law, in acting upon the advice of counsel.

Section 11. Trustee Compensation. The Trustee shall be entitled to reasonable compensation for its services as agreed upon in writing from time to time with the Grantor.

Section 12. Successor Trustee. The Trustee may reside or the Grantor may replace the Trustee, but such resignation or replacement shall not be effective until the Grantor has appointed a successor trustee and this successor accepts the appointment. The successor trustee shall have the same powers and duties as those conferred upon the Trustee hereunder. Upon the successor trustee's acceptance of the appointment; the Trustee shall assign, transfer, and pay over to the successor trustee the funds and properties then constituting the Fund. If for any reason the Grantor cannot or does not act in the event of the resignation of the Trustee, the Trustee may apply to a court of competent jurisdiction for the appointment of a successor trustee or for instructions. The successor trustee shall specify the date on which it assumes administration of the trust in a writing sent to the Grantor, the Agency Commissioner and the present Trustee by certified mail ten days before such change becomes effective. Any expenses incurred by the Trustee as a result of any of the acts contemplated by this Section shall be paid as provided in Section 9.

Section 13. Instructions to the Trustee. All orders, requests, certifications of valid claims, and instructions to the Trustee shall be in writing, signed by such persons as are designated in the attached Exhibit A or such other designees as the Grantor may designate by amendments to Exhibit A. The Trustee shall be fully protected in acting without inquiry in accordance with the Grantor's orders, requests, and instructions. The Trustee shall have the right to assume, in the absence of written notice to the contrary, that no event constituting a change or a termination of the authority of any person to act on behalf of the Grantor or the Agency Commissioner hereunder has occurred. The Trustee shall have no duty to act in the absence of such orders, requests, and instructions from the Grantor and/or the Agency, except as provided for herein.

Section 14. Amendment of Agreement. This Agreement may be amended by an instrument in writing executed by the Grantor, the Trustee, and the Agency Commissioner, or by the Trustee and the Agency Commissioner if the Grantor ceases to exist.

Section 15. Irrevocability and Termination. Subject to the right of the parties to amend this Agreement as provided in Section 14, this Trust shall be irrevocable and shall continue until terminated at the written agreement of the Grantor, the Trustee, and the Agency Commissioner, or by the Trustee and the Agency Commissioner, if the Grantor ceases to exist. Upon termination of the Trust, all remaining trust property, less final trust administration expenses, shall be paid to the Grantor.

The Agency Commissioner will agree to termination of the Trust when the owner or operator substitutes alternative financial assurance as specified in this section.

Section 16. Immunity and Indemnification. The Trustee shall not incur personal liability of any nature in connection with any act or omission, made in good faith, in the administration of this Trust, or in carrying out any directions by the Grantor and the Agency Commissioner issued in accordance with this Agreement. The Trustee shall be indemnified and saved harmless by the Grantor or from the Trust Fund, or both, from and against any personal liability to which the Trustee may be subjected by reason of any act or conduct in its official capacity, including all expenses reasonably incurred in its defense in the event the Grantor fails to provide such defense.

Section 17. Choice of Law. This Agreement shall be administered, construed, and enforced in accordance with the laws of the State of Minnesota.

Section 18. Interpretation. As used in this Agreement, words in the singular include the plural and words in the plural include the singular. The descriptive headings for each Section of this Agreement shall not affect the interpretation of the legal efficacy of this Agreement.

In Witness Whereof, the parties have caused this Agreement to be executed by their respective officers duly authorized and their corporate seals to be hereunto affixed and attested as of the date first above written. The parties below certify that the wording of this Agreement is identical to the wording specified in Minnesota Rules, part 7045.0524, subpart 13, as such rule was constituted on the date first above written.

[In subpart 13, the MPCA is adopting optional federal language regarding the wording of a trust agreement to meet liability requirements. The MPCA is slightly modifying a set of four related parenthetical phrases in Section 3 to reduce the potential for confusion. Similar clarifying changes were made to subparts 11 and 12 above. The existing federal language calls for a fund of "[up to ($1, 2, 3 or 6) million]" (towards various liability coverages). To a reasonable person, the phrase "[up to…]" is a counter-intuitive way to address liability which normally sets minimum amounts of required coverage (often "at least" some millions of dollars). Without understanding the larger context of the wording of this document, the phrase "up to" seems to set no minimum required amount of coverage. This is not the case and the EPA has explained to MPCA staff that it intends this language to apply in the larger context that any of the allowed financial assurance instruments may be used in combination to provide the minimum coverage required by federal 40 CFR 264.147(j), also found in Minnesota Rules part 7045.0518. By using the phrase "up to," the EPA intends the trust fund to make up any shortage between the other financial assurance instruments and the required coverage. The MPCA does not believe that existing federal Section 3 language makes this context clear. The federal language fails to acknowledge the minimum amount of coverage required by part 7045.0518. The MPCA believes that replacing the federal "[up to …]" phrase with the phrase "[insert dollar amount of the fund]" clarifies the intent of the federal language and removes potential confusion. The language of this subpart, except the change discussed above, is adopted from optional RCRA Amendment 113: "Consolidated Liability Requirements" = 40 CFR 264.151(n). Further information can be found in 53 FR 33938-33960, September 1, 1988; as amended by 56 FR 30200, July 1, 1991; and 57 FR 42832-42844, September 16, 1992.]//

7045.0526 USE AND MANAGEMENT OF CONTAINERS.

Subpart 1. **Scope.** This part applies to owners and operators of all hazardous waste facilities that store containers of hazardous waste, except as part 7045.0450 provides

otherwise. Under ~~parts~~ part 7045.0127 and ~~7045.0135, subpart 4, item C~~ Code of Federal Regulations, title 40, section 261.33(c), as incorporated in part 7045.0135, if a hazardous waste is emptied from a container, the residue remaining in the container is not considered a hazardous waste if the container is empty, as defined in part 7045.0127. In that event, management of the container is exempt from the requirements of this part.

[In subpart 1, the MPCA replaces a citation to repealed MN Rules with a citation to the equivalent federal rules as incorporated by reference.]//

[For text of subps 2 to 5, see M.R.]

Subp. 6. **Containment.** Requirements for containment systems are as described in items A to E.

[For text of items A and B, see M.R.]

C. Spilled or leaked waste and accumulated precipitation must be removed from the sump or collection area in as timely a manner as is necessary to prevent overflow of the collection system. If the collected material is a hazardous waste as defined in parts 7045.0102 to ~~7045.0143~~ 7045.0155, it must be managed as a hazardous waste ~~according to all applicable requirements of~~ in accordance with parts 7045.0205 to 7045.1030. If the collected material is discharged through a point source to waters of the United States, it is subject to the requirements of section 402 of the federal Clean Water ~~Pollution Control~~ Act ~~Amendments of 1972~~, United States Code, title 33, section 1342, as amended.

[In item C, the MPCA corrects a citation to a range of rules that changed as parts were added. The MPCA also makes minor changes to simplify existing language. Finally, the MPCA updates an outdated reference to the federal Water Pollution Control Act, section 1342 that was superseded by the Clean Water Act, section 402.]//

[For text of item D, see M.R.]

E. Storage areas that store containers holding wastes F020, F021, F022, F023, F026, F027, and F028 from part 7045.0135, subpart ~~2~~ 1a, item B, that do not contain free liquids must have a containment system defined by item A.

[In item E, the MPCA replaces a citation to a repealed subpart with the revised citation.]//

Subp. 7. **Special requirements for ignitable or reactive waste.** Containers holding ignitable or reactive waste must be located at least 15 meters (50 feet) from the facility's property line when physically possible based on the dimensions of the property. When it is not physically possible to place containers at least 50 feet from the property line, based on the dimensions of the property, the ignitable or reactive waste must be placed at least as far as the specified minimum distance from property line found in ~~Table Number 79.503 F of~~ the Minnesota ~~Uniform~~ State Fire Code ~~as incorporated by reference in part 7510.3510~~, chapter 7510. Nothing in this subpart shall relieve the facility owner or operator from the obligation to comply with any local, state, or federal law governing storage of these wastes.

[In subpart 7, the MPCA corrects a reference to a previously amended State Fire Code.]//

[For text of subps 8 and 9, see M.R.]

Subp. 10. **Air emission standards.** The owner or operator must manage all hazardous waste placed in a container in accordance with parts 7045.0540, 7045.0547, and 7045.0548.

[In subpart 10, the MPCA adopts language referencing the air emission standards that are being applied to containers at facilities as a result of this rulemaking. The reference is from required RCRA Amendment 154, 154-1.15: "Consolidated Organic Air Emission Standards for Tanks, Surface Impoundments, and Containers," = 40 CFR 264.179. Further information can be found in 59 FR 62896-62953, December 6, 1994; as amended by 61 FR 59932-59997, November 25, 1996.]//

7045.0528 TANK SYSTEMS.

Subpart 1. **Scope.** This part applies to owners and operators of facilities that use tank systems, including tank systems, sumps, and other such collection devices or systems used in conjunction with drip pads, as defined in part 7045.0020 and regulated under part 7045.0541, to treat or store hazardous waste, except as part 7045.0450, and items A and B provide otherwise.

A. Tank systems that are used to store or treat hazardous waste that contains no free liquids and are situated inside a building with an impermeable floor are exempted from the requirements in subpart 4. To demonstrate the absence or presence of free liquids in the stored or treated waste, ~~EPA~~ the following test must be used: Method 9095 (Paint Filter Liquids Test) as described in "Test Methods for Evaluating Solid ~~Wastes~~ Waste, Physical/Chemical Methods," ~~(~~EPA publication ~~No.~~ SW-846 ~~) must be used~~, incorporated in part 7045.0065, item D.

[In item A, the MPCA corrects the name of the EPA test method for verifying the presence of liquids in order to correspond to the federal counterpart at 40 CFR 264.190(a). The change is based on required RCRA Amendment 126: "Testing and Monitoring Activities." Further information can be found in 58 FR 46040-46051, August 31, 1993; as amended at 59 FR 47980-47982, September 19, 1994. The MPCA also provides language to clarify where to find the prescribed test method, which has changed as a result of these amendments.]//

[For text of item B, see M.R.]

[For text of subps 2 to 9, see M.R.]

Subp. 10. **Special requirements for ignitable or reactive waste.** Ignitable or reactive waste must not be placed in a tank unless:

[For text of items A and B, see M.R.]

C. the tank is used solely for emergencies.

The owner or operator of a facility that treats or stores ignitable or reactive waste in a tank shall comply with the requirements for the maintenance of protective distances between the waste management area and any public ways, streets, alleys, or an adjoining property line that can be built upon, as required in the buffer zone requirements for tanks contained in ~~article 79 of~~ the Minnesota ~~Uniform~~ State Fire Code, ~~as incorporated by reference in part 7510.3510~~ chapter 7510. As required by part 7045.0458, the waste analysis plan must include analyses needed to comply with these special requirements for ignitable or reactive waste. Additional requirements for ignitable and reactive wastes are contained in part 7045.0456, subpart 1. Part 7045.0456, subpart 3 also requires waste analysis, trial tests, or other documentation to ensure compliance with part 7045.0456, subpart 2. As required by part 7045.0478, the owner or operator shall place the results of

each waste analysis and trial test, and any documented information, in the operating record of the facility.

[In item C, the MPCA corrects a reference to a previously amended State Fire Code.]//

[For text of subp 11, see M.R.]

Subp. 12. **Air emission standards.** The owner or operator of a facility must manage all hazardous waste placed in a tank in accordance with parts 7045.0540, 7045.0547, and 7045.0548.

[In subpart 12, the MPCA adopts language from required RCRA Amendment 154.5, 154-1.16: "Consolidated Organic Air Emission Standards for Tanks, Surface Impoundments, and Containers" = 40 CFR 264.200. Further information can be found in 59 FR 62896-62953, December 6, 1994; as amended by 61 FR 59932-59997, November 25, 1996.]//

7045.0532 SURFACE IMPOUNDMENTS.

[For text of subps 1 to 6, see M.R.]

Subp. 7. **Closure and postclosure care.** The requirements of closure and postclosure care are as follows:

A. At closure, the owner or operator shall:

(1) remove or decontaminate all waste residues, contaminated containment system components including liners, contaminated subsoils, and structures and equipment contaminated with waste and leachate, and manage them as hazardous waste unless they are shown to not be hazardous ~~according to~~ in accordance with parts 7045.0102 to ~~7045.0143~~ 7045.0155; or

[In item A, the MPCA clarifies language and corrects a citation to a range of rules that changed as parts were added.]//

[For text of subitem (2), see M.R.]

[For text of items B to E, see M.R.]

Subp. 8. **Special requirements for ignitable or reactive waste.** Ignitable or reactive waste must not be placed in a surface impoundment, unless the waste and impoundment satisfy all applicable requirements of ~~parts 7045.1300 to 7045.1380~~ part 7045.1390, and:

[In subpart 8, the MPCA provides the replacement citation for a repealed range of rules being amended in this rulemaking.]//

[For text of items A to C, see M.R.]

Subp. 9. **Special requirements for incompatible wastes.** Incompatible wastes, or incompatible wastes and materials, must not be placed in the same surface impoundment unless compliance with part 7045.0456, subpart 2 is maintained. For examples of potentially incompatible wastes, or incompatible waste and materials, see part 7045.0543, subpart 1, item C.

[In subpart 9, the MPCA provides a citation to a rule that incorporates an appendix which lists examples of potentially incompatible wastes and materials. This citation corresponds to parenthetical information provided in the federal counterpart to this rule found at 40 CFR 264.230. The reference to part 7045.0543, subpart 1, item C is to the rule being added in this rulemaking that incorporates appendices from the federal regulations.]//

Subp. 10. **Special requirements for hazardous wastes F020, F021, F022, F023, F026, F027, and F028.** The following requirements apply to the hazardous wastes indicated:

A. Hazardous waste F020, F021, F022, F023, F026, and F027 listed under part 7045.0135, subpart ~~2~~ 1a, item B, must not be placed in a surface impoundment.

[In item A, the MPCA replaces a citation to a repealed subpart with the revised citation.]//

B. Hazardous waste F028 and treatment residues and soils contaminated with hazardous wastes F020, F021, F022, F023, F026, F027, and F028 listed under part 7045.0135, subpart ~~2~~ 1a, item B, must not be placed in surface impoundments unless the owner or operator operates the surface impoundment in accordance with all applicable requirements of this part and in accordance with a management plan that is approved by the commissioner considering the following factors:

[In item B, the MPCA replaces a citation to a repealed subpart with the revised citation.]//

[For text of subitems (1) to (4), see M.R.]

C. The commissioner shall impose additional design, operating, and monitoring requirements if the commissioner finds that additional requirements are necessary for surface impoundments used to treat, store, or dispose of hazardous waste F028 and treatment residues and soils contaminated with hazardous wastes F020, F021, F022, F023, F026, F027, and F028 listed under part 7045.0135, subpart ~~2~~ 1a, item B, in order to reduce the possibility of migration of these wastes to ground water, surface water, or air so as to protect human health and the environment.

[In item C, the MPCA replaces a citation to a repealed subpart with the revised citation.]//

Subp. 11. **Air emission standards.** The owner or operator must manage all hazardous waste placed in a surface impoundment in accordance with parts 7045.0540 and 7045.0548.

[In subpart 11, the MPCA adopts language from required RCRA Amendment 154.6, 154-1.17: "Consolidated Organic Air Emission Standards for Tanks, Surface Impoundments, and Containers," = 40 CFR 264.232. Further information can be found in 59 FR 62896-62953, December 6, 1994; as amended by 61 FR 59932-59997, November 25, 1996.]//

7045.0534 WASTE PILES.

[For text of subps 1 to 6, see M.R.]

Subp. 7. **Closure and postclosure care.** Closure and postclosure requirements are as follows:

A. At closure, the owner or operator shall remove or decontaminate all waste residues, contaminated containment system components including liners, contaminated subsoils, and structures and equipment contaminated with waste and leachate; and manage them as hazardous waste unless they are shown to not be hazardous ~~according to~~ in accordance with parts 7045.0102 to ~~7045.0143~~ 7054.0150.

[In item A, the MPCA corrects a citation to a range of rules that changed as parts were added. The MPCA also revises language to read "in accordance with" to improve clarity.]//

[For text of items B to D, see M.R.]

Subp. 8. **Special requirements for ignitable or reactive waste.** Ignitable or reactive waste must not be placed in a waste pile unless the waste and waste pile satisfy all applicable requirements of ~~parts 7045.1300 to 7045.1380~~ part 7045.1390, and:

[In subpart 8, the MPCA provides the replacement citation for a repealed range of rules.]//

[For text of items A and B, see M.R.]

[For text of subp 9, see M.R.]

Subp. 10.**Special requirements for hazardous wastes F020, F021, F022, F023, F026, F027, and F028.** The following requirements apply to the hazardous wastes indicated:

A. Hazardous waste F020, F021, F022, F023, F026, and F027 listed under part 7045.0135, subpart ~~2~~ 1a, item B, must not be placed in a surface impoundment.

[In item A, the MPCA replaces a citation to a repealed subpart with the revised citation.]//

B. Hazardous waste F028 and treatment residues and soils contaminated with hazardous wastes F020, F021, F022, F023, F026, F027, and F028 listed under part 7045.0135, subpart ~~2~~ 1a, item B, must not be placed in surface impoundments unless the owner or operator operates the surface impoundment in accordance with all applicable requirements of this part and in accordance with a management plan that is approved by the commissioner considering the following factors:

[In item B, the MPCA replaces a citation to a repealed subpart with the revised citation.]//

[For text of subitems (1) to (4), see M.R.]

C. The commissioner shall impose additional design, operating, and monitoring requirements if the commissioner finds that additional requirements are necessary for surface impoundments used to treat, store, or dispose of hazardous waste F028 and treatment residues and soils contaminated with hazardous wastes F020, F021, F022, F023, F026, F027, and F028 listed under part 7045.0135, subpart ~~2~~ 1a, item B, in order to reduce the possibility of migration of these wastes to ground water, surface water, or air so as to protect human health and the environment.

[In item C, the MPCA replaces a citation to a repealed subpart with the revised citation.]//

7045.0536 LAND TREATMENT.

[For text of subps 1 to 8, see M.R.]

Subp. 9. **Ignitable or reactive waste.** The owner or operator shall not apply ignitable or reactive waste to the treatment zone unless the waste and the treatment zone meet all applicable requirements of ~~parts 7045.1300 to 7045.1380~~ part 7045.1390, and:

[In subpart 9, the MPCA provides the replacement citation for a repealed range of rules.]//

[For text of items A and B, see M.R.]

[For text of subp 10, see M.R.]

Subp. 11.**Special requirements for hazardous wastes F020, F021, F022, F023, F026, F027, and F028.** The following requirements apply to the hazardous wastes indicated:

A. Hazardous wastes F020, F021, F022, F023, F026, and F027 listed under part 7045.0135, subpart ~~2~~ 1a, item B, must not be placed in a land treatment unit.

[In item A, the MPCA replaces a citation to a repealed subpart with the revised citation.]//

B. Hazardous waste F028 and treatment residues and soils contaminated with hazardous wastes F020, F021, F022, F023, F026, F027, and F028 listed under part 7045.0135, subpart ~~2~~ 1a, item B, must not be managed at land treatment units unless the owner or operator operates the land treatment unit in accordance with all applicable requirements of this part and in accordance with a management plan that is approved by the commissioner considering the following factors:

[In item B, the MPCA replaces a citation to a repealed subpart with the revised citation.]//

[For text of subitems (1) to (4), see M.R.]

C. The commissioner shall impose additional design, operating, and monitoring requirements if the commissioner finds that the additional requirements are necessary for land treatment facilities used to treat or dispose of hazardous waste F028 and treatment residues and soils contaminated with hazardous wastes F020, F021, F022, F023, F026, F027, and F028 listed under part 7045.0135, subpart ~~2~~ 1a, item B, in order to reduce the possibility of migration of these wastes to ground water, surface water, or air so as to protect human health and the environment.

[In item C, the MPCA replaces a citation to a repealed subpart with the revised citation.]//

7045.0538 LANDFILLS.

[For text of subps 1 to 6, see M.R.]

Subp. 7. **Closure and postclosure care.** Closure and postclosure care requirements are as follows:

[For text of item A, see M.R.]

B. After final closure, the owner or operator shall comply with all postclosure requirements contained in parts 7045.0488 to 7045.0494 including maintenance and monitoring throughout the postclosure care period specified in the permit under part 7045.0488. The owner or operator shall:

[For text of subitems (1) to (3), see M.R.]

(4) maintain and monitor the leak detection system in accordance with subparts 3, item C, subitems (3), unit (d), and (4); and 5, item C, and comply with all other applicable leak detection system requirements of ~~this part~~ parts 7045.0450 to 7045.0551 governing facility standards;

[In subitem (4), the MPCA is correcting an error in rule language that it adopted in a prior rulemaking. The MPCA adopted federal language that used the words 'this part.' Both State rules and federal regulations use the term 'part,' however, each use has a slightly different meaning. The MPCA corrects this rule language to clarify the

intended meaning and to address an EPA comment regarding equivalence with the federal rule.]//

[For text of subitems (5) to (8), see M.R.]

[For text of item C, see M.R.]

Subp. 8. **Special requirements for ignitable or reactive waste.** Special requirements for ignitable or reactive waste are as follows:

A. Except as provided in item B and subpart 12, ignitable or reactive waste must not be placed in a landfill, unless the waste and landfill meet all applicable requirements of ~~parts 7045.1300 to 7045.1380~~ part 7045.1390, and the resulting waste, mixture, or dissolution of material no longer meets the definition of ignitable or reactive waste under part 7045.0131, subpart 2 or 5, and compliance with part 7045.0456, subpart 2 is maintained.

[In item A, the MPCA provides the replacement citation for a repealed range of rules.]//

B. Except for prohibited wastes which remain subject to treatment standards in ~~parts 7045.1350 to 7045.1360~~ Code of Federal Regulations, title 40, sections 268.40 to 268.42, as incorporated in part 7045.1390, ignitable wastes in containers may be landfilled without meeting the requirements of item A, provided that the wastes are disposed of in such a way that they are protected from any material or conditions which may cause them to ignite. At a minimum, ignitable wastes must be disposed of in nonleaking containers which are carefully handled and placed so as to avoid heat, sparks, rupture, or any other condition that might cause ignition of the wastes; must be covered daily with soil or other noncombustible material to minimize the potential for ignition of the wastes; and must not be disposed of in cells that contain or will contain other wastes which may generate heat sufficient to cause ignition of the waste.

[In item B, the MPCA replaces citations to repealed State rules with citations to equivalent federal rules as incorporated by reference.]//

[For text of subp 9, see M.R.]

Subp. 10.**Special requirements for liquid waste.** Special requirements for liquid waste are as follows:

A. The placement in any landfill of bulk or noncontainerized liquid hazardous waste or waste containing free liquids, whether or not ~~absorbents~~ sorbents have been added, is prohibited.

[In item A, the MPCA adds the phrase "in any landfill" to make the context clear. The MPCA also adopts federal language regarding the use of sorbents in landfills from required RCRA Amendment 118: "Liquids in Landfills II," = 40 CFR 264.314(a). Further information can be found in 57 FR 54452-54461, November 18, 1992. This changes the term "absorbents" to the more broadly applicable term "sorbents," which includes materials that both absorb and adsorb waste. Sorbent is also used in the federal counterpart, 40 CFR 264.314(a).]//

B. Containers holding free liquids must not be placed in a landfill unless:

(1) all free-standing liquid has been removed by decanting, or other methods; has been mixed with ~~absorbent~~ sorbent or solidified so that freestanding liquid is no longer observed; or has been otherwise eliminated;

[In subitem (1), the MPCA adopts federal language from required RCRA Amendment 118: "Liquids in Landfills II," = 40 CFR 264.314(b). Further

information can be found in 57 FR 54452-54461, November 18, 1992. This changes the term "absorbent" to the more broadly applicable term "sorbent," which includes materials that both absorb and adsorb waste. Sorbent is the term used in the federal counterpart, 40 CFR 264.314(d)(1).]//

(2) the container is very small, such as an ampoule; or

(3) the container is a laboratory pack as defined in subpart 12 and is disposed of in accordance with subpart 12.

C. To demonstrate the ~~presence or~~ absence or presence of free liquids in either a containerized or a bulk waste, the following test must be ~~demonstrated using the Paint Filter Liquids Test,~~ used: Method 9095 (Paint Filter Liquids Test) as described in "Test Methods for Evaluating Solid ~~Wastes~~ Waste, Physical/Chemical Methods," EPA publication ~~number~~ SW-846, incorporated in part 7045.0065, item D.

[In item C, the MPCA rephrases existing language and makes corrections to information regarding the name of the EPA test methods for determining the presence of liquids. This amendment is based on required RCRA Amendment 126: "Testing and Monitoring Activities" = 40 CFR 265.314(c). Further information can be found in 58 FR 46040-46051, August 31, 1993; as amended at 59 FR 47980-47982, September 19, 1994.]//

D. Sorbents used to treat free liquids to be disposed of in landfills must be nonbiodegradable. Nonbiodegradable sorbents are materials listed or described in subitem (1) or materials that pass one of the tests in subitem (2).

(1) Nonbiodegradable sorbents:

(a) inorganic minerals, other inorganic materials, and elemental carbon (for example, aluminosilicates, clays, smectites, Fuller's earth, bentonite, calcium bentonite, montmorillonite, calcined montmorillonite, kaolinite, micas (illite), vermiculites, and zeolites; calcium carbonate (organic free limestone); oxides/hydroxides, alumina, lime, silica (sand), and diatomaceous earth; perlite (volcanic glass); expanded volcanic rock; volcanic ash; cement kiln dust; fly ash; rice hull ash; and activated charcoal/activated carbon);

(b) high molecular weight synthetic polymers (for example, polyethylene, high density polyethylene (HDPE), polypropylene, polystyrene, polyurethane, polyacrylate, polynorborene, polyisobutylene, ground synthetic rubber, cross-linked allylstyrene, and tertiary butyl copolymers). This does not include polymers derived from biological material or polymers specifically designed to be degradable; or

(c) mixtures of these nonbiodegradable materials.

(2) Tests for nonbiodegradable sorbents must use the following methods. The methods and tests in this subitem are incorporated by reference, are not subject to frequent change, and are available through the Minitex interlibrary loan system:

(a) the sorbent material is determined to be nonbiodegradable under ASTM Method G21-70 (1984a), Standard Practice for Determining Resistance of Synthetic Polymer Materials to Fungi;

(b) the sorbent material is determined to be nonbiodegradable under ASTM Method G22-76 (1984b), Standard Practice for Determining Resistance of Plastics to Bacteria; or

(c) the sorbent material is determined to be nonbiodegradable under OECD test 301B: CO_2 Evolution (Modified Sturm Test).

[In item C, the MPCA rephrases existing language and makes corrections to information regarding the name of the EPA test methods for determining the presence of liquids. This amendment is based on required RCRA Amendment 126: "Testing and Monitoring Activities" = 40 CFR 265.314(c). Further information can be found in 58 FR 46040-46051, August 31, 1993; as amended at 59 FR 47980-47982, September 19, 1994.]//

[For text of subp 11, see M.R.]

Subp. 12.**Disposal of small containers of hazardous waste in overpacked drums.** Small containers of hazardous waste in overpacked drums, or laboratory packs, may be placed in a landfill if the requirements of items A to F are met:

A. Hazardous waste must be packaged in nonleaking inside containers. The inside containers must be of a design and constructed of a material that will not react dangerously with, be decomposed by, or be ignited by the contained waste. Inside containers must be tightly and securely sealed. The inside containers must be of the size and type ~~specified~~ authorized in the United States Department of Transportation hazardous materials regulations under Code of Federal Regulations, title 49, parts 173, 178, ~~and~~ 179, and 180, as amended, if those regulations specify a particular inside container for the waste.

[In item A, the MPCA is amending the State rules on the advice of Minnesota's Department of Transportation. The amendments revise language to conform with amended U.S. Department of Transportation regulations. The language of this item is slightly different than the federal counterpart found at 40 CFR 264.316(a), but the MPCA believes it is the more accurate and current reference to the applicable United States Department of Transportation requirements.]//

B. The inside containers must be overpacked in ~~an open~~ a removable head metal shipping container as specified in the United States Department of Transportation regulations under Code of Federal Regulations, title 49, section 173.12 and parts 178 ~~and~~, 179, and 180, as amended~~, of no more than 415 liter (110 gallon) capacity and~~. The inside containers must be surrounded by, at a minimum, a sufficient quantity of ~~absorbent~~ chemically compatible sorbent material, determined to be nonbiodegradable in accordance with subpart 10, item D, to completely ~~absorb~~ sorb all of the liquid contents of the inside containers. The gross weight of the complete package must not exceed 205 kilograms (452 pounds). The metal outer container must be full after ~~packing~~ it has been packed with inside containers and ~~absorbent~~ sorbent materials.

[In item B, the MPCA is amending existing language to address changes to the corresponding federal EPA regulations regarding overpacking of containers and also to address changes made to the federal Department of Transportation regulations. The MPCA is adopting language from required RCRA Amendment 118.4: "Liquids in Landfills II," = 40 CFR 264.316(b). Further information can be found in 57 FR 54452-54461, November 18, 1992. The MPCA also revises the rule to reflect revisions in the cited U.S. Department of Transportation regulations regarding the size limits of the container. Finally, the MPCA provides a corrected citation to a range of regulations that have been amended by the U.S. Department of Transportation.]//

C. The ~~absorbent~~ sorbent material used must not be capable of reacting dangerously with, being decomposed by, or being ignited by the contents of the inside containers, in accordance with part 7045.0456, subpart 2.

[In item C, the MPCA changes the term absorbent to the more broadly applicable term sorbent, following federal language from required RCRA Amendment 118: "Liquids in Landfills II," = 40 CFR 264.316(c). Further information can be found in 57 FR 54452-54461, November 18, 1992.]//

[For text of items D and E, see M.R.]

F. The disposal is in compliance with ~~parts 7045.1300 to 7045.1380~~ part 7045.1390. Persons who incinerate lab packs ~~according to part 7045.1360~~ in accordance with Code of Federal Regulations, title 40, section 268.42, as incorporated in part 7045.1390, may use fiber drums in place of metal outer containers. The fiber drums must meet United States Department of Transportation specifications in Code of Federal Regulations, title 49, section 173.12, as amended, and be overpacked ~~according to the requirements~~ in accordance with item B.

[In item F, the MPCA provides the replacement citation for a repealed range of rules and adds citations to equivalent federal rules as incorporated by reference. The MPCA also makes slight modifications to existing language to improve clarity.]//

Subp. 13.**Special requirements for hazardous wastes F020, F021, F022, F023, F026, F027, and F028.** The following requirements apply to the hazardous wastes indicated:

A. Hazardous wastes F020, F021, F022, F023, F026, and F027 listed under part 7045.0135, subpart ~~2~~ 1a, item B, must not be placed in a landfill.

[In item A, the MPCA replaces a citation to a repealed subpart with the revised citation.]//

B. Hazardous waste F028 and treatment residues and soils contaminated with hazardous wastes F020, F021, F022, F023, F026, F027, and F028 listed under part 7045.0135, subpart ~~2~~ 1a, item B, must not be managed at landfills unless the owner or operator operates the landfill in accordance with all applicable requirements of this part and in accordance with a management plan that is approved by the commissioner considering the following factors:

[In item B, the MPCA replaces a citation to a repealed subpart with the revised citation.]//

[For text of subitems (1) to (4), see M.R.]

C. The commissioner shall impose additional design, operating, and monitoring requirements if the commissioner finds that the additional requirements are necessary for landfills used to dispose of hazardous waste F028 and treatment residues and soil contaminated with hazardous wastes F020, F021, F022, F023, F026, F027, and F028 listed under part 7045.0135, subpart ~~2~~ 1a, item B, in order to reduce the possibility of migration of these wastes to ground water, surface water, or air so as to protect human health and the environment.

[In item C, the MPCA replaces a citation to a repealed subpart with the revised citation.]//

7045.0539 MISCELLANEOUS UNITS.

[For text of subpart 1, see M.R.]

Subp. 2. **Environmental performance standards.** A miscellaneous unit must be located, designed, constructed, operated, maintained, and closed in a manner that will

ensure protection of human health and the environment. Permits for miscellaneous units are to contain the terms and provisions necessary to protect human health and the environment, including, but not limited to, as appropriate, design and operating requirements, detection and monitoring requirements, and requirements for responses to releases of hazardous waste or hazardous constituents from the unit. Permit terms and provisions shall include those requirements of parts ~~7023.9000 to 7023.9050,~~ 7045.0526 to 7045.0542, 7045.0547, and 7045.0548, and chapter 7001 that are appropriate for the miscellaneous unit being permitted. Protection of human health and the environment includes, but is not limited to:

[In subpart 2, the MPCA deletes a citation to chapter 7023 that was repealed in a previous rulemaking. The MPCA also adopts cross references to the air emission standards that apply to miscellaneous units. These references were added through amendments to the federal regulations found at required RCRA Amendment 154-1.18: "Consolidated Organic Air Emission Standards for Tanks, Surface Impoundments, and Containers," = 40 CFR 264.601. Further information can be found in 59 FR 62896-62953, December 6, 1994.]//

[For text of items A to C, see M.R.]

[For text of subps 3 and 4, see M.R.]

7045.0540 AIR EMISSION STANDARDS FOR TANKS, SURFACE IMPOUNDMENTS, AND CONTAINERS.

Subpart 1. **Incorporation of federal regulations.** The owners and operators of facilities that treat, store, or dispose of hazardous waste in tanks, surface impoundments, or containers must comply with Code of Federal Regulations, title 40, part 264, subpart CC, air emission standards for tanks, surface impoundments, and containers, sections 264.1080 to 264.1090, as amended, which are incorporated by reference subject to the exceptions in subpart 2.

[The MPCA is creating a new rule part to include new requirements addressing air emission standards that will apply to tanks, surface impoundments and containers. The State rules previously provided air emission standards only for process vents (part 7045.0547) and equipment leaks (part 7045.0548). The new standards, referenced in subpart 1, are based on federal regulations found in required RCRA Amendment 154, 154-1, 154-2, 154-3, 154-4, 154-5, 154-6: "Consolidated Organic Air Emission Standards for Tanks, Surface Impoundments, and Containers," = 40 CFR 264.1080-1091. Further information can be found in 59 FR 62896-62953, December 6, 1994; as amended by 60 FR 26828-26829, May 19, 1995; 60 FR 50426-50430, September 29, 1995; 60 FR 56952-56954, November 13, 1995; 61 FR 4903-4916, February 9, 1996; 61 FR 28508-28511, June 5, 1996; and 61 FR 59932-59997, November 25, 1996. By adopting the federal regulations by reference, the MPCA also adopts language from required RCRA Amendment 163.11-18: "Organic Air Emission Standards for Tanks, Surface Impoundments, and Containers; Clarification and Technical Amendment" = 40 CFR 264.1080(b)(1); 264.1080(c); 264.1082(b); 264.1082(c)(2)(ix)(A-B); 264.1082(c)(3); 264.1082(c)(4)(ii); 264.1083(a)(2); 264.1083(b)(1); 264.1084(c)(2)(iii); 264.1084(c)(2)(iii)(B); 264.1084(c)(2)(iii)(B)(12); 264.1084(e)(4); 264.1084(f)(3)(i)(D)(4); 264.1084(f)(3)(iii); 264.1084(f)(4); 264.1084(j)(2)(iii); 264.1085(b)(2); 264.1085(d)(1)(iii); 264.1085(d)(2)(i)(B);

264.1085(e)(2)(iii); 264.1086(c)(2); 264.1086(c)(4)(i); 264.1086(d)(2); 264.1086(d)(4)(i); 264.1086(g); 264.1087(c)(3)(ii); 264.1087(c)(7); 264.1089(a); 264.1089(b)(1)(ii)(B); 264.1089(f)(1); and 264.1089(j)(1-2). Further information about these amendments can be found in 62 FR 64636-64671, December 8, 1997. Finally, in this subpart, the MPCA adopts language from required RCRA Amendment 177: "Organic Air Emission Standards: Clarification and Technical Amendments," = 40 CFR 264.1080(b)(5); 264.1083(a)(1)(i-ii); 264.1083(b)(1)(i-ii); 264.1084(h)(3)(i-ii). Further information about these amendments can be found in 64 FR 3382, January 21, 1999.]//

Subp. 2. **Additions, modifications, or exceptions to incorporated regulations.**

A. The agency does not incorporate the following Code of Federal Regulations, title 40, part 264, subpart CC provisions, as amended:

(1) Code of Federal Regulations, title 40, section 264.1080(d) to (g), governing specific exclusions; and

(2) Code of Federal Regulations, title 40, section 264.1082(c)(4)(ii), governing authority that EPA cannot delegate to states.

[In item A, the MPCA clarifies that it does not incorporate specific federal exclusions that do not apply in Minnesota. The exceptions to the adoption by reference are: (1) The MPCA does not adopt the exclusions for peroxide manufacturers or site specific exclusions for sites that are located in states other than Minnesota; and (2) The MPCA does not have the authority to grant variances to specific land disposal treatment standards.]//

B. Part 7045.0090, adoption and incorporation by reference, also applies.

[In item B, the MPCA clarifies that the conditions established in part 7045.0090 also apply to this incorporation by reference.]//

7045.0542 THERMAL TREATMENT.

[For text of subps 1 to 3, see M.R.]

Subp. 4. **Performance standards.** A thermal treatment facility thermally treating hazardous waste must be designed, constructed, and maintained so that, when operated in accordance with operating requirements specified under subpart 6 it will comply with all federal and state air quality rules and regulations and will meet the performance standards of items A to E, whichever are applicable:

[For text of items A to D, see M.R.]

E. A thermal treatment facility thermally treating hazardous wastes F020, F021, F022, F023, F026, and F027 listed under part 7045.0135, subpart ~~2~~ 1a, item B, must achieve a destruction and removal efficiency ("DRE") of 99.9999 percent for each principal organic hazardous constituent designated in its permit. This performance must be demonstrated on principal organic hazardous constituents that are more difficult to incinerate than tetra-, penta-, and hexachlorodibenzo-p-dioxins and dibenzofurans. DRE is determined for each principal organic hazardous constituent from the equation in item A. In addition, the owner or operator of the thermal treatment facility must notify the commissioner of the intent to burn waste F020, F021, F022, F023, F026, or F027.

[In item E, the MPCA replaces a citation to a repealed subpart with the revised citation.]//

[For text of subps 5 to 9, see M.R.]

7045.0543 APPENDICES TO FACILITY STANDARDS.

[The MPCA adds a new part 7045.0543.]//

Subpart 1. **Incorporation of federal regulations.** The following appendices found in Code of Federal Regulations, title 40, part 264, as amended, are incorporated by reference:

[In subpart 1, items A to E, the MPCA incorporates by reference the Appendices to Facility Standards that are found in 40 CFR 265. By adopting the federal appendices by reference as amended, the MPCA is adopting standards or tests that are referenced either in current rules or in rules that are being adopted or revised for interim status facilities in this rulemaking. By adopting these appendices by reference as amended, the MPCA will ensure that the most current version of these standards will be incorporated into the State rules. The MPCA's discussion of the reasonableness of incorporating federal regulations "as amended" is provided in Section IV of this Statement. A detailed explanation is provided below for the federal appendices that are being incorporated in this rulemaking.]//

A. Appendix I, Recordkeeping Instructions;

[In item A, the MPCA incorporates 40 CFR 264, Appendix I, which contains instructions on how hazardous waste records must be kept. These appendices were adopted by EPA as part of required RCRA Amendment 131.2: "Recordkeeping Instructions; Technical Amendment," = 40 CFR 264 Appendix I, Tables 1 and 2. Further information can be found in 59 FR 13891-13893, March 24, 1994.]//

B. Appendix IV, Cochran's Approximation to the Behrens-Fisher Students' T-test;

[In item B, the MPCA incorporates 40 CFR 264, Appendix IV, the Behrens Fisher T-test. The details of this test were formerly located in part 7045.0544 but are being adopted by reference in this rulemaking in order to accommodate future changes and also to more conveniently locate information regarding the federal Appendices in one rule part. However, a reference to the T-test in part 7045.0544 is being retained to accommodate existing cross references.]//

C. Appendix V, Examples of Potentially Incompatible Waste; and

[In item C, the MPCA incorporates 40 CFR 264, Appendix V, which is the list of examples of potentially incompatible waste. This list is referenced in an amendment to part 7045.0532 being added in this rulemaking. The MPCA believes it is reasonable to incorporate this list of examples, by reference, in order to accommodate future revisions.]//

D. Appendix IX, Ground Water Monitoring List.

[In item D, the MPCA incorporates 40 CFR 264, Appendix IX, the ground water monitoring list. This adoption by reference of Appendix IX replaces the list formerly provided in part 7045.0143. The MPCA believes, for the reasons provided in the discussion in part IV of this Statement, that incorporating the list by reference will provide better future accuracy of this list. Because the list in 7045.0143 is specifically referred to in two places in the existing rules (7001.0640 subpart 1, item D subitem (2) and subpart 13, item E), the MPCA is not repealing that existing rule part, but is instead deleting the existing list and providing a cross reference to the rule (7045.0543, item D (above) that incorporates the federal Appendix IX by reference.)//

Subp. 2. **Additions, modifications, or exceptions to incorporated regulations.** Part 7045.0090, adoption and incorporation by reference, also applies.

[In subpart 2, the MPCA provides exceptions to its incorporations in subpart 1. The MPCA also refers readers to part 7045.0090 governing general adoption and incorporation by reference.]//

7045.0544 COCHRAN'S APPROXIMATION TO THE BEHRENS-FISHER STUDENTS' T-TEST.

Subpart 1. **In general.** ~~Subpart 2 describes Cochran's approximation to the Behrens-Fisher Students' t-test. Subpart 3 presents the standard t-tables at the 0.05 level of significance.~~ Part 7045.0543, subpart 1, item B, incorporates this test by reference.

Subp. 2. [See repealer.]

Subp. 3. [See repealer.]

[The MPCA amends this part by cross referencing to part 7045.0543, subp. 1, item B where the MPCA has incorporated the Cochran's Approximation from the federal rules. The MPCA retains part 7045.0544 as a reference point for existing cross references within the rules. The MPCA believes it is reasonable to minimize changes to cross references as much as possible by retaining this existing rule part.]//

7045.0550 CONTAINMENT BUILDINGS.

Subpart 1. **Incorporation of federal regulations.** The owners and operators of facilities that store or treat hazardous waste in containment buildings must comply with Code of Federal Regulations, title 40, part 264, subpart DD, Containment Buildings, sections 264.1100 to 264.1110, as amended, which is incorporated by reference subject to the exceptions in subpart 2.

[In subpart 1, of new part 7045.0550, the MPCA incorporates by reference language from required RCRA Amendment 109.17: "Land Disposal Restrictions for Newly Listed Wastes and Hazardous Debris," = 40 CFR 264.1100-1102, Subpart DD. Further information regarding this amendment can be found in 57 FR 37194-37282, August 18, 1992.]//

Subp. 2. **Additions, modifications, or exceptions to incorporated regulations.** Part 7045.0090, adoption and incorporation by reference, also applies.

[In subpart 2, the MPCA provides any exceptions to its incorporation by reference and refers readers to the general part governing adoption and incorporation by reference.]//

7045.0552 FACILITIES GOVERNED BY INTERIM STATUS.

Subpart 1. **General requirements.** Parts 7045.0552 to ~~7045.0642~~ 7045.0651 establish minimum standards for the management of hazardous waste during the period of interim status and until certification of final closure or, if the facility is subject to postclosure requirements, until postclosure responsibilities are fulfilled. Except as provided in Code of Federal Regulations, title 40, section 265.1080(b), as incorporated in part 7045.0645, the standards in parts 7045.0552 to 7045.0651, and the standards for the corrective action management units in part 7045.0545, temporary units in part 7045.0546, and staging piles

in part 7045.0547, apply to: (1) owners and operators of facilities that treat, store, or dispose of hazardous waste who have fully complied with the requirements for interim status under chapter 7001 and section 3005(e) of the federal Resource Conservation and Recovery Act (RCRA) until either a permit is issued under chapter 7001 and section 3005 of RCRA or until applicable interim status closure and postclosure responsibilities are fulfilled and (2) those owners and operators of facilities in existence on November 19, 1980, who have failed to provide timely notification as required by section 3010(a) of RCRA or failed to file Part A of the permit application in chapter 7001. These standards, and those in parts 7045.0545 to 7045.0547, apply to owners and operators of existing facilities who have fully complied with the requirements for state or federal interim status until a permit is issued or until applicable interim status closure and postclosure responsibilities are fulfilled, and those who have failed to achieve state or federal interim status.

[In two places in subpart 1, the MPCA corrects citations to a range of rules that changed as parts were added. The MPCA also adopts language from required RCRA Amendment 154-1.22: "Consolidated Organic Air Emission Standards for Tanks, Surface Impoundments, and Containers" = 40 CFR 265.1(b). Further information regarding this amendment can be found in 59 FR 62896-62953, December 6, 1994.]//

Parts 7045.0552 to ~~7045.0642~~ 7045.0651 apply to the owners and operators of all facilities that treat, store, or dispose of hazardous waste referred to in ~~parts 7045.1300 to 7045.1380~~ part 7045.1390, land disposal restrictions, and those restrictions are considered material conditions or requirements of parts 7045.0552 to ~~7045.0642~~ 7045.0651, interim status standards.

[In this paragraph of subpart 1, the MPCA corrects citations to two ranges of rules that changed as parts were added. The MPCA also provides the correct citation, 7045.1390, for a repealed range of rules.]//

Subp. 1a. **Applicability for owners and operators of facilities not regulated as hazardous waste facilities by federal regulation.** Owners and operators of hazardous waste facilities that are not federally regulated as hazardous waste facilities that are, for example, regulated as facilities by state rule only, are subject to the applicable requirements of parts 7045.0552 to ~~7045.0642~~ 7045.0651 on the effective date of any rules that make the facility subject to regulation. The facility shall submit a Part B application for a hazardous waste facility permit to the commissioner within one year of the effective date of any rules that first make the facility subject to the requirement to obtain a hazardous waste facility permit.

[In subpart 1a, the MPCA corrects a citation to a range of rules that changed as parts were added.]//

[For text of subp 2, see M.R.]

Subp. 3. **Exemptions.** The requirements of parts 7045.0552 to ~~7045.0648~~ 7045.0651 do not apply to the following specific waste management units, facilities, or activities, although all other waste management activities of the owner or operator may be regulated:

[In subpart 3, the MPCA corrects a citation to a range of rules that changed as parts were added.]//

[For text of item A, see M.R.]

B. a facility managing recyclable hazardous wastes subject to regulation under part 7045.0125, 7045.0665, 7045.0675, or 7045.0685; however, this exemption does not apply where part 7045.0125, 7045.0665, 7045.0675, or 7045.0685 makes the requirements of parts 7045.0552 to ~~7045.0648~~ 7045.0651 applicable by cross-reference;

[In item B, the MPCA corrects a citation to a range of rules that changed as parts were added.]//

[For text of items C to E, see M.R.]

F. an elementary neutralization unit, a pretreatment unit, or a wastewater treatment unit, if the unit does not receive hazardous waste from generators other than the owner or operator of the unit, provided that if the owner or operator is diluting hazardous ignitable (D001) wastes (other than the D001 high TOC subcategory defined in Code of Federal Regulations, title 40, section 268.40, Table of Treatment Standards for Hazardous Wastes, as incorporated in part 7045.1390), or reactive (D003) waste, to remove the characteristic before land disposal, the owner or operator must comply with part 7045.0562, subpart 2;

[For text of items G to I, see M.R.]

[In item F, the MPCA adds qualifying conditions to an existing exclusion for elementary neutralization units, pretreatment units and wastewater treatment units. The conditions only apply to units treating two specific waste characteristics (ignitable and reactive) and reference existing requirements in part 7045.0562, subpart 2 (which addresses required precautions) for managing these wastes. The additional conditions correspond to requirements found in RCRA Amendment 137.13: "Universal Treatment Standards and Treatment Standards for Organic Toxicity Characteristic Wastes and Newly Listed Wastes" = 40 CFR 265.1(c)(10). Further information regarding the need for and reasonableness of this amendment can be found in 59 FR 47982-48110, September 19, 1994, as amended at 60 FR 242-302, January 3, 1995. Although the language being added at this time is essentially the same as the federal regulations (except for the substitution of cross references to State rule parts and the removal of a reference to the definitions part of the rules), this exclusion remains more restrictive than the federal counterpart because the existing language restricts this exemption to waste generated onsite. This is reasonable as the MPCA has consistently not allowed accepting waste from off-site at unpermitted facilities. This is an existing difference and is not being changed as a result of this rulemaking.]//

J. (1) except as provided in subitem (2), treatment or containment activities during immediate response to any of the following situations: a discharge of a hazardous waste, an imminent and substantial threat of a discharge of a hazardous waste, or a discharge of a material which, when discharged, becomes a hazardous waste;

(2) a facility otherwise regulated by parts 7045.0552 to ~~7045.0642~~ 7045.0651 shall comply with all applicable requirements of parts 7045.0395, 7045.0397, 7045.0558, and 7045.0566 to 7045.0576; or

[In subitem (2), the MPCA corrects a citation to a range of rules that changed as parts were added.]//

(3) a person who is covered by subitem (1) and who continues or initiates hazardous waste treatment or containment activities after the immediate response is over is subject to all applicable requirements of parts 7045.0552 to ~~7045.0642~~ 7045.0651 and the agency's permitting procedures for those activities;

[In subitem (3), the MPCA corrects a citation to a range of rules that changed as parts were added.]//

K. treatment of hazardous waste by the generator in the generator's accumulation tanks or containers in accordance with part 7045.0292. If the treatment involves evaporation of aqueous waste or polymerization of polyester or other chemical fixation treatment processes in open containers, the generator is exempt from parts 7045.0552 to ~~7045.0642~~ 7045.0651, but before beginning the treatment process must submit to the commissioner the information required under part 7045.0539, subpart 2, items A to C, that is relevant to the treatment activity and must be notified by the commissioner that the treatment activity is approved. The commissioner shall approve the treatment activity if the commissioner finds that the treatment activity will not endanger human health and the environment; or

[In item K, the MPCA corrects a citation to a range of rules that changed as parts were added.]//

[For text of item L, see M.R.]

Subp. 4. **Restrictions.** Hazardous wastes F020, F021, F022, F023, F026, F027, and F028 listed under part 7045.0135, subpart ~~2~~ 1a, item B, must not be managed at facilities governed by interim status unless:

[In subpart 4, the MPCA replaces a citation to a repealed subpart with the revised citation.]//

[For text of items A to C, see M.R.]

7045.0556 GENERAL FACILITY STANDARDS.

[For text of subps 1 and 2, see M.R.]

Subp. 3. **Required notices.** Notices are required in the following situations:

[For text of items A and B, see M.R.]

C. Before transferring ownership or operation of a facility during its operating life, or of a disposal facility during the postclosure care period, the owner or operator shall notify the new owner or operator in writing of the requirements of parts 7045.0552 to ~~7045.0642~~ 7045.0651. An owner's or operator's failure to notify the new owner or operator of these requirements does not relieve the new owner or operator of the obligation to comply with all applicable requirements.

[In item C, the MPCA corrects a citation to a range of rules that changed as parts were added.]//

[For text of item D, see M.R.]

Subp. 4. **Security.** Security measures include the following:

A. The owner or operator shall prevent the unknowing entry, and minimize the possibility for the unauthorized entry, of persons or livestock onto the active portion of the facility, unless:

[For text of subitem (1), see M.R.]

(2) disturbance of the waste or equipment, by the unknowing or unauthorized entry of persons or livestock onto the active portion of a facility, will not cause a violation of the requirements of parts 7045.0552 to ~~7045.0642~~ 7045.0651.

[In subitem (2), the MPCA corrects a citation to a range of rules that changed as parts were added.]//

[For text of items B and C, see M.R.]

Subp. 5. **General inspection requirements.** General inspection requirements are listed in items A to E.

[For text of items A and B, see M.R.]

C. The frequency of inspection may vary for the items on the schedule. However, ~~it~~ the frequency must be based on the rate of possible deterioration of the equipment and the probability of an environmental or human health incident if the deterioration ~~or~~, malfunction, or any operator error goes undetected between inspections. Areas subject to spills, such as loading and unloading areas, must be inspected daily when in use. At a minimum, the inspection schedule must include the terms and frequencies called for in parts 7045.0626, subpart 5; 7045.0628, subparts 4 and 7; 7045.0630, subpart 5; 7045.0632, subpart 9; 7045.0634, subpart 4; 7045.0638, subpart 2c; 7045.0640, subpart 4; and 7045.0642, subpart 4; and the process vent ~~and~~, equipment leak , and tank, surface impoundment, and container standards in Code of Federal Regulations, title 40, sections ~~264.1033, 264.1052, 264.1053, and 264.1058~~ 265.1033, 265.1052, 265.1053, and 265.1058, as amended, and sections 265.1084 to 265.1090(b), as incorporated in part 7045.0645.

[In the first sentences of item C, the MPCA has made several changes simply to clarify the meaning of existing language. These changes do not alter the effect of the rule and are not based on federal amendments. The MPCA also adopts references to newly added requirements addressing air emissions from tanks, surface impoundments and containers that are based on required RCRA Amendment 154-1.25: "Consolidated Organic Air Emission Standards for Tanks, Surface Impoundments, and Containers" = 40 CFR 265.15(b)(4). Further information regarding the amendments can be found in 59 FR 62896-62953, December 6, 1994. This amendment also adopts language from required RCRA Amendment 163.20: "Organic Air Emission Standards for Tanks, Surface Impoundments, and Containers; Clarification and Technical Amendment" = 40 CFR 265.15(b)(4). A discussion of these amendments can be found in 62 FR 64636-64671, December 8, 1997.]//

[For text of items D and E, see M.R.]

[For text of subps 6 to 8, see M.R.]

7045.0564 WASTE ANALYSIS REQUIREMENTS.

Subpart 1. **Waste analysis.** The analysis must comply with the requirements in items A to D.

A. Before an owner or operator treats, stores, or disposes of any hazardous waste, or nonhazardous waste if applicable under part 7045.0596, subpart 2a, the owner or operator shall obtain a detailed chemical and physical analysis of a representative sample of the waste. This analysis must contain all the information which must be known in order to treat, store, or dispose of the waste in accordance with the requirements of parts 7045.0552 to ~~7045.0642~~ 7045.0651 and ~~7045.1300 to 7045.1380~~ 7045.1390.

[In item A, the MPCA corrects a citation to a range of rules that changed as parts were added. The MPCA also provides the replacement citation for a repealed range of rules.]//

B. The analysis may include data developed under parts 7045.0102 to ~~7045.0143~~ 7045.0155, and existing published or documented data on the hazardous waste or on hazardous waste generated from similar processes, including data obtained from the generator.

[In item B, the MPCA corrects a citation to a range of rules that changed as parts were added.]//

[For text of items C and D, see M.R.]

Subp. 2. **Waste analysis plan.** The owner or operator shall develop and follow a written waste analysis plan which describes the procedures the owner or operator will carry out to comply with subpart 1. The owner or operator shall keep this plan at the facility. The plan must specify:

[For text of items A to E, see M.R.]

F. Where applicable, the methods that will be used to meet the additional waste analysis requirements for specific waste management methods as specified in parts 7045.0628, subpart 12; 7045.0630, subpart 4; 7045.0632, subpart 3; 7045.0634, subpart 3; 7045.0638, subpart 7; 7045.0640, subpart 2; and 7045.0642, subpart 3; ~~and 7045.1315~~ Code of Federal Regulations, title 40, section 268.7, as incorporated in part 7045.1390; and the process vent ~~and~~, equipment leak, and tank, surface impoundment, and container test methods and procedures in Code of Federal Regulations, title 40, sections ~~264.1034(d) and 264.1063(d)~~ 265.1034(d) and 265.1063(d), as amended, and section 265.1084, as incorporated in part 7045.0645.

[In item F, the MPCA replaces citations to repealed land disposal restriction rules with citations to the new land disposal rules being adopted in this rulemaking. This amendment refers directly to the federal counterpart being adopted by reference in this rulemaking, because in part 7045.1390 where this information is being incorporated by reference, the incorporation does not provide the necessary level of specificity to identify the applicable section. This amendment corresponds to 40 CFR 265.13(b)(6). It is based on required RCRA Amendment 154-1.23: "Consolidated Organic Air Emission Standards for Tanks, Surface Impoundments, and Containers." Further information can be found in 59 FR 62896-62953, December 6, 1994.]//

G. For off-site facilities, the waste analysis plan must also specify the procedures ~~which~~ that will be used to inspect and, if necessary, analyze each movement of hazardous waste received at the facility to ensure that it matches the identity of the waste designated on the accompanying manifest or shipping paper. The plan must describe:

(1) the procedures ~~which~~ that will be used to determine the identity of each movement of waste managed at the facility; ~~and~~

(2) the sampling method ~~which~~ that will be used to obtain a representative sample of the waste to be identified, if the identification method includes sampling; and

[In item G, and subitems (1) and (2), the MPCA changes "which" to "that" for grammatical purposes. The MPCA also adds the word, "and" to accommodate this expanded list.]

(3) the procedures that the owner or operator of an off-site landfill receiving containerized hazardous waste will use to determine whether a hazardous waste generator or treater has added a biodegradable sorbent to the waste in the container.

In subitem (3) the MPCA adds a requirement for a plan to contain information about the use of sorbents to eliminate free liquids in waste being landfilled. This requirement is from required RCRA Amendment 118.2: "Liquids in Landfills II" = 40 CFR 265.13(c)(3). Further information regarding the need for and reasonableness of this amendment can be found in 57 FR 54452-54461, November 18, 1992.]//

H. For surface impoundments exempted from the land disposal restrictions under ~~part 7045.1310~~ Code of Federal Regulations, title 40, section 268.4, as incorporated in part 7045.1390, the procedures and schedule for:

(1) the sampling of impoundment contents;

(2) the analysis of test data; and

(3) the annual removal of residues which are not delisted under part 7045.0075, subpart 2, or which exhibit a characteristic of hazardous waste under part 7045.0131, and either do not meet applicable treatment standards of ~~parts 7045.1350 to 7045.1360~~ Code of Federal Regulations, title 40, sections 268.40 to 268.42, as incorporated in part 7045.1390, or, where no treatment standards have been established, such residues are prohibited from land disposal under ~~parts 7045.1320 to 7045.1333~~ Code of Federal Regulations, title 40, sections 268.30 to 268.35, as incorporated in part 7045.1390, or RCRA section 3004(d).

[In item H, the MPCA replaces citations to repealed rules with citations to equivalent federal rules as incorporated by reference.]//

I. For owners and operators seeking an exemption to the air emission standards in part 7045.0540 in accordance with Code of Federal Regulations, title 40, section 265.1083, as incorporated in part 7045.0645:

(1) if direct measurement is used for the waste determination, the procedures and schedules for waste sampling and analysis and the results of the analysis of test data to verify the exemption; and

(2) if knowledge of the waste is used for the waste determination, any information prepared by the facility owner or operator or by the generator of the hazardous waste, if the waste is received from off site, that is used as the basis for knowledge of the waste.

[In item I, subitems (1) and (2), the MPCA is adding requirements that apply to waste analysis at facilities that are subject to the air emission standards being added in this rulemaking. The adopted language is from required RCRA Amendments 154-1.24, and 154-5: "Consolidated Organic Air Emission Standards for Tanks, Surface Impoundments, and Containers" = 40 CFR 265.13(b)(8). Further information may be found in 59 FR 62896-62953, December 6, 1994. The MPCA also adds language to clarify that air emission standards are found in part 7045.0540.]//

7045.0584 OPERATING RECORD.

[For text of subps 1 and 2, see M.R.]

Subp. 3. **Record information.** The following information must be recorded, as it becomes available, and maintained in the operating record until closure of the facility:

[For text of items A and B, see M.R.]

C. A description and the quantity of each hazardous waste received, and the method and date of treatment, storage, or disposal at the facility in accordance with the

record-keeping instructions in Code of Federal Regulations, title 40, part 265, Appendix I, as incorporated in part 7045.0643.

[In item C, the MPCA initiates adding a reference to recordkeeping requirements that must be followed. This language corresponds to federal provisions in 40 CFR 265.73(b)(1).]//

[For text of item D, see M.R.]

E. Records and results of waste analyses, waste determinations, and trial tests performed as specified in parts 7045.0564; 7045.0628, subpart 12; 7045.0630, subpart 4; 7045.0632, subpart 3; 7045.0634, subpart 3; 7045.0638, subpart 7; 7045.0640, subpart 2; and 7045.0642, subpart 3; ~~7045.1310; and 7045.1315~~ Code of Federal Regulations, title 40, sections 268.4(a) and 268.7, as incorporated in part 7045.1390; and the process vent ~~and~~, equipment leak, and tank, surface impoundment, and container test methods and procedures in Code of Federal Regulations, title 40, sections ~~264.1034 and 264.1063~~ 265.1034 and 265.1063, as amended, and section 265.1084, as incorporated in part 7045.0645.

[In item E, the MPCA is adding requirements that apply to the operating records at facilities that are subject to the air emission standards being added in this rulemaking. This language is based on required RCRA Amendment 154-1.26: "Consolidated Organic Air Emission Standards for Tanks, Surface Impoundments, and Containers" = 40 CFR 265.73(b)(3). Further information regarding this amendment can be found in 59 FR 62896-62953, December 6, 1994. The MPCA also replaces citations to repealed rules with citations to equivalent federal rules as incorporated by reference. Finally, the MPCA replaces two incorrect citations to two CFR sections in part 264 with the appropriate citations in part 265.]//

[For text of items F and G, see M.R.]

H. Monitoring, testing, or analytical data, and corrective action where required by parts 7045.0556, subpart 8; 7045.0590, subparts 1, 6, 7, and 8; 7045.0592, subparts 1 and 7; 7045.0628, subparts 2, 4, and 7; 7045.0630, subparts 2a, 3, and 5; 7045.0632, subparts 4b, 8, and 9; 7045.0634, subparts 4 and 6, item D, subitem (1); 7045.0636; 7045.0638, subparts 2a, 2b, and 2c; and 7045.0640, subpart 4, and the process vent ~~and~~, equipment leak, and tank, surface impoundment, and container test methods and procedures and record keeping requirements in Code of Federal Regulations, title 40, sections ~~264.1034~~ 265.1034(c) to (f), ~~264.1035, 264.1063~~ 265.1035, 265.1063(d) to (i), and ~~264.1064~~ 265.1064, as amended, and sections 265.1083 to 265.1090, as incorporated in part 7045.0645. As required by parts 7045.0590, subparts 6 and 7; and 7045.0592, subpart 7, monitoring data at disposal facilities must be kept throughout the postclosure period.

[In item H, the MPCA is adding requirements that apply to the operating records at facilities that are subject to the air emission standards being added to this rulemaking. This amendment is based on required RCRA Amendment 154-1.26: "Consolidated Organic Air Emission Standards for Tanks, Surface Impoundments, and Containers" = 40 CFR 265.73(b)(6). Further information can be found in 59 FR 62896-62953, December 6, 1994. This amendment also addresses changes based on required RCRA Amendment 163.21: "Organic Air Emission Standards for Tanks, Surface Impoundments, and Containers; Clarification and Technical Amendment" = 40 CFR 265.73(b)(6). Further information may be found in 62 FR 64636-64671, December 8,

1997. Finally, the MPCA replaces incorrect citations to federal regulations found in part 264 with the appropriate citations to related regulations in part 265.]//

[For text of item I, see M.R.]

J. Records of the quantities and date of placement of each shipment of hazardous waste placed in land disposal units under an extension to the effective date of any land disposal restriction granted ~~under part 7045.0075, subpart 8 or 9,~~ by the United States Environmental Protection Agency under Code of Federal Regulations, title 40, section 268.5, monitoring data required pursuant to a petition under part 7045.0075, subpart 9, or a certificate and demonstration under Code of Federal Regulations, title 40, section 268.8, as ~~amended~~ incorporated in part 7045.1390, and the notice required by a generator under ~~part 7045.1315, subpart 1, item C~~ Code of Federal Regulations, title 40, section 268.7(a)(3), as incorporated in part 7045.1390.

[In item J, the MPCA revises language to clarify that only the EPA can grant extensions to the effective dates for land disposal restrictions. In this rulemaking the MPCA is repealing part 7045.0075, subpart 8, and replacing citations to it with the applicable federal citation. The MPCA also replaces citations to other repealed rules with citations to equivalent federal regulations that are being incorporated in this rulemaking by reference.]//

K. For an off-site treatment facility, the notice, and the certification and demonstration, if applicable, required by a generator or the owner or operator under Code of Federal Regulations, title 40, ~~section~~ sections 268.7(a)(1) and 268.8, as ~~amended, and part 7045.1315, subpart 1, item A~~ incorporated in part 7045.1390.

[In item K, the MPCA replaces a citation to a repealed rule with citations to equivalent federal regulations as incorporated by reference.]//

L. For an on-site treatment facility, the information contained in the notice and the certification and demonstration, if applicable, required by a generator or the owner or operator under Code of Federal Regulations, title 40, ~~section~~ sections 268.7(a)(1) and 268.8, as ~~amended , and part 7045.1315, subpart 1, item A~~ incorporated in part 7045.1390, except for the manifest number required under ~~part 7045.1315, subpart 1, item A, subitem (3)~~ Code of Federal Regulations, title 40, section 268.7(a)(1)(i), as incorporated in part 7045.1390.

[In item L, the MPCA replaces citations to a repealed rule with citations to equivalent federal regulations as incorporated by reference.]//

M. For an off-site land disposal facility, the notice, certification and demonstration, if applicable, required by the generator, owner or operator of a treatment facility under Code of Federal Regulations, title 40, section 268.7(b)(1)(2) or 268.8, as ~~amended, or part 7045.1315, subpart 2, items A and B~~ incorporated in part 7045.1390, for the facility or ~~part 7045.1315, subpart 1, item B~~ Code of Federal Regulations, title 40, section 268.7(a)(3), as incorporated in part 7045.1390, for the generator, whichever is applicable.

[In item M, the MPCA replaces citations to a repealed rule with citations to equivalent federal regulations as incorporated by reference.]//

N. For an on-site land disposal facility, the information contained in the notice and the certification and demonstration, if applicable, required by a generator or the owner or operator under Code of Federal Regulations, title 40, section 268.7 or 268.8, as ~~amended~~ incorporated in part 7045.1390, ~~or part 7045.1315~~ except for the manifest number, whichever is applicable.

[In item N, the MPCA replaces citations to a repealed rule with citations to equivalent federal regulations as incorporated by reference.]//

O. For an off-site storage facility, a copy of the notice, and the certification and demonstration if applicable, required by the generator or the owner or operator under Code of Federal Regulations, title 40, section 268.7 or 268.8, as ~~amended, or part 7045.1315~~ incorporated in part 7045.1390.

[In item O, the MPCA replaces citations to a repealed rule with citations to equivalent federal regulations as incorporated by reference.]//

P. For an on-site storage facility, the information contained in the notice, except the manifest number, and the certification and demonstration if applicable, required by the generator or the owner or operator of a treatment facility under Code of Federal Regulations, title 40, section 268.7 or 268.8, as ~~amended, or part 7045.1315~~ incorporated in part 7045.1390.

[In item P, the MPCA replaces citations to a repealed rule with citations to equivalent federal regulations as incorporated by reference.]//

7045.0586 RETENTION AND DISPOSITION OF RECORDS.

[For text of subpart 1, see M.R.]

Subp. 2. **Retention of records.** The retention period for all records required under parts 7045.0552 to ~~7045.0642~~ 7045.0651 is three years and is extended automatically during the course of any unresolved enforcement action regarding the facility.

[In subpart 2, the MPCA corrects a citation to a range of rules that changed as parts were added.]//

[For text of subp 3, see M.R.]

7045.0588 REQUIRED REPORTS.

[For text of subps 1 to 3, see M.R.]

Subp. 4. **Additional reports.** In addition to submitting the manifest discrepancy report described in part 7045.0582, subpart 3, and the annual report and the unmanifested waste reports described in subparts 2 and 3, the owner or operator shall also report to the commissioner and the Environmental Protection Agency Region V Administrator:

[For text of items A to C, see M.R.]

D. as otherwise required by the process vent ~~and,~~ equipment leak, and tank, surface impoundment, and container emission standards in ~~Code of Federal Regulations, title 40, part 265, subparts AA and BB, as amended~~ parts 7045.0645, 7045.0647, and 7045.0648.

[In item D, the MPCA is adopting requirements that apply to the reports required from facilities that are subject to the air emission standards being added in this rulemaking. This language is based on required RCRA Amendment 154-1.27: "Consolidated Organic Air Emission Standards for Tanks, Surface Impoundments, and Containers" = 40 CFR 265.77(d). Further information about the air emission standards can be found at 59 FR 62896-62953, December 6, 1994.]//

7045.0594 CLOSURE.

[For text of subpart 1, see M.R.]

Subp. 2. **Closure performance standard.** The owner or operator shall close the facility in a manner minimizing the need for further maintenance. Closure procedures must result in controlling, minimizing, or eliminating, to the extent necessary to protect human health and the environment, postclosure escape of hazardous waste, hazardous constituents, leachate, contaminated runoff, or hazardous waste decomposition products to the ground or surface waters or to the atmosphere, in accordance with all closure requirements including the requirements of parts 7045.0628, subpart 9; 7045.0630, subpart 6; 7045.0632, subpart 7; 7045.0634, subpart 6; 7045.0638, subpart 4; 7045.0640, subpart 5; and 7045.0642, subpart 5; and Code of Federal Regulations, title 40, section 265.1102, as incorporated in part 7045.0649.

[In subpart 2, the MPCA adds a reference to closure and post closure requirements that apply to containment buildings. The amendment is based on required RCRA Amendment 109.20: "Land Disposal Restrictions for Newly Listed Wastes and Hazardous Debris" = 40 CFR 265.111(c). Further information can be found in 57 FR 37194-37282, August 18, 1992. Finally, the MPCA replaces an incorrect CFR citation to part 264 with the appropriate citation to related regulations in part 265.]//

Subp. 3. **Submittal of closure plan.** The closure plans must be submitted as follows:

A. A copy of the written closure plan and all revisions to the plan must be furnished to the commissioner upon request, including request by mail until final closure is completed and certified. For facilities without approved closure plans, the plan must also be provided to the commissioner as requested, during site inspections on the day of the inspection. The plan must identify steps necessary to perform partial and/or final closure of the facility at any point during its active life. The closure plan must include:

(1) A description of how each hazardous waste management unit will be closed, if applicable, and how the facility will be finally closed, in accordance with subpart 2. The description must identify the maximum extent of the operation which will be unclosed during the active life of the facility and how the facility will meet the requirements of ~~subpart 2, part~~ parts 7045.0590; 7045.0592; 7045.0594; 7045.0596 ~~, and the applicable closure requirements of parts~~; 7045.0626, subpart 8; 7045.0628, subpart 9; 7045.0630, subpart 6; 7045.0632, subpart 7; 7045.0634, subpart 6; 7045.0638, subpart 4; 7045.0640, subpart 5; 7045.0642, subpart 5; and 7045.0655, subpart 6, ~~will be met~~ and Code of Federal Regulations, title 40, section 265.1102, as incorporated in part 7045.0649;

[In subitem (1), the MPCA adopts cross references to specific closure requirements for various types of facilities. These amendments are based on required RCRA Amendment 109.20: "Land Disposal Restrictions for Newly Listed Wastes and Hazardous Debris" = 40 CFR 265.112(d)(4). Further information can be found in 57 FR 37194-37282, August 18, 1992. The MPCA also provides a cross reference to federal requirements that are being incorporated in part 7045.0649.]//

[For text of subitems (2) to (6), see M.R.]

[For text of items B to F, see M.R.]

[For text of subp 4, see M.R.]

7045.0596 CLOSURE ACTIVITIES.

[For text of subps 1 and 2, see M.R.]

Subp. 2a. **Conditions for receiving nonhazardous waste.** The commissioner shall allow an owner or operator to receive only nonhazardous waste in a landfill, land treatment, or surface impoundment unit after the final receipt of hazardous waste at that unit if:

A. the owner or operator submits an amended Part B application, or a Part B application, if not previously required, and demonstrates that:

[For text of subitems (1) and (2), see M.R.]

(3) the nonhazardous waste will not be incompatible with any remaining wastes in the unit, or with the facility design and operating requirements of the unit or facility under parts 7045.0552 to ~~7045.0642~~ 7045.0651;

[In subitem (3), the MPCA corrects a citation to a range of rules that changed as parts were added.]//

[For text of subitems (4) and (5), see M.R.]

[For text of items B to D, see M.R.]

[For text of subps 3 and 4, see M.R.]

7045.0600 POSTCLOSURE.

Subpart 1. **Scope.** This part and parts 7045.0602 to 7045.0606 apply to the owners and operators of all hazardous waste disposal facilities, including surface impoundments and waste piles from which the owner or operator intends to remove the wastes at closure, to the extent that the owner or operator is required to provide postclosure care in part 7045.0630, subpart 6, or ~~in part~~ 7045.0632, subpart 7~~, and also~~; tank systems that are required under part 7045.0628, subpart 9, to meet the requirements for landfills~~,~~; and containment buildings that are required under Code of Federal Regulations, title 40, section 265.1102, as incorporated in part 7045.0649, to meet the requirement for landfills, except as provided otherwise in part 7045.0552.

[In subpart 1, the MPCA adds language to apply the post closure care requirements to the owner or operator of containment buildings. The amendment is based on required RCRA Amendment 109.19: "Land Disposal Restrictions for Newly Listed Wastes and Hazardous Debris" = 40 CFR 265.110(b)(4). Further information can be found in 57 FR 37194-37282, August 18, 1992.]//

Subp. 2. **Submittal of postclosure plan.** The postclosure plan must be submitted as follows:

[For text of items A to C, see M.R.]

D. The commissioner shall provide the owner or operator and the public, through a newspaper notice, the opportunity to submit written comments, to request modification, or to request a public information meeting on the postclosure plan or substantive amendments to the postclosure plan within 30 days of the date of the notice. In response to a request or at his or her own discretion, the commissioner shall hold a public information meeting whenever a meeting might clarify one or more issues concerning the postclosure plan. The commissioner shall approve, modify, or disapprove postclosure plans for facilities having interim status within 90 days of the receipt of the plan. If the commissioner does not approve the plan, he or she shall provide the owner or operator with a detailed written statement of reasons for the refusal, and the owner or operator shall submit a modified or new plan for approval within 30 days after receiving this

written statement. The commissioner shall approve or modify this plan in writing within 60 days. If the commissioner modifies the plan, this modified plan becomes the approved postclosure plan. A copy of the modified plan and a detailed statement of reasons for the modifications shall be mailed to the owner or operator. The commissioner shall ensure that the approved postclosure plan is consistent with ~~part~~ this part and with the postclosure care and use of property requirements in parts 7045.0602, 7045.0604, and 7045.0606.

[In item D, the MPCA revises language to add references to the requirements for providing notification to local land authorities (part 7045.0604) and notification in property deeds (part 7045.0606). Although the phrasing of this part of the State rules does not exactly correspond to the requirements of the final sentences in 40 CFR 265.118(f), the MPCA believes that it addresses the same aspects of regulation. These additions are based on required RCRA Amendment 109.21: "Land Disposal Restrictions for Newly Listed Wastes and Hazardous Debris" = 40 CFR 265.118(f). Further information can be found in 57 FR 37194-37282, August 18, 1992.]//

[For text of subp 3, see M.R.]

7045.0608 FINANCIAL REQUIREMENTS.

[In this rulemaking the MPCA has made a number of amendments to the requirements for providing financial assurance, both for permitted facilities and for facilities governed by the interim status requirements. A discussion of the reasonableness of the MPCA's general decisions regarding the use of particular financial assurance mechanisms is provided in the discussion for the amendments to part 7045.0498 (financial assurance for permitted hazardous waste facilities) and is also applicable to the amendments being made to the following financial assurance rules for interim status hazardous waste facilities.]//

Subpart 1. **Scope.** The requirements of parts 7045.0610, 7045.0612, and 7045.0620 to 7045.0624 apply to owners and operators of hazardous waste facilities except as provided otherwise in this part or in part 7045.0552.

The requirements of parts 7045.0614 to 7045.0618 apply only to owners and operators of disposal facilities ~~and~~; tank systems that are required under part 7045.0628, subpart 9, to meet the requirements for landfills; and containment buildings that are required under Code of Federal Regulations, title 40, section 265.1102, as incorporated in part 7045.0649, to meet the requirements for landfills.

The state and the federal government are exempt from the requirements of parts 7045.0608 to 7045.0624.

[In subpart 1, the MPCA applies post closure care financial assurance requirements to the owners and operators of containment buildings that are required to close as landfills. Requirements for containment buildings are being added in this rulemaking. These requirements are based on required RCRA Amendment 109.22: "Land Disposal Restrictions for Newly Listed Wastes and Hazardous Debris" = 40 CFR 265.140(b)(1-3). Further information can be found in 57 FR 37194-37282, August 18, 1992.]//

[For text of subp 2, see M.R.]

7045.0610 COST ESTIMATE FOR FACILITY CLOSURE.

Subpart 1. **Cost estimate requirements.** The owner or operator shall prepare a detailed written estimate, in current dollars, of the cost of closing the facility in accordance with the closure plan in part 7045.0594 and applicable closure requirements in parts 7045.0626, subpart 8; 7045.0630, subpart 6; 7045.0632, subpart 7; 7045.0634, subpart 6; 7045.0638, subpart 4; 7045.0640, subpart 5; and 7045.0642, subpart 5; and Code of Federal Regulations, title 40, section 265.1102, as incorporated in part 7045.0649. The closure cost estimate must equal the cost of closure at the point in the facility's operating life when the extent and manner of its operation would make closure the most expensive, as indicated by its closure plan. The closure cost shall be estimated as follows:

[In subpart 1, the MPCA adds a reference to the requirements being adopted in this rulemaking that apply to containment buildings. The reference in this part is based on required RCRA Amendment 109.23: "Land Disposal Restrictions for Newly Listed Wastes and Hazardous Debris" = 40 CFR 265.142(a). Further information can be found in 57 FR 37194-37282, August 18, 1992.]//

[For text of subps 2 to 4, see M.R.]

7045.0612 FINANCIAL ASSURANCE FOR FACILITY CLOSURE.

[For text of subps 1 to 5, see M.R.]

Subp. 6. **Financial test and corporate guarantee for closure.** The financial test and corporate guarantee for closure is as follows:

[For text of items A to K, see M.R.]

L. An owner or operator may meet the requirements of this part by obtaining a written guarantee, hereafter referred to as "corporate guarantee." The guarantor must be the parent corporation of the owner or operator. The guarantor must meet the requirements for owner or operator in items A to J; and must comply with the terms of the corporate guarantee. The wording of the corporate guarantee must be identical to the wording specified in part 7045.0524, subpart 8. A certified copy of the corporate guarantee must accompany the items sent to the commissioner as specified in item E. The terms of the corporate guarantee must provide that:

[In item L, the MPCA clarifies that the owner or operator must send a certified copy of the corporate guarantee to the commissioner. The rule formerly implied that the original document had to be sent to the commissioner. This change is based on RCRA Amendment 113: "Consolidated Liability Requirements" = 40 CFR 265.143(e)(10). Further information can be found in 53 FR 33938-33960, September 1, 1988; as amended by 56 FR 30200, July 1, 1991; and 57 FR 42832-42844, September 16, 1992.]//

[For text of subitems (1) to (3), see M.R.]

[For text of subps 7 to 9, see M.R.]

7045.0616 FINANCIAL ASSURANCE FOR POSTCLOSURE CARE.

[For text of subps 1 to 5, see M.R.]

Subp. 6. **Financial test and corporate guarantee for postclosure care.** The following is the financial test and corporate guarantee for postclosure care:

[For text of items A to L, see M.R.]

M. An owner or operator may meet the requirements of this part by obtaining a written guarantee, hereafter referred to as "corporate guarantee." The guarantor must be the parent corporation of the owner or operator. The guarantor must meet the requirements for owners or operators in items A to K, and must comply with the terms of the corporate guarantee. The wording of the corporate guarantee must be identical to the wording specified in part 7045.0524, subpart 8. A certified copy of the corporate guarantee must accompany the items sent to the commissioner as specified in item E. The terms of the corporate guarantee must provide that:

[In item M, the MPCA clarifies that the owner or operator must send a certified copy of the corporate guarantee to the commissioner. The rule formerly implied that the original document had to be sent to the commissioner. This change is based on RCRA Amendment 113: "Consolidated Liability Requirements" = 40 CFR 265.143(e)(10). Further information can be found in 53 FR 33938-33960, September 1, 1988; as amended by 56 FR 30200, July 1, 1991; and 57 FR 42832-42844, September 16, 1992.]//

[For text of subitems (1) to (3), see M.R.]

[For text of subps 7 to 9, see M.R.]

7045.0620 LIABILITY REQUIREMENTS.

[The MPCA has made a number of amendments to the requirements for liability coverage, both for permitted facilities and for facilities governed by the interim status requirements. A discussion of the reasonableness of the MPCA's general decisions regarding the use of particular financial assurance mechanisms is provided in the discussion for the amendments to part 7045.0518 (liability requirements for hazardous waste facilities) and is applicable to the amendments being made to the following rules on liability requirements for interim status hazardous waste facilities.]//

Subpart 1. **Coverage for sudden accidental occurrences.** An owner or operator of a hazardous waste treatment, storage, or disposal facility, or a group of ~~these~~ such facilities, ~~shall~~ must demonstrate financial responsibility for bodily injury and property damage to third parties caused by sudden accidental occurrences arising from operations of the facility or group of facilities. The owner or operator ~~shall~~ must have and maintain liability coverage for sudden accidental occurrences in the amount of at least $1,000,000 per occurrence with an annual aggregate of at least $2,000,000, exclusive of legal defense costs. This liability coverage may be demonstrated ~~in one of three ways,~~ as specified in items A~~, B, and C~~ to F:

A. An owner or operator may demonstrate the required liability coverage by having liability insurance as specified in subitems (1) and (2):

(1) Each insurance policy must be amended by attachment of the hazardous waste facility liability endorsement or evidenced by a certificate of liability insurance. The wording of the endorsement must be identical to the wording specified in part 7045.0524, subpart 9. The wording of the certificate of insurance must be identical to the

wording specified in part 7045.0524, subpart 10. The owner or operator ~~shall~~ must submit a signed duplicate original of the endorsement or the certificate of insurance to the commissioner. If requested by the commissioner, the owner or operator shall provide a signed duplicate original of the insurance policy.

(2) Each insurance policy must be issued by an insurer which is licensed to transact the business of insurance or eligible to provide insurance as an excess or surplus lines insurer in one or more states.

B. An owner or operator may meet the requirements of this part by passing a financial test or using the corporate guarantee for liability coverage as specified in subparts 5 and 6.

C. An owner or operator may meet the requirements of this part by obtaining a letter of credit for liability coverage as specified in subpart 7.

D. An owner or operator may meet the requirements of this part by obtaining a trust fund for liability coverage as specified in subpart 8.

E. An owner or operator may demonstrate the required liability coverage through the use of ~~the~~ combinations of insurance, financial test, ~~insurance, the corporate guarantee, a combination of the financial test and insurance, or a combination of the corporate guarantee and insurance as these mechanisms are specified in this part~~ corporate guarantee, letter of credit, and trust fund, except that the owner or operator may not combine a financial test covering part of the liability coverage requirement with a guarantee unless the financial statement of the owner or operator is not consolidated with the financial statement of the guarantor. The amounts of coverage demonstrated must total at least the minimum amounts required by ~~subpart 1~~ this part. If the owner or operator demonstrates the required coverage through the use of a combination of financial assurances under this item, the owner or operator must specify other assurance as "excess" coverage.

F. An owner or operator must notify the commissioner in writing within 30 days whenever:

(1) a claim results in a reduction in the amount of financial assurance for liability coverage provided by a financial instrument authorized in items A to E;

(2) a certification of valid claim for bodily injury or property damage caused by a sudden or nonsudden accidental occurrence arising from the operation of a hazardous waste treatment, storage, or disposal facility is entered between the owner or operator and third-party claimant for liability coverage under items A to E; or

(3) a final court order establishing a judgment for bodily injury or property damage caused by a sudden or nonsudden accidental occurrence arising from the operation of a hazardous waste treatment, storage, or disposal facility is issued against the owner or operator or an instrument that is providing financial assurance for liability coverage under items A to E.

[In subpart 1, the MPCA amends the rule to clearly identify the expanded range of options being provided in this rulemaking for demonstrating liability coverage for sudden, accidental occurrences and to add new requirements for liability coverage based on the corresponding federal regulations in 40 CFR 265.147(a). The changes are based on RCRA Amendment 113: "Consolidated Liability Requirements" = 40 CFR 265.147(a). Further information can be found in 53 FR 33938-33960, September 1, 1988; as amended by 56 FR 30200, July 1, 1991; and 57 FR 42832-42844,

September 16, 1992. The MPCA has also made minor, clarifying changes that do not change the effect of this provision. The MPCA has also changed "shall" to "must," and "these" to "such."]//

Subp. 2. **Coverage for nonsudden accidental occurrences.** An owner or operator of a surface impoundment, landfill, or land treatment facility which is used to manage hazardous waste, or a group of ~~these~~ such facilities, ~~shall~~ must demonstrate financial responsibility for bodily ~~damage~~ injury and property damage to third parties caused by nonsudden accidental occurrences arising from operations of the facility or group of facilities. The owner or operator ~~shall~~ must have and maintain liability coverage for nonsudden accidental occurrences in the amount of at least $3,000,000 per occurrence with an annual aggregate of at least $6,000,000, exclusive of legal defense costs. An owner or operator who must meet the requirements of this part may combine the required per-occurrence coverage levels for sudden and nonsudden accidental occurrences into a single per-occurrence level, and combine the required annual aggregate coverage levels for sudden and nonsudden accidental occurrences into a single annual aggregate level. Owners or operators who combine coverage levels for sudden and nonsudden accidental occurrences must maintain liability coverage in the amount of at least $4,000,000 per occurrence and $8,000,000 annual aggregate. This liability coverage may be demonstrated ~~in one of three ways~~ as specified in items A~~, B, and C~~ to F:

[For text of item A, see M.R.]

B. An owner or operator may meet the requirements of this part by passing a financial test or using the corporate guarantee for liability coverage as specified in subparts 5 and 6.

C. An owner or operator may meet the requirements of this part by obtaining a letter of credit for liability coverage as specified in subpart 7.

D. An owner or operator may meet the requirements of this part by obtaining a trust fund for liability coverage as specified in subpart 8.

E. An owner or operator may demonstrate the required liability coverage through use of ~~the~~ combinations of insurance, financial test, ~~insurance, the corporate guarantee, a combination of the financial test and insurance, or a combination of the corporate guarantee and insurance as these mechanisms are specified in this part~~ corporate guarantee, letter of credit, and trust fund, except that the owner or operator may not combine a financial test covering part of the liability coverage requirement with a guarantee unless the financial statement of the owner or operator is not consolidated with the financial statement of the guarantor. The amounts of coverage demonstrated must total at least the minimum amounts required by ~~subpart 1~~ this part. If the owner or operator demonstrates the required coverage through the use of a combination of financial assurances under this item, the owner or operator shall specify at least one such assurance as "primary" coverage and shall specify other assurance as "excess" coverage.

~~D. The required liability coverage for nonsudden accidental occurrences must be demonstrated by the dates specified in subitems (1), (2), (3), and (4). The total sales or revenues of the owner or operator in all lines of business, in the fiscal year preceding July 16, 1984, will determine which of the dates applies. If the owner and operator of a facility are two different parties, or if there is more than one owner or operator, the sales or revenues of the owner or operator with the largest sales or revenues determines the date by which the coverage must be demonstrated. The following dates apply:~~

~~(1) for an owner or operator not subject to the requirements of Code of Federal Regulations, title 40, section 265.147 (1983) with sales or revenues totaling $10,000,000 or more, six months after July 16, 1984;~~

~~(2) for an owner or operator not subject to the requirements of Code of Federal Regulations, title 40, section 265.147 (1983) with sales or revenues greater than $5,000,000 but less than $10,000,000, 18 months after July 16, 1984;~~

~~(3) all other owners or operators not subject to the requirements of Code of Federal Regulations, title 40, section 265.147 (1983) 30 months after July 16, 1984;~~

~~(4) for an owner or operator subject to the requirements of Code of Federal Regulations, title 40, section 265.147 (1983) on the date he or she is required to demonstrate coverage under Code of Federal Regulations, title 40, section 265.147 (1983).~~

~~E. By the date six months after July 16, 1984, an owner or operator who is within either of the categories in subitem (2) or (3) shall, unless he or she has demonstrated liability coverage for nonsudden accidental occurrences, send a letter to the commissioner, stating the date by which he or she plans to establish the coverage.~~

F. An owner or operator shall notify the commissioner in writing within 30 days whenever:

(1) a claim results in a reduction in the amount of financial assurance for liability coverage provided by a financial instrument authorized in items A to E;

(2) a certification of valid claim for bodily injury or property damage caused by a sudden or nonsudden accidental occurrence arising from the operation of a hazardous waste treatment, storage, or disposal facility is entered between the owner or operator and third-party claimant for liability coverage under items A to E; or

(3) a final court order establishing a judgment for bodily injury or property damage caused by a sudden or nonsudden accidental occurrence arising from the operation of a hazardous waste treatment, storage, or disposal facility is issued against the owner or operator or an instrument that is providing financial assurance for liability coverage under items A to E.

[In subpart 2, the MPCA amends the rule to clearly identify the expanded range of options being provided in this rulemaking for demonstrating liability coverage for non-sudden, accidental occurrences and to add new requirements for liability coverage based on the corresponding federal regulations in 40 CFR 147(b). The changes are based on adopts optional language from RCRA Amendment 113: "Consolidated Liability Requirements" = 40 CFR 265.147(b). Further information can be found in 53 FR 33938-33960, September 1, 1988; as amended by 56 FR 30200, July 1, 1991; and 57 FR 42832-42844, September 16, 1992. The MPCA has also made minor, clarifying changes to change "shall" to "must" that do not change the effect of this provision.]//

[For text of subps 3 and 4, see M.R.]

Subp. 5. **Financial test for liability coverage.** The financial test for liability coverage is as follows:

[For text of items A to G, see M.R.]

H. If the owner or operator no longer meets the requirements of item A, he or she ~~shall~~ must obtain insurance, a letter of credit, a trust fund, or a corporate guarantee for the entire amount of required liability coverage as specified in this part. Evidence of

~~insurance~~ liability coverage must be submitted to the commissioner within 90 days after the end of the fiscal year for which the year-end financial data show that the owner or operator no longer meets the test requirements.

[In item H, the MPCA makes minor changes to change "shall" to "must" and to address the types of insurance that will be allowed for liability coverage. The amendments addressing the changes to the liability insurance options are based on RCRA Amendment 113: "Consolidated Liability Requirements" = 40 CFR 265.147(f)(6). Further information can be found in 53 FR 33938-33960, September 1, 1988; as amended by 56 FR 30200, July 1, 1991; and 57 FR 42832-42844, September 16, 1992.]//

[For text of item I, see M.R.]

Subp. 6. **Corporate guarantee for liability coverage.** The corporate guarantee for liability coverage is as follows:

A. Subject to item B, an owner or operator may meet the requirements of this part by obtaining a written corporate guarantee. The guarantor must be the parent corporation of the owner or operator. The ~~guarantee~~ guarantor must meet the requirements for owners or operators in subpart 5. The wording of the corporate guarantee must be identical to the wording specified in part 7045.0524, subpart 8a. The guarantee must be signed by two corporate officers of the parent corporation. A corporate resolution authorizing the parent corporation to provide the corporate guarantee for the subsidiary must be attached to the guarantee. A certified copy of the corporate guarantee must accompany the items sent to the commissioner as specified in subpart 5, item E. The terms of the corporate guarantee must provide that:

[In subpart 6, the MPCA makes a minor correction to use the correct term 'guarantor,' rather than 'guarantee.' This is the same term used in parallel provisions for liability requirements for facility standards in part 7045.0518, subpart 7.]//

[For text of subitems (1) and (2), see M.R.]

[For text of item B, see M.R.]

Subp. 7. **Letter of credit for liability coverage.**

A. An owner or operator may satisfy the requirements of this part by obtaining an irrevocable standby letter of credit that conforms to the requirements of this subpart and submitting a copy of the letter of credit to the commissioner.

B. The financial institution issuing the letter of credit must be an entity that has the authority to issue letters of credit and whose letter of credit operations are regulated and examined by a federal or state agency.

C. The wording of the letter of credit must be identical to the wording in part 7045.0524, subpart 11.

D. An owner or operator who uses a letter of credit to satisfy the requirements of this part may also establish a standby trust fund. Under the terms of a letter of credit, all amounts paid pursuant to a draft by the trustee of the standby trust will be deposited by the issuing institution into the standby trust in accordance with instructions from the trustee. The trustee of the standby trust fund must be an entity that has the authority to act as a trustee and whose trust operations are regulated and examined by a federal or state agency.

E. The wording of the standby trust fund must be identical to the wording in part 7045.0524, subpart 13.

[In subpart 7, the MPCA adds a new subpart that provides the option of using a letter of credit for liability coverage. This option is based on federal language for use by interim status facilities. The MPCA believes this is a reasonable financial assurance mechanism. The adopted language is based on optional RCRA Amendment 113: "Consolidated Liability Requirements" = 40 CFR 265.147(h). Further information can be found in 53 FR 33938-33960, September 1, 1988; as amended by 56 FR 30200, July 1, 1991; and 57 FR 42832-42844, September 16, 1992.]//

Subp. 8. **Trust fund for liability coverage.**

A. An owner or operator may satisfy the requirements of this part by establishing a trust fund that conforms to the requirements of this subpart and submitting an originally signed duplicate of the trust agreement to the commissioner.

B. The trustee must be an entity that has the authority to act as a trustee and whose trust operations are regulated and examined by a federal or state agency.

C. The trust fund for liability coverage must be funded for the full amount of the liability coverage to be provided by the trust fund before it may be relied upon to satisfy the requirements of this part. If at any time after the trust fund is created, the amount of funds in the trust fund is reduced below the full amount of the liability coverage to be provided, the owner or operator, by the anniversary date of the establishment of the fund, must either add sufficient funds to the trust fund to cause its value to equal the full amount of liability coverage to be provided or obtain other financial assurance as specified in this part to cover the difference. For purposes of this subpart, "the full amount of the liability coverage to be provided" means the amount of coverage for sudden or nonsudden occurrences required to be provided by the owner or operator by this part, less the amount of financial assurance for liability coverage that is being provided by other financial assurance mechanisms being used to demonstrate financial assurance by the owner or operator.

D. The wording of the trust fund must be identical to the wording in part 7045.0524, subpart 13.

[In subpart 8, the MPCA adds a new subpart that provides the option of using a trust fund for liability coverage. This option is based on federal language for use by interim status facilities. The MPCA believes this is a reasonable financial assurance mechanism. The adopted language is based on optional RCRA Amendment 113: "Consolidated Liability Requirements" = 40 CFR 265.147(j). Further information can be found in 53 FR 33938-33960, September 1, 1988; as amended by 56 FR 30200, July 1, 1991; and 57 FR 42832-42844, September 16, 1992.]//

7045.0626 USE AND MANAGEMENT OF CONTAINERS.

Subpart 1. **Scope.** This part applies to owners and operators of hazardous waste facilities that store containers of hazardous waste, except as part 7045.0552 provides otherwise. Under ~~parts~~ part 7045.0127, subparts 2 to 4, and ~~7045.0135, subpart 4, item C~~ Code of Federal Regulations, title 40, section 261.33(c), as incorporated in part 7045.0135, if a hazardous waste is emptied from a container, the residue remaining in the container is not considered a hazardous waste if the container is empty, as defined in part

7045.0127, subparts 2 to 4. In that event, management of the container is exempt from the requirements of this part.

[In subpart 1, the MPCA replaces citations to repealed rules with citations to equivalent federal rules as incorporated by reference.]//

[For text of subps 2 to 6, see M.R.]

Subp. 7. **Special requirements for ignitable or reactive waste.** Containers holding ignitable or reactive waste must be located at least 15 meters (50 feet) from the facility's property line, when physically possible based on the dimensions of the property. When it is not physically possible to place containers at least 50 feet from the property line, based on the dimensions of the property, the ignitable or reactive waste must be placed at least as far as the specified minimum distance from property line found in ~~Table Number 79.503 F of~~ the Minnesota ~~Uniform~~ State Fire Code ~~as incorporated by reference in part 7510.3510~~, chapter 7510. Nothing in this subpart shall relieve the facility owner or operator from the obligation to comply with any local, state, or federal law governing storage of these wastes.

[In subpart 7, the MPCA corrects a reference and cite to a State Fire Code that has been amended by another rulemaking since originally adopted.]//

[For text of subp 8, see M.R.]

Subp. 9. **Air emission standards.** The owner or operator must manage all hazardous waste placed in a container in accordance with the applicable requirements of parts 7045.0645, 7045.0647, and 7045.0648.

[In subpart 9, the MPCA adopts language referring to the air emission standards that are being applied to containers at interim status facilities as a result of this rulemaking. The reference is from required RCRA Amendment 154, 154-1.28: "Consolidated Organic Air Emission Standards for Tanks, Surface Impoundments, and Containers" = 40 CFR 265.178. Further information regarding the air emission standards can be found in 59 FR 62896-62953, December 6, 1994; as amended by 61 FR 59932-59997, November 25, 1996.]//

7045.0628 TANK SYSTEMS.

Subpart 1. **Scope.** This part applies to owners and operators of facilities that use tank systems, including tank systems, sumps, and other such collection devices or systems used in conjunction with drip pads, as defined in part 7045.0020 and regulated under part 7045.0644, to treat or store hazardous waste, except as items A and B and part 7045.0552 provide otherwise.

A. Tank systems that are used to store or treat hazardous waste containing no free liquids and that are located inside a building with an impermeable floor are exempt from the requirements of subpart 4. To demonstrate the absence or presence of free liquids in the stored or treated waste, ~~EPA~~ the following test must be used: Method 9095 (Paint Filter Liquids Test) as described in "Test Methods for Evaluating Solid ~~Wastes~~ Waste, Physical/Chemical Methods," ~~(~~EPA publication ~~No.~~ SW-846 ~~) must be used~~, incorporated by reference in part 7045.0065, item D.

[In item A, the MPCA corrects the name of the EPA test method for verifying the presence of liquids in order to correspond to the federal counterpart in 40 CFR 265.190(a). The amendment is based on required RCRA Amendment 126.15:

"Testing and Monitoring Activities." Further information can be found in 58 FR 46040-46051, August 31, 1993; as amended at 59 FR 47980-47982, September 19, 1994. The MPCA also provides language to clarify where to find the prescribed test method, which has changed as a result of these amendments.]//

[For text of item B, see M.R.]

[For text of subps 2 to 9, see M.R.]

Subp. 10. **Special requirements for ignitable or reactive waste.** Ignitable or reactive waste must not be placed in a tank unless:

[For text of items A and B, see M.R.]

C. the tank is used solely for emergencies.

The owner or operator of a facility which treats or stores ignitable or reactive waste in a tank shall comply with the requirements for the maintenance of protective distances between the waste management area and any public ways, streets, alleys, or an adjoining property line that can be built upon, as required in the buffer zone requirements for tanks, contained in ~~article 79 of~~ the Minnesota ~~Uniform~~ State Fire Code, ~~as incorporated by reference in part 7510.3510~~ chapter 7510.

[In item C, the MPCA corrects a reference to a previously amended State Fire Code.]//

[For text of subps 11 and 12, see M.R.]

Subp. 13. **Air emission standards.** The owner or operator of a facility must manage all hazardous waste placed in a tank in accordance with parts 7045.0645, 7045.0647, and 7045.0648.

[In subpart 13, the MPCA adopts language referring to the air emission standards that are being applied to tanks at interim status facilities as a result of this rulemaking. The reference is from required RCRA Amendment 154, 154-1.29: "Consolidated Organic Air Emission Standards for Tanks, Surface Impoundments, and Containers" = 40 CFR 265.202. Further information can be found in 59 FR 62896-62953, December 6, 1994; as amended by 61 FR 59932-59997, November 25, 1996.]//

7045.0629 REQUIREMENTS FOR SMALL QUANTITY AND VERY SMALL QUANTITY GENERATORS THAT ACCUMULATE HAZARDOUS WASTE IN TANKS.

[For text of subps 1 to 4, see M.R.]

Subp. 5. **Ignitable and reactive wastes.** Generators regulated under this part must comply with the following special requirements for ignitable or reactive waste:

[For text of item A, see M.R.]

B. The owner or operator of a facility which treats or stores ignitable or reactive waste in covered tanks must comply with the buffer zone requirements for tanks contained in ~~article 79 of~~ the Minnesota ~~Uniform~~ State Fire Code, ~~as incorporated by reference in part 7510.3510~~ chapter 7510.

[In item B, the MPCA corrects a reference to a previously amended State Fire Code.]//

[For text of subp 6, see M.R.]

7045.0630 SURFACE IMPOUNDMENTS.

[For text of subps 1 and 1a, see M.R.]

Subp. 2. **General operating requirements.**

A. A surface impoundment must maintain enough freeboard to prevent any overtopping of the dike by overfilling, wave action or a storm. There must be at least 60 centimeters (two feet) of freeboard. Any point source discharge from a surface impoundment to waters of the United States is subject to the requirements of the Federal Water Pollution Control Act Amendments of 1972, United States Code, title 33, section 1342, as amended. Spills may be subject to the Federal Water Pollution Control Act Amendments of 1972, United States Code, title 33, section 1312, as amended.

B. Surface impoundments that are newly subject to RCRA section 3005(j)(1) due to the promulgation of additional listings or characteristics for the identification of hazardous waste must be in compliance with subpart 1a not later than 48 months after the promulgation of the additional listing or characteristic. This compliance period shall not be cut short as the result of the promulgation of land disposal prohibitions under Code of Federal Regulations, title 40, part 268, as amended, or the granting of an extension to the effective date of a prohibition pursuant to Code of Federal Regulations, title 40, section 268.5, as incorporated in part 7045.1390, within this 48-month period.

[In item A, the MPCA adopts language to address wastes that are newly regulated under the land disposal restrictions. The adopted language is based on required RCRA Amendment 109.24: "Land Disposal Restrictions for Newly Listed Wastes and Hazardous Debris" = 40 CFR 265.221(h). Further information about the land disposal restrictions can be found in 57 FR 37194-37282, August 18, 1992.]//

[For text of subps 2a to 5, see M.R.]

Subp. 6. **Closure and postclosure care.** The requirements of closure and postclosure care are as follows:

[For text of item A, see M.R.]

B. If the owner or operator removes or decontaminates all the impoundment materials described in item A, the impoundment is not further subject to the requirements of parts 7045.0552 to ~~7045.0642~~ 7045.0651. At closure and throughout the operating period, unless the owner or operator can demonstrate that any waste removed from the surface impoundment is not a hazardous waste, he or she becomes a generator of hazardous waste and must manage it in accordance with all applicable requirements of parts 7045.0205 to 7045.0397 and 7045.0552 to ~~7045.0642~~ 7045.0651.

[In item B, the MPCA corrects citations to ranges of rules that changed as parts were added.]//

[For text of items C and D, see M.R.]

Subp. 7. **Special requirements for ignitable or reactive wastes.** Ignitable or reactive waste must not be placed in a surface impoundment unless the waste and the impoundment satisfy all applicable requirements of ~~parts 7045.1300 to 7045.1380~~ part 7045.1390, and:

[In subpart 7, the MPCA provides the replacement citation for a repealed range of rules.]//

[For text of items A and B, see M.R.]

Subp. 8. **Special requirements for incompatible wastes.** Incompatible waste, or incompatible wastes and materials, must not be placed in the same surface impoundment

unless part 7045.0562, subpart 2, is followed. For examples of potentially incompatible wastes, or incompatible waste and materials, see part 7045.0643, subpart 1, item D.

[In subpart 8, the MPCA initiates providing a citation to a rule that incorporates an appendix which lists examples of potentially incompatible wastes and materials. This citation corresponds to parenthetical information provided in the federal counterpart to this rule found at 40 CFR 265.230. The reference to part 7045.0643, subpart 1, item D is to the rule being added in this rulemaking that incorporates appendices from the federal regulations.]//

Subp. 9. **Air emission standards.** The owner or operator must manage all hazardous waste placed in a surface impoundment in accordance with parts 7045.0645 and 7045.0648.

[In subpart 9, the MPCA requires surface impoundments to comply with the requirements for air emissions being adopted in this rulemaking. The language is based on required RCRA Amendment 154, 154-1.30: "Consolidated Organic Air Emission Standards for Tanks, Surface Impoundments, and Containers" = 40 CFR 265.231. Further information can be found in 59 FR 62896-62953, December 6, 1994; as amended by 61 FR 59932-59997, November 25, 1996.]//

7045.0632 WASTE PILES.

[For text of subps 1 to 4b, see M.R.]

Subp. 5. **Special requirements for ignitable or reactive waste.** Ignitable or reactive waste must not be placed in a pile unless the waste and pile satisfy all applicable requirements of ~~parts 7045.1300 to 7045.1380~~ part 7045.1390:

[In subpart 5, the MPCA provides the replacement citation for a repealed range of rules.]//

[For text of items A and B, see M.R.]

[For text of subps 6 to 9, see M.R.]

7045.0634 LAND TREATMENT.

[For text of subps 1 to 6, see M.R.]

Subp. 7. **Special requirements for ignitable or reactive waste.** Ignitable or reactive wastes must not be land treated, unless the waste and treatment zone meet all applicable requirements of ~~parts 7045.1300 to 7045.1380~~ part 7045.1390, and the waste is immediately incorporated into the soil so that the resulting waste, mixture, or dissolution of material no longer meets the definition of ignitable or reactive waste under parts 7045.0131, subpart 2 or 5; and 7045.0562, subpart 2 is complied with.

[In subpart 7, the MPCA provides the replacement citation for a repealed range of rules.]//

[For text of subp 8, see M.R.]

7045.0638 LANDFILLS.

[For text of subps 1 to 3, see M.R.]

Subp. 4. **Closure and postclosure.** Closure and postclosure requirements are as follows:

[For text of item A, see M.R.]

B. After final closure, the owner or operator shall comply with all postclosure requirements contained in parts 7045.0600 to 7045.0606 including maintenance and monitoring throughout the postclosure care period. The owner or operator must:

[For text of subitem (1), see M.R.]

(2) maintain and monitor the leak detection system in accordance with part 7045.0538, subparts 3, item C, subitems (3), unit (d), and (4); and 2c, item B, and comply with all other applicable leak detection system requirements of ~~this part~~ parts 7045.0552 to 7045.0651 governing interim status facility standards;

[In subitem (2), the MPCA adopts language referring to the leak detection system requirements that can be found in the entire range of interim status rules. The existing language referred only to the leak detection requirements that apply to landfills. However, in an EPA program authorization review, the EPA identified the fact that the corresponding federal regulations in 40 CFR 264.310(b)(2) reference the entire part of the federal regulations that regulate interim status. The MPCA is making the changes in this subpart to correct this error. The language of this amendment is based on required RCRA Amendment 100: "Liners and Leak Detection Systems for Hazardous Waste Land Disposal Units" = 40 CFR 264.310(b)(2). Further information can be found in 57 FR 3462-3497, January 29, 1992.]//

[For text of subitems (3) to (5), see M.R.]

Subp. 5. **Special requirements for ignitable or reactive waste.** Special requirements for ignitable or reactive waste are as follows:

A. Except as provided in item B, and subparts 7 and 9, ignitable or reactive waste must not be placed in a landfill unless the waste and landfill meet all applicable requirements of ~~parts 7045.1300 to 7045.1380~~ part 7045.1390, and the resulting waste, mixture, or dissolution of material no longer meets the definition of ignitable or reactive waste under part 7045.0131, subpart 2 or 5, and compliance with part 7045.0562, subpart 2, is maintained.

[In item A, the MPCA provides the replacement citation for a repealed range of rules.]//

B. Except for prohibited wastes which remain subject to treatment standards in ~~parts 7045.1350 to 7045.1360~~ Code of Federal Regulations, title 40, sections 268.40 to 268.42, as incorporated in part 7045.1390, ignitable wastes in containers may be landfilled without meeting the requirements of item A if the wastes are disposed so that they are protected from any material or conditions which may cause them to ignite. Ignitable wastes must be disposed in nonleaking containers which are carefully handled and placed so as to avoid heat, sparks, rupture, or any other condition that might cause ignition of the wastes; must be covered daily with soil or other noncombustible material to minimize the potential for ignition of the wastes; and must not be disposed in cells that contain or will contain other wastes which may generate heat sufficient to cause ignition of the wastes.

[In item B, the MPCA replaces citations to repealed rules with citations to equivalent federal rules as incorporated by reference.]//

[For text of subp 6, see M.R.]

Subp. 7. **Special requirements for liquid waste.** Bulk or noncontainerized liquid waste or waste containing free liquids, whether or not ~~absorbents~~ sorbents have been added, must not be placed in a landfill.

A. A container holding liquid waste or waste containing free liquids must not be placed in a landfill, unless:

(1) all free standing liquid has been removed by decanting, or other methods; has been mixed with ~~absorbent~~ sorbent or solidified so that free standing liquid is no longer observed; or has been otherwise eliminated;

[For text of subitems (2) to (4), see M.R.]

B. To demonstrate the ~~presence or~~ absence or presence of free liquids in either a containerized or a bulk waste, the following test must be ~~demonstrated using the Paint Filter Liquids Test,~~ used: Method 9095 (Paint Filter Liquids Test) as described in "Test Methods for Evaluating Solid ~~Wastes~~ Waste, Physical/Chemical Methods," EPA publication ~~number~~ SW-846, incorporated in part 7045.0065, item D.

[In item B, the MPCA rephrases existing language and makes corrections to information regarding the name of the EPA test methods for determining the presence of free liquids. The amendment is based on required RCRA Amendment 126.15: "Testing and Monitoring Activities" = 40 CFR 265.314(d). Further information can be found in 58 FR 46040-46051, August 31, 1993; as amended at 59 FR 47980-47982, September 19, 1994.]//

C. Sorbents used to treat free liquids to be disposed of in landfills must be nonbiodegradable. Nonbiodegradable sorbents are materials listed or described in subitem (1) or materials that pass one of the tests in subitem (2).

(1) Nonbiodegradable sorbents:

(a) inorganic minerals, other inorganic materials, and elemental carbon (for example, aluminosilicates, clays, smectites, Fuller's earth, bentonite, calcium bentonite, montmorillonite, calcined montmorillonite, kaolinite, micas (illite), vermiculites, and zeolites; calcium carbonate (organic free limestone); oxides/hydroxides, alumina, lime, silica (sand), and diatomaceous earth; perlite (volcanic glass); expanded volcanic rock; volcanic ash; cement kiln dust; fly ash; rice hull ash; and activated charcoal/activated carbon);

(b) high molecular weight synthetic polymers (for example, polyethylene, high density polyethylene (HDPE), polypropylene, polystyrene, polyurethane, polyacrylate, polynorborene, polyisobutylene, ground synthetic rubber, cross-linked allylstyrene and tertiary butyl copolymers). This does not include polymers derived from biological material or polymers specifically designed to be degradable; or

(c) mixtures of these nonbiodegradable materials.

(2) Tests for nonbiodegradable sorbents must use the following methods. The methods are incorporated by reference under part 7045.0538, subpart 10, item D, subitem (2):

(a) the sorbent material is determined to be nonbiodegradable under ASTM Method G21-70 (1984a), Standard Practice for Determining Resistance of Synthetic Polymer Material to Fungi;

(b) the sorbent material is determined to be nonbiodegradable under ASTM Method G22-76 (1984b), Standard Practice for Determining Resistance of Plastics to Bacteria; or

(c) the sorbent material is determined to be nonbiodegradable under OECD test 301B: [CO_2 Evolution (Modified Sturm Test)].

[In subpart 7, the MPCA makes a number of changes to the regulations governing landfills. At several points, the MPCA changes the word "absorbent" to the broader term "sorbent," based on federal language. The MPCA also adopts specific requirements regarding the use of sorbents to treat free liquids. These changes are reasonable for the reasons discussed in part 7045.0538, subpart 10 and are based on language from required RCRA Amendment 118.3: "Liquids in Landfills II" = 40 CFR 265.314. Further information can be found in 57 FR 54452-54461, November 18, 1992.]//

[For text of subp 8, see M.R.]

Subp. 9. **Special requirements for disposal of laboratory packs.** Small containers of hazardous waste in overpacked drums, or laboratory packs, may be placed in a landfill if the requirements of items A to F are met:

A. Hazardous waste must be packaged in nonleaking inside containers. The inside containers must be of a design and constructed of a material that will not react dangerously with, be decomposed by, or be ignited by the waste held therein. Inside containers must be tightly and securely sealed. The inside containers must be of the size and type ~~specified~~ authorized in the United States Department of Transportation hazardous materials regulations under Code of Federal Regulations, title 49, parts 173, 178, ~~and~~ 179, and 180, as amended, if those regulations specify a particular inside container for the waste.

[In item A, the MPCA is amending the State rules on the advice of Minnesota's Department of Transportation. The amendments revise language to conform with amended U.S. Department of Transportation regulations. The language of this item is slightly different than the federal counterpart found at 40 CFR 265.316, but the MPCA believes it is the more accurate and current reference to the applicable United States Department of Transportation requirements.]//

B. The inside containers must be overpacked in ~~an open~~ a removable head metal shipping container as specified in United States Department of Transportation regulations under Code of Federal Regulations, title 49, section 173.12 and parts 178 ~~and~~, 179, and 180, as amended~~, of no more than 416 liter (110 gallon) capacity, and~~. The inside containers must be surrounded by a sufficient quantity of ~~absorbent~~ chemically compatible sorbent material, determined to be nonbiodegradable in accordance with subpart 7, item C, to completely ~~absorb~~ sorb all of the liquid contents of the inside containers. The gross weight of the complete package must not exceed 205 kilograms (452 pounds). The metal outer container must be full after ~~packing~~ it has been packed with inside containers and ~~absorbent~~ sorbent material.

[In item B, the MPCA adopts language addressing changes to the corresponding federal EPA regulation regarding overpacking of containers and also to address changes made to the federal Department of Transportation regulations. The changes are based on required RCRA Amendment 118.4: "Liquids in Landfills II" = 40 CFR 265.316(b). Further information can be found in 57 FR 54452-54461, November 18,

1992. The MPCA is revising the federal language slightly to reflect revisions in the cited U.S. Department of Transportation regulations. The MPCA believes that these differences, taken on the advice of the Minnesota Department of Transportation, are a more accurate reference to the rules that actually apply.]//

C. The ~~absorbent~~ sorbent material used must not be capable of reacting dangerously with, being decomposed by, or being ignited by the contents of the inside containers, in accordance with part 7045.0562, subpart 2.

[In item C, the MPCA changes "absorbent" to "sorbent" for the same reasons discussed in subpart 7 of this part.]//

[For text of items D and E, see M.R.]

F. The disposal complies with ~~parts 7045.1300 to 7045.1380~~ part 7045.1390. Persons who incinerate lab packs ~~according to part 7045.1360~~ in accordance with Code of Federal Regulations, title 40, section 268.42(c)(1), as incorporated in part 7045.1390, may use fiber drums in place of metal outer containers. The fiber drums must meet the United States Department of Transportation specifications in Code of Federal Regulation, title 49, section 173.12, as amended, and be overpacked ~~according to~~ in accordance with item B.

[In item F, the MPCA replaces a reference to a repealed range of rules with the correct citation being adopted or incorporated by reference in this rulemaking. The MPCA also is amending the rules at this time to include the phrase "as amended" in regard to future changes to Department of Transportation specifications. This type of prospective adoption is reasonable for the reasons discussed in part IV of this Statement of Need and Reasonableness. Finally, the MPCA revises language at the end of the item for grammatical purposes.]//

7045.0643 APPENDICES TO INTERIM STATUS FACILITY STANDARDS.

Subpart 1. **Incorporation of federal regulations.** The following appendices found in Code of Federal Regulations, title 40, part 265, as amended, are incorporated by reference:

[In subpart 1, items A to E, the MPCA incorporates by reference the appendices to Interim Facility Standards that are found in 40 CFR 265. In these appendices, the MPCA is adopting standards or tests that are referenced either in current rules or in rules that are being adopted or revised for interim status facilities in this rulemaking. By adopting these appendices by reference as amended, the MPCA will ensure that the most current standards are incorporated into the State rules. The MPCA's discussion of the reasonableness of incorporating federal regulations "as amended" is provided in Section IV of this Statement of Need and Reasonableness. Note: the EPA repealed its former Appendix II from the federal regulations which is why it is not included the these incorporated appendices.]//

A. Appendix I, Recordkeeping Instructions;

[In item A, the MPCA incorporates Appendix I, regarding recordkeeping. This Appendix was amended as described in required RCRA Amendment 131.2: "Recordkeeping Instructions; Technical Amendment" = 40 CFR 265 Appendix I, Tables 1 and 2. Further information can be found in 59 FR 13891-13893, March 24, 1994.]//

B. Appendix III, EPA Interim Primary Drinking Water Standards;

[In item B, the MPCA incorporates Appendix III, a listing of drinking water standards. The MPCA believes it is reasonable to incorporate these standards, which are referred to in part 7045.0590, subpart 6, by reference in order to accommodate future revisions.]//

C. Appendix IV, Tests for Significance;

[In item C, the MPCA incorporates Appendix IV, which establishes tests to determine significance. The MPCA believes it is reasonable to incorporate this test, which is referred to in part 7045.0592, subpart 2, by reference in order to accommodate future revisions.]//

D. Appendix V, Examples of Potentially Incompatible Waste; and

[In item D, the MPCA incorporates Appendix V, which provides examples of incompatible wastes. The MPCA believes it is reasonable to incorporate this list of examples, which are referred to in part 7045.0630, subpart 8, by reference in order to accommodate future revisions.]//

E. Appendix VI, Compounds with Henry's Law Constant Less Than 0.1 Y/X.

[In item E, the MPCA adopts language regarding the use of Henry's Law Constant. This Appendix was amended as described in required RCRA Amendment 163.38: "Organic Air Emission Standards for Tanks, Surface Impoundments, and Containers; Clarification and Technical Amendment" = 40 CFR 265 Appendix VI. Further information can be found in 62 FR 64636-64671, December 8, 1997. Appendix VI is referenced in 265.1081 which the MPCA is incorporating in this rulemaking as part of the air emission standards.]//

Subp. 2. **Additions, modifications, or exceptions to incorporated regulations.** Part 7045.0090, adoption and incorporation by reference, also applies.

[In subpart 2, the MPCA provides a reference to part 7045.0090 which applies whenever regulations are incorporated by reference. Part 7045.0090, subpart 1f, specifically applies when federal interim status facility standards are incorporated by reference.]//

7045.0645 AIR EMISSION STANDARDS FOR TANKS, SURFACE IMPOUNDMENTS, AND CONTAINERS.

Subpart 1. **Incorporation of federal regulations.** The owners and operators of interim status facilities that treat, store, or dispose of hazardous waste in tanks, surface impoundments, or containers must comply with Code of Federal Regulations, title 40, part 265, subpart CC, air emission standards for tanks, surface impoundments, and containers, sections 265.1080 to 265.1091, as amended, which are incorporated by reference subject to the exceptions in subpart 2.

[In part 7045.0645, the MPCA incorporates federal requirements addressing air emission standards that apply to interim status facilities that treat, store or dispose of hazardous waste in tanks, surface impoundments or containers. The State rules previously only provided air emission standards for process vents and equipment leaks. The new standards, referenced in subpart 1 are based on federal regulations found in 40 CFR 265, subpart CC (40 CFR 265.1080 through 265.1090), "Air Emission Standards for Tanks, Surface Impoundments, and Containers." By incorporating these standards by reference, the MPCA also effectively incorporates language from these related RCRA Amendments:

- **RCRA Amendments 154, 154-1.26, 154-2, 154-3, 154-4, 154-5, 154-6: "Consolidated Organic Air Emission Standards for Tanks, Surface Impoundments, and Containers" = 40 CFR 265.1080-1091. Further information can be found in 59 FR 62896-62953, December 6, 1994; as amended by 60 FR 26828-26829, May 19, 1995; 60 FR 50426-50430, September 29, 1995; 60 FR 56952-56954, November 13, 1995; 61 FR 4903-4916, February 9, 1996; 61 FR 28508-28511, June 5, 1996; and 61 FR 59932-59997, November 25, 1996.]**
- **RCRA Amendment 177: "Organic Air Emission Standards: Clarification and Technical Amendments" = 40 CFR 265.1080(b)(5); 265.1084(a)(1)(i-ii); 265.1084(a)(3)(ii)(B,D); 265.1084(a)(3)(iii); 265.1084(b)(1)(i-ii); 265.1084(b)(3)(ii)(B,D); 265.1084(b)(3)(iii); 265.1085(h)(3)(i-ii); and 265.1087(e)(6). Further information can be found in 64 FR 3382, January 21, 1999.**
- **RCRA Amendment 163.28-37: "Organic Air Emission Standards for Tanks, Surface Impoundments, and Containers; Clarification and Technical Amendment" = 40 CFR 265.1080; 265.1081; 265.1082; 265.1083; 265.1084; 265.1085; 265.1086; 265.1087; 265.1088; and 265.1090. Further information can be found in 62 FR 64636-64671, December 8, 1997.]//**

Subp. 2. **Additions, modifications, or exceptions to incorporated regulations.**

A. The agency does not incorporate the following Code of Federal Regulations, title 40, part 265, subpart CC, provisions, as amended:

(1) Code of Federal Regulations, title 40, section 265.1080(d) to (g), governing specific exclusions; and

(2) Code of Federal Regulations, title 40, section 265.1083(c)(4)(ii), governing authority that EPA cannot delegate to states.

[In item A, the MPCA clarifies that it does not incorporate parts of the federal regulations governing specific exclusions and authority that does not apply in Minnesota. The exceptions to the adoption by reference are: (1) the MPCA does not adopt specific exclusions relating to peroxide manufacturers (described in 265.1080 (d)), and sites located in other states (described in 265.1080 (e) to (g)); and (2) the MPCA does not have the authority to grant variances to specific land disposal treatment standards (described in 265.1083 (c)(4)(ii)). See the discussion of the similar exclusion in part 7045.1390, subpart 5, item A of this document.]//

B. Part 7045.0090, adoption and incorporation by reference, also applies.

[In item B, the MPCA refers readers to the general State rule part governing adoption and incorporation by reference.]//

7045.0649 CONTAINMENT BUILDINGS.

Subpart 1. **Incorporation of federal regulations.** The owners and operators of interim status facilities that store or treat hazardous waste in containment buildings must comply with Code of Federal Regulations, title 40, part 265, subpart DD, Containment Buildings, sections 265.1100 to 265.1110, as amended, which are incorporated by reference subject to the exceptions in subpart 2.

[In part 7045.0649, the MPCA incorporates the requirements of 40 CFR 265, subpart DD, "Containment Buildings" by reference, as amended. The MPCA believes that it is efficient and reasonable to adopt this section of the federal regulations by reference as amended. In the incorporated federal regulations, sections 265.1103-1110 are

"reserved." Since the MPCA incorporates these sections of RCRA as amended, if the EPA incorporates regulations into these reserved sections, they would be automatically incorporated into the State rules unless the MPCA amends its rules to provide exceptions to particular provisions. By adopting this rule, the MPCA also adopts amendments based on required RCRA Amendment 109.25: "Land Disposal Restrictions for Newly Listed Wastes and Hazardous Debris" = 40 CFR 265.1100-1110. Further information can be found in 57 FR 37194-37282, August 18, 1992.]//

Subp. 2. **Additions, modifications, or exceptions to incorporated regulations.** Part 7045.0090, adoption and incorporation by reference, also applies.

[In subpart 2, the MPCA provides exceptions to its incorporation by reference in subpart 1 by referring readers to the general State rule part governing adoption and incorporation by reference.]//

7045.0652 FACILITIES GOVERNED BY FACILITY STANDARDS.

Subpart 1. **General requirements.** Parts 7045.0652 and 7045.0655 apply in lieu of parts 7045.0450 to ~~7045.0642~~ 7045.0651 to the owner or operator of the following types of units or facilities:

[In subpart 1, the MPCA corrects a citation to a range of rules that changed as parts were added.]//

[For text of items A to D, see M.R.]

[For text of subp 2, see M.R.]

7045.0655 GENERAL FACILITY STANDARDS.

[For text of subps 1 to 5, see M.R.]

Subp. 6. **Closure.** At closure, the owner or operator of an elementary neutralization unit, pretreatment unit, or wastewater treatment unit shall remove all hazardous waste and hazardous waste residues from the unit.

At closure, the owner or operator of a combustion waste facility shall analyze the waste present in the facility ~~according to~~ in accordance with parts 7045.0102 to ~~7045.0143~~ 7045.0155 and shall submit the waste analysis results and proposed closure methods to the commissioner. Based on the waste analysis and proposed closure methods, the agency shall determine which closure standards from parts 7045.0450 to 7045.0551, if any, apply to the facility.

[In subpart 6, the MPCA makes a grammatical change that does not alter the meaning of the rules. The MPCA also corrects citations to ranges of rules that changed as parts were added.]//

[For text of subp 7, see M.R.]

7045.0665 ~~USE~~ HAZARDOUS WASTES USED IN A MANNER CONSTITUTING DISPOSAL.

[In part 7045.0665, the MPCA revises the title to clarify the subject of this part.]//

Subpart 1. **Scope.** ~~Items A and B apply~~ This part applies to hazardous wastes that are used in a manner constituting disposal.

[In subpart 1, the MPCA revises language to clarify to what this entire part applies.]//

[For text of item A, see M.R.]

B. Hazardous wastes are not used in a manner constituting disposal if:

[For text of subitems (1) and (2), see M.R.]

(3) the products meet the applicable treatment standards in ~~parts 7045.1350 to 7045.1360 or applicable prohibition levels in part 7045.1330~~ Code of Federal Regulations, title 40, sections 268.40 to 268.49, as incorporated in part 7045.1390, or, if no treatment standards have been established, meet the applicable prohibition levels in Code of Federal Regulations, title 40, section 268.32, as incorporated in part 7045.1390, or RCRA section 3004(d) where no treatment standards have been established, for each ~~recyclable material~~ hazardous waste that they contain.

[In subitem (3), the MPCA is deleting citations to repealed State rules and replacing them with citations to equivalent federal rules that are being incorporated by reference in this rulemaking. The references to the deleted and replaced citations refer to the land disposal restrictions that are discussed in more detail in this Statement at part 7045.1390. This language in subpart 1, item B, now corresponds to 40 CFR 266.20(b) with the following exception. In the last sentence the MPCA has changed the term "recyclable material," which is used in the federal counterpart, to "hazardous waste." The MPCA believes that the treatment standards referred to only apply to hazardous wastes and would not necessarily apply to recyclable materials that may or may not be hazardous wastes. The term "hazardous waste" is more accurate and appropriate to this application.]//

~~Commercial fertilizers that are produced for the general public's use that contain recyclable materials also are not presently subject to regulation provided they meet the same treatment standards or prohibition levels for each recyclable material that they contain. However, zinc-containing fertilizers using hazardous waste K061 that are produced for the general public's use are not presently subject to regulation.~~

[The MPCA is deleting the last paragraph of item B addressing the regulation of fertilizers and is providing new requirements addressing fertilizers in item D, subitems (1) and (2) below.]//

C. Antiskid/deicing uses of slags, which are generated from high temperature metals recovery (HTMR) processing of hazardous waste K061, K062, and F006, in a manner constituting disposal are not covered by the exemption in item B and remain subject to regulation.

[In item C, the MPCA adopts language from required RCRA Amendment 136.2: "Removal of the Conditional Exemption for Certain Slag Residues" = 40 CFR 266.20(c); Further information about the Amendment can be found at 59 FR 43496-43500, August 24, 1994.]//

D. Fertilizers that contain recyclable materials are not subject to regulation provided that:

(1) they are zinc fertilizers that meet the requirements in Code of Federal Regulations, title 40, section 261.4(a)(21), as amended; or

(2) they meet the applicable treatment standards in Code of Federal Regulations, title 40, sections 268.40 to 268.49, as incorporated in part 7045.1390, for each hazardous waste that they contain.

[Item D, addressing the use of fertilizers, is added to incorporate a paragraph that was formerly at the end of item B, subitem (3), along with certain modifications to

make it consistent with the federal counterpart found at 40 CFR 266.20(d). The change is based on RCRA Amendment 200: "Zinc Fertilizers Made from Recycled Hazardous Secondary Materials" = 40 CFR 266.20(d). Further information can be found at 67 FR 48393-48415, July 24, 2002.]//

[For text of subps 1a to 3, see M.R.]

Subp. 4. **Standards applicable to facilities managing wastes that are to be used in a manner that constitutes disposal.** Facilities managing wastes in a manner that constitutes disposal are subject to the following requirements:

A. owners or operators of facilities that store recyclable wastes that are to be used in a manner that constitutes disposal, but who are not the ultimate users of the wastes are subject to all applicable provisions of parts ~~7023.9000 to 7023.9050,~~ 7045.0450 to ~~7045.0534, 7045.0544~~ 7045.0551, and 7045.0552 to ~~7045.0632~~ 7045.0651, and chapter 7001; and

[In item A, the MPCA deletes a citation to chapter 7023 that the MPCA repealed in a prior rulemaking. The MPCA also corrects citations to ranges of rules that changed as parts were added.]//

B. owners or operators of facilities that use recyclable wastes that are to be used in a manner that constitutes disposal are subject to all applicable provisions of parts ~~7023.9000 to 7023.9050,~~ 7045.0450 to ~~7045.0538, 7045.0544~~ 7045.0551, 7045.0552 to ~~7045.0638~~ 7045.0651, and 7045.1390 and chapter 7001.

[In item B, the MPCA makes several changes. First, the MPCA deletes a citation to chapter 7023 that the MPCA repealed in a prior rulemaking. Second, the MPCA corrects a citation to a range of rules that changed as parts were added in this rulemaking. Finally, the MPCA adopts a reference to the land disposal restrictions that would also apply to facilities managing wastes to be used in a manner that constitutes disposal using the cite revised in this rulemaking.]//

7045.0686 SPECIAL REQUIREMENTS FOR MANAGEMENT OF SPENT OR WASTE HOUSEHOLD BATTERIES.

Subpart 1. **Scope.** The requirements of this part apply to operators who collect, store, transport, or reclaim spent or waste household batteries as a part of a household battery management program.

[For text of item A, see M.R.]

B. Operators who collect, transport, or store spent or waste household batteries which are sent for recycling but who do not reclaim them are subject to regulation under subparts 2 and 3, but are not otherwise subject to regulation under parts ~~7023.9000 to 7023.9050,~~ 7045.0205 to ~~7045.1380~~ 7045.1390, and chapter 7001 for such collection, transportation, and storage.

[In item B, the MPCA deletes a citation to chapter 7023 that the MPCA repealed in a prior rulemaking. The MPCA also corrects a citation to a range of rules that changed as parts were added.]//

[For text of items C and D, see M.R.]

[For text of subps 2 to 4, see M.R.]

7045.0692 HAZARDOUS WASTE BURNED FOR ENERGY RECOVERY.

[For text of subps 1 to 4, see M.R.]

Subp. 5. **Standards applicable to marketers of hazardous waste fuel.** Marketers are subject to the requirements in items A to F.

[For text of items A and B, see M.R.]

C. If a marketer is a generator, or becomes a generator by initiating a shipment of hazardous waste fuel, the marketer must comply with parts 7045.0205 to 7045.0320. If the marketer operates a facility, the marketer must comply with parts 7045.0450 to ~~7045.0534~~ 7045.0551. If the marketer is operating a facility under interim status, the marketer must comply with parts 7045.0552 to ~~7045.0632~~ 7045.0651. If the marketer stores hazardous waste, the marketer must comply with the agency's permitting procedures in chapter 7001 ~~and parts 7023.9000 to 7023.9050~~ for storage of hazardous waste.

[In item C, the MPCA corrects two citations to ranges of rules that changed as parts were added. The MPCA also deletes a citation to chapter 7023 that the MPCA repealed in a prior rulemaking.]//

[For text of items D and E, see M.R.]

F. In addition to the applicable record keeping requirements of parts 7045.0205 to 7045.0320, 7045.0450 to ~~7045.0534~~ 7045.0551, and 7045.0552 to ~~7045.0632~~ 7045.0651, a marketer must keep a copy of each certification notice received or sent for three years from the date the marketer last engaged in a hazardous waste fuel marketing transaction with the person who sent or received the certification notice.

[In item F, the MPCA corrects citations to ranges of rules that changed as parts were added.]//

Subp. 6. **Standards applicable to burners of hazardous waste fuel.** Owners and operators of industrial furnaces and boilers identified in subpart 2, item B, that burn hazardous fuel are subject to the requirements in items A to F.

[For text of items A to D, see M.R.]

E. Generators who accumulate waste for longer than the time periods in item D, and burners who receive waste from off-site and store it, must comply with the following requirements:

(1) the agency's permitting procedures in chapter 7001 ~~and parts 7023.9000 to 7023.9050~~ for hazardous waste storage facilities, parts 7045.0205 to 7045.0536, 7045.0544, 7045.0552 to 7045.0632, 7045.1000 to 7045.1030, and ~~7045.1300 to 7045.1380~~ 7045.1390; and

[In subitem (1), the MPCA deletes a citation to chapter 7023 that the MPCA repealed in a prior rulemaking. The MPCA also provides the replacement citation for a repealed range of rules.]//

[For text of subitem (2), see M.R.]

[For text of item F, see M.R.]

7045.0800 MIXTURES OF USED OIL AND HAZARDOUS WASTE.

[For text of subps 1 and 2, see M.R.]

Subp. 3. **Rebuttable presumption of mixing.** Except as provided in items A to C, used oil containing more than 1,000 ppm total halogens is presumed to have been mixed with a halogenated hazardous waste listed in part 7045.0135, and thus is subject to

regulation as a listed hazardous waste. Persons may rebut this presumption by demonstrating that the used oil does not contain hazardous waste. Demonstration must either involve applying knowledge of the source of halogens or the use of an analytical method from Environmental Protection Agency document SW-846, ~~Edition III, (such as method 8010A or 8021)~~ as incorporated by reference in part 7045.0065, item D, to show that the used oil does not contain greater than 100 ppm of any individual halogenated hazardous constituent listed in part 7045.0139.

[In subpart 3, the MPCA revises language to more accurately identify the prescribed analytic method. The MPCA also provides a clearer reference to where it is incorporated into these rules.]//

[For text of items A to C, see M.R.]

Subp. 4. **Characteristic waste.** Mixtures of used oil and hazardous waste that solely exhibits one or more of the hazardous waste characteristics identified in part 7045.0131 and mixtures of used oil and hazardous waste that is listed in part 7045.0135 solely because it exhibits one or more of the characteristics of hazardous waste identified in part 7045.0131 are subject to:

[For text of item A, see M.R.]

B. except as provided in item C, regulation as used oil under parts 7045.0790 to 7045.0990 and regulation under the land disposal restrictions of ~~parts 7045.1300 to 7045.1380~~ part 7045.1390, if the resultant mixture does not exhibit any characteristic of hazardous waste identified in part 7045.0131; or

[In item B, the MPCA provides the replacement citation for a repealed range of rules.]//

[For text of item C, see M.R.]

7045.0805 WASTE CONTAINING OR CONTAMINATED WITH USED OIL.

A. Waste contaminated with used oil that is destined for disposal is subject to evaluation under parts 7045.0102 to ~~7045.0143~~ 7045.0155 to determine if it is hazardous waste, and the appropriate solid or hazardous waste management standards based on the results of the evaluation, unless the waste is:

[In item A, the MPCA corrects a citation to a range of rules that changed as parts were added.]//

[For text of subitems (1) and (2), see M.R.]

[For text of items B to E, see M.R.]

7045.0855 STANDARDS FOR USED OIL GENERATORS.

[For text of subpart 1, see M.R.]

Subp. 2. **Storage.**

A. Used oil generators shall comply with all applicable spill prevention, control, and countermeasures requirements of Code of Federal Regulations, title 40, part 112, as amended, in addition to the requirements of this part. Used oil generators shall also comply with the underground storage tank standards of ~~Code of Federal Regulations, title 40, part 280,~~ chapter 7150 for used oil stored in underground tanks, whether or not the

used oil exhibits any characteristic of hazardous waste, in addition to the requirements of this part.

[In item A, the MPCA deletes a reference to the federal underground storage tank standards and replaces it with language to clarify that the State rules governing storage tank standards found in chapter 7150 apply to used oil generators who store used oil in underground tanks. The federal regulations governing underground tanks were in effect before the adoption of the State rules governing underground tanks and a reference to the federal regulations was reasonable. However, now that the State rules are in effect, it is reasonable to delete the redundant reference to the federal regulations. None of these references to existing rules and statutes change the effect of this item.]//

B. Used oil generators who store used oil ~~for more than seven days~~ in aboveground tanks ~~of at least 110 gallons in size~~ are subject to ~~parts 7100.0010 to 7100.0090~~ chapter 7151, in addition to the requirements of this part. Used oil generators who store at least 10,000 gallons of used oil at one time are subject to the requirements of Minnesota Statutes, chapter 115E, to prepare and maintain a discharge prevention and response plan, in addition to the requirements of this part. All used oil generators shall comply with the storage and use requirements of ~~article 79 of~~ the Minnesota ~~Uniform~~ State Fire Code, ~~as incorporated by reference in part 7510.3510~~ chapter 7510, in addition to the requirements of this part.

[In item B, the MPCA removes obsolete and superfluous time and size limits. Appropriate limits are provided in applicable chapter 7151 rules. The MPCA also corrects a citation to repealed chapter 7100 rules that were previously changed and moved to chapter 7151. The MPCA also corrects an obsolete reference to provide the current State Fire Code. These changes maintain the original intent of the rule that above ground storage tank rules, spill prevention and response rules, and State Fire Codes apply to those storing used oil.]//

[For text of items C and D, see M.R.]

Subp. 3. **On-site burning in small burning units designed to burn used oil.** Generators who store used oil in vessels directly connected to burning units shall comply with ~~article 61 of~~ the Minnesota ~~Uniform~~ State Fire Code, ~~as incorporated by reference in part 7510.3510~~ chapter 7510. Generators may burn used oil in burning units designed to burn used oil provided that:

[In subpart 3, the MPCA corrects a reference to the State Fire Code.]//

[For text of items A to D, see M.R.]

E. the unit ~~is used in accordance~~ and its operation comply with the Minnesota ~~Statutes, section 299F.015~~ Fire Code.

[For text of subps 4 and 5, see M.R.]

Subp. 6. **Closure.**

A. Generators who store or process used oil in aboveground tanks must to the extent practical, at closure of the tank system, remove or decontaminate visible residues in tanks, contaminated containment system components, contaminated soils, and structures and equipment contaminated with used oil and manage them as hazardous waste unless the materials are not hazardous waste under parts 7045.0102 to ~~7045.0143~~ 7045.0155.

[In item A, the MPCA corrects a citation to a range of rules that changed as parts were added.]//

B. Owners and operators who store used oil in containers must, at closure, remove containers holding used oils or residues of used oil from the site. The owner or operator must remove or decontaminate used oil residues, contaminated containment system components, contaminated soils, and structures and equipment contaminated with used oil, and manage them as hazardous waste unless the materials are not hazardous waste under parts 7045.0102 to ~~7045.0143~~ 7045.0155.

[In item B, the MPCA corrects a citation to a range of rules that changed as parts were added.]//

[For text of subp 7, see M.R.]

7045.0865 STANDARDS FOR USED OIL TRANSPORTERS AND TRANSFER FACILITIES.

[For text of subps 1 to 6, see M.R.]

Subp. 7. **Used oil discharges.**

[For text of items A to C, see M.R.]

D. An air, rail, highway, or water transporter who has discharged used oil must give notice, if required by Code of Federal Regulations, title 49, section 171.15, as amended, to the National Response Center (800) 424-8802, and report in writing as required by Code of Federal Regulations, title 49, section 171.16, as amended, to the ~~Director, Office of Hazardous Materials Regulations, Materials Transportation Bureau~~ Information Systems Manager, PHH-63, Pipeline and Hazardous Materials Safety Administration, Department of Transportation, Washington, D.C. 20590-0001, or submit an electronic hazardous materials incident report to the Information Systems Manager, DHM-63, Pipeline and Hazardous Materials Safety Administration, Department of Transportation, Washington, D.C. 20590-0001 at http://hazmat.dot.gov.

[In item D, the MPCA follows advice from Minnesota's Department of Transportation to revise language to conform with amended U.S. Department of Transportation regulations.]//

[For text of subp 8, see M.R.]

Subp. 9. **Used oil storage at transfer facilities.** This subpart applies to used oil transfer facilities where used oil is stored for more than 24 hours and no more than 35 days. Transfer facilities where used oil is stored for more than 35 days are subject to regulation under part 7045.0875.

A. Used oil transporters shall comply with all applicable spill prevention, control, and countermeasures requirements of Code of Federal Regulations, title 40, part 112, as amended, in addition to the requirements of this part. Used oil transporters shall also comply with the underground storage tank standards of ~~Code of Federal Regulations, title 40, part 280, as amended,~~ chapter 7150 for used oil stored in underground tanks, whether or not the used oil exhibits any characteristic of hazardous waste, in addition to the requirements of this part.

[In item A, the MPCA deletes a reference to the federal underground storage tank standards and replaces it with language to clarify that the State rules governing storage tank standards found in chapter 7150 apply to used oil transporters who store

used oil in underground tanks. The federal regulations governing underground tanks were in effect before the adoption of the State rules governing underground tanks and a reference to the federal regulations was reasonable. However, now that the State rules are in effect, it is reasonable to delete the redundant reference to the federal regulations. None of these references to existing rules and statutes change the effect of this item.]//

B. Used oil transporters who store used oil ~~for more than seven days~~ in aboveground tanks ~~of at least 110 gallons in size~~ are subject to ~~parts 7100.0010 to 7100.0090~~ chapter 7151, in addition to the requirements of this part. Used oil transporters who store at least 10,000 gallons of used oil at one time are subject to the requirements of Minnesota Statutes, chapter 115E, to prepare and maintain a discharge prevention and response plan, in addition to the requirements of this part. All used oil transporters shall comply with the storage and use requirements of ~~article 79 of~~ the Minnesota ~~Uniform~~ State Fire Code, ~~as incorporated by reference in part 7510.3510~~ chapter 7510, in addition to the requirements of this part.

[In item B, the MPCA removes obsolete and superfluous time and size limits. Appropriate limits are provided in applicable chapter 7151 rules. The MPCA also corrects a citation to repealed chapter 7100 rules that were previously changed and moved to chapter 7151. The MPCA also corrects an obsolete reference to provide the current State Fire Code. These changes maintain the original intent of the rule that above ground storage tank rules, spill prevention and response rules, and State Fire Codes apply to transporters who store used oil.]//

C. Used oil transporters shall not store used oil in units other than containers or tanks and shall ensure that the following requirements for containers and tanks are met. Containers and tanks used to store used oil at transfer facilities must be in good condition, not leaking, and closed. Containers must be equipped with a secondary containment system consisting of dikes, berms, or retaining walls and a floor that covers the entire area within the dikes, berms, or retaining walls, or an equivalent secondary containment system. The entire containment system, including walls and floors, must be sufficiently impervious to used oil to prevent any used oil released into the containment system from migrating out of the system to the soil, groundwater, or surface water. Containers, aboveground tanks, and fill pipes of underground tanks used to store used oil at transfer facilities must be marked with the words "Used Oil." Aboveground tanks used to store used oil at transfer facilities ~~are~~ may also be subject to the secondary containment requirements ~~of parts 7100.0010 to 7100.0090~~ and other requirements in chapter 7151. ~~Double-walled tanks meet this secondary containment requirement.~~

[In item C, the MPCA clarifies that the storage tank standards found in chapter 7151 apply to transfer facilities that store used oil in aboveground tanks. This change does not add new regulation but only clarifies that certain requirements of the above ground tank standards may also apply. The MPCA also is removing a statement that double walled tanks meet the secondary containment requirement for above ground tanks. The requirements for the application of secondary containment are addressed in more detail in chapter 7151 and the MPCA believes it is more appropriate to refer readers to that chapter rather than to simply identify double walled tanks, which is only one of the options allowed for secondary containment.]//

[For text of item D, see M.R.]

[For text of subps 10 to 12, see M.R.]

Subp. 13. **Closure.**

A. Owners and operators who store or process used oil in aboveground tanks must, at closure of the tank system, remove or decontaminate residues in tanks, contaminated containment system components, contaminated soils, and structures and equipment contaminated with used oil and manage them as hazardous waste unless the materials are not hazardous waste under parts 7045.0102 to ~~7045.0143~~ 7045.0155. If the owner or operator demonstrates that not all contaminated soils can be practicably removed or decontaminated as required in this item, then the owner or operator must close the tank system and perform postclosure care in accordance with the closure and postclosure care requirements of part 7045.0638, subpart 4, that apply to hazardous waste landfills.

[In item A, the MPCA corrects a citation to a range of rules that changed as parts were added.]//

B. Owners and operators who store used oil in containers must, at closure, remove containers holding used oils or residues of used oil from the site. The owner or operator must remove or decontaminate used oil residues, contaminated containment system components, contaminated soils, and structures and equipment contaminated with used oil, and manage them as hazardous waste unless the materials are not hazardous waste under parts 7045.0102 to ~~7045.0143~~ 7045.0155.

[In item B, the MPCA corrects a citation to a range of rules that changed as parts were added.]//

[For text of subp 14, see M.R.]

7045.0875 STANDARDS FOR USED OIL PROCESSORS AND REREFINERS.

[For text of subps 1 to 4, see M.R.]

Subp. 5. **Used oil storage and management.**

A. Used oil processors/rerefiners shall comply with all applicable spill prevention, control, and countermeasures requirements of Code of Federal Regulations, title 40, part 112, as amended, in addition to the requirements of this part. Used oil processors/rerefiners shall also comply with the underground storage tank standards of ~~Code of Federal Regulations, title 40, part 280, as amended,~~ chapter 7150 for used oil stored in underground tanks, whether or not the used oil exhibits any characteristic of hazardous waste, in addition to the requirements of this part.

[In item A, the MPCA deletes a reference to the federal underground storage tank standards and replaces it with language to clarify that the State rules governing storage tank standards found in chapter 7150 apply to used oil processors and rerefiners who store used oil in underground tanks. The federal regulations governing underground tanks were in effect before the adoption of the State rules governing underground tanks and a reference to the federal regulations was reasonable. However, now that the State rules are in effect, it is reasonable to delete the redundant reference to the federal regulations. None of these references to existing rules and statutes change the effect of this item.]//

B. Used oil processors/rerefiners who store used oil ~~for more than seven days~~ in aboveground tanks ~~of at least 110 gallons in size~~ are subject to ~~parts 7100.0010 to~~

~~7100.0090~~ chapter 7151, in addition to the requirements of this part. Used oil processors/rerefiners who store at least 10,000 gallons of used oil at one time are subject to the requirements of Minnesota Statutes, chapter 115E, to prepare and maintain a discharge prevention and response plan, in addition to the requirements of this part. All used oil processors/rerefiners shall comply with the storage and use requirements of ~~article 79 of~~ the Minnesota ~~Uniform~~ State Fire Code, ~~as incorporated by reference in part 7510.3510~~ chapter 7510, in addition to the requirements of this part.

[In item B, the MPCA removes obsolete and superfluous time and size limits. Appropriate limits are provided in applicable chapter 7151 rules. The MPCA also corrects a citation to repealed chapter 7100 rules that were previously changed and moved to chapter 7151. The MPCA also corrects an obsolete reference to provide the current State Fire Code. These changes maintain the original intent of the rule that above ground storage tank rules, spill prevention and response rules, and State Fire Codes apply to those storing used oil.]//

C. Used oil processors/rerefiners shall not store used oil in units other than containers or tanks and shall ensure that the following requirements for containers and tanks are met. Containers and tanks used to store used oil at processing/rerefining facilities must be in good condition, not leaking, and closed. Containers must be equipped with a secondary containment system. The secondary containment system must consist of, at a minimum, dikes, berms, or retaining walls, and a floor which covers the entire area within the dike, berm, or retaining wall. An equivalent secondary containment system may be used for containers. The entire containment system, including walls and floor, must be sufficiently impervious to used oil to prevent any used oil released into the containment system from migrating out of the system to the soil, groundwater, or surface water. Containers, aboveground tanks, and fill pipes of underground tanks used to store used oil at transfer facilities must be marked with the words "Used Oil." Aboveground tanks used to store used oil at transfer facilities ~~are~~ may also be subject to the secondary containment requirements ~~of parts 7100.0010 to 7100.0090~~ and other requirements in chapter 7151. ~~Double-walled tanks meet this secondary containment requirement.~~

[In item C, the MPCA clarifies that the storage tank standards found in chapter 7151 apply to used oil processors and rerefiners that store used oil in aboveground tanks. This change does not add new regulation but only clarifies that certain requirements of the aboveground tank standards may also apply in accordance with the requirements of those rules. The MPCA also is removing a statement that double walled tanks meet the secondary containment requirement for above ground tanks. The requirements for the application of secondary containment are addressed in more detail in chapter 7151 and the MPCA believes it is more appropriate to refer readers to that chapter rather than to list just one of the options.]//

[For text of item D, see M.R.]

E. Closure:

(1) Owners and operators who store or process used oil in aboveground tanks must, at closure of the tank system, remove or decontaminate residues in tanks, contaminated containment system components, contaminated soils, and structures and equipment contaminated with used oil, and manage them as hazardous waste unless the materials are not hazardous waste under parts 7045.0102 to ~~7045.0143~~ 7045.0155. If the owner or operator demonstrates that not all contaminated soils can be practicably

removed or decontaminated as required in this subitem, then the owner or operator must close the tank system and perform postclosure care in accordance with the closure and postclosure care requirements of part 7045.0638, subpart 4, that apply to hazardous waste landfills.

[In subitem (1), the MPCA corrects a citation to a range of rules that changed as parts were added.]//

(2) Owners and operators who store used oil in containers must, at closure, remove containers holding used oils or residues of used oil from the site. The owner or operator must remove or decontaminate used oil residues, contaminated containment system components, contaminated soils, and structures and equipment contaminated with used oil, and manage them as hazardous waste unless the materials are not hazardous waste under parts 7045.0102 to ~~7045.0143~~ 7045.0155.

[In subitem (2), the MPCA corrects a citation to a range of rules that changed as parts were added.]//

[For text of subps 6 to 11, see M.R.]

7045.0885 STANDARDS FOR USED OIL BURNERS WHO BURN OFF-SPECIFICATION USED OIL FOR ENERGY RECOVERY.

[For text of subps 1 to 5, see M.R.]

Subp. 6. **Used oil storage.**

A. Applicability of federal storage regulations. Used oil burners must comply with all applicable spill prevention, control, and countermeasures requirements of Code of Federal Regulations, title 40, part 112, as amended, in addition to the requirements of this subpart. Used oil burners must comply with the underground storage tank standards of ~~Code of Federal Regulations, title 40, part 280, as amended,~~ chapter 7150 for used oil stored in underground tanks, whether or not the used oil exhibits any characteristic of hazardous waste, in addition to the requirements of this part.

[In item A, the MPCA deletes a reference to the federal underground storage tank standards and replaces it with language to clarify that the State rules governing storage tank standards found in chapters 7150 apply to used oil burners who store off-specification used oil for energy recovery in underground tanks. The federal regulations governing underground tanks were in effect before the adoption of the State rules governing underground tanks and a reference to the federal regulations was reasonable. However, now that the State rules are in effect, it is reasonable to delete the redundant reference to the federal regulations. None of these references to existing rules and statutes change the effect of this item.]//

B. Used oil burners who store used oil ~~for more than seven days~~ in aboveground tanks ~~of at least 110 gallons in size~~ are subject to ~~parts 7100.0010 to 7100.0090~~ chapter 7151, in addition to the requirements of this subpart. Used oil burners who store at least 10,000 gallons of used oil at one time are subject to the requirements of Minnesota Statutes, chapter 115E, to prepare and maintain a discharge prevention and response plan, in addition to the requirements of this part. All used oil burners shall comply with the storage and use requirements of ~~article 79 of~~ the Minnesota ~~Uniform~~ State Fire Code, ~~as incorporated by reference in part 7510.3510~~ chapter 7510, in addition to the requirements of this part.

[In item B, the MPCA removes obsolete and superfluous time and size limits. Appropriate limits are provided in applicable chapter 7151 rules. The MPCA also corrects a citation to repealed chapter 7100 rules that were previously changed and moved to chapter 7151. The MPCA also corrects an obsolete reference to provide the current State Fire Code. These changes maintain the original intent of the rule that above ground storage tank rules, spill prevention and response rules, and State Fire Codes apply to those storing used oil.]//

C. Used oil burners shall not store used oil in units other than containers or tanks and must ensure that the following requirements for containers and tanks are met. Containers and tanks used to store used oil at burning facilities must be in good condition, not leaking, and closed. Containers must be equipped with a secondary containment system. The secondary containment system must consist of, at a minimum, dikes, berms, or retaining walls, and a floor which covers the entire area within the dike, berm, or retaining wall. An equivalent secondary containment system may be used for containers. The entire containment system, including walls and floor, must be sufficiently impervious to used oil to prevent any used oil released into the containment system from migrating out of the system to the soil, groundwater, or surface water. Containers, aboveground tanks, and fill pipes of underground tanks used to store used oil at transfer facilities must be marked with the words "Used Oil." Aboveground tanks used to store used oil at burning facilities ~~are~~ may also be subject to the secondary containment requirements ~~of parts 7100.0010 to 7100.0090~~ and other requirements in chapter 7151. ~~Double-walled tanks meet this secondary containment requirement.~~

[In item C, the MPCA clarifies that the storage tank standards found in chapter 7151 apply to used oil burners who store used oil in aboveground tanks. This change does not add new regulation but only clarifies that certain requirements of the aboveground tank standards may also apply in accordance with the requirements of those rules. The MPCA also is removing a statement that double walled tanks meet the secondary containment requirement for above ground tanks. The requirements for the application of secondary containment are addressed in more detail in chapter 7151 and the MPCA believes it is more appropriate to refer readers to that chapter rather than to simply identify double walled tanks, which is only one of the options allowed for secondary containment.]//

[For text of item D, see M.R.]

[For text of subps 7 to 9, see M.R.]

Subp. 10. **Closure.**

A. Owners and operators who store or process used oil in aboveground tanks must, at closure of the tank system, remove or decontaminate residues in tanks, contaminated containment system components, contaminated soils, and structures and equipment contaminated with used oil, and manage them as hazardous waste unless the materials are not hazardous waste under parts 7045.0102 to ~~7045.0143~~ 7045.0155. If the owner or operator demonstrates that not all contaminated soils can be practicably removed or decontaminated as required in this item, then the owner or operator must close the tank system and perform postclosure care in accordance with the closure and postclosure care requirements of part 7045.0638, subpart 4, that apply to hazardous waste landfills.

[In item A, the MPCA corrects a citation to a range of rules that changed as parts were added.]//

B. Owners and operators who store used oil in containers must, at closure, remove containers holding used oils or residues of used oil from the site. The owner or operator must remove or decontaminate used oil residues, contaminated containment system components, contaminated soils, and structures and equipment contaminated with used oil, and manage them as hazardous waste unless the materials are not hazardous waste under parts 7045.0102 to ~~7045.0143~~ 7045.0155.

[In item B, the MPCA corrects a citation to a range of rules that changed as parts were added.]//

[For text of subp 11, see M.R.]

7045.1390 LAND DISPOSAL RESTRICTIONS.

Subpart 1. **Incorporation of federal land disposal restrictions.** Code of Federal Regulations, title 40, part 268, as amended, land disposal restrictions, is incorporated by reference, except as provided in subparts 2 to 5.

[In subpart 1, the MPCA incorporates 40 CFR 268, Land Disposal Restrictions, by reference, as amended. The MPCA has gone through a long process of addressing the federal land disposal restrictions in the State rules. The MPCA has amended the rules several times over many years to add new elements of the federal land disposal restrictions to the State rules as they were issued by EPA. Up to this point the MPCA has used a combination of incorporation by references and adopting the federal language into the State rules. In this rulemaking, the MPCA has decided to repeal the previously adopted land disposal restriction language and to simply incorporate all of the federal land disposal restrictions by reference. The MPCA believes this is reasonable for three reasons.//

First, the MPCA is required to adopt the land disposal restrictions to maintain hazardous waste program authorization. The land disposal restrictions are more stringent elements of the hazardous waste program and therefore required (while the MPCA may decline to adopt federal amendments that reduce the stringency of existing land disposal restrictions, the main body of land disposal restrictions is a required element). Secondly, the federal land disposal restrictions are at this time essentially complete. Although the EPA will continue to amend and refine the requirements, there are no longer any major elements that remain to be adopted. The MPCA's piecemeal process of addressing different elements of the land disposal restrictions can now be more appropriately replaced by a single incorporation by reference to the full set of federal land disposal restrictions. Finally, for the reasons discussed in Part IV of this Statement, the MPCA believes that incorporating by reference is a reasonable and effective way to keep the State rules consistent with those aspects of the federal regulations that the MPCA does not anticipate modifying to meet State only concerns.//

One significant exception to the MPCA's incorporating the land disposal restrictions by reference is that the MPCA considered and rejected the federal language found at 40 CFR 268.2(g) and 268.2(h), the definitions of debris and hazardous debris, and in other sections of 40 CFR part 268 that would allow hazardous debris to be disposed in landfills. The MPCA is concerned that hazardous debris may easily be contaminated

with mercury that would be listed or TCLP hazardous waste and that disposal of such mercury contaminated debris in landfills is not adequately protective. Minnesota's environment is sensitive to mercury contamination. The MPCA has placed a high priority on efforts to reduce mercury in the environment. The MPCA believes that it is reasonable to decline to adopt these federal amendments that would reduce the management standards for hazardous debris which could easily be contaminated with mercury. Even though the federal regulations that address the management of hazardous debris are not optional provisions, RCRA allows authorized states to be more stringent than EPA. Since the MPCA finds unacceptable the potential risk for releasing mercury allowed by the EPA's hazardous debris exclusion, it is choosing not to incorporate that exclusion.//

In this rulemaking to amend the land disposal restrictions, the MPCA is incorporating language from the following RCRA Amendments except as described in subparts 2-5 (note that later RCRA amendments has supplanted certain content of earlier amendments):

- **Required RCRA Amendment 95: "Land Disposal Restrictions for Electric Arc Furnace Dust (K061)" = 40 CFR 268.41(a)/Table CCWE, 268.41(b), and 268.42(a)/Table 2; regarding the need for and reasonableness of this amendment, the MPCA agrees with and is relying on the EPA's rationale found in 56 FR 41164-41178, August 19, 1991. Some tables and other content from this amendment have been supplanted by subsequent amendments. For example, the information formerly in 40 CFR 268.41 is now in 40 CFR 268.40. Also, some tables have since been repealed.//**
- **Required RCRA Amendment 109: "Land Disposal Restrictions for Newly Listed Wastes and Hazardous Debris" = 40 CFR 268.5(h)(2)(ii, iv-vi); 268.7(a)(1)(iii-v); 268.7(a)(2); 268.7(a)(3)(iv-vi); 268.7(a)(4); 268.7(b)(4); 268.7(b)(5); 268.7(d); 268.7(d)(1); 268.7(d)(1)(i-iii); 268.7(d)(2); 268.7(d)(3); 268.7(d)(3)(i-iii); 268.9(d); 268.9(d)(1)(i-iii); 268.9(d)(2); 268.14(a-c); 268.36(a-h); 268.36(h)(1-4); 268.36(i); 268.40(b, d); 268.41(a); 268.41(a)/Table CCWE; 268.41(c); 268.42/Table 2; 268.42(b-d); 268.43/Table CCW; 268.45(a); 268.45(a)(1-5); 268.45(b); 268.45(b)(1-3); 268.45(c); 268.45(d)(1); 268.45(d)(1)(i-ii); 268.45(d)(2-5); 268.45/Table 1; 268.46; 268.46/Table 1; 268.50(a)(1-2); 268 Appendix II. Subp. 2. **General additions, modifications, or exceptions to incorporation of regulations.**

[In subpart 2, the MPCA provides general exceptions to its incorporations in subpart 1.]//

A. Part 7045.0090, adoption and incorporation by reference, also applies.

[In item A, the MPCA refers readers to the general rule part that governs adoption and incorporation by reference.]//

B. The agency does not incorporate the definitions of debris or hazardous debris in Code of Federal Regulations, title 40, section 268.2, or the regulations related to debris and hazardous debris throughout Code of Federal Regulations, title 40, part 268, including the treatment standards for hazardous debris in section 268.45. Wastes that

would be federally regulated as debris or hazardous debris are regulated as hazardous waste.

[In item B, as discussed in the introduction to this part, the MPCA is specifically declining to incorporate the land disposal restrictions relating to hazardous debris. The effect of this will be that hazardous debris will not be excluded from land disposal treatment standards in Minnesota.]//

Subp. 3. **Exceptions or additions to Code of Federal Regulations, title 40, subpart A.**

A. The agency does not incorporate Code of Federal Regulations, title 40, section 268.1(c)(3), allowing disposal into an injection well.

[In item A, the MPCA is declining to allow the subsurface injection of hazardous waste because of Minnesota's existing laws banning disposal of waste into the saturated or unsaturated zones (see the discussion in Part 7045.0071). The use of an injection well for waste disposal is not allowed in Minnesota. Thus, it is reasonable to clarify that although injection is referenced in the EPA's land disposal restrictions, Minnesota prohibits this practice and is not adopting the EPA regulations in 40 CFR part 268 related to injection wells.]//

B. References to "EPA" in Code of Federal Regulations, title 40, sections 268.1(e)(3) and 268.2(j) mean the federal Environmental Protection Agency.

[In item B, the MPCA clarifies that in the cited sections, 40 CFR 267.1(e)(3), Wastes identified or listed as hazardous after November 8, 1984 for which EPA has not promulgated land disposal prohibitions or treatment standards, and 40 CFR 268.2(j), Inorganic metal-bearing waste is one for which EPA has established treatment standards for metal hazardous constituents, and which does not otherwise contain significant organic or cyanide content which are referenced in 40 CFR 268.3(c)(1), and is specifically listed in appendix XI of this part. In these sections, the term 'EPA' will continue to refer to the EPA and will not, through operation of part 7045.0090, be considered to refer to the MPCA. This is reasonable because the activities referenced at each of these two provisions (establishing treatment standards) are EPA actions that cannot be conducted by a state.]//

C. The agency does not incorporate the definitions found in Code of Federal Regulations, title 40, section 268.2, paragraph a, c, d, e, f, g, or h.

[In item C, the MPCA is not adopting certain definitions found in 40 CFR 268.2. For the definitions in 268.2(a-f), the MPCA already has definitions of these terms in part 7045.0020. In some instances, those definitions differ from the EPA'S definitions in 40 CFR 268.2. The MPCA believes that it is appropriate to continue to use in the land disposal restrictions the same definitions that the MPCA uses for its other hazardous waste rules to ensure that the same types of waste are consistently regulated. The MPCA is also not adopting the EPA's definitions for the terms "debris" or "hazardous debris," in 40 CFR 268.2 (g) and (h). As noted in subpart 2 above, the MPCA is not adopting the EPA's exclusions related to debris and hazardous debris. The MPCA is incorporating the EPA's definitions of the terms in 40 CFR 268.2(i-k) because the MPCA does not have definitions for these terms. These definitions are related to required RCRA Amendment 151: "Land Disposal Restrictions Phase III-Decharacterized Wastewaters, Carbamate Wastes, and Spent Potliners" = 40 CFR 268.2; as supported at 61 FR 15566-15660, April 8, 1996; as amended at 61 FR 15660-

15668, April 8, 1996; 61 FR 19117, April 30, 1996; 61 FR 33680-33690, June 28, 1996; 61 FR 36419-36421, July 10, 1996; 61 FR 43924-43931, August 26, 1996; and 62 FR 7502-7600, February 19, 1997.]//

D. References in Code of Federal Regulations, title 40, section 268.7(a)(9)(iii), to D001 to D043 do not include D009.

[In item D, the MPCA follows the EPA's advice to states incorporating federal regulations by reference to correct an error that appeared in 40 CFR 268.7(s)(9)(iii). The EPA is in the process of correcting a number of errors in the CFR. Until that process is completed, this simply clarifies the EPA's intent for this range or waste codes in this provision.]//

E. The agency does not incorporate Code of Federal Regulations, title 40, section 268.5, governing procedures for case-by-case extensions to an effective date. That section is administered by the EPA.

[In item E, the MPCA cannot incorporate 40 CFR 268.5, because the RCRA does not allow the EPA to delegate to the states its authority to issue these extensions.]//

F. The agency does not incorporate Code of Federal Regulations, title 40, section 268.6, governing petitions to allow land disposal of a waste prohibited under subpart C. Part 7045.0075, subpart 9, applies.

[In item F, the MPCA cannot incorporate 40 CFR 268.6, because the RCRA does not allow the EPA to delegate to the states its authority to issue no-migration petitions. While the EPA approves federal petitions, State rules require that no-migration petitions also be approved by the MPCA through a petition process found in part 7045.0075, subpart 12.]//

G. The agency does not incorporate Code of Federal Regulations, title 40, section 268.4(a)(3)(ii) and (iii), relating to waivers or modifications of surface impoundment requirements.

[In item G, the MPCA chooses not to incorporate 40 CFR 268.4(a)(3)(ii) to allow waivers or modifications of the liner requirements applicable to surface impoundments. The MPCA believes that existing part 7045.0532, subpart 3, provides an equivalent standards to those offered under 268.4(3)(ii). The MPCA does not want to establish a new process by which it will issue waivers to those requirements. In Minnesota, a person can seek a variance to hazardous waste rule requirements through the process established in part 7045.0060. Similarly, the MPCA chooses not to incorporate 40 CFR 268.4(a)(3)(iii) which allows waivers based on a demonstration of no migration. Existing State rules provide the owners or operators of any land disposal facility the ability to demonstrate no migration through the petition process in part 7045.0075, subpart 12. The MPCA finds it unnecessary to duplicate this existing mechanism, so is declining to incorporate 40 CFR 268.4(a)(3)(iii) by reference.]//

Subp. 4. **Exceptions or additions to Code of Federal Regulations, title 40, subpart B.** The agency does not incorporate the EPA schedule in Code of Federal Regulations, title 40, section 268.13, for wastes identified or listed after November 8, 1984. That section is administered by the Environmental Protection Agency.

[In subpart 4, the MPCA cannot incorporate 40 CFR 268.13, because the RCRA does not allow the EPA to delegate to the states its authority to provide the schedule by which the EPA must evaluate wastes for land disposal restrictions.]//

Subp. 5. **Exceptions or additions to Code of Federal Regulations, title 40, subpart D.**

A. The agency does not incorporate Code of Federal Regulations, title 40, section 268.42(b), governing the demonstration of an alternative treatment method. That section is administered by the EPA.

[In item A, the MPCA cannot incorporate 40 CFR 268.42(b), because the RCRA does not allow the EPA to delegate to the states its authority to review and approve alternative treatment methods.]//

B. The agency does not incorporate Code of Federal Regulations, title 40, section 268.44, paragraphs (a) to (g) or (o), governing variance from a treatment standard and wastes excluded in various states. That section is administered by the EPA.

[In item B, the MPCA cannot incorporate 40 CFR 268.44(a)-(g), because the RCRA does not allow the EPA to delegate to the states its authority to provide generators the option of seeking a variance from a specific treatment standard. The MPCA chooses not to incorporate 40 CFR part 268.44(o) relating to other state activities because it is not relevant to any MPCA function.]//

REPEALER. Minnesota Rules, parts 7045.0020, subpart 45a; 7045.0075, subparts 8 and 10; 7045.0135, subparts 1, 2, 2a, 3, and 4; 7045.0139, subpart 2; 7045.0141, subparts 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, and 23; 7045.0143, subparts 2, 3, 4, 5, 6, 7, 9, 10, 12, 13, 14, 15, 17, 20, 21, 23, 25, and 27; 7045.0544, subparts 2 and 3; 7045.1300; 7045.1305; 7045.1309; 7045.1310; 7045.1315; 7045.1320; 7045.1325; 7045.1330; 7045.1333; 7045.1334; 7045.1335; 7045.1339; 7045.1350; 7045.1355; 7045.1358; 7045.1360; and 7045.1380, are repealed.

[Finally, in the REPEALER, the Revisor of Minnesota Statutes, who's office is responsible for keeping the official source of Minnesota Rules, provides a compilation of the provisions removed during the course of this rulemaking.]//

Pollution Control Agency

Proposed Permanent Rules Relating to Hazardous Waste

7001.0150 TERMS AND CONDITIONS OF PERMITS.

[For text of subpart 1, see M.R.]

Subp. 2. **Special conditions.** Each draft and final permit must contain conditions necessary for the permittee to achieve compliance with applicable Minnesota or federal statutes or rules, including each of the applicable requirements in parts 7045.0450 to ~~7045.0642~~ 7045.0651 and ~~7045.1300 to 7045.1380~~ 7045.1390, and any conditions that the agency determines to be necessary to protect human health and the environment. If applicable to the circumstances, the conditions must include:

[For text of items A to D, see M.R.]

Subp. 3. **General conditions.** Unless specifically exempted by statute or rule, each draft and final permit must include the following general conditions and the agency shall incorporate these conditions into all permits either expressly or by specific reference to this part:

[For text of items A to O, see M.R.]

P. Compliance with ~~an~~ a RCRA permit during its term constitutes compliance, for purposes of enforcement, with subtitle C of RCRA except for those requirements not included in the permit which:

(1) become effective by statute;

(2) are adopted under ~~parts 7045.1300 to 7045.1380~~ part 7045.1390, restricting the placement of hazardous wastes in or on the land; ~~or~~

(3) are adopted under parts 7045.0450 to 7045.0551 regarding leak detection systems for new and replacement surface impoundment, waste pile, and landfill units, and lateral expansions of surface impoundment, waste pile, and landfill units. The

leak detection system requirements include double liners, construction quality assurance programs, monitoring, action leakage rates, and response action plans, and will be implemented through the procedures of part 7001.0730, minor permit modifications; or

(4) are adopted under parts 7045.0645, 7045.0647, and 7045.0648, limiting air emissions.

7001.0501 UNDERGROUND INJECTION.

References to underground injection of waste throughout this chapter are subject to Minnesota statutes and rules prohibiting the discharge of waste or pollutants to the saturated or unsaturated zones.

7001.0520 PERMIT REQUIREMENTS.

[For text of subps 1 to 3, see M.R.]

Subp. 4. **Termination of eligibility for permit by rule.** The eligibility of an owner or operator of an elementary neutralization unit, a pretreatment unit, a wastewater treatment unit, or a combustion waste facility to be permitted under this part is subject to termination by the agency after notice and opportunity for a contested case hearing or a public informational meeting if the agency makes any of the findings set forth in items A to D. An owner or operator whose eligibility to be permitted under this part has been terminated shall apply for and obtain an individual permit under these parts. The following findings constitute justification for the commissioner to commence proceedings to terminate eligibility:

[For text of items A to C, see M.R.]

D. that under the circumstances, in order to protect human health or the environment, the permitted facility should be subject to the requirements of parts ~~7045.0452 to 7045.0544~~ 7045.0450 to 7045.0551.

Subp. 5. **Closure by removal.** Owners or operators of surface impoundments, land treatment units, and waste piles closing by removal or decontamination under parts 7045.0552 to ~~7045.0642~~ 7045.0651 must obtain a postclosure permit unless they can demonstrate to the agency that the closure met the requirements for closure by removal or decontamination in part 7045.0532, subpart 7; 7045.0534, subpart 7; or 7045.0536, subpart 8. The demonstration may be made in the following ways:

[For text of items A and B, see M.R.]

[For text of subps 6 and 7, see M.R.]

7001.0550 CONTENTS OF PART A OF APPLICATION.

Part A of the application must contain the following information:

[For text of items A to D, see M.R.]

E. a list of the waste designated under parts 7045.0102 to ~~7045.0143~~ 7045.0155 as hazardous to be treated, stored, or disposed of by the applicant and an estimate of the quantity of each hazardous waste to be treated, stored, or disposed of annually by the applicant;

[For text of items F to J, see M.R.]

7001.0560 GENERAL INFORMATION REQUIREMENTS FOR PART B OF APPLICATION.

Part B of the application must contain the following information:

[For text of item A, see M.R.]

B. Chemical and physical analyses of the hazardous wastes to be handled at the facility. At a minimum, these analyses must contain all the information that ~~is necessary~~ must be known to treat, store, or dispose of the wastes properly in accordance with parts 7045.0450 to 7045.0551.

[For text of items C and D, see M.R.]

E. A copy of the general inspection schedule required by part 7045.0452, subpart 5, item B, including, if applicable, the information in parts 7045.0526, subpart 5; 7045.0528, subpart 7; 7045.0532, subpart 5; 7045.0534, subparts 5 and 6; 7045.0536, subpart 4; 7045.0538, subpart 5; 7045.0539, subpart 3; and 7045.0542, subpart 7; and the process vent and equipment leak standards in Code of Federal Regulations, title 40, sections 264.1033, 264.1052, 264.1053, ~~and~~ 264.1058, as amended, and sections 264.1084, 264.1085, 264.1086, and 264.1088, as incorporated in part 7045.0540.

[For text of items F to U, see M.R.]

V. For land disposal facilities, if a case-by-case extension has been approved ~~under part 7045.0075, subpart 8~~ by the United States Environmental Protection Agency, under Code of Federal Regulations, title 40, section 268.5, or a petition has been granted under part 7045.0075, subpart 9, a copy of the notice of approval for the extension or petition is required.

7001.0570 PART B INFORMATION REQUIREMENTS FOR FACILITIES THAT STORE CONTAINERS OF HAZARDOUS WASTE.

Except as otherwise provided in part 7045.0526, subpart 1, if the applicant proposes to store containers of hazardous waste, the applicant shall furnish the following information in addition to the information required by part 7001.0560:

[For text of items A to F, see M.R.]

G. Information on air emission controls as required in part 7001.0635.

7001.0580 PART B INFORMATION REQUIREMENTS FOR STORAGE OR TREATMENT TANKS.

Except as otherwise provided in part 7045.0528, subpart 1, if the applicant proposes to use tanks to store or treat hazardous waste, the applicant shall furnish the following information, in writing, in addition to the information required by part 7001.0560:

[For text of items A to H, see M.R.]

I. description of controls and practices to prevent spills and overflows, as required under part 7045.0528, subpart 6, item B; ~~and~~

J. for tank systems in which ignitable, reactive, or incompatible wastes are to be stored or treated, a description of how operating procedures and tank system and facility design will achieve compliance with the requirements of part 7045.0528, subparts 10 and 11 ; and

K. information on air emission controls as required in part 7001.0635.

7001.0590 PART B INFORMATION REQUIREMENTS FOR SURFACE IMPOUNDMENTS.

Except as otherwise provided in part 7045.0532, subpart 1, if the applicant proposes to store, treat, or dispose of hazardous waste in surface impoundment facilities, the applicant shall submit detailed plans and specifications accompanied by an engineering report which collectively includes the following information in addition to the information required by part 7001.0560:

[For text of items A to J, see M.R.]

K. A waste management plan for hazardous waste F028 and treatment residues and soil contaminated with hazardous wastes F020, F021, F022, F023, F026, F027, and F028 listed under part 7045.0135, subpart ~~2~~ 1a, item B, describing how the surface impoundment is or will be designed, constructed, operated, and maintained to meet the requirements of part 7045.0532, subpart 10. This plan must address the following items as specified in part 7045.0532, subpart 10:

[For text of subitems (1) to (4), see M.R.]

[For text of items L and M, see M.R.]

N. Information on air emission controls as required in part 7001.0635.

7001.0600 PART B INFORMATION REQUIREMENTS FOR WASTE PILES.

Except as otherwise provided by part 7045.0534, subpart 1, if the applicant proposes to store or treat hazardous waste in waste piles, the applicant shall furnish the information required by items A to M in addition to the information required by part 7001.0560:

[For text of items A to K, see M.R.]

L. A waste management plan for hazardous waste F028 and treatment residues and soils contaminated with hazardous wastes F020, F021, F022, F023, F026, F027, and F028 listed under part 7045.0135, subpart ~~2~~ 1a, item B, describing how a waste pile that is not enclosed is or will be designed, constructed, operated, and maintained to meet the requirements of part 7045.0534, subpart 10. This submission must address the following items as specified in part 7045.0534, subpart 10:

[For text of subitems (1) to (4), see M.R.]

[For text of item M, see M.R.]

7001.0610 PART B INFORMATION REQUIREMENTS FOR LAND TREATMENT.

Except as otherwise provided by part 7045.0536, subpart 1, if the applicant proposes to use land treatment to dispose of hazardous waste, the applicant shall furnish the information designated in items A to I in addition to the information required by part 7001.0560:

[For text of items A to H, see M.R.]

I. A waste management plan for hazardous waste F028 and treatment residues and soils contaminated with hazardous wastes F020, F021, F022, F023, F026, F027, and F028 listed under part 7045.0135, subpart ~~2~~ 1a, item B, describing how a land treatment facility is or will be designed, constructed, operated, and maintained to meet the requirements of part 7045.0536, subpart 11. This plan must address the following items as specified in part 7045.0536, subpart 11:

[For text of subitems (1) to (4), see M.R.]

7001.0620 PART B INFORMATION REQUIREMENTS FOR LANDFILLS.

Except as otherwise provided by part 7045.0538, subpart 1, if the applicant proposes to dispose of hazardous waste in a landfill, the applicant shall furnish the information designated in items A to L in addition to the information required by part 7001.0560:

[For text of items A to I, see M.R.]

J. A waste management plan for hazardous waste F028 and treatment residues and soils contaminated with hazardous wastes F020, F021, F022, F023, F026, F027, and F028 listed under part 7045.0135, subpart ~~2~~ 1a, item B, describing how a landfill is or will be designed, constructed, operated, and maintained to meet the requirements of part 7045.0538, subpart 13. This plan must address the following items as specified in part 7045.0538, subpart 13:

[For text of subitems (1) to (4), see M.R.]

[For text of items K and L, see M.R.]

7001.0630 PART B INFORMATION AND SPECIAL PROCEDURAL REQUIREMENTS FOR THERMAL TREATMENT FACILITIES.

Except as provided in part 7045.0542, subpart 1, if the applicant proposes to treat or dispose of hazardous waste by using thermal treatment, the applicant shall fulfill the requirements of item A, B, or C in addition to the information requirements of part 7001.0560, and the commissioner shall fulfill the requirements of item D:

[For text of items A and B, see M.R.]

C. The applicant shall perform an analysis of each waste or mixture of waste to be treated by using the analytical techniques set forth in the Environmental Protection Agency document SW-846, as ~~referenced~~ incorporated in part 7045.0065, or by using

techniques found by the commissioner to be equivalent to them. The applicant shall submit all of the following information:

(1) The results of each waste analysis performed, including:

[For text of units (a) to (d), see M.R.]

(e) an approximate quantification of the hazardous constituents identified in the waste, within the precision specified by Environmental Protection Agency document SW-846, as incorporated in part 7045.0065;

[For text of units (f) and (g), see M.R.]

[For text of subitems (2) to (8), see M.R.]

[For text of item D, see M.R.]

7001.0635 SPECIFIC PART B INFORMATION REQUIREMENTS FOR AIR EMISSION CONTROLS FOR TANKS, SURFACE IMPOUNDMENTS, AND CONTAINERS.

Except as otherwise provided in part 7045.0450, owners and operators of tanks, surface impoundments, or containers that use air emission controls in accordance with the requirements of part 7045.0540 must provide the additional information described in items A to G.

A. Documentation for each floating roof cover installed on a tank subject to Code of Federal Regulations, title 40, section 264.1084(d)(1) or (d)(2), as incorporated in part 7045.0540, that includes information prepared by the owner or operator or provided by the cover manufacturer or vendor describing the cover design, and certification by the owner or operator that the cover meets the applicable design specifications under Code of Federal Regulations, title 40, section 264.1084(e)(1) or (f)(1), as incorporated in part 7045.0540.

B. Identification of each container area subject to the requirements of part 7045.0540 and certification by the owner or operator that the requirements of this part are met.

C. Documentation for each enclosure used to control air pollutant emissions from tanks or containers in accordance with the requirements of Code of Federal Regulations, title 40, section 264.1084(d)(5) or 264.1086(e)(1)(ii), as incorporated in part 7045.0540, that includes records for the most recent set of calculations and measurements performed by the owner or operator to verify that the enclosure meets the criteria of a permanent total enclosure as specified in "Procedure T - Criteria for and Verification of a Permanent or Temporary Total Enclosure" under Code of Federal Regulations, title 40, section 52.741, Appendix B, as amended.

D. Documentation for each floating membrane cover installed on a surface impoundment in accordance with the requirements of Code of Federal Regulations, title 40, section 264.1085(c), as incorporated in part 7045.0540, that includes information prepared by the owner or operator or provided by the cover manufacturer or vendor describing the cover design, and certification by the owner or operator that the cover meets the specifications under Code of Federal Regulations, title 40, section 264.1085(c)(1), as incorporated in part 7045.0540.

E. Documentation for each closed-vent system and control device installed in accordance with the requirements of Code of Federal Regulations, title 40, section 264.1087, as incorporated in part 7045.0540, that includes design and performance information as specified in Code of Federal Regulations, title 40, section 270.24(c) and (d), as amended.

F. An emission monitoring plan for both Code of Federal Regulations, title 40, part 60, Appendix A, Method 21, as amended, and control device monitoring methods. This plan shall include the following information: monitoring points, monitoring methods

for control devices, monitoring frequency, procedures for documenting exceedances, and procedures for mitigating noncompliances.

G. The schedule of implementation required under Code of Federal Regulations, title 40, section 265.1082, as incorporated in part 7045.0645, when an owner or operator of a facility subject to part 7045.0645 cannot comply with part 7045.0540 by the date of permit issuance.

7001.0650 INTERIM STATUS.

Subpart 1. **Qualifying for interim status.** Except as provided in subpart 2, during the period after the submission of Part A of a hazardous waste facility permit application to the Environmental Protection Agency or to the commissioner and before a final determination by the agency on the permit application, the owner or operator of an existing hazardous waste facility or a facility in existence on the effective date of statutory or regulatory amendments under the Resource Conservation and Recovery Act that render the facility subject to the requirement to have a hazardous waste facility permit shall be considered to be in compliance with the requirement to obtain a permit if the commissioner finds that the Environmental Protection Agency has granted the owner or operator interim status or if the commissioner finds:

[For text of item A, see M.R.]

B. that the owner or operator is in compliance with parts 7045.0552 to ~~7045.0642~~ 7045.0651;

[For text of items C and D, see M.R.]

[For text of subps 2 and 3, see M.R.]

Subp. 4. **Prohibitions.** During the interim status period, an owner or operator shall not:

[For text of items A to C, see M.R.]

D. alter a hazardous waste facility in a manner that amounts to a reconstruction of the facility. For the purpose of this part, reconstruction occurs when the capital investment in the modification of the facility exceeds 50 percent of the capital cost of a comparable new hazardous waste facility. Reconstruction does not include changes made solely for the purpose of complying with the requirements of part 7045.0628, subpart 4, for tanks and ancillary equipment, or to treat or store in containers ~~or~~, tanks, or containment buildings hazardous wastes subject to the land disposal restrictions under ~~parts 7045.1300 to 7045.1380~~ part 7045.1390 or RCRA section 3004, if the changes are made solely to comply with ~~parts 7045.1300 to 7045.1380~~ part 7045.1390 or RCRA section 3004.

Subp. 5. **Changes during interim status.** Except as provided in item F, an owner or operator who has interim status may conduct the activities prescribed in items A to F.

[For text of items A and B, see M.R.]

C. The owner or operator may add new processes or change the processes for the treatment, storage, or disposal of hazardous waste if, before implementation of the addition or change, the owner or operator submits a revised Part A of the permit application and an explanation of the need for the addition, and if the commissioner approves the addition or change in writing. The commissioner shall approve the addition or change if the commissioner finds that:

[For text of subitem (1), see M.R.]

(2) the addition or change is necessary for the owner or operator to comply with federal, Minnesota, or local requirements, including the interim status standards in parts 7045.0552 to ~~7045.0642~~ 7045.0651.

[For text of items D and E, see M.R.]

F. Except as specifically allowed under this item, changes listed under items A to E may not be made if they amount to reconstruction of the hazardous waste management

facility. Reconstruction occurs when the capital investment in the changes to the facility exceeds 50 percent of the capital cost of a comparable entirely new hazardous waste management facility. If all other requirements are met, the following changes may be made even if they amount to reconstruction:

[For text of subitems (1) to (5), see M.R.]

(6) changes to treat or store, in tanks ~~or~~, containers, or containment buildings, hazardous wastes subject to land disposal restrictions imposed by ~~parts 7045.1300 to 7045.1380~~ part 7045.1390 or RCRA section 3004, provided that ~~the~~ such changes are made solely for the purpose of complying with ~~parts 7045.1300 to 7045.1380~~ part 7045.1390 or RCRA section 3004.

Subp. 6. **Compliance with interim status standards.** During the interim status period the owner or operator shall comply with the interim status standards in parts 7045.0552 to ~~7045.0642~~ 7045.0651.

Subp. 7. **Termination of interim status.** Interim status terminates automatically when the agency has taken final administrative action on the permit application or when terminated by Code of Federal Regulations, title 40, section 270.73(c) to (g), as amended. The following constitute justification for the commissioner to commence proceedings to terminate interim status:

[For text of item A, see M.R.]

B. the commissioner finds that the owner or operator is in violation of any of the requirements of parts 7045.0552 to ~~7045.0642~~ 7045.0651.

7001.0690 EMERGENCY PERMITS.

[For text of subps 1 to 5, see M.R.]

Subp. 6. **Requirements.**The emergency permit must incorporate, to the extent possible under the circumstances, all applicable requirements of parts 7001.0500 to 7001.0730, ~~7045.0452 to 7045.0544~~ 7045.0450 to 7045.0551, 7045.0652, and 7045.0655.

[For text of subps 7 and 8, see M.R.]

7001.0700 HAZARDOUS WASTE THERMAL TREATMENT FACILITY PERMITS.

[For text of subps 1 and 2, see M.R.]

Subp. 3. **Trial burn plan.** An applicant shall submit to the commissioner a trial burn plan with Part B of the permit application. The trial burn plan must include the following information:

A. the results of an analysis of each waste or mixture of wastes to be burned, that uses the analytical techniques set forth in the United States Environmental Protection Agency document SW-846 as ~~referenced~~ incorporated in part 7045.0065 or that uses analytical techniques found by the commissioner to be equivalent to them. This analysis must include:

[For text of subitems (1) to (4), see M.R.]

(5) an approximate quantification of the hazardous constituents identified in the waste, within the precision specified by Environmental Protection Agency ~~document~~ publication SW-846, as incorporated in part 7045.0065;

[For text of items B to I, see M.R.]

[For text of subps 4 to 11, see M.R.]

7001.0710 LAND TREATMENT DEMONSTRATION PERMITS.

Subpart 1. **Letters of approval.** A person who desires to conduct controlled laboratory demonstrations of hazardous waste land treatment for the purpose of collecting preliminary data shall request a letter of approval from the agency.

The agency shall issue a letter of approval if the demonstration will be conducted under supervised conditions in a closed system capable of providing adequate protection to human health and the environment, and if the data obtained will not be used as the only basis for the issuance of a facility permit. The letter of approval must specify the general conditions for conducting demonstrations, the duration of approval, and the specific waste types.

The letter of approval may only provide approval for controlled laboratory demonstrations of hazardous waste treatment and does not provide exemptions from the hazardous waste management and disposal requirements of chapter 7045. Materials resulting from the demonstration that meet the criteria of parts 7045.0102 to ~~7045.0143~~ 7045.0155 must be managed as hazardous waste.

[For text of subps 2 to 6, see M.R.]

7001.0730 MODIFICATION OF PERMITS; REVOCATION AND REISSUANCE OF PERMITS.

[For text of subps 1 to 3, see M.R.]

Subp. 4. **Minor modifications of permits.** In addition to the corrections or allowances listed in part 7001.0190, subparts 2 and 3, if the permittee consents, the commissioner may modify a permit to make the corrections or allowances listed below without following the procedures in parts 7001.0100 to 7001.0130:

[For text of items A to K, see M.R.]

L. to allow treatment of hazardous wastes not previously specified in the permit if the following conditions are met:

(1) the hazardous waste has been prohibited from one or more methods of land disposal under ~~parts 7045.1320 to 7045.1330~~ Code of Federal Regulations, title 40, sections 268.30 to 268.39, as incorporated in part 7045.1390, or RCRA section 3004;

(2) treatment is in accordance with ~~part 7045.1310~~ Code of Federal Regulations, title 40, section 268.4, as incorporated in part 7045.1390, if applicable, and ~~part 7045.1305~~ section 268.3, as incorporated in part 7045.1390, and applicable standards established under ~~parts 7045.1355 to 7045.1360 and part 7045.0075, subpart 10~~ Code of Federal Regulations, title 40, sections 268.41 to 268.49, and 268.5, as incorporated in part 7045.1390, or, where no treatment standards have been established, treatment renders the waste no longer subject to the applicable prohibitions of ~~part 7045.1330~~ Code of Federal Regulations, title 40, section 268.32, as incorporated in part 7045.1390, or RCRA section 3004;

[For text of subitems (3) and (4), see M.R.]

M. to allow permitted facilities to change their operations to treat or store hazardous wastes subject to land disposal restrictions imposed by ~~parts 7045.1300 to 7045.1380~~ part 7045.1390 or RCRA section 3004, provided the treatment or storage occurs in containers or tanks and the permittee:

(1) requests a major permit modification under subparts 1 to 3;

(2) demonstrates in the request for a major permit modification that the treatment or storage is necessary to comply with the land disposal restrictions of ~~parts 7045.1300 to 7045.1380~~ part 7045.1390 or RCRA section 3004; and

(3) ensures that the treatment or storage units comply with the applicable standards of parts 7045.0552 to ~~7045.0642~~ 7045.0651 and ~~7045.1300 to 7045.1380~~ 7045.1390 pending final administrative disposition of the major modification request. The authorization to make the changes conferred in this item terminates upon final

administrative disposition of the permittee's major modification request under subparts 1 to 3 or termination of the permit under part 7001.0180.

[For text of subps 5 and 6, see M.R.]

7045.0020 DEFINITIONS.

[For text of subps 1 to 9a, see M.R.]

Subp. 9b. **Combustible liquid.** "Combustible liquid" has the meaning given in Code of Federal Regulations, title 49, section ~~173.115~~ 173.120, paragraph (b), as amended.

[For text of subps 9c to 11, see M.R.]

Subp. 11a. **Containment building.** "Containment building" means a hazardous waste management unit that is used to store or treat hazardous waste under the provisions of parts 7045.0550 and 7045.0649.

[For text of subps 12 to 22a, see M.R.]

Subp. 22b. **Excluded scrap metal.** "Excluded scrap metal" means processed scrap metal, unprocessed home scrap metal, and unprocessed prompt scrap metal.

Subp. 22c. **Existing drip pad.** "Existing drip pad" means a drip pad that:

A. is or was used to manage hazardous waste with the waste code of F032 and was constructed, or for which the owner or operator had a design and had entered into binding financial or other agreements for construction, before December 6, 1990; or

B. is used to manage hazardous waste with the waste code of F034 or F035 and was constructed, or for which the owner or operator had a design and had entered into binding financial or other agreements for construction, before July 25, 1994.

Subp. ~~22c.~~ 22d. **Existing hazardous waste management facility or existing facility.** "Existing hazardous waste management facility" or "existing facility" means

a facility which was in operation or for which construction commenced on or before November 19, 1980. See subpart 10b for definition of "construction commenced."

[For text of subps 23 to 24a, see M.R.]

Subp. 24b. **Flammable liquid.** "Flammable liquid" has the meaning given in Code of Federal Regulations, title 49, section ~~173.115~~ 173.120, as amended.

[For text of subps 25 to 30, see M.R.]

Subp. 31. **Generator.**"Generator" means any person, by site, whose act or process produces hazardous waste identified or listed in parts 7045.0102 to ~~7045.0143~~ 7045.0155, or whose act first causes a hazardous waste to become subject to regulation. "Generator" means all size generators including large quantity generators, small quantity generators, and very small quantity generators, unless specifically stated otherwise.

[For text of subps 32 to 37, see M.R.]

Subp. 37a. **Home scrap metal.**"Home scrap metal" means scrap metal as generated by steel mills, foundries, and refineries, such as turnings, cuttings, punchings, and borings.

Subp. 37b. **Household.** "Household" has the meaning given in Minnesota Statutes, section 115A.96, subdivision 1, paragraph (a).

Subp. ~~37b.~~ 37c. **Household battery.** "Household battery" means a disposable or rechargeable dry cell, generated by a household and commonly used as a power source for household products. "Household battery" includes nickel-cadmium, alkaline, mercuric oxide, silver oxide, zinc oxide, zinc-air, lithium, and zinc-carbon batteries, but excludes lead-acid batteries.

Subp. ~~37c.~~ 37d. **Household hazardous waste.** "Household hazardous waste" has the meaning given in Minnesota Statutes, section 115A.96, subdivision 1, paragraph (b).

Subp. ~~37d.~~ 37e. **Household hazardous waste collection site or collection site.** "Household hazardous waste collection site" or "collection site" as used in part 7045.0310

has the meaning established under Minnesota Statutes, section 115A.96, subdivision 1, paragraph (c).

Subp. ~~37c.~~ 37f. **Household waste.** "Household waste" means any material including garbage, trash, and sanitary waste in septic tanks derived from households, including single and multiple residences, hotels and motels, bunkhouses, ranger stations, crew quarters, campgrounds, picnic grounds, and day-use recreation areas.

[For text of subps 38 to 45, see M.R.]

Subp. 45a. [See repealer.]

[For text of subps 45b to 64a, see M.R.]

Subp. 65. **Partial closure.** "Partial closure" means the closure of a hazardous waste management unit in accordance with the applicable closure requirements of parts 7045.0450 to ~~7045.0642~~ 7045.0651 at a facility that contains other active hazardous waste management units. For example, partial closure may include the closure of a tank, including its associated piping and containment systems, a landfill cell, surface impoundment, waste pile, or other hazardous waste management unit, while other units of the same facility continue to operate.

[For text of subps 66 to 69, see M.R.]

Subp. 70. **Pile.** "Pile" means any noncontainerized accumulation of solid, nonflowing hazardous waste that is used for treatment or storage and that is not a containment building.

[For text of subps 70a to 71, see M.R.]

Subp. 71a. **Polychlorinated biphenyls, PCB, or PCB's.** "Polychlorinated biphenyls," "PCB," or "PCB's" ~~are halogenated organic compounds defined~~ have the meaning given "PCB" in ~~accordance with Code of Federal Regulations, title 40, section 761.3, as amended~~ Minnesota Statutes, section 116.36, subdivision 4.

Subp. 72. **Pretreatment unit.** "Pretreatment unit" means a device which:

[For text of item A, see M.R.]

B. receives and treats or stores an influent wastewater which is a hazardous waste as defined in parts 7045.0102 to ~~7045.0143~~ 7045.0155; or generates and accumulates a wastewater treatment sludge which is a hazardous waste as defined in parts 7045.0102 to ~~7045.0143~~ 7045.0155; or treats or stores a wastewater treatment sludge which is a hazardous waste as defined in parts 7045.0102 to ~~7045.0143~~ 7045.0155; and

C. meets the definition of "tank" as defined in subpart 90.

[For text of subp 72a, see M.R.]

Subp. 72b. **Processed scrap metal.** "Processed scrap metal" means scrap metal that has been manually or physically altered to either separate it into distinct materials to enhance economic value or to improve the handling of materials. Processed scrap metal includes, but is not limited to, scrap metal that has been baled, shredded, sheared, chopped, crushed, flattened, cut, melted, or separated by metal type (i.e., sorted) and fines, drosses, and related materials that have been agglomerated. Shredded circuit boards being sent for recycling are not processed scrap metal. When recycled, shredded circuit boards are governed by part 7045.0125, subpart 4, item P.

Subp. 72c. **Prompt scrap metal.** "Prompt scrap metal" means scrap metal as generated by the metal working or fabrication industries and includes such scrap metal as turnings, cuttings, punchings, and borings. Prompt scrap metal is also known as industrial or new scrap metal.

[For text of subps 73 to 84, see M.R.]

Subp. 84a. **Sorbent or sorb.** "Sorbent" means a material that is used to soak up free liquids by either adsorption or absorption, or both. "Sorb" means to either adsorb or absorb, or both.

Subp. 84b. **Speculative accumulation.** "Speculative accumulation" means accumulation of a hazardous waste before it is recycled. Speculative accumulation does not include accumulation of a waste if there is a feasible method of recycling for the waste and at least 75 percent by volume or weight of the waste is recycled during a calendar year. The 75 percent requirement applies to each waste of the same type that is recycled in the same way.

Subp. ~~84b.~~ 84c. **Spent material.** "Spent material" means a material that has been used and as a result of contamination can no longer serve the purpose for which it was produced without processing.

[For text of subps 85 to 98a, see M.R.]

Subp. 98b. **Underlying hazardous constituent.** "Underlying hazardous constituent" means any constituent listed in Code of Federal Regulations, title 40, section 268.48, Table UTS - Universal Treatment Standards, as incorporated in part 7045.1390, except fluoride, selenium, sulfides, vanadium, and zinc, which can reasonably be expected to be present at the point of generation of the hazardous waste at a concentration above the constituent-specific UTS treatment standards.

Subp. 98c. **Unfit for use tank system.** "Unfit for use tank system" means a tank system that has been determined through an integrity assessment or other inspection to be no longer capable of storing or treating hazardous waste without posing a threat of release of hazardous waste to the environment.

Subp. ~~98c.~~ 98d. **Universal waste.** "Universal waste" has the meaning given at Code of Federal Regulations, title 40, section 273.9.

Subp. ~~98d.~~ 98e. **Universal waste handler.** "Universal waste handler" has the meaning given at Code of Federal Regulations, title 40, section 273.9.

Subp. ~~98c.~~ 98f. **Universal waste transporter.** "Universal waste transporter" has the meaning given at Code of Federal Regulations, title 40, section 273.9.

[For text of subps 99 to 102b, see M.R.]

Subp. 102c. **Wastewater.** "Wastewater" means waste that contains less than one percent by weight total organic carbon (TOC) and less than one percent by weight total suspended solids (TSS), with the following exceptions:

A. F001, F002, F003, F004, or F005 wastewaters are solvent-water mixtures that contain less than one percent by weight total organic carbon or less than one percent by weight total F001, F002, F003, F004, or F005 solvent constituents listed in ~~part 7045.1355~~ Code of Federal Regulations, title 40, section 268.40, as incorporated in part 7045.1390;

[For text of items B and C, see M.R.]

Subp. 103. **Wastewater treatment unit.** "Wastewater treatment unit" means a device which:

[For text of item A, see M.R.]

B. receives and treats or stores an influent wastewater which is a hazardous waste as defined in parts 7045.0102 to ~~7045.0143~~ 7045.0155; or generates and accumulates a wastewater treatment sludge which is a hazardous waste as defined in parts 7045.0102 to ~~7045.0143~~ 7045.0155; or treats or stores a wastewater treatment sludge which is a hazardous waste as defined in parts 7045.0102 to ~~7045.0143~~ 7045.0155; and

[For text of item C, see M.R.]

[For text of subps 104 to 109, see M.R.]

7045.0065 INCORPORATION AND AVAILABILITY OF REFERENCES.

The documents referred to in this ~~chapter may be obtained by contacting the appropriate offices as listed in this part.~~ part are incorporated by reference. The documents

are not subject to frequent change, unless otherwise noted, and are available online or through the Minitex interlibrary loan system, unless otherwise noted:

~~A. standards of the American Society for Testing and Materials, in the Annual Book of ASTM Standards, 100 Barr Harbor Drive, West Conshohocken, PA 19428-2959, available at the Engineering Library of the University of Minnesota;~~

~~B. Minnesota Uniform Fire Code, as incorporated by reference in part 7510.3510;~~

~~C.~~ A. the implicit price deflator for gross ~~national~~ domestic product ~~in~~ from the ~~Survey of Current Business,~~ Bureau of Economic Analysis, United States Department of Commerce~~, 110 4th Street South, Minneapolis, Minnesota 55401, available at the Saint Paul Public Library~~. This document is subject to frequent change and is readily available at the Bureau of Economic Analysis Web site: www.bea.gov;

~~D. The Manual on Disposal of Refinery Wastes, volume 1, issued by the American Petroleum Institute, (Washington, D.C., 1969), available at the state of Minnesota Law Library;~~

7045.0071 UNDERGROUND INJECTION.

References to underground injection of waste throughout this chapter are subject to Minnesota statutes and rules prohibiting the discharge of waste or pollutants to the saturated or unsaturated zones.

7045.0075 PETITIONS.

Subpart 1. **Petitions for equivalent testing or analytical methods.** Any person seeking to use a testing or analytical method other than those described in parts 7045.0102 to ~~7045.0143,~~ 7045.0155 or 7045.0450 to ~~7045.0642~~ 7045.0651 may petition under these provisions. The person must demonstrate to the satisfaction of the commissioner that the proposed method is equal to or superior to the corresponding method prescribed in parts 7045.0102 to ~~7045.0143,~~ 7045.0155 or 7045.0450 to ~~7045.0642~~ 7045.0651 in terms of its sensitivity, accuracy, precision, and reproducibility. Each petition must include:

[For text of items A to D, see M.R.]

E. comparative results obtained from using the proposed method with those obtained from using the relevant or corresponding methods prescribed in parts ~~7045.0100~~ 7045.0102 to ~~7045.0143,~~ 7045.0155 or 7045.0450 to ~~7045.0642~~ 7045.0651;

[For text of items F and G, see M.R.]

Subp. 2. **Petitions to exclude a waste produced at a particular facility.** Petitions to exclude a waste produced at a particular facility are as follows:

[For text of items A to D, see M.R.]

E. If the waste is listed with code "T" in part 7045.0135, subitems (1) to (4) apply.

(1) The petitioner must demonstrate that the waste:

(a) does not contain the constituent or constituents in part 7045.0141 that caused the agency to list the waste, using the appropriate test methods prescribed in ~~Code of Federal Regulations, title 40, part 261, appendix III, as amended~~ "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods," EPA publication SW-846, incorporated by reference in part 7045.0065, item D; or

[For text of unit (b), see M.R.]

[For text of subitems (2) to (4), see M.R.]

[For text of items F to H, see M.R.]

Subp. 3. **Petition for reduced regulation of hazardous waste being speculatively accumulated or reclaimed prior to use.** The agency may, upon presentation of a petition for those purposes, reduce any of the requirements of chapter 7045 applicable to reclamation, reuse, or recycling. The agency shall apply the standards and criteria set forth

below in determining whether to grant a petition to reduce the regulatory requirements for the following recycled hazardous wastes.

[For text of item A, see M.R.]

B. Any person seeking a reduction in regulation of hazardous wastes that are reclaimed and then reused as feedstock within the original ~~primary~~ production process in which the hazardous wastes were generated if the reclamation is an essential part of the production process may petition under these provisions. The agency's decision regarding the petition shall be based on the following standards and criteria:

[For text of subitems (1) to (8), see M.R.]

[For text of item C, see M.R.]

[For text of subp 4, see M.R.]

Subp. 5. **Petition for use of alternate manifest.** A person who meets the criteria in item A may submit a petition to the commissioner for approval of the use of an alternate manifest system as described in item B. The criteria the commissioner shall use in determining whether to approve the use of the alternate manifest system are provided in item C.

[For text of item A, see M.R.]

B. Upon approval, an alternate manifest system may be used in lieu of the manifest system described in parts 7045.0261 ~~to~~ and 7045.0265. The commissioner shall only approve alternate manifest systems meeting the following criteria:

(1) The alternate manifest system must include a manifest form to be used by the generator to notify the commissioner each time waste is transported under this subpart. The manifest form must include: a space for the generator's name, mailing address, telephone number, and identification number; a space for the transporter's name and identification number; a space for the name, address, telephone number, and

identification number of the recycling facility; a space for the United States Department of Transportation shipping name, hazard class, ~~and~~ identification number, and packing group of the waste as specified in the United States Department of Transportation Code, title 49, parts 171 to ~~179~~ 199; a space for the number and type of containers and total volume of the waste being shipped; a space for the waste identification number as specified in part 7045.0131, 7045.0135, or 7045.0137; a space for the signature of the generator or the generator's authorized representative affirming the correctness of the information; the mailing address of the commissioner; and a statement advising the generator to complete the form and submit it to the commissioner within five working days of transporting waste.

[For text of subitems (2) and (3), see M.R.]

[For text of item C, see M.R.]

[For text of subps 6 and 7, see M.R.]

Subp. 8. [See repealer.]

Subp. 9. **Petitions to allow land disposal of a prohibited waste.** A person seeking an exemption from a prohibition for the disposal of a restricted hazardous waste in a particular unit or units must submit a petition to the agency and to the EPA demonstrating, to a reasonable degree of certainty, that there will be no migration of hazardous constituents from the disposal unit or injection zone for as long as the wastes remain hazardous. The demonstration to the EPA must include the provisions in Code of Federal Regulations, title 40, section 268.6. The demonstration to the agency must include an identification of the specific waste and the specific unit for which the demonstration will be made, a waste analysis to describe fully the chemical and physical characteristics of the subject waste, and a comprehensive characterization of the disposal unit site including an analysis of background air, soil, and water quality. The demonstration must also include a monitoring plan that detects migration at the earliest practicable time, and sufficient information to assure the commissioner that the owner or operator of a land disposal unit

receiving restricted wastes will comply with other applicable federal, state, and local laws. The person seeking the exemption must also comply with items A to L.

[For text of items A to C, see M.R.]

D. If the owner or operator determines that there is migration of hazardous constituents from the unit, the owner or operator must immediately suspend receipt of prohibited waste at the unit and notify the commissioner in writing within ten days of the determination that a release has occurred. Within 60 days of receiving the notification, the commissioner shall determine whether the owner or operator can continue to receive prohibited waste in the unit and whether the variance is to be revoked. The commissioner shall also determine whether further examination of any migration is warranted under applicable provisions of parts 7045.0450 to ~~7045.0642~~ 7045.0651.

[For text of items E to I, see M.R.]

J. Before the agency's decision, the applicant must comply with all restrictions on land disposal under ~~parts 7045.1300 to 7045.1380~~ part 7045.1390 when the effective date for the waste has been reached.

[For text of items K and L, see M.R.]

Subp. 10. [See repealer.]

[For text of subps 11 and 12, see M.R.]

7045.0090 ADOPTION AND INCORPORATION BY REFERENCE.

Subpart 1. **Applicability.** Except as specified in subparts 2 and 3, the terms and standards identified in subparts 1a to ~~1c~~ 1h apply whenever federal regulations are ~~adopted or~~ incorporated by reference in this chapter whether or not this part is specifically referenced. Terms used in incorporated Code of Federal Regulations, title 40, and defined in part 7045.0020 or in Minnesota Statutes have the meaning given in part 7045.0020 or in Minnesota Statutes.

Subp. 1a. ~~**General**~~ **Specific terms.** ~~Terms defined in Minnesota Rules and Minnesota Statutes that are also defined in Code of Federal Regulations, title 40,~~ The following terms and phrases have the meaning given ~~in part 7045.0020 and the applicable Minnesota statute~~.

A. "EPA" and "agency" mean the Pollution Control Agency ~~and its commissioner~~.

~~B. "Generator" has the meaning given in part 7045.0020.~~

~~C. "Hazardous waste" has the meaning given in part 7045.0020.~~

~~D.~~ B. "Regional administrator," "administrator," and "director" mean the commissioner of the Pollution Control Agency.

~~E.~~ C. "State," "authorized state," "approved state," or "approved program" means Minnesota.

~~F. "Waste" has the meaning given in part 7045.0020.~~

D. "Generator," "hazardous waste," and "waste" have the meanings given in part 7045.0020.

Subp. 1b. **Hazardous waste management system general standards; Code of Federal Regulations, title 40, part 260.** References to the petition processes established in ~~"~~Code of Federal Regulations, title 40, part 260, subpart C,~~" or "Code of Federal Regulations, title 40,~~ or Code of Federal Regulations, title 40, sections 260.20 to 260.41,~~"~~ mean the petition processes established in part 7045.0075.

Subp. 1c. **Identification and listing standards; Code of Federal Regulations, title 40, part 261.**

A. References to any section in ~~"~~Code of Federal Regulations, title 40, part 261, ~~subpart C," "~~ subparts A to C, or to Code of Federal Regulations, title 40, sections ~~261.20~~

261.1 to 261.24,~~" or "characteristic hazardous waste"~~ mean ~~the characteristics established in part~~ parts 7045.0102 to 7045.0131 or part 7045.0214, subpart 3.

B. References to ~~"~~Code of Federal Regulations, title 40, section 261.4,~~"~~ mean the exclusions listed in part 7045.0120.

C. References to ~~"~~Code of Federal Regulations, title 40, section 261.6,~~"~~ mean the use, reuse, recycling, and reclamation requirements of part 7045.0125.

D. References to any section in Code of Federal Regulations, title 40, part 261, subpart D, or to Code of Federal Regulations, title 40, sections 261.30 to 261.38, mean parts 7045.0135 to 7045.0145.

Subp. 1d. **Standards applicable to generators of hazardous waste, Code of Federal Regulations, title 40, part 262.** References to Code of Federal Regulations, title 40, part 262, or to any section in Code of Federal Regulations, title 40, sections 262.10 to 262.70, mean parts 7045.0205 to 7045.0325.

Subp. 1e. **Standards applicable to transporters of hazardous waste, Code of Federal Regulations, title 40, part 263.** References to any section in Code of Federal Regulations, title 40, sections 263.10 to 263.31, mean parts 7045.0351 to 7045.0397.

Subp. ~~1d~~ 1f. **Permitted and interim status standards for owners and operators of hazardous waste treatment, storage, and disposal facilities; Code of Federal Regulations, title 40, parts 264 and 265.**

A. References to ~~"~~Code of Federal Regulations, title 40, part 264, subpart F,~~"~~ ~~"Code~~ Code of Federal Regulations, title 40, sections 264.90 to 264.101,~~" "Code~~ Code of Federal Regulations, title 40, part 265, subpart F,~~"~~ or ~~"~~Code of Federal Regulations, title 40, sections 265.90 to 265.94,~~"~~ mean the requirements of parts 7045.0484, 7045.0485, 7045.0590, and 7045.0592 relating to groundwater protection, monitoring, and corrective action for releases.

B. References to ~~"~~Code of Federal Regulations, title 40, part 264, subpart H,~~"~~ ~~"Code~~ Code of Federal Regulations, title 40, sections 264.140 to 264.151,~~" "Code~~ Code of Federal Regulations, title 40, part 265, subpart H,~~"~~ or ~~"~~Code of Federal Regulations, title 40, sections 265.140 to 265.150,~~"~~ mean the financial assurance requirements of parts 7045.0498 to 7045.0524 and 7045.0608 to 7045.0624.

C. References to ~~"~~Code of Federal Regulations, title 40, part 264, subpart O,~~"~~ ~~"Code~~ Code of Federal Regulations, title 40, sections 264.340 to 264.351,~~" "Code~~ Code of Federal Regulations, title 40, part 265, subpart O,~~"~~ or ~~"~~Code of Federal Regulations, title 40, sections 265.340 to 265.352,~~"~~ mean the thermal treatment standards of parts 7045.0542 and 7045.0640.

D. References to ~~"~~Code of Federal Regulations, title 40, part 264, subpart N,~~"~~ ~~"Code~~ Code of Federal Regulations, title 40, sections 264.300 to 264.317,~~" "Code~~ Code of Federal Regulations, title 40, part 265, subpart N,~~"~~ or ~~"~~Code of Federal Regulations, title 40, sections 265.300 to 265.316,~~"~~ mean the landfill standards of parts 7045.0538 and 7045.0638.

Subp. ~~1c~~ 1g. **Permit requirements; Code of Federal Regulations, title 40, part 270.** References to ~~"~~Code of Federal Regulations, title 40, part 270, subparts A to H,~~"~~ ~~"Code~~ Code of Federal Regulations, title 40, sections 270.1 to 270.230,~~"~~ or any other reference to a hazardous waste facility permit mean the hazardous waste facility permit requirements in parts 7001.0500 to 7001.0730.

Subp. 1h. **Other standards.**

A. References to Code of Federal Regulations, title 40, part 273, mean part 7045.1400 (universal waste).

B. References to Code of Federal Regulations, title 40, part 279, mean parts 7045.0692 to 7045.0990 (used oil).

C. References to underground injection of waste in any Code of Federal Regulations incorporated in this chapter are subject to Minnesota Statutes and rules prohibiting the discharge of waste or pollutants to the saturated or unsaturated zones.

D. References to Code of Federal Regulations, title 40, part 266, subpart C, mean part 7045.0665 (uses constituting disposal).

E. References to Code of Federal Regulations, title 40, part 266, subpart F, mean part 7045.0675 (precious metal recovery).

F. References to Code of Federal Regulations, title 40, part 266, subpart G, mean part 7045.0685 (spent lead-acid batteries being reclaimed).

[For text of subps 2 and 3, see M.R.]

Subp. 4. **Applicable law.** When federal regulations incorporated into this chapter cite additional federal regulations and when this chapter does not address whether the cited federal regulations or corresponding state rules apply, state rules shall apply.

7045.0102 MIXTURES OF WASTES.

Subpart 1. **Scope.** Except as provided in part 7045.0665, subpart 1, mixtures of wastes are ~~listed in subparts 2 and 3~~ identified in subpart 2.

Subp. 2. **Mixtures of hazardous and nonhazardous wastes.** The mixing of a hazardous waste with a nonhazardous waste as described in this subpart constitutes treatment. Generators who mix hazardous and nonhazardous wastes on site must meet the requirements of part 7045.0211 for generators with on-site facilities. Mixtures excluded under part 7045.0075, subpart 2, are excluded from regulation. Wastes excluded under this subpart are subject to part 7045.1390, even if they no longer exhibit a characteristic at the point of land disposal.

A. A mixture is a hazardous waste if it ~~is a mixture of nonhazardous waste and any waste which is hazardous solely because it exhibits the characteristic of ignitability,~~

~~corrosivity, oxidativity, or reactivity as described in part 7045.0131, unless the resulting mixture does not exhibit any of the characteristics of hazardous waste as defined in part 7045.0131~~ contains a waste that is hazardous solely because it exhibits any of the characteristics of ignitability, corrosivity, oxidativity, or reactivity identified in part 7045.0131, or contains a hazardous waste listed in part 7045.0135 solely because of ignitability, corrosivity, or reactivity, and the resulting mixture exhibits any characteristic of a hazardous waste identified in part 7045.0131.

B. Except as provided in item D or E, a mixture is a hazardous waste if it ~~is a mixture of nonhazardous waste and any waste listed in part 7045.0135 solely because of ignitability, corrosivity, or reactivity, unless:~~ contains a waste listed for toxicity in part 7045.0135.

~~(1) the resulting mixture does not exhibit any of the characteristics of hazardous waste as defined in part 7045.0131;~~

~~(2) the resulting mixture has been excluded from regulation pursuant to part 7045.0075, subpart 2; or~~

~~(3) the nonhazardous waste is exempt from regulation under part 7045.0120, item I, and the resultant mixture no longer exhibits any characteristic of hazardous waste as defined in part 7045.0131 for which the hazardous waste listed in part 7045.0135 was listed.~~

C. Except as provided in item D, a mixture is a hazardous waste if it ~~is a nonsewered mixture of nonhazardous waste and any waste listed in part 7045.0135 (other than wastes listed solely because of ignitability, corrosivity, or reactivity) or any waste which is hazardous because it exhibits the characteristics of toxicity or lethality as identified in part 7045.0131 unless the resulting mixture has been excluded from regulation pursuant to part 7045.0075, subpart 2~~ contains a waste that exhibits the characteristic of toxicity or lethality identified in part 7045.0131.

D. A mixture is a hazardous waste if it is a sewered mixture of nonhazardous waste and any waste which is hazardous because it exhibits the characteristics of toxicity or lethality as defined in part 7045.0131 unless:

(1) prior to entering the sewer the resulting mixture no longer exhibits the characteristic of toxicity or lethality; and

(2) the sewering of the mixture has been approved by the agency pursuant to parts 7045.0221 to 7045.0255.

This provision does not apply to those mixtures defined as nonhazardous under item ~~F~~ E.

~~E. Except as provided in item F, a mixture is a hazardous waste if it is a sewered mixture of nonhazardous waste and any waste listed in part 7045.0135 (other than wastes listed solely because of ignitability, corrosivity, or reactivity) unless the resulting mixture has been excluded from regulation under part 7045.0075, subpart 2.~~

~~F.~~ E. ~~Except as otherwise provided in item A, B, or D, the following sewered mixtures of nonhazardous wastes and hazardous wastes listed in part 7045.0135~~ Except as otherwise provided in item A, B, or D, the following sewered mixtures are not hazardous wastes if the generator can demonstrate that the mixture consists of wastewater, the discharge of which is subject to regulation under ~~the Federal Water Pollution Control Act Amendments of 1972, United States Code, title 33, section 1317(b) or 1342, as amended~~ either section 307(b) or 402 of the Clean Water Act, including wastewater at facilities which have eliminated the discharge of wastewater; and

(1) one or more of the following spent solvents listed in part 7045.0135, subpart 1a, item B: carbon tetrachloride, tetrachloroethylene, trichloroethylene; provided that the solvents are discharged into the wastewater stream as a result of normal manufacturing operations and provided further that the maximum total weekly usage of these solvents, other than the amounts that can be demonstrated not to be discharged to

wastewater, divided by the average weekly flow of wastewater into the headworks of the facility's wastewater treatment or pretreatment system does not exceed one part per million;

(2) one or more of the following spent solvents listed in part 7045.0135, subpart 1a, item B: methylene chloride, 1,1,1-trichloroethane, chlorobenzene, o-dichlorobenzene, cresols, cresylic acid, nitrobenzene, toluene, methyl ethyl ketone, carbon disulfide, isobutanol, pyridine, spent chlorofluorocarbon solvents; provided that the solvents are discharged into the wastewater stream as a result of normal manufacturing operations and provided further that the maximum total weekly usage of these solvents, other than the amounts that can be demonstrated not to be discharged to wastewater, divided by the average weekly flow of wastewater into the headworks of the facility's wastewater treatment or pretreatment system does not exceed 25 parts per million;

(3) heat exchanger bundle cleaning sludge from the petroleum refining industry, EPA Hazardous Waste No. K050 as listed in part 7045.0135, subpart 1a, item C;

(4) a discarded commercial chemical product, or chemical intermediate listed in part 7045.0135, subpart 1a, item D, arising from de minimis losses of these materials from manufacturing operations in which these materials are used as raw materials or are produced in the manufacturing process. De minimis losses include those from normal material handling operations (such as spills from the unloading or transfer of materials from bins or other containers or leaks from pipes, valves, or other devices used to transfer materials); minor leaks of process equipment, storage tanks or containers; leaks from well-maintained pump packings and seals; sample purgings; relief device discharges; discharges from safety showers and rinsing and cleaning of personal safety equipment; and ~~rinsing~~ rinsate from empty containers or from containers that are rendered empty by that rinsing; ~~or~~

(5) wastewater resulting from laboratory operations containing toxic wastes listed in part 7045.0135, provided that the annualized average flow of laboratory wastewater does not exceed one percent of total wastewater flow into the headworks of the facility's wastewater treatment or pretreatment system, or provided the waste's combined annualized average concentration does not exceed one part per million in the headworks of the facility's wastewater treatment or pretreatment facility. Toxic wastes used in laboratories that are demonstrated not to be discharged to wastewater are not to be included in this calculation;

(6) one or more of the following wastes listed in part 7045.0135, subpart 1a, item C: wastewaters from the production of carbamates and carbamoyl oximes (EPA Hazardous Waste No. K157), provided that the maximum weekly usage of formaldehyde, methyl chloride, methylene chloride, and triethylamine, including all amounts that can not be demonstrated to be reacted in the process, destroyed through treatment, or is recovered (i.e., what is discharged or volatilized), divided by the average weekly flow of process wastewater prior to any dilutions into the headworks of the facility's wastewater treatment system does not exceed a total of five parts per million by weight; or

(7) wastewaters derived from the treatment of one or more of the following wastes listed in part 7045.0135, subpart 1a, item C: organic waste, including heavy ends, still bottoms, light ends, spent solvents, filtrates, and decantates, from the production of carbamates and carbamoyl oximes (EPA Hazardous Waste No. K156), provided that the maximum concentration of formaldehyde, methyl chloride, methylene chloride, and triethylamine prior to any dilutions into the headworks of the facility's wastewater treatment system does not exceed a total of five milligrams per liter.

~~G.~~ For the purpose of this ~~part~~ item, headworks refers to the influent plumbing of a privately owned national pollutant discharge elimination system, state disposal system,

or pretreatment facility or to the facility's point of discharge to a municipal collection system when the treatment facility is a publicly owned wastewater treatment facility.

F. A mixture of used oil and a hazardous waste is a hazardous waste except as provided in part 7045.0800.

~~H.~~ G. Any mixture of a waste from the extraction, beneficiation, and processing of ores and minerals excluded under part 7045.0120, subpart 1, item I, and any other waste exhibiting a characteristic of hazardous waste under part 7045.0131 is a hazardous waste only if:

[For text of subitems (1) and (2), see M.R.]

[For text of subp 3, see M.R.]

7045.0120 EXEMPTIONS AND SPECIAL REQUIREMENTS.

Subpart 1. **Exempt types of waste.** The following waste may be stored, labeled, transported, treated, processed, and disposed of without complying with the requirements of this chapter:

[For text of items A to H, see M.R.]

I. waste from the extraction, beneficiation, and processing of ores and minerals, including coal, ~~and including~~ phosphate rock, and overburden from the mining of uranium ore. For purposes of this item, beneficiation of ores and minerals is restricted to the following activities: crushing; grinding; washing; dissolution; crystallization; filtration; sorting; sizing; drying; sintering; pelletizing; briquetting; calcining to remove water or carbon dioxide; roasting, autoclaving, or chlorination in preparation for leaching (except where the roasting, autoclaving, or chlorination/leaching sequence produces a final or intermediate product that does not undergo further beneficiation or processing); gravity concentration; magnetic separation; electrostatic separation; flotation; ion exchange; solvent extraction; electrowinning; precipitation; amalgamation; and heap, dump, vat,

tank, and in situ leaching. For the purposes of this item, waste from the processing of ores and minerals includes only the following wastes as generated:

(1) slag from primary copper processing;

(2) slag from primary lead processing;

(3) red and brown muds from bauxite refining;

(4) phosphogypsum from phosphoric acid production;

~~(2)~~ (5) slag from elemental phosphorus production;

~~(3)~~ (6) gasifier ash from coal gasification;

~~(4)~~ (7) process wastewater from coal gasification;

(8) calcium sulfate wastewater treatment plant sludge from primary copper processing;

~~(5)~~ (9) slag tailings from primary copper processing;

~~(6)~~ (10) fluorogypsum from hydrofluoric acid production;

(11) process wastewater from hydrofluoric acid production;

(12) air pollution control dust or sludge from iron blast furnaces;

~~(7)~~ (13) iron blast furnace slag;

~~(8)~~ (14) treated residue from the roasting/leaching of chrome ore; ~~and~~

(15) process wastewater from primary magnesium processing by the anhydrous process;

(16) process wastewater from phosphoric acid production;

(17) basic oxygen furnace and open hearth furnace air pollution control dust or sludge from carbon steel production;

~~(9)~~ (18) basic oxygen furnace and open hearth furnace slag from carbon steel production;

(19) chloride process waste solids from titanium tetrachloride production; and

(20) slag from primary zinc processing.

A residue derived from coprocessing mineral processing secondary materials with normal beneficiation raw materials or with normal mineral processing raw materials remains excluded under this subpart if the owner or operator processes at least 50 percent by weight normal beneficiation raw materials or normal mineral processing raw materials and legitimately reclaims the secondary mineral processing materials;

[For text of items J to S, see M.R.]

T. spent wood preserving solutions that have been reclaimed and reused for their original intended purpose, and wastewaters from the wood preserving process that have been reclaimed and are reused to treat wood~~;~~ if, prior to reuse, the wood preserving wastewaters and spent wood preserving solutions described in this item meet all of the following conditions:

(1) the wood preserving wastewaters and spent wood preserving solutions are reused on site at waterborne plants in the production process for their original intended purpose;

(2) prior to reuse, the wood preserving wastewaters and spent wood preserving solutions are managed to prevent release to land resources or waters of the state;

(3) any unit used to manage wood preserving wastewaters or spent wood preserving solutions prior to reuse can be visually or otherwise determined to prevent such releases;

(4) any drip pad used to manage the wood preserving wastewaters or spent wood preserving solutions prior to reuse complies with the standards governing drip pads in part 7045.0644; and

(5) prior to operating pursuant to this exclusion, the plant owner or operator submits to the commissioner a onetime notification stating that the plant intends to claim the exclusion, giving the date on which the plant intends to begin operating under the exclusion, and containing the following language: "I have read the applicable regulation establishing an exclusion for wood preserving wastewaters and spent wood preserving solutions and understand it requires me to comply at all times with the conditions set out in the regulation." The plant must maintain a copy of that document in its on-site records until closure of the facility. The exclusion applies only so long as the plant meets all of the conditions. If the plant goes out of compliance with any condition, the plant owner or operator may apply to the commissioner for reinstatement. Reinstatement is conditioned on the commissioner finding that the plant has returned to compliance with all conditions and that violations are not likely to recur;

[For text of item U, see M.R.]

V. used oil rerefining distillation bottoms that are used as feedstock to manufacture asphalt products; ~~or~~

W. sorbents, soil, and debris contaminated with petroleum fuel from spills and emergencies that are contained and reported in accordance with Minnesota Statutes, section 115.061, except for used oil spills and emergencies~~.~~; or

X. spent materials, other than hazardous wastes listed in part 7045.0135, generated within the primary mineral processing industry from which minerals, acids, cyanide, water, or other values are recovered by mineral processing or by beneficiation, provided that:

(1) the spent material is legitimately recycled to recover minerals, acids, cyanide, water, or other values;

(2) the spent material is not accumulated speculatively;

(3) except as provided in subitem (4), the spent material is stored in tanks, containers, or buildings meeting the following minimum integrity standards: a building must be an engineered structure with a floor, walls, and a roof, all of which are made of nonearthen materials providing structural support (except smelter buildings may have partially earthen floors provided the spent material is stored on the nonearthen portion), and have a roof suitable for diverting rainwater away from the foundation; a tank must be freestanding, not be a surface impoundment, and be manufactured of a material suitable for containment of its contents; a container must be freestanding and be manufactured of a material suitable for containment of its contents. If tanks or containers contain any particulate that may be subject to wind dispersal, the owner or operator must operate these units in a manner that controls fugitive dust. Tanks, containers, and buildings must be designed, constructed, and operated to prevent releases to the environment of these materials;

(4) the commissioner may make a site-specific determination, upon application by the owner or operator and after public review and comment, that only solid mineral processing spent material may be placed on pads rather than in tanks, containers, or buildings. Solid mineral processing spent materials must not contain any free liquid. The commissioner must affirm that pads are designed, constructed, and operated to prevent releases of the spent material into the environment. Pads must provide the same degree of containment afforded by the tanks, containers, and buildings eligible for exclusion in subitem (3):

(a) the commissioner must also consider if storage on pads poses the potential for releases via groundwater, surface water, and air exposure pathways. Factors

to be considered for assessing the groundwater, surface water, and air exposure pathways are the volume and physical and chemical properties of the spent material, including its potential for migration off the pad; the potential for human or environmental exposure to hazardous constituents migrating from the pad via each exposure pathway; and the possibility and extent of harm to human and environmental receptors via each exposure pathway;

(b) pads must meet the following minimum standards: be designed of nonearthen material that is compatible with the chemical nature of the mineral processing spent material, be capable of withstanding physical stresses associated with placement and removal, have run-on/runoff controls, be operated in a manner that controls fugitive dust, and have integrity assurance through inspections and maintenance programs; and

(c) before making a determination under this subitem, the commissioner must provide notice and the opportunity for comment to all persons potentially interested in the determination in accordance with part 7001.0100, subpart 5;

(5) the owner or operator provides a notice to the commissioner, providing the following information: the types of materials to be recycled, the type and location of the storage units and recycling processes, and the annual quantities expected to be placed in land-based units. This notification must be updated when there is a change in the type of materials recycled or the location of the recycling process; and

(6) for purposes of this item, mineral processing spent materials must be the result of mineral processing and may not include any listed hazardous wastes. Listed hazardous wastes and characteristic hazardous wastes generated by nonmineral processing industries are not eligible for the exemption in this item.

Subp. 2. **Special requirements.** The following waste is exempt from the general requirements of this chapter if managed as specified:

A. waste collected as a result of a household hazardous waste management program under part 7045.0310;

B. spent or waste household batteries collected under part 7045.0686;

C. waste collected as a result of a very small quantity generator hazardous waste collection program under part 7045.0320;

D. feedstocks and by-products under part 7045.0125, subparts 5 and 6;

E. comparable fuels or comparable syngas fuels that meet the specifications and other requirements of Code of Federal Regulations, title 40, section 261.38, as amended, which is adopted and incorporated by reference; ~~and~~

F. universal waste managed under part 7045.1400~~.~~; and

G. hazardous waste containing radioactive waste when it meets the eligibility criteria and conditions of Code of Federal Regulations, title 40, part 266, subpart N, Conditional Exemption for Low-Level Mixed Waste Storage, Treatment, Transportation and Disposal, as amended. This exemption also pertains to:

(1) any mixture of a waste and an eligible radioactive mixed waste; and

(2) any waste generated from treating, storing, or disposing of an eligible radioactive mixed waste.

Waste exempted under this item must meet the eligibility criteria and specified conditions in Code of Federal Regulations, title 40, sections 266.225 and 266.230 (for storage and treatment), as amended, and 266.310 and 266.315 (for transportation and disposal), as amended. Waste that fails to satisfy these eligibility criteria and conditions is regulated as hazardous waste.

7045.0121 TREATABILITY STUDY EXEMPTIONS.

[For text of subps 1 and 2, see M.R.]

Subp. 3. **Facilities and sample handling.** A mobile treatment unit may qualify as a laboratory or testing facility subject to requirements of this subpart. Where a group of mobile treatment units are located at the same site, the limitations specified in this subpart apply to the entire group of mobile treatment units involved in treatability studies collectively as if the group were one mobile treatment unit. Samples undergoing treatability studies and the laboratory or testing facility conducting the treatability studies, to the extent the facilities are engaged directly in treatability studies and are not otherwise subject to the Resource Conservation and Recovery Act requirements, United States Code, title 42, section 6901 et seq., as amended, are not subject to any requirements of Code of Federal Regulations, title 40, part 124, as amended; parts 7045.0102 to 7045.0685 except this part and applicable references; ~~parts 7023.9000 to 7023.9050; 7045.1300 to 7045.1380~~ part 7045.1390; chapter 7001; or to the notification requirements of the Resource Conservation and Recovery Act, United States Code, title 42, section 6930, as amended, providing that the conditions in items A to K are met.

[For text of items A to K, see M.R.]

7045.0125 MANAGEMENT OF WASTE BY USE, REUSE, RECYCLING, AND RECLAMATION.

[For text of subps 1 to 3a, see M.R.]

Subp. 4. **Management of specific hazardous wastes.** Management of the following wastes when recycled, is not subject to regulation under parts 7045.0205 to 7045.0695 and ~~7045.1300 to 7045.1380~~ 7045.1390:

[For text of items A and B, see M.R.]

C. scrap metal and excluded scrap metal;

[For text of items D and E, see M.R.]

F. ~~coke and coal tar from the iron and steel industry that contain EPA Hazardous Waste No. K087 listed under part 7045.0135, subpart 3, item Q, subitem (2), (decanter tank tar sludge from coking operations) from the iron and steel production process~~ EPA Hazardous Waste Nos. K060, K087, K141, K142, K143, K144, K145, K147, and K148, and any wastes from the coke by-products processes that are hazardous only because they exhibit the toxicity characteristic, specified in part 7045.0131, subpart 7, when, subsequent to generation, these materials are recycled to coke ovens, recycled to the tar recovery process as a feedstock to produce coal tar, or mixed with coal tar prior to the tar's sale or refining. This exclusion is conditioned on there being no land disposal of the wastes from the point they are generated to the point they are recycled to coke ovens, tar recovery, or refining processes or mixed with coal tar;

[For text of items G to M, see M.R.]

N. recyclable fuel, if the following conditions are met:

(1) the recyclable fuel is immediately removed from the generation site by a transporter in compliance with all applicable Minnesota Department of Transportation requirements in Minnesota Statutes, sections 221.033 to ~~221.035~~ 221.0355, and Code of Federal Regulations, title 49, parts 171 to ~~179~~ 199;

[For text of subitems (2) to (4), see M.R.]

(5) if, because of a need to conduct waste analysis, recyclable fuel cannot be placed into the recycling process within 24 hours of receipt, the owner or operator of the fuel recycling facility shall contact the commissioner to request an extension of the storage time. A request for an extension can be for a single event or to address an ongoing need for additional time. A request for an extension must be submitted in writing to the commissioner and must include:

[For text of units (a) and (b), see M.R.]

(c) a description of how the waste will be managed during the storage period, including the measures that will be in place to prevent releases and how spills will be contained and cleaned up.

The commissioner's decision to approve holding the waste longer than 24 hours will be based on an evaluation of whether the owner or operator of the recycling facility can provide adequate protection of human health and the environment until the recyclable fuel is placed into the recycling process; ~~and~~

O. petroleum fuel filters if they are burned for energy recovery under subpart 3a, or recycled as scrap metal under item C, and are managed during accumulation and transportation ~~according to~~ in accordance with the requirements of part 7045.0990, subparts 3 to 5~~.~~; and

P. circuit boards or shredded circuit boards being recycled, provided that they are:

(1) stored in containers sufficient to prevent a release to the environment prior to recovery; and

(2) free of mercury switches, mercury relays, and nickel-cadmium batteries and lithium batteries.

Subp. 5. **Requirements for use of hazardous waste as feedstock.**

A. Except as provided in items B to D, hazardous wastes that are shown to be recycled by being used in a manner specified in subitems (1) to (3), are not subject to regulation under parts 7045.0205 to 7045.0990 and ~~7045.1300 to 7045.1380~~ 7045.1390. This subpart does not apply to wastes being accumulated speculatively as defined in part 7045.0020, subpart 84a, or being managed by use constituting disposal as regulated under part 7045.0665 or burning for energy recovery, as regulated in part 7045.0692. Hazardous wastes are considered to be used as feedstock if they are:

[For text of subitems (1) to (3), see M.R.]

[For text of item B, see M.R.]

C. Transporters of hazardous wastes for use as feedstock must comply with all applicable requirements of Minnesota Statutes, sections 221.033 and ~~221.034~~ 221.0341, and with ~~221.035~~ 221.0355 if applicable, and Code of Federal Regulations, title 49, parts 171 to ~~179~~ 199, as amended.

[For text of item D, see M.R.]

Subp. 6. **Requirements for reclamation of specific hazardous waste.**

A. A by-product or a sludge that is hazardous only because it exhibits a characteristic of hazardous waste as defined in part 7045.0131 and is reclaimed is subject to only the following requirements:

(1) A generator of such a hazardous waste is subject to the requirements of subpart 5, item B.

(2) Transporters of such a hazardous waste must comply with all applicable requirements of Minnesota Statutes, sections 221.033 and ~~221.034~~ 221.0341, and with ~~221.035~~ 221.0355 if applicable, and Code of Federal Regulations, title 49, parts 171 to ~~179~~ 199, as amended.

[For text of subitem (3), see M.R.]

[For text of item B, see M.R.]

[For text of subps 7 and 8, see M.R.]

Subp. 9. **Facility requirements.** Unless exempted specifically in this part or parts 7045.0692 and 7045.0790 to 7045.0990, owners ~~or~~ and operators of facilities ~~which~~ that recycle hazardous waste are subject to the following requirements:

A. If the recyclable hazardous waste is stored before it is recycled, the owners or operators are subject to the requirements of parts 7045.0450 to 7045.0534, 7045.0540, 7045.0547, 7045.0548, 7045.0552 to 7045.0632, 7045.0645, 7045.0647, 7045.0648, 7045.0652 to 7045.0686, and ~~7045.1300 to 7045.1380~~ 7045.1390, and chapter 7001. The recycling process itself is exempt from regulation except as provided in item C.

[For text of items B to D, see M.R.]

[For text of subps 10 to 13, see M.R.]

7045.0127 RESIDUES IN EMPTY CONTAINERS AND EMPTY INNER LINERS.

Subpart 1. **Scope.** Any hazardous waste remaining in an empty container or an empty inner liner removed from an empty container, as defined in subparts 2 to 4 is not subject to regulation under parts 7045.0102 to 7045.1030 and ~~7045.1300 to 7045.1380~~ 7045.1390, or a hazardous waste facility permit. Any hazardous waste in a container or an inner liner removed from a container that is not empty, as defined in subparts 2 to 4, is subject to regulation under parts 7045.0102 to 7045.1030 and ~~7045.1300 to 7045.1380~~ 7045.1390, and the agency's permitting procedures.

Subp. 2. **Empty containers or inner liners; definition.** A container or an inner liner removed from a container that has held any hazardous waste, except a waste that is a compressed gas or that is identified as an acute hazardous waste in part 7045.0135, subpart ~~2, 3, or 4, item E~~ 1a, items B and C, and Code of Federal Regulations, title 40, section 261.33(e), as incorporated in part 7045.0135, is empty if:

[For text of items A to D, see M.R.]

Subp. 3. **Other empty containers or inner liners.** A container or inner liner that has held an acute hazardous waste identified in part 7045.0135, subpart ~~2, 3, or 4, item E~~ 1a, items B and C, and Code of Federal Regulations, title 40, section 261.33(e), as incorporated in part 7045.0135, is empty if:

[For text of items A to C, see M.R.]

[For text of subp 4, see M.R.]

7045.0131 CHARACTERISTICS OF HAZARDOUS WASTE.

Subpart 1. **In general.** A waste which is not excluded from regulation as a hazardous waste under part 7045.0120 is a hazardous waste if it exhibits ignitability, corrosivity, reactivity, toxicity, lethality, or is an oxidizer, as described in subparts 2 to 7. A hazardous waste which is identified by a characteristic in this part is assigned every hazardous waste number that is applicable. This number must be used in complying with the notification requirements of section 3010 of the federal Resource Conservation and Recovery Act and all applicable record keeping and reporting requirements under parts ~~7023.9000 to 7023.9050,~~ 7045.0205 to ~~7045.0642 and 7045.1300~~ 7045.0651 and 7045.1390, and chapter 7001. For purposes of this part, the commissioner shall consider a sample obtained using any of the applicable sampling methods specified in Code of Federal Regulations, title 40, part ~~260~~ 261, Appendix I ~~or part 261, Appendix II~~, as ~~amended~~ incorporated in part 7045.0155, or Toxicity Characteristic Leaching Procedure, Method 1311 in "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods," EPA publication SW-846, incorporated by reference in part 7045.0065, item D, to be a representative sample.

Subp. 2. **Ignitability.** A waste exhibits the characteristic of ignitability if a representative sample of the waste has any of the following properties:

[For text of items A and B, see M.R.]

C. it is an ignitable compressed gas as defined in Code of Federal Regulations, title 49, section ~~173.300~~ 173.115, as amended, and as determined by the test methods described in that regulation or equivalent test methods approved by the commissioner under part 7045.0075, subpart 1.

A waste that exhibits the characteristic of ignitability has the hazardous waste number of D001.

[For text of subp 3, see M.R.]

Subp. 4. **Corrosivity.** A waste exhibits the characteristic of corrosivity if a representative sample of the waste has any of the following properties:

A. It is aqueous and has a pH less than or equal to 2.0 or greater than or equal to 12.5, as determined by a pH meter using ~~either the test method~~ Method 9040C in ~~the~~ "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods ~~issued by the United States Environmental Protection Agency~~," EPA publication ~~number~~ SW-846 ~~(First Edition, 1980 as updated by Revisions A (August 1980), B (July 1981), and C (February 1982) or Second Edition, 1982) also described in Methods for Chemical Analysis of Water and Waste issued by the Environmental Monitoring and Support Laboratory, publication number 600/7-79-020 (March 1979), or an equivalent test method approved by the commissioner under the procedures set forth in part 7045.0075, subpart 1~~, incorporated by reference in part 7045.0065, item D; or

B. It is liquid and corrodes steel (SAE 1020) at a rate greater than 6.35 mm (0.250 inch) per year at a test temperature of 55 degrees Celsius (130 degrees Fahrenheit) as determined by the test method specified in National Association of Corrosion Engineers Standard TM-01-69 as standardized in" Test Methods for Evaluating Solid Waste, Physical/Chemical Methods," ~~issued by the United States Environmental Protection Agency,~~ EPA publication ~~number~~ SW-846 ~~(First Edition, 1980 as updated by Revisions A (August 1980), B (July 1981), and C (February 1982) or Second Edition, 1982) or an equivalent test method approved by the commissioner under the procedures set forth in part 7045.0075, subpart 1~~, incorporated by reference in part 7045.0065, item D.

A waste that exhibits the characteristic of corrosivity has the hazardous waste number of D002.

Subp. 5. **Reactivity.** A waste exhibits the characteristic of reactivity if a representative sample of the waste has any of the following properties:

[For text of items A to G, see M.R.]

H. it is a forbidden explosive as defined in Code of Federal Regulations, title 49, section ~~173.51~~ 173.54, as amended, a ~~Class A~~ Division 1.1 or 1.2 explosive as defined in Code of Federal Regulations, title 49, section ~~173.53~~ 173.50, as amended, or a ~~Class B~~ Division 1.2 or 1.3 explosive as defined in Code of Federal Regulations, title 49, section ~~173.88~~ 173.50, as amended.

A waste that exhibits the characteristic of reactivity has the hazardous waste number of D003.

[For text of subp 6, see M.R.]

Subp. 7. **Toxicity.** Toxicity is determined as follows:

A. A waste, except manufactured gas plant waste, exhibits the characteristic of toxicity if, using the ~~test methods described in Code of Federal Regulations, title 40, part 261, appendix II, as amended, or equivalent methods approved by the commissioner under the procedures in part 7045.0075, subpart 1~~ Toxicity Characteristic Leaching Procedure, Method 1311 in "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods," EPA publication SW-846, incorporated by reference in part 7045.0155, subpart 1, item B, the extract from a representative sample of the waste contains any of the contaminants listed in subpart 8 at a concentration equal to or greater than the respective ~~value given in that table~~ contaminant values listed. Where the waste contains less than 0.5 percent filterable solids, the waste itself, after filtering using the methodology outlined in Method 1311, is considered to be the extract for the purpose of this evaluation.

[For text of items B and C, see M.R.]

[For text of subp 8, see M.R.]

7045.0133 EXEMPTION FROM REGULATION DUE TO LETHALITY.

Subpart 1. **In general.** A generator's waste that exhibits the characteristics of lethality as described in part 7045.0131, subpart 6, may be exempted from regulation under parts 7045.0102 to ~~7045.1380~~ 7045.1390 if the generator can demonstrate to the satisfaction of the agency that the waste is not capable of posing a present or potential hazard to human health and the environment if the waste were to be improperly treated, transported, stored, disposed, or managed under routine waste management methods.

Subp. 2. **Factors to be considered.** In demonstrating that a waste should be exempt from regulation under parts 7045.0102 to ~~7045.1380~~ 7045.1390, the generator must present information related to the following factors:

[For text of items A to G, see M.R.]

7045.0135 LISTS OF HAZARDOUS WASTES.

Subpart 1. [See repealer.]

Subp. 1a. **Incorporation by reference of federal regulations.**The following lists of hazardous wastes found in Code of Federal Regulations, title 40, part 261, subpart D, as amended, are incorporated by reference:

A. section 261.30, general;

B. section 261.31, hazardous wastes from nonspecific sources;

C. section 261.32, hazardous wastes from specific sources;

D. section 261.33, discarded commercial chemical products, off-specification species, container residues, and spill residues thereof;

E. section 261.35, deletion of certain hazardous waste codes following equipment cleaning and replacement; and

F. section 261.38, comparable/syngas fuel exclusion.

Subp. 2. [See repealer.]

Subp. 2a. [See repealer.]

Subp. 2b. **Additions, modifications, or exceptions to incorporated provisions.**

A. Part 7045.0090, adoption and incorporation by reference, also applies.

B. The hazardous waste number in the "U" listing for paraldehyde in Code of Federal Regulations, title 40, section 261.33(f)/Table, should be U182.

C. In Code of Federal Regulations, title 40, section 261.38, Table 1, under "metals," in the listing for "cadmium, total," "ND" is the "composite value" and "1.2" is the "Concentration limit."

Subp. 3. [See repealer.]

Subp. 4. [See repealer.]

Subp. 5. **PCB wastes.** Requirements for PCB wastes are as follows:

A. For ~~the~~ purposes of this ~~part, "PCB" means the class of organic compounds known as polychlorinated biphenyls at a concentration of 50 parts per million or greater and includes any of several compounds produced by replacing one or more hydrogen atoms on the biphenyl molecule with chlorine. "PCB" does not include chlorinated biphenyl compounds that have functional groups attached other than chlorine.~~ subpart:

(1) "commercial storer of PCB waste" has the meaning given in Code of Federal Regulations, title 40, section 761.3, as amended;

(2) "PCB" means a substance that contains PCB's at a concentration of 50 parts per million or greater;

(3) "PCB lighting ballast" means a device that electrically controls light fixtures and that contains a PCB small capacitor or potting material that contains PCB's; and

(4) "PCB small capacitor" means a capacitor that contains less than 1.36 kilograms (3 pounds) of PCB dielectric fluid.

B. PCB materials or items are hazardous waste if and when they are discarded or stored prior to being discarded.

C. A generator of PCB wastes ~~who stores on-site prior to disposal~~ is subject to the requirements of Minnesota Statutes, section 116.07, subdivision 2b, and is exempt from the agency's hazardous waste ~~storage facility permit~~ requirements ~~and parts 7045.0292 and 7045.0450 to 7045.0642 for the storage of those wastes~~ except for ~~the following requirements~~:

~~(1) the storage standards described in Code of Federal Regulations, title 40, section 761.65, as amended; and~~

~~(2) the requirements applicable to the generator based on generator size of part 7045.0292, subpart 1, 5, or 6, regarding proper labeling, personnel training, preparedness, prevention, and contingency planning. However, PCB items in use or in storage prior to disposal that are labeled as PCBs according to Code of Federal Regulations, title 40, sections 761.40, 761.45, and 761.65, as amended, are not subject to the hazardous waste labeling requirements of part 7045.0292.~~

(1) the hazardous waste management requirements of part 7045.0208;

(2) the evaluation requirements of part 7045.0214;

(3) the licensing requirements of parts 7045.0225 to 7045.0250; and

(4) the fee requirements of chapter 7046, unless a generator demonstrates performance of a PCB phase-out agreement under Minnesota Statutes, section 116.07, subdivision 2b, paragraph (b).

D. ~~PCB wastes may be transported without a hazardous waste manifest if transportation is via the owner's own vehicle and if that transportation is between the~~

~~owner's facilities or premises.~~ In addition to the requirements of item C, a generator or commercial storer of PCB waste who generates or stores PCB ballasts or PCB small capacitors must comply with the requirements of part 7045.0566, subpart 2. A commercial storer of PCB waste storing only PCB ballasts and PCB small capacitors is not subject to the facility standards in parts 7045.0450 to 7045.0651, except for the requirements of part 7045.0566, subpart 2, or to the hazardous waste facility permit requirements in chapter 7001.

E. Thermal treatment of PCB wastes at concentrations less than 500 parts per million. High efficiency boilers as defined in Code of Federal Regulations, title 40, section 761.60(a), as amended, which are used for treatment of mineral oil dielectric fluid containing less than 500 ppm PCB, are exempt from the agency's hazardous waste facility permit requirements in chapter 7001 and parts ~~7023.9000 to 7023.9050,~~ 7045.0292~~,~~ and 7045.0450 to ~~7045.0642 for storage and treatment of those wastes~~ 7045.0651, except for the following requirements:

(1) parts 7045.0526 and 7045.0528;

(2) parts 7045.0556 and 7045.0558;

(3) parts 7045.0564 to 7045.0588; and

(4) parts 7045.0594 and 7045.0596.

F. PCB wastes have the hazardous waste number of MN03.

7045.0139 BASIS FOR LISTING HAZARDOUS WASTES.

Subpart 1. **General.** ~~The tables in subpart 2 list the constituents which caused the agency to list wastes as hazardous in part 7045.0135, subparts 2 and 3. The notation "N.A." indicates the waste is hazardous because it fails the test for the characteristics of ignitability, corrosivity, reactivity, or toxicity, and the listing of a chemical name is not applicable.~~ The basis for listing hazardous waste is found in part 7045.0155, subpart 1,

item D, which incorporates Code of Federal Regulations, title 40, part 261, Appendix VII, Basis for Listing Hazardous Waste. Part 7045.0155, subpart 2, provides any applicable exceptions.

Subp. 2. [See repealer.]

7045.0141 HAZARDOUS CONSTITUENTS.

Subpart 1. **Scope.** ~~Hazardous constituents and their corresponding Chemical Abstract Service registry numbers and hazardous waste numbers, if available, are listed in subparts 2 to 22.~~ The hazardous constituents list is found in part 7045.0155, subpart 1, item E, which incorporates Code of Federal Regulations, title 40, part 261, Appendix VIII, Hazardous Constituents. Part 7045.0155, subpart 2, provides any applicable exceptions.

Subp. 2. [See repealer.]

Subp. 3. [See repealer.]

Subp. 4. [See repealer.]

Subp. 5. [See repealer.]

Subp. 6. [See repealer.]

Subp. 7. [See repealer.]

Subp. 8. [See repealer.]

Subp. 9. [See repealer.]

Subp. 10. [See repealer.]

Subp. 11. [See repealer.]

Subp. 12. [See repealer.]

Subp. 13. [See repealer.]

Subp. 15. [See repealer.]

Subp. 16. [See repealer.]

Subp. 17. [See repealer.]

Subp. 18. [See repealer.]

Subp. 19. [See repealer.]

Subp. 20. [See repealer.]

Subp. 21. [See repealer.]

Subp. 22. [See repealer.]

Subp. 23. [See repealer.]

7045.0143 GROUNDWATER PROTECTION HAZARDOUS CONSTITUENTS LIST.

Subpart 1. **Scope.** ~~For the purposes of the groundwater protection requirements in parts 7001.0640, subpart 1, item D, subitem (2); and 7045.0484, subparts 12, item G, subitem (2), and 13, item E, the hazardous constituents are listed with their corresponding Chemical Abstract Service registry numbers in subparts 2 to 27. Where "total" is entered for the Chemical Abstract Service registry number, all species in the groundwater that contain this element are included.~~ The groundwater protection hazardous constituents list is found in part 7045.0543, subpart 1, item D, which incorporates Code of Federal Regulations, title 40, part 264, Appendix IX, Ground Water Monitoring List. Part 7045.0543, subpart 2, provides any applicable exceptions.

Subp. 2. [See repealer.]

Subp. 3. [See repealer.]

Subp. 4. [See repealer.]

Subp. 5. [See repealer.]

Subp. 6. [See repealer.]

Subp. 7. [See repealer.]

Subp. 9. [See repealer.]

Subp. 10. [See repealer.]

Subp. 12. [See repealer.]

Subp. 13. [See repealer.]

Subp. 14. [See repealer.]

Subp. 15. [See repealer.]

Subp. 17. [See repealer.]

Subp. 20. [See repealer.]

Subp. 21. [See repealer.]

Subp. 23. [See repealer.]

Subp. 25. [See repealer.]

Subp. 27. [See repealer.]

7045.0155 APPENDICES TO IDENTIFICATION AND LISTING OF HAZARDOUS WASTE.

Subpart 1. **Incorporation of federal regulations.** The following appendices found in Code of Federal Regulations, title 40, part 261, as amended, are incorporated by reference:

A. Appendix I, Representative Sampling Methods;

B. Appendix VII, Basis for Listing Hazardous Waste; and

C. Appendix VIII, Hazardous Constituents.

Subp. 2. **Additions, modifications, or exceptions to incorporated regulations.**

A. Part 7045.0090, adoption and incorporation by reference, also applies.

B. The chemical abstracts name for physostigmine listed in Code of Federal Regulations, title 40, part 261, Appendix VIII, is "Pyrrolo [2,3-b]indol-5-o1."

C. The chemical abstracts number for potassium pentachlorophenate in Code of Federal Regulations, title 40, part 261, Appendix VIII, should be "7778-73-6."

7045.0208 HAZARDOUS WASTE MANAGEMENT.

Subpart 1. **Management by generator.** A generator must manage hazardous waste by using one of the methods described in items A to ~~G~~ H, unless otherwise specifically exempted under this chapter.

A. A generator may treat or dispose of hazardous waste at an on-site facility as provided under part 7045.0211.

B. A generator may ensure delivery of hazardous waste to an off-site storage, treatment, or disposal facility. If located in the United States, the facility used must be permitted to accept hazardous waste under the agency's permitting procedures, have interim status under parts 7045.0552 to ~~7045.0642~~ 7045.0651, or be authorized to manage hazardous waste by the Environmental Protection Agency or by a state with a hazardous waste management program authorized by the Environmental Protection Agency.

[For text of items C to G, see M.R.]

H. A generator may ensure delivery of PCB waste to a commercial storer of PCB waste, as defined in part 7045.0135, subpart 5.

[For text of subps 1a to 3, see M.R.]

Subp. 4. **Land disposal.** ~~Except as specified in part 7045.1300, subparts 2 and 3,~~ Hazardous wastes are subject to the requirements of ~~parts 7045.1300 to 7045.1380~~ part 7045.1390.

7045.0213 FARMERS; PESTICIDES.

[For text of subpart 1, see M.R.]

Subp. 2. **Special conditions.** A farmer who generates waste pesticides which are hazardous waste and who triple rinses each emptied pesticide container and disposes of the pesticide residues on the farmer's farm in a manner consistent with the disposal instructions on the pesticide label is not required with respect to those pesticides to comply with other standards in parts 7045.0205 to 7045.0320 or to comply with parts 7045.0450 to ~~7045.1380~~ 7045.1390, or to obtain a hazardous waste facility permit, provided that:

[For text of items A to C, see M.R.]

7045.0214 EVALUATION OF WASTES.

Subpart 1. **General requirement.** Any person who produces a waste within the state of Minnesota or any person who produces a waste outside the state of Minnesota that is managed within the state of Minnesota, must evaluate the waste to determine if it is hazardous within 60 days of initially generating the waste. The generation start date must be recorded and available for inspection. Waste that is not evaluated within 60 days of the generation start date must be managed as a hazardous waste and the person who produces the waste must be considered a generator until the waste is determined to be nonhazardous under parts 7045.0214 to 7045.0218. A material is determined to be a waste in accordance with the conditions specified under the definition of other waste material in part 7045.0020. Any waste evaluated and exempted under part 7045.0075 or 7045.0120 does not need to be reevaluated under this part. If the waste is determined to be hazardous, the generator must refer to parts 7045.0075, 7045.0450 to ~~7045.0685~~ 7045.0990, ~~and~~ ~~7045.1300 to 7045.1380~~ 7045.1390, and 7045.1400 for possible exclusions or restrictions relating to management of the specific waste.

[For text of subp 2, see M.R.]

Subp. 3. **Wastes generated by treatment, storage, or disposal.** Wastes generated by treatment, storage, or disposal of hazardous waste are as follows:

A. Except as provided in items B to E, or in part 7045.0102, any waste generated from the treatment, storage, or disposal of hazardous waste, including any sludge, spill residue, ash, emission control dust or leachate, but not including precipitation ~~run-off~~ runoff, is a hazardous waste if it meets the criteria of subpart 2 or if it is derived from a waste that is listed in part 7045.0135.

[For text of items B to D, see M.R.]

E. Nonwastewater residues, such as slag, resulting from high temperature metals recovery (HTMR) processing of K061, K062, or F006 waste, in units identified as rotary kilns, flame reactors, electric furnaces, plasma arc furnaces, slag reactors, rotary hearth furnace/electric furnace combinations, or industrial furnaces~~, as defined in~~ that are blast furnaces or smelting, melting, and refining furnaces, including pyrometallurgical devices, such as cupolas, reverberator furnaces, sintering machines, roasters, or foundry furnaces, or that are other devices that the commissioner determines qualify for inclusion as an industrial furnace under part 7045.0020, subpart 43b, that are disposed ~~of~~ in solid waste disposal units, provided that these residues meet the generic exclusion levels identified ~~below~~ in the tables in this item for all constituents, and exhibit no characteristics of hazardous waste. Testing requirements must be incorporated in a facility's waste analysis plan or a generator's self-implementing waste analysis plan. At a minimum, composite samples of residues must be collected and analyzed quarterly and/or when the process or operation generating the waste changes. Persons claiming this exclusion in an enforcement action have the burden of proving by clear and convincing evidence that the material meets all of the exclusion requirements.

The generic exclusion levels ~~are~~ for K061 and K062 nonwastewater HTMR residues are as follows:

Constituent	Maximum for any single composite sample (mg/l)
Antimony	~~0.063~~ 0.10
Arsenic	~~0.055~~ 0.50
Barium	~~6.3~~ 7.6
Beryllium	~~0.0063~~ 0.010
Cadmium	~~0.032~~ 0.050
Chromium (total)	0.33
Lead	~~0.095~~ 0.15
Mercury	0.009
Nickel	~~0.63~~ 1.0
Selenium	0.16
Silver	0.30
Thallium	~~0.013~~ 0.020
~~Vanadium~~	~~1.26~~
Zinc	70

The generic exclusion levels for F006 nonwastewater HTMR residues are as follows:

Constituent	Maximum for any single composite sample (mg/l)
Antimony	0.10
Arsenic	0.50
Barium	7.6
Beryllium	0.010
Cadmium	0.050
Chromium (total)	0.33
Cyanide (total)	1.8 (mg/kg)
Lead	0.15
Mercury	0.009
Nickel	1.0
Selenium	0.16

Silver	0.30
Thallium	0.020
Zinc	70

For ~~each shipment of~~ K061 ~~high temperature metals recovery~~, K062, or F006 HTMR residues sent to ~~a~~ solid waste disposal ~~unit that meets~~ units, the treatment facility must prepare and send to the commissioner a onetime notification and certification certifying that the residues meet the generic exclusion levels for all constituents~~,~~ and ~~does~~ do not exhibit any ~~characteristic, a~~ characteristics of hazardous waste. The notification and certification must also be kept in the facility's files. The notification and certification must be updated if the process or operation generating the waste changes or if the solid waste disposal unit receiving the waste changes. However, the treatment facility need only notify the commissioner on an annual basis if these changes occur. The notification and certification must be sent to the commissioner no later than December 31. The notification and certification must include the following information:

(1) the name and address of the solid waste disposal unit receiving the waste ~~shipment~~ shipments;

(2) the EPA hazardous waste ~~number~~ numbers and treatability ~~group~~ groups at the initial point of generation; and

(3) the treatment standards applicable to the waste at the initial point of generation.

The certification must be signed by an authorized representative of the treatment facility and must state as follows: "I certify under penalty of law that the generic exclusion levels for all constituents have been met without impermissible dilution and that no characteristic of hazardous waste is exhibited. I am aware that there are significant penalties for submitting a false certification, including the possibility of fine and imprisonment."

7045.0255 ~~ONE-TIME~~ ONETIME DISPOSAL REQUIREMENTS.

A person having hazardous waste subject to regulation under this chapter who is only a hazardous waste generator for the ~~one-time~~ onetime disposal of hazardous waste which is not currently being produced, must comply with this chapter except as provided in items A to D. The exemptions in this part do not apply to generators that generate hazardous waste more than one time.

A. The generator is exempt from parts 7045.0225 to 7045.0250, license and license reporting.

B. A large quantity generator is exempt from part 7045.0292, subpart 1, but must instead comply with part 7045.0292, subpart 5, items A to F, and must meet the requirements of part 7045.0566, relating to preparedness and prevention, and ~~part 7045.1315, subpart 1, item D~~ Code of Federal Regulations, title 40, section 268.7(a)(5), as incorporated in part 7045.1390, relating to waste analysis for restricted wastes.

C. A small quantity generator is exempt from the requirements of part 7045.0292, subpart 5, items G and H, but instead must meet the requirements of part 7045.0566, relating to preparedness and prevention, and ~~part 7045.1315, subpart 1, item D~~ Code of Federal Regulations, title 40, section 268.7(a)(5), as incorporated in part 7045.1390, relating to waste analysis for restricted wastes.

D. A very small quantity generator is exempt from part 7045.0292, subpart 6, but instead must comply with part 7045.0292, subpart 5, items A to F, and must meet the requirements of part 7045.0566, relating to preparedness and prevention, and ~~part 7045.1315, subpart 1, item D~~ Code of Federal Regulations, title 40, section 268.7(a)(5), as incorporated in part 7045.1390, relating to waste analysis for restricted wastes.

7045.0270 PRETRANSPORT REQUIREMENTS.

Subpart 1. **Marking.** Before transporting or offering hazardous waste for transportation off-site, a generator must:

A. mark each package of hazardous waste in accordance with the applicable United States Department of Transportation regulations on hazardous materials under Code of Federal Regulations, title 49, part 172, subpart D, as amended; and

[For text of item B, see M.R.]

[For text of subps 2 and 3, see M.R.]

Subp. 4. **Packaging.** Before transporting hazardous waste or offering a hazardous waste for transportation off-site, a generator must package the waste in accordance with the applicable United States Department of Transportation regulations on packaging under Code of Federal Regulations, title 49, parts 173, 178, ~~and~~ 179, and 180, as amended.

Subp. 5. **Labeling.** Before transporting or offering hazardous waste for transportation off-site, a generator must label each package in accordance with the applicable United States Department of Transportation regulations on hazardous materials under Code of Federal Regulations, title 49, part 172, subpart E, as amended.

[For text of subps 6 and 7, see M.R.]

7045.0292 ACCUMULATION OF HAZARDOUS WASTE.

Subpart 1. **Large quantity generator.** A large quantity generator may accumulate hazardous waste on site without a permit or without having interim status if:

[For text of item A, see M.R.]

B. the waste is placed as follows:

(1) in containers which meet the standards of part 7045.0270, subpart 4, and are managed in accordance with applicable requirements of parts 7045.0594, subpart 2~~.~~; 7045.0596, subpart 3~~, and~~; 7045.0626; 7045.0645; 7045.0647; and 7045.0648;

(2) in tanks provided the generator complies with the applicable requirements of parts 7045.0594, subpart 2~~.~~; 7045.0596, subpart 3~~, and~~; 7045.0628;

7045.0645; 7045.0647; and 7045.0648, except part 7045.0628, ~~subpart~~ subparts 9, item C, and ~~subpart~~ 12; ~~or~~

(3) for wood preserving operations on drip pads, provided the generator complies with parts 7045.0594, subpart 2~~.~~; 7045.0596, subpart 3~~.~~; and 7045.0644 and maintains records containing a description of procedures that will be followed to ensure that all wastes are removed from drip pads and associated collection systems at least once every 90 days, and maintains documentation of the quantities, dates, and times of each waste removal. ~~These~~ Records relating to drip pads must be maintained at the licensed site and must be easily available for agency inspection;

[For text of items C to F, see M.R.]

G. the requirements of parts 7045.0558; 7045.0562, subparts 1 and 2; 7045.0566 to 7045.0576; and ~~7045.1315, subpart 1, item D~~ Code of Federal Regulations, title 40, section 268.7(a)(5), as incorporated in part 7045.1390, are fulfilled regarding personnel training, ignitable, reactive, or incompatible waste, preparedness and prevention, contingency planning, and waste analysis for restricted wastes.

[For text of subps 2 to 4, see M.R.]

Subp. 5. **Small quantity generator.** A small quantity generator may accumulate up to 3,000 kilograms of hazardous waste that is not acute hazardous waste on site without a permit or without having interim status if:

[For text of item A, see M.R.]

B. the waste is placed in containers which meet the standards of part 7045.0270, subpart 4, and are managed in accordance with parts 7045.0594, subpart 2~~.~~; 7045.0596, subpart 3~~.~~; and 7045.0626, subparts 1 to 8; in tanks provided the generator complies with the requirements of parts 7045.0594, subpart 2~~.~~; 7045.0596, subpart 3~~.~~; and 7045.0629; or for wood preserving operations on drip pads, provided the generator complies with parts

7045.0594, subpart 2~~,~~; 7045.0596, subpart 3 ~~,~~; and 7045.0644 and maintains records containing a description of procedures that will be followed to ensure that all wastes are removed from drip pads and associated collection systems at least once every 180 days, and maintains documentation of the quantities, dates, and times of each waste removal. These records relating to drip pads must be maintained at the licensed site and must be easily available for agency inspection;

[For text of items C to F, see M.R.]

G. the generator meets the requirements of parts 7045.0566, relating to preparedness and prevention; 7045.0568, relating to the arrangements with local authorities for emergencies; and ~~7045.1315, subpart 1, item D~~ Code of Federal Regulations, title 40, section 268.7(a)(5), as incorporated in part 7045.1390, relating to waste analysis for restricted wastes; and

[For text of item H, see M.R.]

Subp. 6. **Very small quantity generator.** A very small quantity generator may accumulate up to 1,000 kilograms of hazardous waste that is not acute hazardous waste on site without a permit or without having interim status if:

[For text of item A, see M.R.]

B. the waste is placed in containers which meet the standards of part 7045.0270, subpart 4, and are managed in accordance with parts 7045.0594, subpart 2~~,~~; 7045.0596, subpart 3~~,~~; and 7045.0626, subparts 1 to 8; in tanks provided the generator complies with the requirements of parts 7045.0594, subpart 2~~,~~; 7045.0596, subpart 3~~,~~; and 7045.0629; or for wood preserving operations on drip pads, provided the generator complies with parts 7045.0594, subpart 2~~,~~; 7045.0596, subpart 3~~,~~; and 7045.0644 and maintains records containing a description of procedures that will be followed to ensure that all wastes are removed from drip pads and associated collection systems at least once every 180 days, and maintains documentation of the quantities, dates, and times of each waste removal.

These records relating to drip pads must be maintained at the licensed site and must be easily available for agency inspection;

[For text of items C to H, see M.R.]

Subp. 7. **Acute hazardous waste accumulation.** A small quantity generator or a very small quantity generator who generates acute hazardous waste ~~may accumulate that waste on site indefinitely until one kilogram of acute hazardous waste or 100 kilograms of residue, contaminated soil, water, or other debris resulting from the cleanup of a spill of an acute hazardous waste into or on any land or water, is accumulated. From the date the applicable limit is reached, the entire quantity of waste must be treated on site in compliance with part 7045.0211 or shipped off site in compliance with part 7045.0208 within 90 days. A generator accumulating wastes under this subpart must meet the requirements in items A and B.~~ that is not exempt under subpart 8 must comply with items A and B:

A. ~~For the period preceding the accumulation start date,~~ A generator may accumulate acute hazardous waste on site indefinitely in quantities equal to or less than one kilogram of acute hazardous waste and equal to or less than 100 kilograms of residue, contaminated soil, water, or other debris resulting from cleaning up spilled acute hazardous waste. The generator must comply with subpart 5, items B to H.

B. ~~For the period following the accumulation start date, the generator~~ A generator who accumulates on site more than one kilogram of acute hazardous waste, or more than 100 kilograms of residue, contaminated soil, water, or other debris resulting from cleaning up spilled acute hazardous waste must comply with subpart 1.

Subp. 8. **Satellite accumulation.** Items A to D apply to all generators of hazardous waste.

A. A generator may, without a permit or interim status and without complying with subparts 1 to 7, accumulate as much as 55 gallons of hazardous waste or one quart of

acute hazardous waste listed in part 7045.0135, ~~subparts 2 and 4, item E~~ subpart 1a, items B to D, per waste stream per each point of generation provided the generator complies with items B to D.

[For text of items B to D, see M.R.]

[For text of subps 9 and 10, see M.R.]

Subp. 11. **Accumulation requiring a permit.** A large quantity generator who accumulates hazardous waste for more than 90 days, or a small quantity generator who accumulates more than 3,000 kilograms of hazardous waste at any time, is an operator of a storage facility and is subject to the requirements of parts 7045.0450 to ~~7045.0642~~ 7045.0651 and the agency's permitting procedures in chapter 7001 ~~and parts 7023.9000 to 7023.9050~~ unless the generator has been granted a time extension under subpart 10.

[For text of subp 12, see M.R.]

7045.0294 RECORD KEEPING.

[For text of subps 1 to 3, see M.R.]

Subp. 3a. **Training records.** A generator must keep training records required under part 7045.0292, subparts 1, item G, and 5, item ~~G~~ H, subitem (3), on current personnel until closure of the licensed site. Training records on former employees must be kept for at least three years from the date of the employee's termination. Personnel training records may accompany personnel transferred within the same company.

[For text of subps 4 and 5, see M.R.]

7045.0300 ADDITIONAL REPORTING.

The commissioner, when necessary to determine compliance with the requirements of this chapter, may require generators to furnish additional reports concerning the quantities and disposition of waste identified or listed in parts ~~7045.0100~~ 7045.0102 to ~~7045.0143~~ 7045.0155.

7045.0302 INTERNATIONAL SHIPMENTS; SPECIAL CONDITIONS.

[For text of subps 1 and 1a, see M.R.]

Subp. 2. **Notification.** When shipping hazardous waste outside the state of Minnesota to a foreign country the primary exporter must notify the commissioner and the EPA of an intended export before the waste is scheduled to leave the United States. A complete notification should be submitted 60 days before the initial shipment is intended to be shipped off site. This notification may cover export activities extending over a 12-month or lesser period.

The notification must be sent to the commissioner at 520 Lafayette Road, Saint Paul, Minnesota 55155-4194, and to the Office of Enforcement and Compliance Assurance, Office of Federal Activities, International Compliance Assurance Division (2254A), Environmental Protection Agency, 1200 Pennsylvania Avenue N.W., Washington, DC 20460. Hand-delivered notifications must be sent to the Office of Enforcement and Compliance Assurance, Office of Federal Activities, International Compliance Assurance Division (2254A), Environmental Protection Agency, Ariel Rios Building, 12th Street and Pennsylvania Avenue N.W., Washington, DC 20460. In both cases, the following must be prominently displayed on the front of the envelope: "Attention: Notification of Intent to Export."

The primary exporter must provide the commissioner and the EPA with written renotification of any changes to the notification, except for changes to the telephone number, decreases in the quantity indicated in item B, subitem (3), and changes in the means of transport in item B, subitem (5). The waste shall not be shipped until the primary exporter receives an EPA Acknowledgment of Consent reflecting the receiving country's consent to the changes.

The notification must be in writing, signed by the primary exporter, and include the following information:

A. name, mailing address, telephone number, and identification number of the primary exporter; and

B. by consignee, for each hazardous waste type:

(1) a description of the hazardous waste and the EPA hazardous waste number (from Code of Federal Regulations, title 40, part 261, subpart C or D, as amended), United States Department of Transportation proper shipping name, hazard class, ~~and~~ identification number (UN/NA), and packing group for each hazardous waste as identified in Code of Federal Regulations, title 49, parts 171 to 177, as amended;

[For text of subitems (2) to (9), see M.R.]

[For text of subps 3 to 7, see M.R.]

7045.0365 TRANSFER FACILITY REQUIREMENTS.

Subpart 1. **Applicability.** A transporter who stores manifested shipments of hazardous waste in containers meeting the requirements of part 7045.0270, subpart 4, at a transfer facility for a period of ten days or fewer is not subject to regulation under parts 7045.0450 to ~~7045.0642~~ 7045.0651 and ~~7045.1300 to 7045.1380~~ 7045.1390, and a hazardous waste facility permit with respect to the storage of those wastes. The owner or operator must notify the commissioner in writing of his or her activity.

[For text of subps 2 and 3, see M.R.]

7045.0371 TRANSPORTATION OF HAZARDOUS WASTE.

Hazardous waste shall be transported in accordance with all applicable requirements of Minnesota Statutes, sections 221.033 and ~~221.034~~ 221.0341, and with ~~221.035~~ 221.0355 if applicable, and Code of Federal Regulations, title 49, parts 171 to ~~179~~ 199, as amended.

7045.0395 HAZARDOUS WASTE DISCHARGES.

[For text of subps 1 to 4, see M.R.]

Subp. 5. **Reporting.** Any air, rail, highway, or water transporter who has discharged hazardous waste must:

A. report in writing as required by Code of Federal Regulations, title 49, section 171.16, as amended, to the ~~Director, Office of Hazardous Materials Regulations, Materials Transportation Bureau~~ Information Systems Manager, PHH-63, Pipeline and Hazardous Materials Safety Administration, Department of Transportation, Washington, D.C. 20590-0001, or submit an electronic hazardous materials incident report to the Information Systems Manager, DHM-63, Pipeline and Hazardous Materials Safety Administration, Department of Transportation, Washington, D.C. 20590-0001 at http://hazmat.dot.gov;

[For text of items B and C, see M.R.]

7045.0450 FACILITIES GOVERNED BY FACILITY STANDARDS.

Subpart 1. **General requirements.**

[For text of items A to C, see M.R.]

D. Parts 7045.0450 to 7045.0551 apply to the owners and operators of all facilities that treat, store, or dispose of hazardous waste referred to in ~~parts 7045.1300 to 7045.1380~~ part 7045.1390.

[For text of item E, see M.R.]

Subp. 2. **Relationship to interim status standards.** A facility owner or operator who has fully complied with the requirements for interim status under part 7045.0554 shall comply with parts 7045.0552 to ~~7045.0642~~ 7045.0651 in lieu of parts 7045.0450 to 7045.0551 until final administrative disposition of the permit application is made. The treatment, storage, or disposal of hazardous waste is prohibited except in accordance with a permit and except for the extent to which parts 7045.0552 to ~~7045.0642~~ 7045.0651 provide for the continued operation of an existing facility which meets certain conditions

until final administrative disposition of the owner's or operator's permit application is made, except as provided under parts 7045.0485, 7045.0545, and 7045.0546.

Subp. 3. **Exemptions.** The requirements of parts 7045.0450 to 7045.0551 do not apply to the following specific waste management units, facilities, or activities, although all other waste management activities of the owner or operator may be regulated:

[For text of items A to D, see M.R.]

E. an elementary neutralization unit, a pretreatment unit, or a wastewater treatment unit, but only if the unit does not receive hazardous waste from generators other than the owner or operator of the unit, provided that if the owner or operator is diluting hazardous ignitable (D001) wastes (other than the D001 High TOC Subcategory defined in Code of Federal Regulations, title 40, section 268.40, Table of Treatment Standards for Hazardous Wastes, as incorporated in part 7045.1390) or reactive (D003) waste to remove the characteristic before land disposal, the owner or operator must comply with part 7045.0456, subpart 2;

[For text of items F to I, see M.R.]

J. (1) except as provided in subitem (2), treatment or containment activities during immediate response to any of the following situations: a discharge of a hazardous waste, an imminent and substantial threat of a discharge of hazardous waste, or a discharge of a material which, when discharged, becomes a hazardous waste;

[For text of subitem (2), see M.R.]

(3) a person who is covered by subitem (1) and who continues or initiates hazardous waste treatment or containment activities after the immediate response is over is subject to all applicable requirements of parts 7045.0450 to ~~7045.0544~~ 7045.0551 and the agency's permitting procedures for those activities;

K. treatment of hazardous waste by a generator in the generator's accumulation tanks or containers in accordance with part 7045.0292. If the treatment involves evaporation of aqueous waste or polymerization of polyester or other chemical fixation treatment processes in open containers, the generator is exempt from parts 7045.0450 to ~~7045.0544~~ 7045.0551, but before beginning the treatment process must submit to the commissioner the information required under part 7045.0539, subpart 2, items A to C, that is relevant to the treatment activity and must be notified by the commissioner that the treatment activity is approved. The commissioner shall approve the treatment activity if the commissioner finds that the treatment activity will not endanger human health and the environment; or

[For text of item L, see M.R.]

7045.0452 GENERAL FACILITY STANDARDS.

[For text of subps 1 to 4, see M.R.]

Subp. 5. **General inspection requirements.** General inspection requirements include the following:

[For text of items A and B, see M.R.]

C. The frequency of inspection may vary for the items on the schedule. However, ~~it must~~ the frequency must be based on the rate of possible deterioration of the equipment and the probability of an environmental or human health incident if the deterioration ~~or malfunctions~~, malfunction, or any operator error goes undetected between inspections. Areas subject to spills, such as loading and unloading areas, must be inspected daily when in use. At a minimum, the inspection schedule must include the terms and frequencies called for in parts 7045.0526, subpart 5; 7045.0528, subparts 4 and 7; 7045.0532, subpart 5; 7045.0534, subpart 6; 7045.0536, subpart 6; 7045.0538, subpart 5; 7045.0539, subpart 3; and 7045.0542, subpart 7; and the process vent ~~and~~, equipment leak, and tank, surface impoundment, and container standards in Code of

Federal Regulations, title 40, sections 264.1033, 264.1052, 264.1053, ~~and~~ 264.1058, as amended, and sections 264.1083 to 264.1089, as incorporated in part 7045.0540, where applicable. The inspection schedule must be submitted with the permit application. The commissioner shall evaluate the schedule along with the rest of the application to ensure that it adequately protects human health and the environment. As part of this review, the commissioner may modify or amend the schedule as necessary.

[For text of items D and E, see M.R.]

7045.0458 WASTE ANALYSIS REQUIREMENTS.

Subpart 1. **Waste analysis.** Waste analysis procedures are listed in items A to D.

A. Before an owner or operator treats, stores, or disposes of any hazardous waste, or nonhazardous waste if applicable under part 7045.0488, subpart 2a, the owner or operator shall obtain a detailed chemical and physical analysis of a representative sample of the waste. This analysis must contain all the information which must be known in order to treat, store, or dispose of the waste in accordance with the requirements of parts 7045.0450 to 7045.0551 and ~~7045.1300 to 7045.1380~~ 7045.1390, or with the conditions of a permit issued under the agency's permitting procedures.

B. The analysis may include data developed under parts 7045.0102 to ~~7045.0143~~ 7045.0155 and existing published or documented data on the hazardous waste or on hazardous waste generated from similar processes, including data obtained from the generator.

[For text of items C and D, see M.R.]

Subp. 2. **Waste analysis plan.** The owner or operator shall develop and follow a written waste analysis plan which describes the procedures that will be used to comply with subpart 1. The owner or operator shall keep this plan at the facility. The plan must specify:

[For text of items A to E, see M.R.]

F. where applicable, the methods that will be used to meet the additional waste analysis requirements for specific waste management methods as specified in parts 7045.0456; 7045.0538, subpart 10; 7045.0542, subpart 2; and ~~7045.1315~~ Code of Federal Regulations, title 40, section 268.7, as incorporated in part 7045.1390; and the process vent ~~and~~, equipment leak, and tank, surface impoundment, and container test methods and procedures in Code of Federal Regulations, title 40, sections 264.1034(d) ~~and~~, 264.1063(d), as amended, and section 264.1083, as incorporated in part 7045.0540;

G. for off-site facilities, the waste analysis plan must also specify the procedures ~~which~~ that will be used to inspect and, if necessary, analyze each movement of hazardous waste received at the facility to ensure that it matches the identity of the waste designated on the accompanying manifest or shipping paper. The plan must describe:

(1) the procedures ~~which~~ that will be used to determine the identity of each movement of waste managed at the facility; ~~and~~

(2) the sampling method ~~which~~ that will be used to obtain a representative sample of the waste to be identified, if the identification method includes sampling. The waste analysis plan must be submitted with the permit application; and

(3) the procedure that the owner or operator of an off-site landfill receiving containerized hazardous waste will use to determine whether a hazardous waste generator or treater has added a biodegradable sorbent to the waste in the container;

H. for surface impoundments exempted from the land disposal restrictions under ~~part 7045.1310~~ Code of Federal Regulations, title 40, section 268.4, as incorporated in part 7045.1390, the procedures and schedules for:

(1) the sampling of impoundment contents;

(2) the analysis of test data; and

(3) the annual removal of residues which are not delisted under part 7045.0075, subpart 2, or which exhibit a characteristic of hazardous waste under part 7045.0131, and either do not meet the treatment standards of ~~parts 7045.1350 to 7045.1360~~ Code of Federal Regulations, title 40, sections 268.40 to 268.42, as incorporated in part 7045.1390, or, where no treatment standards have been established, such residues are prohibited from land disposal under ~~parts 7045.1320 to 7045.1333~~ Code of Federal Regulations, title 40, sections 268.30 to 268.35, as incorporated in part 7045.1390, or RCRA section 3004(d)~~.~~; and

I. for owners and operators seeking an exemption to the air emission standards of part 7045.0540 in accordance with Code of Federal Regulations, title 40, section 264.1082, as incorporated in part 7045.0540:

(1) if direct measurement is used for the waste determination, the procedures and schedules for waste sampling and analysis and the results of the analysis of test data to verify the exemption; and

(2) if knowledge of the waste is used for the waste determination, any information prepared by the facility owner or operator or by the generator of the hazardous waste, if the waste is received from off site, that is used as the basis for knowledge of the waste.

7045.0478 OPERATING RECORD.

[For text of subps 1 and 2, see M.R.]

Subp. 3. **Record information.** The information in items A to T must be recorded, as it becomes available, and maintained in the operating record until closure of the facility.

[For text of items A and B, see M.R.]

C. A description and the quantity of each hazardous waste received, and the method and date of treatment, storage, or disposal at the facility in accordance with the

record-keeping instructions in Code of Federal Regulations, title 40, part 264, Appendix I, as incorporated in part 7045.0543.

[For text of item D, see M.R.]

E. Records and results of waste analyses and waste determinations performed as specified in parts 7045.0456~~,~~; 7045.0458~~,~~; 7045.0538, subpart 10~~,~~; and 7045.0542, subpart 2, ~~7045.1310, and 7045.1315~~ and Code of Federal Regulations, title 40, sections 264.1034 and 264.1063, as amended, and sections 264.1083, 268.4(a), and 268.7, as incorporated in part 7045.0540 or 7045.1390; and the process vent and equipment leak test methods and procedures in Code of Federal Regulations, title 40, sections 264.1034 and 264.1063, as amended.

[For text of items F and G, see M.R.]

H. Monitoring, testing, or analytical data and corrective action where required by parts 7045.0461; 7045.0484; 7045.0528, subparts 2, 4, and 7; 7045.0532, subparts 4a, 4b, and 5; 7045.0534, subparts 4a, 5, 5a, and 6; 7045.0536, subparts 5, 6, and 8; 7045.0538, subparts 4a, 5, 5a, and 6; 7045.0539, subpart 3; and 7045.0542, subpart 7; and the process vent ~~and~~, equipment leak, and tank, surface impoundment, and container test methods and procedures and record keeping requirements in Code of Federal Regulations, title 40, sections 264.1034(c) to (f), 264.1035, 264.1063(d) to (i), and 264.1064, as amended, and sections 264.1082 to 264.1090, as incorporated in part 7045.0540.

[For text of items I to K, see M.R.]

L. The certification in item K signed by the owner or operator of the facility or an authorized representative.

M. Records of the quantities and date of placement for each shipment of hazardous waste placed in land disposal units under an extension to the effective date of any land disposal restriction granted ~~under part 7045.0075, subpart 8~~ by the United States

Environmental Protection Agency under Code of Federal Regulations, title 40, section 268.5, a petition under part 7045.0075, subpart 9, or a certification under Code of Federal Regulations, title 40, section 268.8, as ~~amended~~ incorporated in part 7045.1390, and the applicable notice required of a generator under ~~part 7045.1315, subpart 1~~ Code of Federal Regulations, title 40, section 268.7(a), as incorporated in part 7045.1390.

N. For an off-site treatment facility, a copy of the notice, and the certification and demonstration, if applicable, required of the generator or the owner under Code of Federal Regulations, title 40, section 268.7(a)(1) or 268.8, as ~~amended, or part 7045.1315, subpart 1, item A~~ incorporated in part 7045.1390.

O. For an on-site treatment facility, the information contained in the notice, except the manifest number, and the certification and demonstration, if applicable, required of the generator or owner or operator under Code of Federal Regulations, title 40, section 268.7(a)(1) or 268.8, as ~~amended, or part 7045.1315, subpart 1, item A~~ incorporated in part 7045.1390.

P. For an off-site land disposal facility, a copy of the notice, and the certification and demonstration, if applicable, required of the generator or the owner or operator of a treatment facility under Code of Federal Regulations, title 40, ~~section~~ sections 268.7 and 268.8, as ~~amended, and part 7045.1315~~ incorporated in part 7045.1390, whichever is applicable.

Q. For an on-site land disposal facility, the information contained in the notice required of the generator or owner or operator of a treatment facility under ~~part 7045.1315~~ Code of Federal Regulations, title 40, section 268.7, as incorporated in part 7045.1390, except for the manifest number, and the certification and demonstration, if applicable, required under Code of Federal Regulations, title 40, section 268.8, as ~~amended~~ incorporated in part 7045.1390, whichever is applicable.

R. For an off-site storage facility, a copy of the notice, and the certification and demonstration if applicable, required of the generator or the owner or operator under Code of Federal Regulations, title 40, section 268.7 or 268.8, as ~~amended, or part 7045.1315~~ incorporated in part 7045.1390.

S. For an on-site storage facility, the information contained in the notice, except the manifest number, and the certification and demonstration if applicable, required of the generator or the owner or operator under Code of Federal Regulations, title 40, section 268.7 or 268.8, as ~~amended, or part 7045.1315~~ incorporated in part 7045.1390.

[For text of item T, see M.R.]

7045.0482 REQUIRED REPORTS.

[For text of subps 1 to 3, see M.R.]

Subp. 4. **Additional reports.** In addition to submitting the manifest discrepancy report described in part 7045.0476, subpart 3, and the annual reports and the unmanifested waste reports described in subparts 2 and 3, the owner or operator shall also report to the commissioner:

[For text of items A and B, see M.R.]

C. as otherwise required by parts 7045.0484, 7045.0532 to 7045.0538; and the process vent ~~and~~, equipment leak, and tank, surface impoundment, and container standards in ~~Code of Federal Regulations, title 40, part 264, subparts AA and BB, as amended~~ parts 7045.0540, 7045.0547, and 7045.0548.

7045.0484 GROUNDWATER PROTECTION.

Subpart 1. **Scope.** This part applies as follows:

A. Except as provided in item B, the requirements of this part apply to owners or operators of facilities that treat, store, or dispose of hazardous waste. The owner or

operator must comply with the requirements in subitems (1) to (3) for all wastes or waste constituents contained in solid or hazardous waste management units at the facility regardless of the time the waste was placed in such units:

(1) all solid waste management units must comply with part 7045.0485;

(2) a surface impoundment, waste pile, land treatment unit, ~~or~~ landfill, or containment building that is required under Code of Federal Regulations, title 40, section 264.1102, as incorporated in part 7045.0550, to meet the requirements of a landfill, that receives hazardous waste after July 26, 1982, is a regulated unit and must comply with the requirements of subparts 2 to 14 for detecting, characterizing, and responding to releases; and

(3) the financial responsibility requirements of part 7045.0485 apply to regulated units.

[For text of items B to D, see M.R.]

[For text of subps 2 to 14, see M.R.]

7045.0486 CLOSURE.

[For text of subpart 1, see M.R.]

Subp. 2. **Closure performance standard.** The owner or operator shall close the facility in a manner minimizing the need for further maintenance. Closure procedures must result in controlling, minimizing, or eliminating, to the extent necessary to protect human health and the environment, postclosure escape of hazardous waste, hazardous constituents, leachate, contaminated runoff, or hazardous waste decomposition products to the ground or surface waters or to the atmosphere, in accordance with the closure requirements, including the requirements of parts 7045.0526, subpart 9; 7045.0528, subpart 9; 7045.0532, subpart 7; 7045.0534, subpart 7; 7045.0536, subpart 8; 7045.0538,

subpart 7; 7045.0539, subparts 2 to 4; and 7045.0542, subpart 8; and Code of Federal Regulations, title 40, section 264.1102, as incorporated in part 7045.0550.

Subp. 3. **Submittal and contents of closure plan.** The owner or operator of a hazardous waste facility shall submit a closure plan with the permit application, and the closure plan must be approved by the agency as part of the permit issuance procedure. The approved closure plan shall become a condition of any permit. The agency's approval must ensure that the approved closure plan is consistent with subparts 2, 4, and 5~~, and part~~; parts 7045.0484, groundwater protection, and 7045.0488, closure activities; and the applicable closure requirements of parts 7045.0526, subpart 9; 7045.0528, subpart 9; 7045.0532, subpart 7; 7045.0534, subpart 7; 7045.0536, subpart 8; 7045.0538, subpart 7; 7045.0539, subpart 2; ~~and~~ 7045.0542, subpart 8; and Code of Federal Regulations, title 40, section 264.1102, as incorporated in part 7045.0550.

A copy of the approved closure plan and all revisions to the plan must be furnished to the commissioner upon request, including request by mail, until final closure is completed and certified. The plan must identify steps necessary to completely or partially close the facility at any point during its intended operating life and to completely close the facility at the end of its intended operating life. The closure plan must at least include all of the following:

[For text of items A to F, see M.R.]

[For text of subps 4 to 6, see M.R.]

7045.0490 POSTCLOSURE.

Subpart 1. **Scope.** Except as otherwise provided in part 7045.0450, the provisions of subparts 2, 3, and parts 7045.0492 to 7045.0496 apply to:

A. the owner or operator of a hazardous waste disposal facility;

B. the owner or operator of a waste pile or surface impoundment that is required by part 7045.0532, subpart 7, or 7045.0534, subpart 7, to have a postclosure plan; ~~and~~

C. the owner or operator of tank systems that are required under part 7045.0528, subpart 9, to meet the requirements for landfills; and

D. the owner or operator of containment buildings that are required under Code of Federal Regulations, title 40, section 264.1102, as incorporated in part 7045.0550, to meet the requirement for landfills.

[For text of subps 2 and 3, see M.R.]

7045.0498 FINANCIAL REQUIREMENTS.

Subpart 1. **Scope.** Parts 7045.0502, 7045.0504, and 7045.0518 to 7045.0524 apply to owners and operators of all hazardous waste facilities, except as provided otherwise in this part or in part 7045.0450, subpart 3.

Parts 7045.0506 and 7045.0508 apply only to owners and operators of:

A. disposal facilities;

B. waste piles, and surface impoundments from which the owner or operator intends to remove the wastes at closure, to the extent that he or she is required to develop a contingent closure and postclosure care plan in parts 7045.0532, subpart 7; and 7045.0534, subpart 7; ~~and~~

C. tank systems that are required under part 7045.0528, subpart 9, to meet the requirements for landfills; and

D. containment buildings that are required under Code of Federal Regulations, title 40, section 264.1102, as incorporated in part 7045.0550, to meet the requirements for landfills.

Parts 7045.0512 to 7045.0516 apply only to owners and operators of facilities that treat, store, or dispose of hazardous waste in surface impoundments, waste piles, land

treatment units, ~~or~~ landfills, or containment buildings that are required under Code of Federal Regulations, title 40, section 264.1102, as incorporated in part 7045.0550, to meet the requirements of landfills.

The state and the federal government are exempt from the requirements of parts 7045.0498 to 7045.0524.

[For text of subp 2, see M.R.]

7045.0502 COST ESTIMATE FOR FACILITY CLOSURE.

Subpart 1. **Cost estimate requirements.** The owner or operator shall have a detailed written estimate, in current dollars, of the cost of closing the facility in accordance with parts 7045.0486 and 7045.0488 and applicable closure requirements in parts 7045.0526, subpart 9; 7045.0532, subpart 7; 7045.0534, subpart 7; 7045.0536, subpart 8; 7045.0538, subpart 7; 7045.0539, subparts 2 to 4; and 7045.0542, subpart 8; and Code of Federal Regulations, title 40, section 264.1102, as incorporated in part 7045.0550. The closure cost estimate must equal the cost of final closure at the point in the facility's active life when the extent and manner of its operation would make closure the most expensive, as indicated by its closure plan. The closure cost shall be estimated as follows:

[For text of items A to C, see M.R.]

[For text of subps 2 to 4, see M.R.]

7045.0504 FINANCIAL ASSURANCE FOR FACILITY CLOSURE.

[For text of subps 1 to 3, see M.R.]

Subp. 4. **Surety bond guaranteeing performance of closure.** The following apply to surety bonds that guarantee performance of closure:

[For text of item A, see M.R.]

B. The wording of the surety bond must be identical to the wording specified in part 7045.0524, subpart ~~2~~ 3.

[For text of items C to J, see M.R.]

[For text of subps 5 and 6, see M.R.]

Subp. 7. **Financial test and corporate guarantee for closure.** The financial test and corporate guarantee for closure is as follows:

[For text of items A to K, see M.R.]

L. An owner or operator may meet the requirements of this part by obtaining a written guarantee, hereafter referred to as "corporate guarantee." The guarantor must be the parent corporation of the owner or operator. The guarantor must meet the requirements for owners or operators in items A to J, and must comply with the terms of the corporate guarantee. The wording of the corporate guarantee must be identical to the wording specified in part 7045.0524, subpart 8. The certified copy of the corporate guarantee must accompany the items sent to the commissioner as specified in item E. The terms of the corporate guarantee must provide that:

[For text of subitems (1) and (2), see M.R.]

(3) If the owner or operator fails to provide alternate financial assurance as specified in this part and obtain the written approval of alternate assurance from the commissioner within 90 days after receipt by both the owner or operator and the commissioner of a notice of cancellation of the corporate guarantee from the guarantor, the guarantor ~~shall~~ must provide alternative financial assurance in the name of the owner or operator.

[For text of subps 8 to 10, see M.R.]

7045.0508 FINANCIAL ASSURANCE FOR POSTCLOSURE CARE.

[For text of subps 1 to 6, see M.R.]

Subp. 7. **Financial test and corporate guarantee for postclosure care.** The financial test and corporate guarantee for postclosure care is as follows:

[For text of items A to L, see M.R.]

M. An owner or operator may meet the requirements ~~of~~ for this part by obtaining a written guarantee, hereafter referred to as "corporate guarantee." The guarantor must be the parent corporation of the owner or operator. The guarantor ~~shall~~ must meet the requirements for owners or operators in items A to K, and ~~shall~~ must comply with the terms of the corporate guarantee. The wording of the corporate guarantee ~~shall~~ must be identical to the wording specified in part 7045.0524, subpart 8. A certified copy of the corporate guarantee must accompany the items sent to the commissioner as specified in item E. The terms of the corporate guarantee must provide that:

(1) If the owner or operator fails to perform postclosure care of a facility covered by the corporate guarantee in accordance with the postclosure plan and other permit requirements whenever required to do so, the guarantor ~~shall~~ must do so or establish a trust fund as specified in subpart 2 in the name of the owner or operator.

[For text of subitem (2), see M.R.]

(3) If the owner or operator fails to provide alternate financial assurance as specified in this part and to obtain the written approval of alternate assurance from the commissioner within 90 days after receipt by both the owner or operator and the commissioner of a notice of cancellation of the corporate guarantee from the guarantor, the guarantor ~~shall~~ must provide alternate financial assurance in the name of the owner or operator.

[For text of subps 8 to 10, see M.R.]

7045.0514 FINANCIAL ASSURANCE FOR CORRECTIVE ACTION.

[For text of subps 1 to 6, see M.R.]

Subp. 7. **Financial test and corporate guarantee for corrective action.** The financial test and corporate guarantee for corrective action is as follows:

[For text of items A to K, see M.R.]

L. An owner or operator may meet the requirements of this part by obtaining a written guarantee, hereafter referred to as "corporate guarantee." The guarantor must be the parent corporation of the owner or operator. The guarantor must meet the requirements for owners or operators in items A to J and must comply with the terms of the corporate guarantee. The wording of the corporate guarantee must be identical to the wording specified in part 7045.0524, subpart 8. A certified copy of the corporate guarantee must accompany the items sent to the commissioner as specified in item E. The terms of the corporate guarantee must provide that:

[For text of subitems (1) and (2), see M.R.]

(3) If the owner or operator fails to provide alternate financial assurance as specified in this part and to obtain the written approval of alternate assurance from the commissioner within 90 days after receipt by both the owner or operator and the commissioner of a notice of cancellation of the corporate guarantee from the guarantor, the guarantor ~~will~~ must provide alternative financial assurance in the name of the owner or operator.

[For text of subps 8 to 10, see M.R.]

7045.0518 LIABILITY REQUIREMENTS.

Subpart 1. **Coverage for sudden accidental occurrences.** An owner or operator of a hazardous waste treatment, storage, or disposal facility, or a group of facilities, shall demonstrate financial responsibility for bodily injury and property damage to third parties caused by sudden accidental occurrences arising from operations of the facility or group of facilities. The owner or operator shall have and maintain liability coverage for sudden

accidental occurrences in the amount of at least $1,000,000 per occurrence with an annual aggregate of at least $2,000,000, exclusive of legal defense costs. This liability coverage may be demonstrated in one of the following ways:

[For text of items A and B, see M.R.]

C. An owner or operator may ~~demonstrate the required liability coverage through use of the financial test, insurance, the corporate guarantee, a combination of the financial test and insurance, or a combination of the corporate guarantee and insurance, as these mechanisms are specified in this part. The amounts of coverage demonstrated must total at least the minimum amounts required by subpart 1~~ meet the requirements of this part by obtaining a letter of credit for liability coverage as specified in subpart 8.

D. An owner or operator may meet the requirements of this part by obtaining a trust fund for liability coverage as specified in subpart 9.

E. An owner or operator may demonstrate the required liability coverage through the use of combinations of insurance, financial test, corporate guarantee, letter of credit, and trust fund, except that the owner or operator may not combine a financial test covering part of the liability coverage requirement with a corporate guarantee unless the financial statement of the owner or operator is not consolidated with the financial statement of the guarantor. The amounts of coverage demonstrated must total at least the minimum amounts required by this part. If the owner or operator demonstrates the required coverage through the use of a combination of financial assurances under this item, the owner or operator shall specify at least one such assurance as "primary" coverage and shall specify other assurance as "excess" coverage.

F. An owner or operator shall notify the commissioner in writing within 30 days whenever:

(1) a claim results in a reduction in the amount of financial assurance for liability coverage provided by a financial instrument authorized in items A to E;

(2) a certification of valid claim for bodily injury or property damages caused by a sudden or nonsudden accidental occurrence arising from the operation of a hazardous waste treatment, storage, or disposal facility is entered between the owner or operator and third-party claimant for liability coverage under items A to E; or

(3) a final court order establishing a judgment for bodily injury or property damage caused by a sudden or nonsudden accidental occurrence arising from the operation of a hazardous waste treatment, storage, or disposal facility is issued against the owner or operator or an instrument that is providing financial assurance for liability coverage under items A to E.

Subp. 2. **Coverage for nonsudden accidental occurrences.** An owner or operator of a surface impoundment, landfill, land treatment facility, or disposal miscellaneous ~~disposal~~ unit ~~which~~ that is used to manage hazardous waste, or a group of such facilities, ~~shall~~ must demonstrate financial responsibility for bodily injury and property damage to third parties caused by nonsudden accidental occurrences arising from operations of the facility or group of facilities. The owner or operator ~~shall~~ must have and maintain liability coverage for nonsudden accidental occurrences in the amount of at least $3,000,000 per occurrence with an annual aggregate of at least $6,000,000, exclusive of legal defense costs. An owner or operator who must meet the requirements of this part may combine the required per-occurrence coverage levels for sudden and nonsudden accidental occurrences into a single per-occurrence level, and combine the required annual aggregate coverage levels for sudden and nonsudden accidental occurrences into a single annual aggregate level. Owners or operators who combine coverage levels for sudden and nonsudden accidental occurrences must maintain liability coverage in the amount of at least $4,000,000 per occurrence and $8,000,000 annual aggregate. This liability coverage may be demonstrated in one of the following ways:

[For text of items A and B, see M.R.]

C. An owner or operator may ~~demonstrate the required liability coverage through use of the financial test, insurance, the corporate guarantee, a combination of the financial test and insurance, or a combination of the corporate guarantee and insurance, as these mechanisms are specified in this part. The amounts of coverage must total at least the minimum amounts required by subpart 2~~ meet the requirements of this part by obtaining a letter of credit for liability coverage as specified in subpart 8.

~~D. For existing facilities, the required liability coverage for nonsudden accidental occurrences must be demonstrated by the dates listed below. The total sales or revenues of the owner or operator in all lines of business, in the fiscal year preceding July 16, 1984 will determine which of the dates applies. If the owner and operator of a facility are two different parties, or if there is more than one owner or operator, the sales or revenues of the owner or operator with the largest sales or revenues will determine the date by which the coverage must be demonstrated. The dates are as follows:~~

~~(1) for an owner or operator with sales or revenues totaling $10,000,000 or more, six months after July 16, 1984;~~

~~(2) for an owner or operator with sales or revenues greater than $5,000,000 but less than $10,000,000, 18 months after July 16, 1984;~~

~~(3) for all other owners or operators, 30 months after July 16, 1984;~~

~~(4) for an owner or operator subject to the requirements of Code of Federal Regulations, title 40, section 264.147 (1983) on the date he or she is required to demonstrate coverage under Code of Federal Regulations, title 40, section 264.147 (1983) or on July 16, 1984, whichever is later.~~

D. An owner or operator may meet the requirements of this part by obtaining a trust fund for liability coverage as specified in subpart 9.

E. An owner or operator may demonstrate the required liability coverage through the use of combinations of insurance, financial test, corporate guarantee, letter of credit, and trust fund, except that the owner or operator may not combine a financial test covering part of the liability coverage requirement with a corporate guarantee unless the financial statement of the owner or operator is not consolidated with the financial statement of the guarantor. The amounts of coverage demonstrated must total at least the minimum amount required by this part. If the owner or operator demonstrates the required coverage through the use of a combination of financial assurances under this item, the owner or operator shall specify at least one such assurance as "primary" coverage and shall specify other assurance as "excess" coverage.

F. An owner or operator must notify the commissioner in writing within 30 days whenever:

(1) a claim results in a reduction in the amount of financial assurance for liability coverage provided by a financial instrument authorized in items A to E;

(2) a certification of valid claim for bodily injury or property damage caused by a sudden or nonsudden accidental occurrence arising from the operation of a hazardous waste treatment, storage, or disposal facility is entered between the owner or operator and third-party claimant for liability coverage under items A to E; or

(3) a final court order establishing a judgment for bodily injury or property damage caused by a sudden or nonsudden accidental occurrence arising from the operation of a hazardous waste treatment, storage, or disposal facility is issued against the owner or operator or an instrument that is providing financial assurance for liability coverage under items A to E.

[For text of subps 3 to 5, see M.R.]

Subp. 6. **Financial test for liability coverage.** The financial test for liability coverage is as follows:

[For text of items A to G, see M.R.]

H. If the owner or operator no longer meets the requirements of item A, ~~he or she~~ the owner or operator shall obtain insurance, a letter of credit, a trust fund, or a corporate guarantee for the entire amount of required liability coverage as specified in this part. Evidence of ~~insurance~~ liability coverage must be submitted to the commissioner within 90 days after the end of the fiscal year for which the year-end financial data show that the owner or operator no longer meets the test requirements.

[For text of item I, see M.R.]

Subp. 7. **Corporate guarantee for liability coverage.** The corporate guarantee for liability coverage is as follows:

A. Subject to item B, an owner or operator may meet the requirements of this part by obtaining a written corporate guarantee. The guarantor must be the parent corporation of the owner or operator. The guarantor must meet the requirements for owners or operators in subpart 6. The wording of the corporate guarantee must be identical to the wording specified in part 7045.0524, subpart 8a. The corporate guarantee must be signed by two corporate officers of the parent corporation. A corporate resolution authorizing the parent corporation to provide the corporate guarantee for the subsidiary must be attached to the corporate guarantee. A certified copy of the corporate guarantee must accompany the items sent to the commissioner as ~~provided~~ specified in subpart 6, item E. The terms of the corporate guarantee must provide that:

[For text of subitems (1) and (2), see M.R.]

B. A corporate guarantee may be used to satisfy the requirements of this part only if:

(1) in the case of corporations incorporated in the United States, the attorney general or insurance commissioner of the state in which the guarantor is incorporated

and of each state in which a facility covered by the corporate guarantee is located has submitted a written statement to the commissioner and the United States Environmental Protection Agency that a corporate guarantee executed as described in this part and part 7045.0524, subpart 8a, is a legally valid and enforceable obligation in that state; and

(2) in the case of corporations incorporated outside the United States, the non-United States corporation has identified a registered agent for service of process in each state in which a facility covered by the corporate guarantee is located and in the state in which it has its principal place of business, and the attorney general or insurance commissioner of each state in which a facility covered by the corporate guarantee is located and the state in which the guarantor corporation has its principal place of business, has submitted a written statement to the commissioner and to the United States Environmental Protection Agency that a corporate guarantee executed as described in this part and part 7045.0524, subpart 8a, is a legally valid and enforceable obligation in that state.

Subp. 8. **Letter of credit for liability coverage.**

A. An owner or operator may satisfy the requirements of this part by obtaining an irrevocable standby letter of credit that conforms to the requirements of this subpart and submitting a copy of the letter of credit to the commissioner.

B. The financial institution issuing the letter of credit must be an entity that has the authority to issue letters of credit and whose letter of credit operations are regulated and examined by a federal or state agency.

C. The wording of the letter of credit must be identical to the wording in part 7045.0524, subpart 11.

D. An owner or operator who uses a letter of credit to satisfy the requirements of this part may also establish a standby trust fund. Under the terms of a letter of credit, all amounts paid pursuant to a draft by the trustee of the standby trust will be deposited by the issuing institution into the standby trust in accordance with instructions from the trustee.

The trustee of the standby trust fund must be an entity that has the authority to act as a trustee and whose trust operations are regulated and examined by a federal or state agency.

E. The wording of the standby trust fund must be identical to the wording in part 7045.0524, subpart 13.

Subp. 9. **Trust fund for liability coverage.**

A. An owner or operator may satisfy the requirements of this part by establishing a trust fund that conforms to the requirements of this subpart and submitting an originally signed duplicate of the trust agreement to the commissioner.

B. The trustee must be an entity that has the authority to act as a trustee and whose trust operations are regulated and examined by a federal or state agency.

C. The trust fund for liability coverage must be funded for the full amount of the liability coverage to be provided by the trust fund before it may be relied upon to satisfy the requirements of this part. If at any time after the trust fund is created the amount of funds in the trust fund is reduced below the full amount of the liability coverage to be provided, the owner or operator, by the anniversary date of the establishment of the fund, must either add sufficient funds to the trust fund to cause its value to equal the full amount of liability coverage to be provided or obtain other financial assurance as specified in this part to cover the difference. For purposes of this item, "the full amount of the liability coverage to be provided" means the amount of coverage for sudden or nonsudden occurrences required to be provided by the owner or operator under this part, less the amount of financial assurance for liability coverage that is being provided by other financial assurance mechanisms being used to demonstrate financial assurance by the owner or operator.

D. The wording of the trust fund must be identical to the wording in part 7045.0524, subpart 13.

7045.0524 WORDING OF INSTRUMENTS.

[For text of subps 1 to 5, see M.R.]

Subp. 6. **Letter from chief financial officer for corrective action, closure, and/or postclosure care.** A letter from the chief financial officer as specified in part 7045.0504, subpart 7; 7045.0508, subpart 7; 7045.0514, subpart 7; 7045.0612, subpart 6; or 7045.0616, subpart 6 must be worded as specified in this subpart, except that instructions in brackets must be replaced with the relevant information and the brackets deleted.

LETTER FROM CHIEF FINANCIAL OFFICER FOR CORRECTIVE ACTION, CLOSURE, AND/OR POSTCLOSURE CARE

[Agency Commissioner]

Minnesota Pollution Control Agency

I am the chief financial officer of [name and address of firm]. This letter is in support of this firm's use of the financial test to demonstrate financial assurance for corrective action, closure, or postclosure costs, as specified in Minnesota Rules, parts 7045.0498 to 7045.0524 and 7045.0608 to 7045.0624.

[Fill out the following five paragraphs regarding facilities and associated cost estimates. If your firm has no facilities that belong in a particular paragraph, write "None" in the space indicated. For each facility, include its identification number, name, address, and current corrective action, closure, and/or postclosure cost estimates. Identify each cost estimate as to whether it is for corrective action, closure, or postclosure care.]

1. This firm is the owner or operator of the following facilities for which financial assurance for corrective action, closure, or postclosure care is demonstrated through the financial test specified in Minnesota Rules, parts 7045.0498 to 7045.0524 and 7045.0608 to 7045.0624. The current corrective action, closure, and/or postclosure cost estimates covered by the ~~text~~ test are shown for each facility: _____.

2. This firm guarantees, through the corporate guarantee specified in Minnesota Rules, parts 7045.0498 to 7045.0524 and 7045.0608 to 7045.0624, the corrective action, closure, or postclosure care of the following facilities owned or operated by subsidiaries

of this firm. The current cost estimates for the corrective action, closure, or postclosure care so guaranteed are shown for each facility: _____.

3. In states other than Minnesota, this firm, as owner or operator or guarantor, is demonstrating financial assurance for the corrective action, closure, or postclosure care of the following facilities either to the United States Environmental Protection Agency through the use of the financial test specified in Code of Federal Regulations, title 40, parts 264 or 265, subpart H, as amended, or to an authorized state through the use of a test equivalent or substantially equivalent to the specified financial test. The current corrective action, closure, and/or postclosure cost estimates covered by such a test are shown for each facility: _____.

4. This firm is the owner or operator of the following hazardous waste management facilities for which financial assurance for corrective action, if required, closure, or if a disposal facility, postclosure care, is not demonstrated either to the United States Environmental Protection Agency or a state through the financial test or any other financial assurance mechanism specified in Code of Federal Regulations, title 40, parts 264 or 265, subpart H, as amended, or equivalent or substantially equivalent state mechanisms. The current corrective action, closure, and/or postclosure cost estimates not covered by such financial assurance are shown for each facility: _____.

5. This firm is the owner or operator of the following underground injection control (UIC) facilities for which financial assurance for plugging and abandonment is required under Code of Federal Regulations, title 40, part 144, as amended. The current closure cost estimates as required by Code of Federal Regulations, title 40, section 144.62, as amended, are shown for each facility.

This firm [insert "is required" or "is not required"] to file a Form 10K with the Securities and Exchange Commission (SEC) for the latest fiscal year.

The fiscal year of this firm ends on [month, day]. The figures for the following items marked with an asterisk are derived from this firm's independently audited, year end financial statements for the latest completed fiscal year, ended [date].

[Fill in Alternative I if the criteria of Minnesota Rules, part 7045.0504, subpart 7, item B; 7045.0508, subpart 7, item B; 7045.0514, subpart 7, item B; 7045.0612, subpart 6, item B; 7045.0616, subpart 6, item B are used. Fill in Alternative II if the criteria of Minnesota Rules, part 7045.0504, subpart 7, item C; 7045.0508, subpart 7, item C; 7045.0514, subpart 7, item C; or 7045.0612, subpart 6, item C; or 7045.0616, subpart 6, item C are used.]

ALTERNATIVE I

1.	Sum of current corrective action, closure, and postclosure cost estimate [total of all cost estimates shown in the five paragraphs above]	$_____
*2.	Total liabilities [if any portion of the corrective actions, closure, or postclosure cost estimates is included in total liabilities, you may deduct the amount of that portion from this line and add that amount to lines 3 and 4]	$_____
*3.	Tangible net worth	$_____
*4.	Net worth	$_____
*5.	Current assets	$_____
*6.	Current liabilities	$_____
7.	Net working capital [line 5 minus line 6]	$_____
*8.	The sum of net income plus depreciation, depletion, and amortization	$_____
*9.	Total assets in United States (required only if less than 90 percent of firm's assets are located in United States)	$_____

		YES	NO
10.	Is line 3 at least $10,000,000?	___	___
11.	Is line 3 at least 6 times line 1?	___	___
12.	Is line 7 at least 6 times line 1?	___	___
*13.	Are at least 90 percent of firm's assets located in the United States? If not, complete line 14	___	___

14.	Is line 9 at least 6 times line 1?		___	___
15.	Is line 2 divided by line 4 less than 2.0?		___	___
16.	Is line 8 divided by line 2 greater than 0.1?		___	___
17.	Is line 5 divided by line 6 greater than 1.5?		___	___

ALTERNATIVE II

1.	Sum of current corrective action, closure, and postclosure cost estimates [total of all cost estimates shown in the five paragraphs above]	$_____
2.	Current bond rating of most recent issuance of this firm and name of rating service	_____
3.	Date of issuance of bond	_____
4.	Date of maturity of bond	_____
*5.	Tangible net worth [if any portion of the corrective action, closure, and postclosure costs estimates is included in "total liabilities" on your firm's financial statements, you may add the amount of that portion to this line]	$_____
*6	Total assets in United States (required only if less than 90 percent of firm's assets are located in United States)	$_____

			YES	NO
7.	Is line 5 at least $10,000,000?		___	___
8.	Is line 5 at least 6 times line 1?		___	___
*9.	Are at least 90 percent of firm's assets located in United States? If not, complete line 10		___	___
10.	Is line 6 at least 6 times line 1?		___	___

I hereby certify that the wording of this letter is identical to the wording specified in Minnesota Rules, part 7045.0524, subpart 6, as such rules were constituted on the date shown immediately below.

Subp. 8. **Corporate guarantee for corrective action, closure, or postclosure care.** A corporate guarantee as specified in part 7045.0504, subpart 7; 7045.0508, subpart 7; 7045.0514, subpart 7; 7045.0612, subpart 6; or 7045.0616, subpart 6 must be worded as specified in this subpart, except that instructions in brackets must be replaced with the relevant information and the brackets deleted.

CORPORATE GUARANTEE FOR CORRECTIVE ACTION, CLOSURE, OR POSTCLOSURE CARE

Guarantee made this [date] by [name of guaranteeing entity], a business corporation organized under the laws of the state of [insert name of state], herein referred to as guarantor, to the Minnesota Pollution Control Agency (Agency), obligee, on behalf of our subsidiary [owner or operator] of [business address].

Recitals

1. Guarantor meets or exceeds the financial test criteria and agrees to comply with the reporting requirements for guarantors as specified in Minnesota Rules, parts 7045.0504, subpart 7; 7045.0508, subpart 7; 7045.0514, subpart 7; 7045.0612, subpart 6; and 7045.0616, subpart 6.

2. [Owner or operator] owns or operates the following hazardous waste management facility(ies) covered by this guarantee: [List for each facility: identification number, name, and address. Indicate for each whether guarantee is for corrective action, closure, postclosure care, or a combination of the three.]

3. "Closure plans" and "postclosure plans" as used below refer to the plans maintained as required by Minnesota Rules, parts 7045.0486 to 7045.0494 and 7045.0594 to 7045.0606 for the closure and postclosure care of facilities as identified above. "Corrective action plans" as used below refers to the plans maintained as required by

Minnesota Rules, part 7045.0484, subpart 2, item D; and subpart 14 for corrective action for the facilities as identified above.

4. For value received from [owner or operator], guarantor guarantees to the Agency that in the event that [owner or operator] fails to perform [insert "corrective action," "closure," "postclosure care," or any combination of the three] of the above facility(ies) in accordance with the corrective action, closure, or postclosure plans and other permit or interim status requirements whenever required to do so, the guarantor shall do so or establish a trust fund as specified in Minnesota Rules, parts 7045.0498 to 7045.0524 or 7045.0608 to 7045.0624 as applicable, in the name of [owner or operator] in the amount of the current corrective action, closure, or postclosure cost estimates as specified in Minnesota Rules, parts 7045.0498 to 7045.0524 and 7045.0608 to 7045.0624.

5. Guarantor agrees that if, at the end of any fiscal year before termination of this guarantee, the guarantor fails to meet the financial test criteria, guarantor shall send within 90 days, by certified mail, notice to the Agency Commissioner and to [owner or operator] that he or she intends to provide alternate financial assurance as specified in Minnesota Rules, parts 7045.0498 to 7045.0524 or 7045.0608 to 7045.0624, as applicable, in the name of [owner or operator]. Within 120 days after the end of such fiscal year, the guarantor shall establish financial assurance unless [owner or operator] has done so.

6. The guarantor agrees to notify the Agency Commissioner by certified mail of a voluntary or involuntary proceeding under United States Code, title 11, Bankruptcy, as amended, naming guarantor as debtor, within ten days after commencement of the proceeding.

7. Guarantor agrees that within 30 days after being notified by the Agency Commissioner of a determination that guarantor no longer meets the financial test criteria or that he or she is disallowed from continuing as a guarantor of corrective action, closure, or postclosure care, the guarantor shall establish alternate financial assurance as specified

in Minnesota Rules, parts 7045.0498 to 7045.0524 or 7045.0608 to 7045.0624, as applicable, in the name of [owner or operator] unless [owner or operator] has done so.

8. Guarantor agrees to remain bound under this guarantee notwithstanding any or all of the following: amendment or modification of the corrective action, closure or postclosure plan, amendment or modification of the permit, the extension or reduction of the time of performance of corrective action, closure, postclosure, or any other modification or alteration of an obligation of the owner or operator pursuant to Minnesota Rules, parts 7045.0450 to ~~7045.0642~~ 7045.0651.

9. Guarantor agrees to remain bound under this guarantee for so long as [owner or operator] must comply with the applicable financial assurance requirements of Minnesota Rules, parts 7045.0498 to 7045.0524 and 7045.0608 to 7045.0624 for the above listed facilities, except that guarantor may cancel this guarantee by sending notice by certified mail to the Agency Commissioner and to [owner or operator], the cancellation to become effective no earlier than 120 days after receipt of notice by both the Agency Commissioner and [owner or operator], as evidenced by the return receipts.

10. Guarantor agrees that if [owner or operator] fails to provide alternate financial assurance as specified in Minnesota Rules, parts 7045.0498 to 7045.0524 or 7045.0608 to 7045.0624, as applicable, and obtain written approval of such assurance from the Agency Commissioner within 90 days after a notice of cancellation by the guarantor is received by the Agency Commissioner from guarantor, guarantor shall provide alternate financial assurance in the name of [owner or operator].

11. Guarantor expressly waives notice of acceptance of this guarantee by the Agency or by [owner or operator]. Guarantor also expressly waives notice of amendments or modifications of the corrective action, closure, and/or postclosure plan and of amendments or modifications of the facility permit(s).

I hereby certify that the wording of this guarantee is identical to the wording specified in Minnesota Rules, part 7045.0524, subpart 8, as such rules were constituted on the date first above written.

Effective date: _____

[NAME OF GUARANTOR]

[AUTHORIZED SIGNATURE FOR GUARANTOR]

[NAME OF PERSON SIGNING]

[TITLE OF PERSON SIGNING]

[SIGNATURE OF WITNESS OR NOTARY]

Subp. 8a. **Corporate guarantee for liability coverage.** A corporate guarantee as specified in part 7045.0518, subpart 7, or 7045.0620, subpart 6, must be worded as follows, except that instructions in brackets are to be replaced with the relevant information and the brackets deleted:

CORPORATE GUARANTEE FOR LIABILITY COVERAGE

Guarantee made this [date] by [name of guaranteeing entity], a business corporation organized under the laws of [if incorporated within the United States, insert "the State of _____" and insert name of state; if incorporated outside the United States, insert the name of the country in which incorporated, the principal place of business within the United States, and the name and address of the registered agent in the state of the principal place of business], referred to in this guarantee as the guarantor. This guarantee is made on behalf of our subsidiary [owner or operator] of [business address], to any and all third parties who have sustained or may sustain bodily injury or property damage caused by [sudden and/or nonsudden] accidental occurrences arising from operation of the facility(ies) covered by this guarantee.

Recitals

1. Guarantor meets or exceeds the financial test criteria and agrees to comply with the reporting requirements for guarantors as specified in Minnesota Rules, parts 7045.0518, subpart 7, and 7045.0620, subpart 6.

2. [Owner or operator] owns or operates the following hazardous waste management facility(ies) covered by this guarantee: [List for each facility: Identification Number, name, and address; and if guarantor is incorporated outside the United States, list the name and address of the guarantor's registered agent in each state.] This corporate guarantee satisfies RCRA third party liability requirements for [insert "sudden" or "nonsudden" or "both sudden and nonsudden"] accidental occurrences in above named owner or operator facilities for coverage in the amount of [insert dollar amount] for each occurrence and [insert dollar amount] annual aggregate.

3. For value received from [owner or operator], guarantor guarantees to any and all third parties who have sustained or may sustain bodily injury or property damage caused by [sudden and/or nonsudden] accidental occurrences arising from operations of the facility(ies) covered by this guarantee that in the event that [owner or operator] fails to satisfy a judgment or award based on a determination of liability for bodily injury or property damage to third parties caused by [sudden and/or nonsudden] accidental occurrences, arising from the operation of the above named facilities, or fails to pay an amount agreed to in settlement of a claim arising from or alleged to arise from such injury or damage, the guarantor will satisfy such judgment(s), award(s), or settlement agreement(s), up to the limits of coverage identified above.

4. Such obligation does not apply to any of the following:

(a) Bodily injury or property damage for which [insert owner or operator] is obligated to pay damages by reason of the assumption of liability in a contract or agreement. This exclusion does not apply to liability for damages that [insert owner or operator] would be obligated to pay in the absence of the contract or agreement.

(b) Any obligation of [insert owner or operator] under a workers' compensation, disability benefits, or unemployment compensation law, or any similar law.

(c) Bodily injury to:

(1) an employee of [insert owner or operator] arising from, and in the course of, employment by [insert owner or operator]; or

(2) the spouse, child, parent, brother, or sister of that employee as a consequence of, or arising from, and in the course of employment by [insert owner or operator]. This exclusion applies:

(A) whether [insert owner or operator] may be liable as an employer or in any other capacity; and

(B) to any obligation to share damages with or repay another person who must pay damages because of the injury to persons identified in paragraphs (1) and (2).

(d) Bodily injury or property damage arising out of the ownership, maintenance, use, or entrustment to others of any aircraft, motor vehicle, or watercraft.

(e) Property damage to:

(1) any property owned, rented, or occupied by [insert owner or operator];

(2) premises that are sold, given away, or abandoned by [insert owner or operator] if the property damage arises out of any part of those premises;

(3) property loaned to [insert owner or operator];

(4) personal property in the care, custody, or control of [insert owner or operator]; or

(5) that particular part of real property on which [insert owner or operator] or any contractors or subcontractors working directly or indirectly on behalf of [insert owner or operator] are performing operations, if the property damage arises out of these operations.

5. Guarantor agrees that if, at the end of any fiscal year before termination of this guarantee, the guarantor fails to meet the financial test criteria, guarantor shall send within 90 days, by certified mail, notice to the commissioner and to [owner or operator] that (s)he intends to provide alternate liability coverage as specified in Minnesota Rules, parts 7045.0518 and 7045.0620, as applicable, in the name of [owner or operator]. Within 120 days after the end of that fiscal year, the guarantor shall establish the liability coverage unless [owner or operator] has done so.

~~5.~~ 6. The guarantor agrees to notify the commissioner by certified mail of a voluntary or involuntary proceeding under Title 11 (bankruptcy), United States Code, as amended, naming guarantor as debtor, within ten days after commencement of the proceeding.

~~6.~~ 7. Guarantor agrees that within 30 days after being notified by the commissioner of a determination that guarantor no longer meets the financial test criteria or that (s)he is disallowed from continuing as a guarantor, (s)he shall establish alternate liability coverage as specified in Minnesota Rules, part 7045.0518 or 7045.0620 in the name of [owner or operator], unless [owner or operator] has done so.

~~7.~~ 8. Guarantor reserves the right to modify this agreement to take into account amendment or modification of the liability requirements established by Minnesota Rules, parts 7045.0518 and 7045.0620, but the modification becomes effective only if the commissioner does not disapprove the modification within 30 days of receipt of notification of the modification.

~~8.~~ 9. Guarantor agrees to remain bound under this guarantee for so long as [owner or operator] must comply with the applicable requirements of Minnesota Rules, parts 7045.0518 and 7045.0620 for the above listed facility(ies), except as provided in paragraph ~~9~~ 10 of this agreement.

~~9.~~ 10. Guarantor may terminate this guarantee by sending notice by certified mail to the commissioner and to [owner or operator] but this guarantee may not be terminated

unless and until [owner or operator] obtains, and the commissioner approves alternate liability coverage complying with Minnesota Rules, parts 7045.0518 and/or 7045.0620.

~~10.~~ 11. Guarantor hereby expressly waives notice of acceptance of this guarantee by any party.

~~11.~~ 12. Guarantor agrees that this guarantee is in addition to and does not affect any other responsibility or liability of the guarantor with respect to the covered facilities.

~~12. Exclusions~~

~~This corporate guarantee does not apply to:~~

~~A. Bodily injury or property damage for which the owner or operator is obliged to pay damages by reason of the assumption of liability in a contract or agreement. This exclusion does not apply to liability for damages that the owner or operator would be obligated to pay in the absence of the contract or agreement.~~

~~B. Any obligation of the owner or operator under a workers' compensation, disability benefits, or unemployment compensation law or any similar law.~~

~~C. Bodily injury to:~~

~~(1) an employee of the owner or operator arising from, and in the course of, employment by the owner or operator; or~~

~~(2) the spouse, child, parent, brother, or sister of that employee as a consequence of, or arising from, and in the course of, employment by the owner or operator.~~

~~This exclusion applies whether the owner or operator is liable as an employer or in any other capacity. This exclusion also applies to any obligation to share damages with or repay another person who must pay damages because of the injury to persons identified in item C.~~

~~D. Bodily injury or property damage arising out of the ownership, maintenance, use, or entrustment to others of any aircraft, motor vehicle, or watercraft.~~

~~E. Property damage to:~~

~~(1) any property owned, rented, or occupied by the owner or operator;~~

~~(2) premises that are sold, given away, or abandoned by the owner or operator if the property damage arises out of any part of those premises;~~

~~(3) property loaned to the owner or operator;~~

~~(4) personal property in the care, custody, or control of the owner or operator; and~~

~~(5) that particular part of real property on which the owner or operator or any contractors or subcontractors working directly or indirectly on behalf of the owner or operator are performing operations, if the property damage arises out of these operations.~~

13. The guarantor shall satisfy a third-party liability claim only on receipt of one of the following documents:

(a) Certification from the principal and the third-party claimant(s) that the liability claim should be paid. The certification must be worded as follows, except that instructions in brackets are to be replaced with the relevant information and the brackets deleted:

Certification of Valid Claim

The undersigned, as parties [insert principal] and [insert name and address of third-party claimant(s)], hereby certify that the claim of bodily injury and/or property damage caused by a [sudden or nonsudden] accidental occurrence arising from operating [principal's hazardous waste treatment, storage, or disposal facility] should be paid in the amount of $.....

Claimant(s)

(Notary) Date

(b) A valid final court order establishing a judgment against the principal for bodily injury or property damage caused by sudden or nonsudden accidental occurrences arising from the operation of the principal's facility or group of facilities.

14. In the event of combination of this guarantee with another mechanism to meet liability requirements, this guarantee will be considered [insert "primary" or "excess"] coverage.

I hereby certify that the wording of the guarantee is identical to the wording specified in Minnesota Rules, part 7045.0524, subpart 8a.

Subp. 11. **Letter of credit for liability coverage.** A letter of credit, as specified in part 7045.0518, subpart 8, or 7045.0620, subpart 7, must be worded as follows, except that instructions in brackets are to be replaced with the relevant information and the brackets deleted:

IRREVOCABLE STANDBY LETTER OF CREDIT

[Name and Address of Issuing Institution]

[Agency Commissioner]

Minnesota Pollution Control Agency

Dear Sir or Madam: We hereby establish our Irrevocable Standby Letter of Credit No. ... in the favor of ["any and all third-party liability claimants" or insert name of trustee of the standby trust fund], at the request and for the account of [owner or operator's name and address] for third-party liability awards or settlements of [insert

dollar amount of the letter of credit] per occurrence and the annual aggregate amount of [insert dollar amount of the letter of credit] for sudden accidental occurrences and/or for third-party liability awards or settlements of [insert dollar amount of the letter of credit] per occurrence and the annual aggregate amount of [insert dollar amount of the letter of credit] for nonsudden accidental occurrences available on presentation of a sight draft bearing reference to this letter of credit No. ..., and [insert the following language if the letter of credit is being used without a standby trust fund:

"(1) a signed certificate reading as follows:

CERTIFICATE OF VALID CLAIM

The undersigned, as parties [insert principal] and [insert name and address of third party claimant(s)], hereby certify that the claim of bodily injury and/or property damage caused by a [sudden or nonsudden] accidental occurrence arising from operations of [principal's] hazardous waste treatment, storage, or disposal facility should be paid in the amount of $..... We hereby certify that the claim does not apply to any of the following:

(a) Bodily injury or property damage for which [insert principal] is obligated to pay damages by reason of the assumption of liability in a contract or agreement. This exclusion does not apply to liability for damages that [insert principal] would be obligated to pay in the absence of the contract or agreement.

(b) Any obligation of [insert principal] under a workers' compensation, disability benefits or unemployment compensation law or any similar law.

(c) Bodily injury to:

(1) an employee of [insert principal] arising from, and in the course of, employment by [insert principal]; or

(2) the spouse, child, parent, brother, or sister of that employee as a consequence of, or arising from, and in the course of employment by [insert principal].

This exclusion applies:

(A) whether [insert principal] may be liable as an employer or in any other capacity; and

(B) to any obligation to share damages with or repay another person who must pay damages because of the injury to persons identified in paragraphs (1) and (2).

(d) Bodily injury or property damage arising out of the ownership, maintenance, use, or entrustment to others of any aircraft, motor vehicle, or watercraft.

(e) Property damage to:

(1) any property owned, rented, or occupied by [insert principal];

(2) premises that are sold, given away, or abandoned by [insert principal] if the property damage arises out of any part of those premises;

(3) property loaned to [insert principal];

(4) personal property in the care, custody, or control of [insert principal]; or

(5) that particular part of real property on which [insert principal] or any contractors or subcontractors working directly or indirectly on behalf of [insert principal] are performing operations, if the property damage arises out of these operations.

[Signatures]

Grantor

[Signatures]

Claimant(s)

; or

(2) a valid final court order establishing a judgment against the Grantor for bodily injury or property damage caused by sudden or nonsudden accidental occurrences arising from the operation of the Grantor's facility or group of facilities.

This letter of credit is effective as of [date] and shall expire on [date at least one year later], but such expiration date shall be automatically extended for a period of [at least one year] on [date] and on each successive expiration date, unless, at least 120 days before

the current expiration date, we notify you, the commissioner, and [owner's or operator's name] by certified mail that we have decided not to extend this letter of credit beyond the current expiration date.

Whenever this letter of credit is drawn on under and in compliance with the terms of this credit, we shall duly honor such draft upon presentation to us.

[Insert the following language if a standby trust fund is not being used: "In the event that this letter of credit is used in combination with another mechanism for liability coverage, this letter of credit shall be considered [insert "primary" or "excess" coverage."]

We certify that the wording of this letter of credit is identical to the wording specified in Minnesota Rules, part 7045.0524, subpart 11, as such rule was constituted on the date shown immediately below. [Signature(s) and title(s) of official(s) of issuing institution] [Date].

This credit is subject to [insert "the most recent edition of the Uniform Customs and Practice for Documentary Credits, published and copyrighted by the International Chamber of Commerce," or "the Uniform Commercial Code"].

Subp. 12. **Trust agreement for liability coverage.**

A. A trust agreement, as specified in part 7045.0518, subpart 10, or 7045.0620, subpart 9, must be worded as follows, except that instructions in brackets are to be replaced with the relevant information and the brackets deleted:

TRUST AGREEMENT

Trust Agreement, the "Agreement," entered into as of [date] by and between [name of the owner or operator] a [name of State] [insert "corporation," "partnership," "association," or "proprietorship"], the "Grantor," and [name of corporate trustee], [insert "incorporated in the State of _____" or "a national bank"], the "trustee."

Whereas, the Minnesota Pollution Control Agency (Agency), an agency of the state of Minnesota, has established certain rules applicable to the Grantor, requiring that an owner or operator of a hazardous waste management facility or group of facilities must

demonstrate financial responsibility for bodily injury and property damage to third parties caused by sudden accidental and/or nonsudden accidental occurrences arising from operations of the facility or group of facilities.

Whereas, the Grantor has elected to establish a trust to assure all or part of such financial responsibility for the facilities identified herein.

Whereas, the Grantor, acting through its duly authorized officers, has selected the Trustee to be the trustee under this agreement, and the Trustee is willing to act as trustee.

Now, therefore, the Grantor and the Trustee agree as follows:

Section 1. Definitions. As used in this Agreement:

(a) The term "Grantor" means the owner or operator who enters into this Agreement and any successors or assigns of the Grantor.

(b) The term "Trustee" means the Trustee who enters into this Agreement and any successor Trustee.

Section 2. Identification of Facilities. This agreement pertains to the facilities identified on attached schedule A [on Schedule A, for each facility list the EPA Identification Number, name, and address of the facility(ies) and the amount of liability coverage, or portions thereof, if more than one instrument affords combined coverage as demonstrated by this Agreement].

Section 3. Establishment of Fund. The Grantor and the Trustee hereby establish a trust fund, hereinafter the "Fund," for the benefit of any and all third parties injured or damaged by [sudden and/or nonsudden] accidental occurrences arising from operation of the facility(ies) covered by this guarantee, in the amounts of [insert dollar amount of the fund] per occurrence and [insert dollar amount of the fund] annual aggregate for sudden accidental occurrences and [insert dollar amount of the fund] per occurrence and [insert dollar amount of the fund] annual aggregate for nonsudden occurrences, except that the Fund is not established for the benefit of third parties for the following:

(a) Bodily injury or property damage for which [insert Grantor] is obligated to pay damages by reason of the assumption of liability in a contract or agreement. This exclusion does not apply to liability for damages that [insert Grantor] would be obligated to pay in the absence of the contract or agreement.

(b) Any obligation of [insert Grantor] under a workers' compensation, disability benefits, or unemployment compensation law or any similar law.

(c) Bodily injury to:

(1) an employee of [insert Grantor] arising from, and in the course of, employment by [insert Grantor]; or

(2) the spouse, child, parent, brother, or sister of that employee as a consequence of, or arising from, and in the course of employment by [insert Grantor].

This exclusion applies:

(A) whether [insert Grantor] may be liable as an employer or in any other capacity; and

(B) to any obligation to share damages with or repay another person who must pay damages because of the injury to persons identified in paragraphs (1) and (2).

(d) Bodily injury or property damage arising out of the ownership, maintenance, use, or entrustment to others of any aircraft, motor vehicle, or watercraft.

(e) Property damage to:

(1) any property owned, rented, or occupied by [insert Grantor];

(2) premises that are sold, given away, or abandoned by [insert Grantor] if the property damage arises out of any part of those premises;

(3) property loaned to [insert Grantor];

(4) personal property in the care, custody, or control of [insert Grantor]; or

(5) that particular part of real property on which [insert Grantor] or any contractors or subcontractors working directly or indirectly on behalf of [insert Grantor] are performing operations, if the property damage arises out of these operations.

In the event of combination with another mechanism for liability coverage, the fund shall be considered [insert "primary" or "excess"] coverage.

The Fund is established initially as consisting of the property, which is acceptable to the Trustee, described in Schedule B attached hereto. Such property and any other property subsequently transferred to the Trustee is referred to as the Fund, together with all earnings and profits thereon, less any payments or distributions made by the Trustee pursuant to this Agreement. The Fund shall be held by the Trustee, IN TRUST, as hereinafter provided. The Trustee shall not be responsible nor shall it undertake any responsibility for the amount or adequacy of, nor any duty to collect from the Grantor, any payments necessary to discharge any liabilities of the Grantor established by the Agency.

Section 4. Payment for Bodily Injury or Property Damage. The Trustee shall satisfy a third party liability claim by making payments from the Fund only upon receipt of one of the following documents:

(a) Certification from the Grantor and the third party claimant(s) that the liability claim should be paid. The certification must be worded as follows, except that instructions in brackets are to be replaced with the relevant information and the brackets deleted:

CERTIFICATION OF VALID CLAIM

The undersigned, as parties [insert Grantor] and [insert name and address of third party claimant(s)], hereby certify that the claim of bodily injury and/or property damage caused by a [sudden or nonsudden] accidental occurrence arising from operating [Grantor's] hazardous waste treatment, storage, or disposal facility should be paid in the amount of $[.....].

[Signatures]

Grantor

[Signatures]

Claimant(s)

(b) A valid final court order establishing a judgment against the Grantor for bodily injury or property damage caused by sudden or nonsudden accidental occurrences arising from the operation of the Grantor's facility or group of facilities.

Section 5. Payments Comprising the Fund. Payments made to the Trustee for the Fund shall consist of cash or securities acceptable to the Trustee.

Section 6. Trustee Management. The Trustee shall invest and reinvest the principal and income, in accordance with general investment policies and guidelines which the Grantor may communicate in writing to the Trustee from time to time, subject, however, to the provisions of this section. In investing, reinvesting, exchanging, selling, and managing the Fund, the Trustee shall discharge his duties with respect to the trust fund solely in the interest of the beneficiary and with the care, skill, prudence, and diligence under the circumstance then prevailing which persons of prudence, acting in a like capacity and familiar with such matters, would use in the conduct of an enterprise of a like character and with like aims; except that:

(a) securities or other obligations of the Grantor, or any other owner or operator of the facilities, or any of their affiliates as defined in the Investment Company Act of 1940, as amended, 15 U.S.C. 80a-2.(a), shall not be acquired or held unless they are securities or other obligations of the Federal or State government;

(b) the Trustee is authorized to invest the Fund in time or demand deposits of the Trustee, to the extent insured by an agency of the Federal or State government; and

(c) the Trustee is authorized to hold cash awaiting investment or distribution uninvested for a reasonable time and without liability for the payment of interest thereon.

Section 7. Commingling and Investment. The Trustee is expressly authorized in its discretion:

(a) to transfer from time to time any or all of the assets of the Fund to any common commingled, or collective trust fund created by the Trustee in which the fund is eligible to participate, subject to all of the provisions thereof, to be commingled with the assets of other trusts participating therein; and

(b) to purchase shares in any investment company registered under the Investment Company Act of 1940, 15 U.S.C. 81a-1 et seq., including one which may be created, managed, underwritten, or to which investment advice is rendered or the shares of which are sold by the Trustee. The Trustee may vote such shares in its discretion.

Section 8. Express Powers of Trustee. Without in any way limiting the powers and discretions conferred upon the Trustee by the other provisions of this Agreement or by law, the Trustee is expressly authorized and empowered:

(a) to sell, exchange, convey, transfer, or otherwise dispose of any property held by it, by public or private sale. No person dealing with the Trustee shall be bound to see to the application of the purchase money or to inquire into the validity or expediency of any such sale or other disposition;

(b) to make, execute, acknowledge, and deliver any and all documents of transfer and conveyance and any and all other instruments that may be necessary or appropriate to carry out the powers herein granted;

(c) to register any securities held in the Fund in its own name or in the name of a nominee and to hold any security in bearer form or in book entry, or to combine certificates representing such securities with certificates of the same issue held by the Trustee in other fiduciary capacities, or to deposit or arrange for the deposit of such securities in a qualified central depository even though, when so deposited, such securities may be merged and held in bulk in the name of the nominee of such depository with other securities deposited therein by another person, or to deposit or arrange for the deposit of any securities issued by the United States Government, or any agency or instrumentality thereof, with a Federal

Reserve bank, but the books and records of the Trustee shall at all times show that all such securities are part of the Fund;

(d) to deposit any cash in the Fund in interest-bearing accounts maintained or savings certificates issued by the Trustee, in its separate corporate capacity, or in any other banking institution affiliated with the Trustee, to the extent insured by an agency of the Federal or State government; and

(e) to compromise or otherwise adjust all claims in favor of or against the Fund.

Section 9. Taxes and Expenses. All taxes of any kind that may be assessed or levied against or in respect of the Fund and all brokerage commissions incurred by the Fund shall be paid from the Fund. All other expenses incurred by the Trustee in connection with the administration of this Trust, including fees for legal services rendered to the Trustee, the compensation of the Trustee to the extent not paid directly by the Grantor, and all other proper charges and disbursements of the Trustee shall be paid from the Fund.

Section 10. Annual Valuations. The Trustee shall annually, at least 30 days prior to the anniversary date of establishment of the Fund, furnish to the Grantor and to the Agency Commissioner a statement confirming the value of the Trust. Any securities in the Fund shall be valued at market value as of no more than 60 days prior to the anniversary date of establishment of the Fund. The failure of the Grantor to object in writing to the Trustee within 90 days after the statement has been furnished to the Grantor and the Agency Commissioner shall constitute a conclusively binding assent by the Grantor barring the Grantor from asserting any claim or liability against the Trustee with respect to matters disclosed in the statement.

Section 11. Advice of Counsel. The Trustee may from time to time consult with counsel, who may be counsel to the Grantor with respect to any question arising as to the construction of this Agreement or any action to be taken hereunder. The Trustee shall be fully protected, to the extent permitted by law, in acting upon the advice of counsel.

Section 12. Trustee Compensation. The Trustee shall be entitled to reasonable compensation for its services as agreed upon in writing from time to time with the Grantor.

Section 13. Successor Trustee. The Trustee may resign or the Grantor may replace the Trustee, but such resignation or replacement shall not be effective until the Grantor has appointed a successor trustee and this successor accepts the appointment. The successor trustee shall have the same powers and duties as those conferred upon the Trustee hereunder. Upon the successor trustee's acceptance of the appointment, the Trustee shall assign, transfer, and pay over to the successor trustee the funds and properties then constituting the Fund. If for any reason the Grantor cannot or does not act in the event of the resignation of the Trustee, the Trustee may apply to a court of competent jurisdiction for the appointment of a successor trustee or for instructions. The successor trustee shall specify the date on which it assumes administration of the trust in a writing sent to the Grantor, the Agency Commissioner, and the present Trustee by certified mail ten days before such change becomes effective. Any expenses incurred by the Trustee as a result of any of the acts contemplated by this section shall be paid as provided in Section 9.

Section 14. Instructions to the Trustee. All orders, requests, and instructions by the Grantor to the Trustee shall be in writing, signed by such persons as are designated in the attached Exhibit A or such other designees as the Grantor may designate by amendments to Exhibit A. The Trustee shall be fully protected in acting without inquiry in accordance with the Grantor's orders, requests, and instructions. All orders, requests, and instructions by the Agency Commissioner to the Trustee shall be in writing, signed by the Agency Commissioner, or the Commissioner's designees, and the Trustee shall act and shall be fully protected in acting in accordance with such orders, requests, and instructions. The Trustee shall have the right to assume, in the absence of written notice to the contrary, that no event constituting a change or a termination of the authority of any person to act on behalf of the Grantor or the Agency hereunder has occurred. The Trustee shall have

no duty to act in the absence of such orders, requests, and instructions from the Grantor and/or the Agency, except as provided for herein.

Section 15. Notice of Nonpayment. If a payment for bodily injury or property damage is made under Section 4 of this trust, the Trustee shall notify the Grantor of such payment and the amount(s) thereof within five (5) working days. The Grantor shall, on or before the anniversary date of the establishment of the Fund following such notice, either make payments to the Trustee in amounts sufficient to cause the trust to return to its value immediately prior to the payment of claims under Section 4, or shall provide written proof to the Trustee that other financial assurance for liability coverage has been obtained equaling the amount necessary to return the trust to its value prior to the payment of claims. If the Grantor does not either make payments to the Trustee or provide the Trustee with such proof, the Trustee shall within ten working days after the anniversary date of the establishment of the Fund provide a written notice of nonpayment to the Agency Commissioner.

Section 16. Amendment of Agreement. This Agreement may be amended by an instrument in writing executed by the Grantor, the Trustee, and the Agency Commissioner, or by the Trustee and the Agency Commissioner if the Grantor ceases to exist.

Section 17. Irrevocability and Termination. Subject to the right of the parties to amend this Agreement as provided in Section 16, this Trust shall be irrevocable and shall continue until terminated at the written agreement of the Grantor, the Trustee, and the Agency Commissioner, or by the Trustee and the Agency Commissioner, if the Grantor ceases to exist. Upon termination of the Trust, all remaining trust property, less final trust administration expenses, shall be delivered to the Grantor.

The Agency Commissioner will agree to termination of the Trust when the owner or operator substitutes alternate financial assurance as specified in this section.

Section 18. Immunity and Indemnification. The Trustee shall not incur personal liability of any nature in connection with any act or omission, made in good faith, in

the administration of this Trust, or in carrying out any directions by the Grantor or the Agency Commissioner issued in accordance with this Agreement. The Trustee shall be indemnified and saved harmless by the Grantor or from the Trust Fund, or both, from and against any personal liability to which the Trustee may be subjected by reason of any act or conduct in its official capacity, including all expenses reasonably incurred in its defense in the event the Grantor fails to provide such defense.

Section 19. Choice of Law. This Agreement shall be administered, construed, and enforced according to the laws of the State of Minnesota.

Section 20. Interpretation. As used in Agreement, words in the singular include the plural and words in the plural include the singular. The descriptive headings for each section of this Agreement shall not affect the interpretation or the legal efficacy of this Agreement.

In Witness Whereof the parties have caused this Agreement to be executed by their respective officers duly authorized and their corporate seals to be hereunto affixed and attested as of the date first above written. The parties below certify that the wording of this Agreement is identical to the wording specified in part 7045.0524, subpart 12, as such regulations were constituted on the date first above written.

Subp. 13. **Standby trust agreement for liability coverage.**

A. A standby trust agreement, as specified in part 7045.0518, subpart 8, or 7045.0620, subpart 7, must be worded as follows, except that instructions in brackets are to be replaced with the relevant information and the brackets deleted:

STANDBY TRUST AGREEMENT

Trust Agreement, the "Agreement," entered into as of [date] by and between [name of the owner or operator] a [name of a State] [insert "corporation," "partnership," "association," or "proprietorship"], the "Grantor," and [name of corporate trustee], [insert, "incorporated in the State of _____" or "a national bank"], the "trustee."

Whereas, the Minnesota Pollution Control Agency (Agency), an agency of the State of Minnesota, has established certain regulations applicable to the Grantor, requiring that an owner or operator of a hazardous waste management facility or group of facilities must demonstrate financial responsibility for bodily injury and property damage to third parties caused by sudden accidental and/or nonsudden accidental occurrences arising from operations of the facility or group of facilities.

Whereas, the Grantor has elected to establish a standby trust into which the proceeds from a letter of credit may be deposited to assure all or part of such financial responsibility for the facilities identified herein.

Whereas, the Grantor, acting through its duly authorized officers, has selected the Trustee to be the trustee under this agreement, and the Trustee is willing to act as trustee.

Now, therefore, the Grantor and the Trustee agree as follows:

Section 1. Definitions. As used in this Agreement:

(a) The term Grantor means the owner or operator who enters into this Agreement and any successors or assigns of the Grantor.

(b) The term Trustee means the Trustee who enters into this Agreement and any successor Trustee.

Section 2. Identification of Facilities. This Agreement pertains to the facilities identified on attached Schedule A [on Schedule A, for each facility list the identification number, name, and address of the facility(ies) and the amount of liability coverage, or portions thereof, if more than one instrument affords combined coverage as demonstrated by this Agreement].

Section 3. Establishment of Fund. The Grantor and the Trustee hereby establish a standby trust fund, hereafter the "Fund," for the benefit of any and all third parties injured or damaged by [sudden and/or nonsudden] accidental occurrences arising from operation of the facility(ies) covered by this guarantee, in the amounts of [insert dollar amount of the fund] per occurrence and [insert dollar amount of the fund] annual aggregate for sudden accidental occurrences and [insert dollar amount of the fund] per occurrence and [insert dollar amount of the fund] annual aggregate for nonsudden occurrences, except that the Fund is not established for the benefit of third parties for the following:

(a) Bodily injury or property damage for which [insert Grantor] is obligated to pay damages by reason of the assumption of liability in a contract or agreement. This

exclusion does not apply to liability for damages that [insert Grantor] would be obligated to pay in the absence of the contract or agreement.

(b) Any obligation of [insert Grantor] under a workers' compensation, disability benefits, or unemployment compensation law or any similar law.

(c) Bodily injury to:

(1) an employee or [insert Grantor] arising from, and in the course of, employment by [insert Grantor]; or

(2) the spouse, child, parent, brother, or sister of that employee as a consequence of, or arising from, and in the course of employment by [insert Grantor].

This exclusion applies:

(A) whether [insert Grantor] may be liable as an employer or in any other capacity; and

(B) to any obligation to share damages with or repay another person who must pay damages because of the injury to persons identified in paragraphs (1) and (2).

(d) Bodily injury or property damage arising out of the ownership, maintenance, use, or entrustment to others of any aircraft, motor vehicle, or watercraft.

(e) Property damage to:

(1) any property owned, rented, or occupied by [insert Grantor];

(2) premises that are sold, given away, or abandoned by [insert Grantor] if the property damage arises out of any part of those premises;

(3) property loaned [insert Grantor];

(4) personal property in the care, custody, or control of [insert Grantor]; or

(5) that particular part of real property on which [insert Grantor] or any contractors or subcontractors working directly or indirectly on behalf of [insert Grantor] are performing operations, if the property damage arises out of these operations.

In the event of combination with another mechanism for liability coverage, the fund shall be considered [insert "primary" or "excess"] coverage.

The Fund is established initially as consisting of the proceeds of the letter of credit deposited into the Fund. Such proceeds and any other property subsequently transferred to the Trustee is referred to as the Fund, together with all earnings and profits thereon, less any payments or distributions made by the Trustee pursuant to this Agreement. The Fund shall be held by the Trustee, IN TRUST, as hereinafter provided. The Trustee shall not be responsible nor shall it undertake any responsibility for the amount or adequacy of, nor any duty to collect from the Grantor, any payments necessary to discharge any liabilities of the Grantor established by the Agency.

Section 4. Payment for Bodily Injury or Property Damage. The Trustee shall satisfy a third-party liability claim by drawing on the letter of credit described in Schedule B and by making payments from the Fund only upon receipt of one of the following documents:

(a) Certification from the Grantor and the third-party claimant(s) that the liability claim should be paid. The certification must be worded as follows, except that instructions in brackets are to be replaced with the relevant information and the brackets deleted: The Trustee shall satisfy a third-party liability claim by drawing on the letter of credit described in Schedule B and by making payments from the Fund only upon receipt of one of the following documents:

CERTIFICATION OF VALID CLAIM

The undersigned, as parties [insert Grantor] and [insert name and address of third party claimant(s)], hereby certify that the claim of bodily injury and/or property damage caused by a [sudden or nonsudden] accidental occurrence arising from operating [Grantor's] hazardous waste treatment, storage, or disposal facility should be paid in the amount of $[ ].

[Signature] Grantor

[Signature(s)] Claimant(s)

(b) A valid final court order establishing a judgment against the Grantor for bodily injury or property damage caused by sudden or nonsudden accidental occurrences arising from the operation of the Grantor's facility or group of facilities.

Section 5. Payments Comprising the Fund. Payments made to the Trustee for the Fund shall consist of the proceeds from the letter of credit drawn upon by the Trustee in accordance with the requirements of Minnesota Rules, part 7045.0524, subpart 11, and Section 4 of this Agreement.

Section 6. Trustee Management. The Trustee shall invest and reinvest the principal and income, in accordance with general investment policies and guidelines which the Grantor may communicate in writing to the Trustee from time to time, subject, however, to the provisions of this Section. In investing, reinvesting, exchanging, selling, and managing the Fund, the Trustee shall discharge the trustee's duties with respect to the trust fund solely in the interest of the beneficiary and with the care, skill, prudence, and diligence under the circumstances then prevailing which persons of prudence, acting in a like capacity and familiar with such matters, would use in the conduct of an enterprise of a like character and with like aims; except that:

(a) securities or other obligations of the Grantor, or any other owner or operator of the facilities, or any of their affiliates as defined in the Investment Company Act of 1940, as amended, United States Code, title 15, section 80a-2(a), shall not be acquired or held, unless they are securities or other obligations of the Federal or State government;

(b) the Trustee is authorized to invest the Fund in time or demand deposits of the Trustee, to the extent insured by an agency of the Federal or a State government; and

(c) the Trustee is authorized to hold cash awaiting investment or distribution uninvested for a reasonable time and without liability for the payment of interest thereon.

Section 7. Commingling and Investment. The Trustee is expressly authorized in its discretion:

(a) to transfer from time to time any or all of the assets of the Fund to any common, commingled, or collective trust fund created by the trustee in which the Fund is eligible to participate, subject to all of the provisions thereof, to be commingled with the assets of other trusts participating therein; and

(b) to purchase shares in any investment company registered under the Investment Company Act of 1940, United States Code, title 15, section 80a-1 et seq., including one which may be created, managed, underwritten, or to which investment advice is rendered or the shares of which are sold by the Trustee. The Trustee may vote such shares in its discretion.

Section 8. Express Powers of Trustee. Without in any way limiting the powers and discretions conferred upon the Trustee by the other provisions of the Agreement or by law, the Trustee is expressly authorized and empowered:

(a) to sell, exchange, convey, transfer, or otherwise dispose of any property held by it, by public or private sale. No person dealing with the Trustee shall be bound to see to the application of the purchase money or to inquire into the validity or expediency of any such sale or other disposition;

(b) to make, execute, acknowledge, and deliver any and all documents of transfer and conveyance and any and all other instruments that may be necessary or appropriate to carry out the powers herein granted;

(c) to register any securities held in the Fund in its own name or in the name of a nominee and to hold any security in bearer form or in book entry, or to combine certificates representing such securities with certificates of the same issue held by the Trustee in other fiduciary capacities, or to deposit or arrange for the deposit of such securities in a qualified central depositary even though, when so deposited, such securities may be merged and held in bulk in the name of the nominee of such depositary with other securities deposited therein by another person, or to deposit or arrange for the deposit of any securities issued by the United States Government, or any agency or instrumentality thereof, with a Federal

Reserve Bank, but the books and records of the Trustee shall at all times show that all such securities are part of the Fund;

(d) to deposit any cash in the Fund in interest-bearing accounts maintained or savings certificates issued by the Trustee, in its separate corporate capacity, or in any other banking institution affiliated with the Trustee, to the extent insured by an agency of the Federal or State government; and

(e) to compromise or otherwise adjust all claims in favor of or against the Fund.

Section 9. Taxes and Expenses. All taxes of any kind that may be assessed or levied against or in respect of the Fund and all brokerage commissions incurred by the Fund shall be paid from the Fund. All other expenses incurred by the Trustee in connection with the administration of this Trust, including fees for legal services rendered to the Trustee, the compensation of the Trustee to the extent not paid directly by the Grantor, and all other proper charges and disbursements to the Trustee shall be paid from the Fund.

Section 10. Advice of Counsel. The Trustee may from time to time consult with counsel, who may be counsel to the Grantor, with respect to any question arising as to the construction of this Agreement or any action to be taken hereunder. The Trustee shall be fully protected, to the extent permitted by law, in acting upon the advice of counsel.

Section 11. Trustee Compensation. The Trustee shall be entitled to reasonable compensation for its services as agreed upon in writing from time to time with the Grantor.

Section 12. Successor Trustee. The Trustee may reside or the Grantor may replace the Trustee, but such resignation or replacement shall not be effective until the Grantor has appointed a successor trustee and this successor accepts the appointment. The successor trustee shall have the same powers and duties as those conferred upon the Trustee hereunder. Upon the successor trustee's acceptance of the appointment; the Trustee shall assign, transfer, and pay over to the successor trustee the funds and properties then constituting the Fund. If for any reason the Grantor cannot or does not act in the event of the resignation of the Trustee, the Trustee may apply to a court of competent jurisdiction

for the appointment of a successor trustee or for instructions. The successor trustee shall specify the date on which it assumes administration of the trust in a writing sent to the Grantor, the Agency Commissioner and the present Trustee by certified mail ten days before such change becomes effective. Any expenses incurred by the Trustee as a result of any of the acts contemplated by this Section shall be paid as provided in Section 9.

Section 13. Instructions to the Trustee. All orders, requests, certifications of valid claims, and instructions to the Trustee shall be in writing, signed by such persons as are designated in the attached Exhibit A or such other designees as the Grantor may designate by amendments to Exhibit A. The Trustee shall be fully protected in acting without inquiry in accordance with the Grantor's orders, requests, and instructions. The Trustee shall have the right to assume, in the absence of written notice to the contrary, that no event constituting a change or a termination of the authority of any person to act on behalf of the Grantor or the Agency Commissioner hereunder has occurred. The Trustee shall have no duty to act in the absence of such orders, requests, and instructions from the Grantor and/or the Agency, except as provided for herein.

Section 14. Amendment of Agreement. This Agreement may be amended by an instrument in writing executed by the Grantor, the Trustee, and the Agency Commissioner, or by the Trustee and the Agency Commissioner if the Grantor ceases to exist.

Section 15. Irrevocability and Termination. Subject to the right of the parties to amend this Agreement as provided in Section 14, this Trust shall be irrevocable and shall continue until terminated at the written agreement of the Grantor, the Trustee, and the Agency Commissioner, or by the Trustee and the Agency Commissioner, if the Grantor ceases to exist. Upon termination of the Trust, all remaining trust property, less final trust administration expenses, shall be paid to the Grantor.

The Agency Commissioner will agree to termination of the Trust when the owner or operator substitutes alternative financial assurance as specified in this section.

Section 16. Immunity and Indemnification. The Trustee shall not incur personal liability of any nature in connection with any act or omission, made in good faith, in the administration of this Trust, or in carrying out any directions by the Grantor and the Agency Commissioner issued in accordance with this Agreement. The Trustee shall be indemnified and saved harmless by the Grantor or from the Trust Fund, or both, from and against any personal liability to which the Trustee may be subjected by reason of any act or conduct in its official capacity, including all expenses reasonably incurred in its defense in the event the Grantor fails to provide such defense.

Section 17. Choice of Law. This Agreement shall be administered, construed, and enforced in accordance with the laws of the State of Minnesota.

Section 18. Interpretation. As used in this Agreement, words in the singular include the plural and words in the plural include the singular. The descriptive headings for each Section of this Agreement shall not affect the interpretation of the legal efficacy of this Agreement.

In Witness Whereof, the parties have caused this Agreement to be executed by their respective officers duly authorized and their corporate seals to be hereunto affixed and attested as of the date first above written. The parties below certify that the wording of this Agreement is identical to the wording specified in Minnesota Rules, part 7045.0524, subpart 13, as such rule was constituted on the date first above written.

7045.0526 USE AND MANAGEMENT OF CONTAINERS.

Subpart 1. **Scope.** This part applies to owners and operators of all hazardous waste facilities that store containers of hazardous waste, except as part 7045.0450 provides otherwise. Under ~~parts~~ part 7045.0127 and ~~7045.0135, subpart 4, item C~~ Code of Federal Regulations, title 40, section 261.33(c), as incorporated in part 7045.0135, if a hazardous waste is emptied from a container, the residue remaining in the container is not considered a hazardous waste if the container is empty, as defined in part 7045.0127. In that event, management of the container is exempt from the requirements of this part.

[For text of subps 2 to 5, see M.R.]

Subp. 6. **Containment.** Requirements for containment systems are as described in items A to E.

[For text of items A and B, see M.R.]

C. Spilled or leaked waste and accumulated precipitation must be removed from the sump or collection area in as timely a manner as is necessary to prevent overflow of the collection system. If the collected material is a hazardous waste as defined in parts 7045.0102 to ~~7045.0143~~ 7045.0155, it must be managed as a hazardous waste ~~according to all applicable requirements of~~ in accordance with parts 7045.0205 to 7045.1030. If the collected material is discharged through a point source to waters of the United States, it is subject to the requirements of section 402 of the federal Clean Water ~~Pollution Control Act Amendments of 1972~~, United States Code, title 33, section 1342, as amended.

[For text of item D, see M.R.]

E. Storage areas that store containers holding wastes F020, F021, F022, F023, F026, F027, and F028 from part 7045.0135, subpart ~~2~~ 1a, item B, that do not contain free liquids must have a containment system defined by item A.

Subp. 7. **Special requirements for ignitable or reactive waste.** Containers holding ignitable or reactive waste must be located at least 15 meters (50 feet) from the facility's property line when physically possible based on the dimensions of the property. When it is not physically possible to place containers at least 50 feet from the property line, based on the dimensions of the property, the ignitable or reactive waste must be placed at least as far as the specified minimum distance from property line found in ~~Table Number 79.503-F of~~ the Minnesota ~~Uniform~~ State Fire Code ~~as incorporated by reference in part 7510.3510~~, chapter 7510. Nothing in this subpart shall relieve the facility owner or operator from the obligation to comply with any local, state, or federal law governing storage of these wastes.

[For text of subps 8 and 9, see M.R.]

Subp. 10. **Air emission standards.** The owner or operator must manage all hazardous waste placed in a container in accordance with parts 7045.0540, 7045.0547, and 7045.0548.

7045.0528 TANK SYSTEMS.

Subpart 1. **Scope.** This part applies to owners and operators of facilities that use tank systems, including tank systems, sumps, and other such collection devices or systems used in conjunction with drip pads, as defined in part 7045.0020 and regulated under part 7045.0541, to treat or store hazardous waste, except as part 7045.0450, and items A and B provide otherwise.

A. Tank systems that are used to store or treat hazardous waste that contains no free liquids and are situated inside a building with an impermeable floor are exempted from the requirements in subpart 4. To demonstrate the absence or presence of free liquids in the stored or treated waste, ~~EPA~~ the following test must be used: Method 9095 (Paint Filter Liquids Test) as described in "Test Methods for Evaluating Solid ~~Wastes~~ Waste, Physical/Chemical Methods," ~~(~~EPA publication ~~No.~~ SW-846 ~~) must be used~~, incorporated in part 7045.0065, item D.

[For text of item B, see M.R.]

[For text of subps 2 to 9, see M.R.]

Subp. 10. **Special requirements for ignitable or reactive waste.** Ignitable or reactive waste must not be placed in a tank unless:

[For text of items A and B, see M.R.]

C. the tank is used solely for emergencies.

The owner or operator of a facility that treats or stores ignitable or reactive waste in a tank shall comply with the requirements for the maintenance of protective distances between the waste management area and any public ways, streets, alleys, or an adjoining property line that can be built upon, as required in the buffer zone requirements for tanks contained in ~~article 79 of~~ the Minnesota ~~Uniform~~ State Fire Code, ~~as incorporated by reference in part 7510.3510~~ chapter 7510. As required by part 7045.0458, the waste analysis plan must include analyses needed to comply with these special requirements for ignitable or reactive waste. Additional requirements for ignitable and reactive wastes

are contained in part 7045.0456, subpart 1. Part 7045.0456, subpart 3 also requires waste analysis, trial tests, or other documentation to ensure compliance with part 7045.0456, subpart 2. As required by part 7045.0478, the owner or operator shall place the results of each waste analysis and trial test, and any documented information, in the operating record of the facility.

[For text of subp 11, see M.R.]

Subp. 12. **Air emission standards.** The owner or operator of a facility must manage all hazardous waste placed in a tank in accordance with parts 7045.0540, 7045.0547, and 7045.0548.

7045.0532 SURFACE IMPOUNDMENTS.

[For text of subps 1 to 6, see M.R.]

Subp. 7. **Closure and postclosure care.** The requirements of closure and postclosure care are as follows:

A. At closure, the owner or operator shall:

(1) remove or decontaminate all waste residues, contaminated containment system components including liners, contaminated subsoils, and structures and equipment contaminated with waste and leachate, and manage them as hazardous waste unless they are shown to not be hazardous ~~according to~~ in accordance with parts 7045.0102 to ~~7045.0143~~ 7045.0155; or

[For text of subitem (2), see M.R.]

[For text of items B to E, see M.R.]

Subp. 8. **Special requirements for ignitable or reactive waste.** Ignitable or reactive waste must not be placed in a surface impoundment, unless the waste and impoundment satisfy all applicable requirements of ~~parts 7045.1300 to 7045.1380~~ part 7045.1390, and:

[For text of items A to C, see M.R.]

Subp. 9. **Special requirements for incompatible wastes.** Incompatible wastes, or incompatible wastes and materials, must not be placed in the same surface impoundment unless compliance with part 7045.0456, subpart 2 is maintained. For examples of potentially incompatible wastes, or incompatible waste and materials, see part 7045.0543, subpart 1, item C.

Subp. 10. **Special requirements for hazardous wastes F020, F021, F022, F023, F026, F027, and F028.** The following requirements apply to the hazardous wastes indicated:

A. Hazardous waste F020, F021, F022, F023, F026, and F027 listed under part 7045.0135, subpart ~~2~~ 1a, item B, must not be placed in a surface impoundment.

B. Hazardous waste F028 and treatment residues and soils contaminated with hazardous wastes F020, F021, F022, F023, F026, F027, and F028 listed under part 7045.0135, subpart ~~2~~ 1a, item B, must not be placed in surface impoundments unless the owner or operator operates the surface impoundment in accordance with all applicable requirements of this part and in accordance with a management plan that is approved by the commissioner considering the following factors:

[For text of subitems (1) to (4), see M.R.]

C. The commissioner shall impose additional design, operating, and monitoring requirements if the commissioner finds that additional requirements are necessary for surface impoundments used to treat, store, or dispose of hazardous waste F028 and treatment residues and soils contaminated with hazardous wastes F020, F021, F022, F023, F026, F027, and F028 listed under part 7045.0135, subpart ~~2~~ 1a, item B, in order to reduce the possibility of migration of these wastes to ground water, surface water, or air so as to protect human health and the environment.

Subp. 11. **Air emission standards.** The owner or operator must manage all hazardous waste placed in a surface impoundment in accordance with parts 7045.0540 and 7045.0548.

7045.0534 WASTE PILES.

[For text of subps 1 to 6, see M.R.]

Subp. 7. **Closure and postclosure care.** Closure and postclosure requirements are as follows:

A. At closure, the owner or operator shall remove or decontaminate all waste residues, contaminated containment system components including liners, contaminated subsoils, and structures and equipment contaminated with waste and leachate; and manage them as hazardous waste unless they are shown to not be hazardous ~~according to~~ in accordance with parts 7045.0102 to ~~7045.0143~~ 7054.0150.

[For text of items B to D, see M.R.]

Subp. 8. **Special requirements for ignitable or reactive waste.** Ignitable or reactive waste must not be placed in a waste pile unless the waste and waste pile satisfy all applicable requirements of ~~parts 7045.1300 to 7045.1380~~ part 7045.1390, and:

[For text of items A and B, see M.R.]

[For text of subp 9, see M.R.]

Subp. 10. **Special requirements for hazardous wastes F020, F021, F022, F023, F026, F027, and F028.** The following requirements apply to the hazardous wastes indicated:

A. Hazardous waste F020, F021, F022, F023, F026, and F027 listed under part 7045.0135, subpart ~~2~~ 1a, item B, must not be placed in a surface impoundment.

B. Hazardous waste F028 and treatment residues and soils contaminated with hazardous wastes F020, F021, F022, F023, F026, F027, and F028 listed under part 7045.0135, subpart ~~2~~ 1a, item B, must not be placed in surface impoundments unless the owner or operator operates the surface impoundment in accordance with all applicable requirements of this part and in accordance with a management plan that is approved by the commissioner considering the following factors:

[For text of subitems (1) to (4), see M.R.]

C. The commissioner shall impose additional design, operating, and monitoring requirements if the commissioner finds that additional requirements are necessary for surface impoundments used to treat, store, or dispose of hazardous waste F028 and treatment residues and soils contaminated with hazardous wastes F020, F021, F022, F023, F026, F027, and F028 listed under part 7045.0135, subpart ~~2~~ 1a, item B, in order to reduce the possibility of migration of these wastes to ground water, surface water, or air so as to protect human health and the environment.

7045.0536 LAND TREATMENT.

[For text of subps 1 to 8, see M.R.]

Subp. 9. **Ignitable or reactive waste.** The owner or operator shall not apply ignitable or reactive waste to the treatment zone unless the waste and the treatment zone meet all applicable requirements of ~~parts 7045.1300 to 7045.1380~~ part 7045.1390, and:

[For text of items A and B, see M.R.]

[For text of subp 10, see M.R.]

Subp. 11. **Special requirements for hazardous wastes F020, F021, F022, F023, F026, F027, and F028.** The following requirements apply to the hazardous wastes indicated:

A. Hazardous wastes F020, F021, F022, F023, F026, and F027 listed under part 7045.0135, subpart ~~2~~ 1a, item B, must not be placed in a land treatment unit.

B. Hazardous waste F028 and treatment residues and soils contaminated with hazardous wastes F020, F021, F022, F023, F026, F027, and F028 listed under part 7045.0135, subpart ~~2~~ 1a, item B, must not be managed at land treatment units unless the owner or operator operates the land treatment unit in accordance with all applicable requirements of this part and in accordance with a management plan that is approved by the commissioner considering the following factors:

[For text of subitems (1) to (4), see M.R.]

C. The commissioner shall impose additional design, operating, and monitoring requirements if the commissioner finds that the additional requirements are necessary for land treatment facilities used to treat or dispose of hazardous waste F028 and treatment residues and soils contaminated with hazardous wastes F020, F021, F022, F023, F026, F027, and F028 listed under part 7045.0135, subpart ~~2~~ 1a, item B, in order to reduce the possibility of migration of these wastes to ground water, surface water, or air so as to protect human health and the environment.

7045.0538 LANDFILLS.

[For text of subps 1 to 6, see M.R.]

Subp. 7. **Closure and postclosure care.** Closure and postclosure care requirements are as follows:

[For text of item A, see M.R.]

B. After final closure, the owner or operator shall comply with all postclosure requirements contained in parts 7045.0488 to 7045.0494 including maintenance and monitoring throughout the postclosure care period specified in the permit under part 7045.0488. The owner or operator shall:

[For text of subitems (1) to (3), see M.R.]

(4) maintain and monitor the leak detection system in accordance with subparts 3, item C, subitems (3), unit (d), and (4); and 5, item C, and comply with all other applicable leak detection system requirements of ~~this part~~ parts 7045.0450 to 7045.0551 governing facility standards;

[For text of subitems (5) to (8), see M.R.]

[For text of item C, see M.R.]

Subp. 8. **Special requirements for ignitable or reactive waste.** Special requirements for ignitable or reactive waste are as follows:

A. Except as provided in item B and subpart 12, ignitable or reactive waste must not be placed in a landfill, unless the waste and landfill meet all applicable requirements of ~~parts 7045.1300 to 7045.1380~~ part 7045.1390, and the resulting waste, mixture, or dissolution of material no longer meets the definition of ignitable or reactive waste under part 7045.0131, subpart 2 or 5, and compliance with part 7045.0456, subpart 2 is maintained.

B. Except for prohibited wastes which remain subject to treatment standards in ~~parts 7045.1350 to 7045.1360~~ Code of Federal Regulations, title 40, sections 268.40 to 268.42, as incorporated in part 7045.1390, ignitable wastes in containers may be landfilled without meeting the requirements of item A, provided that the wastes are disposed of in such a way that they are protected from any material or conditions which may cause them to ignite. At a minimum, ignitable wastes must be disposed of in nonleaking containers which are carefully handled and placed so as to avoid heat, sparks, rupture, or any other condition that might cause ignition of the wastes; must be covered daily with soil or other noncombustible material to minimize the potential for ignition of the wastes; and must not be disposed of in cells that contain or will contain other wastes which may generate heat sufficient to cause ignition of the waste.

[For text of subp 9, see M.R.]

Subp. 10. **Special requirements for liquid waste.** Special requirements for liquid waste are as follows:

A. The placement in any landfill of bulk or noncontainerized liquid hazardous waste or waste containing free liquids, whether or not ~~absorbents~~ sorbents have been added, is prohibited.

B. Containers holding free liquids must not be placed in a landfill unless:

(1) all free-standing liquid has been removed by decanting, or other methods; has been mixed with ~~absorbent~~ sorbent or solidified so that freestanding liquid is no longer observed; or has been otherwise eliminated;

(2) the container is very small, such as an ~~ampule~~ ampoule; or

(3) the container is a laboratory pack as defined in subpart 12 and is disposed of in accordance with subpart 12.

C. To demonstrate the ~~presence or~~ absence or presence of free liquids in either a containerized or a bulk waste, the following test must be ~~demonstrated using the Paint Filter Liquids Test,~~ used: Method 9095 (Paint Filter Liquids Test) as described in "Test Methods for Evaluating Solid ~~Wastes~~ Waste, Physical/Chemical Methods," EPA publication ~~number~~ SW-846, incorporated in part 7045.0065, item D.

D. Sorbents used to treat free liquids to be disposed of in landfills must be nonbiodegradable. Nonbiodegradable sorbents are materials listed or described in subitem (1) or materials that pass one of the tests in subitem (2).

(1) Nonbiodegradable sorbents:

(a) inorganic minerals, other inorganic materials, and elemental carbon (for example, aluminosilicates, clays, smectites, Fuller's earth, bentonite, calcium bentonite, montmorillonite, calcined montmorillonite, kaolinite, micas (illite),

vermiculites, and zeolites; calcium carbonate (organic free limestone); oxides/hydroxides, alumina, lime, silica (sand), and diatomaceous earth; perlite (volcanic glass); expanded volcanic rock; volcanic ash; cement kiln dust; fly ash; rice hull ash; and activated charcoal/activated carbon);

(b) high molecular weight synthetic polymers (for example, polyethylene, high density polyethylene (HDPE), polypropylene, polystyrene, polyurethane, polyacrylate, polynorborene, polyisobutylene, ground synthetic rubber, cross-linked allylstyrene, and tertiary butyl copolymers). This does not include polymers derived from biological material or polymers specifically designed to be degradable; or

(c) mixtures of these nonbiodegradable materials.

(2) Tests for nonbiodegradable sorbents must use the following methods. The methods and tests in this subitem are incorporated by reference, are not subject to frequent change, and are available through the Minitex interlibrary loan system:

(a) the sorbent material is determined to be nonbiodegradable under ASTM Method G21-70 (1984a), Standard Practice for Determining Resistance of Synthetic Polymer Materials to Fungi;

(b) the sorbent material is determined to be nonbiodegradable under ASTM Method G22-76 (1984b), Standard Practice for Determining Resistance of Plastics to Bacteria; or

(c) the sorbent material is determined to be nonbiodegradable under OECD test 301B: CO_2 Evolution (Modified Sturm Test).

[For text of subp 11, see M.R.]

Subp. 12. **Disposal of small containers of hazardous waste in overpacked drums.** Small containers of hazardous waste in overpacked drums, or laboratory packs, may be placed in a landfill if the requirements of items A to F are met:

A. Hazardous waste must be packaged in nonleaking inside containers. The inside containers must be of a design and constructed of a material that will not react dangerously with, be decomposed by, or be ignited by the contained waste. Inside containers must be tightly and securely sealed. The inside containers must be of the size and type ~~specified~~ authorized in the United States Department of Transportation hazardous materials regulations under Code of Federal Regulations, title 49, parts 173, 178, ~~and~~ 179, and 180, as amended, if those regulations specify a particular inside container for the waste.

B. The inside containers must be overpacked in ~~an open~~ a removable head metal shipping container as specified in the United States Department of Transportation regulations under Code of Federal Regulations, title 49, section 173.12 and parts 178 ~~and~~, 179, and 180, as amended~~, of no more than 415 liter (110 gallon) capacity and~~. The inside containers must be surrounded by, at a minimum, a sufficient quantity of ~~absorbent~~ chemically compatible sorbent material, determined to be nonbiodegradable in accordance with subpart 10, item D, to completely ~~absorb~~ sorb all of the liquid contents of the inside containers. The gross weight of the complete package must not exceed 205 kilograms (452 pounds). The metal outer container must be full after ~~packing~~ it has been packed with inside containers and ~~absorbent~~ sorbent materials.

C. The ~~absorbent~~ sorbent material used must not be capable of reacting dangerously with, being decomposed by, or being ignited by the contents of the inside containers, in accordance with part 7045.0456, subpart 2.

[For text of items D and E, see M.R.]

F. The disposal is in compliance with ~~parts 7045.1300 to 7045.1380~~ part 7045.1390. Persons who incinerate lab packs ~~according to part 7045.1360~~ in accordance with Code of Federal Regulations, title 40, section 268.42, as incorporated in part 7045.1390, may use fiber drums in place of metal outer containers. The fiber drums

must meet United States Department of Transportation specifications in Code of Federal Regulations, title 49, section 173.12, as amended, and be overpacked ~~according to the requirements~~ in accordance with item B.

Subp. 13. **Special requirements for hazardous wastes F020, F021, F022, F023, F026, F027, and F028.** The following requirements apply to the hazardous wastes indicated:

A. Hazardous wastes F020, F021, F022, F023, F026, and F027 listed under part 7045.0135, subpart ~~2~~ 1a, item B, must not be placed in a landfill.

B. Hazardous waste F028 and treatment residues and soils contaminated with hazardous wastes F020, F021, F022, F023, F026, F027, and F028 listed under part 7045.0135, subpart ~~2~~ 1a, item B, must not be managed at landfills unless the owner or operator operates the landfill in accordance with all applicable requirements of this part and in accordance with a management plan that is approved by the commissioner considering the following factors:

[For text of subitems (1) to (4), see M.R.]

C. The commissioner shall impose additional design, operating, and monitoring requirements if the commissioner finds that the additional requirements are necessary for landfills used to dispose of hazardous waste F028 and treatment residues and soil contaminated with hazardous wastes F020, F021, F022, F023, F026, F027, and F028 listed under part 7045.0135, subpart ~~2~~ 1a, item B, in order to reduce the possibility of migration of these wastes to ground water, surface water, or air so as to protect human health and the environment.

7045.0539 MISCELLANEOUS UNITS.

[For text of subpart 1, see M.R.]

Subp. 2. **Environmental performance standards.** A miscellaneous unit must be located, designed, constructed, operated, maintained, and closed in a manner that will ensure protection of human health and the environment. Permits for miscellaneous units are to contain the terms and provisions necessary to protect human health and the environment, including, but not limited to, as appropriate, design and operating requirements, detection and monitoring requirements, and requirements for responses to releases of hazardous waste or hazardous constituents from the unit. Permit terms and provisions shall include those requirements of parts ~~7023.9000 to 7023.9050,~~ 7045.0526 to 7045.0542, 7045.0547, and 7045.0548, and chapter 7001 that are appropriate for the miscellaneous unit being permitted. Protection of human health and the environment includes, but is not limited to:

[For text of items A to C, see M.R.]

[For text of subps 3 and 4, see M.R.]

7045.0540 AIR EMISSION STANDARDS FOR TANKS, SURFACE IMPOUNDMENTS, AND CONTAINERS.

Subpart 1. **Incorporation of federal regulations.** The owners and operators of facilities that treat, store, or dispose of hazardous waste in tanks, surface impoundments, or containers must comply with Code of Federal Regulations, title 40, part 264, subpart CC, air emission standards for tanks, surface impoundments, and containers, sections 264.1080 to 264.1090, as amended, which are incorporated by reference subject to the exceptions in subpart 2.

Subp. 2. **Additions, modifications, or exceptions to incorporated regulations.**

A. The agency does not incorporate the following Code of Federal Regulations, title 40, part 264, subpart CC provisions, as amended:

(1) Code of Federal Regulations, title 40, section 264.1080(d) to (g), governing specific exclusions; and

(2) Code of Federal Regulations, title 40, section 264.1082(c)(4)(ii), governing authority that EPA cannot delegate to states.

B. Part 7045.0090, adoption and incorporation by reference, also applies.

7045.0542 THERMAL TREATMENT.

[For text of subps 1 to 3, see M.R.]

Subp. 4. **Performance standards.** A thermal treatment facility thermally treating hazardous waste must be designed, constructed, and maintained so that, when operated in accordance with operating requirements specified under subpart 6 it will comply with all federal and state air quality rules and regulations and will meet the performance standards of items A to E, whichever are applicable:

[For text of items A to D, see M.R.]

E. A thermal treatment facility thermally treating hazardous wastes F020, F021, F022, F023, F026, and F027 listed under part 7045.0135, subpart ~~2~~ 1a, item B, must achieve a destruction and removal efficiency ("DRE") of 99.9999 percent for each principal organic hazardous constituent designated in its permit. This performance must be demonstrated on principal organic hazardous constituents that are more difficult to incinerate than tetra-, penta-, and hexachlorodibenzo-p-dioxins and dibenzofurans. DRE is determined for each principal organic hazardous constituent from the equation in item A. In addition, the owner or operator of the thermal treatment facility must notify the commissioner of the intent to burn waste F020, F021, F022, F023, F026, or F027.

[For text of subps 5 to 9, see M.R.]

7045.0543 APPENDICES TO FACILITY STANDARDS.

Subpart 1. **Incorporation of federal regulations.** The following appendices found in Code of Federal Regulations, title 40, part 264, as amended, are incorporated by reference:

A. Appendix I, Recordkeeping Instructions;

B. Appendix IV, Cochran's Approximation to the Behrens-Fisher Students' T-test;

C. Appendix V, Examples of Potentially Incompatible Waste; and

D. Appendix IX, Ground Water Monitoring List.

Subp. 2. **Additions, modifications, or exceptions to incorporated regulations.** Part 7045.0090, adoption and incorporation by reference, also applies.

7045.0544 COCHRAN'S APPROXIMATION TO THE BEHRENS-FISHER STUDENTS' T-TEST.

Subpart 1. **In general.** ~~Subpart 2 describes Cochran's approximation to the Behrens-Fisher Students' t-test. Subpart 3 presents the standard t-tables at the 0.05 level of significance.~~ Part 7045.0543, subpart 1, item B, incorporates this test by reference.

Subp. 2. [See repealer.]

Subp. 3. [See repealer.]

7045.0550 CONTAINMENT BUILDINGS.

Subpart 1. **Incorporation of federal regulations.** The owners and operators of facilities that store or treat hazardous waste in containment buildings must comply with Code of Federal Regulations, title 40, part 264, subpart DD, Containment Buildings, sections 264.1100 to 264.1110, as amended, which is incorporated by reference subject to the exceptions in subpart 2.

Subp. 2. **Additions, modifications, or exceptions to incorporated regulations.** Part 7045.0090, adoption and incorporation by reference, also applies.

7045.0552 FACILITIES GOVERNED BY INTERIM STATUS.

Subpart 1. **General requirements.** Parts 7045.0552 to ~~7045.0642~~ 7045.0651 establish minimum standards for the management of hazardous waste during the period of interim status and until certification of final closure or, if the facility is subject to postclosure requirements, until postclosure responsibilities are fulfilled. Except as provided in Code of Federal Regulations, title 40, section 265.1080(b), as incorporated in part 7045.0645, the standards in parts 7045.0552 to 7045.0651, and the standards for the corrective action management units in part 7045.0545, temporary units in part 7045.0546, and staging piles in part 7045.0547, apply to: (1) owners and operators of facilities that treat, store, or dispose of hazardous waste who have fully complied with the requirements for interim status under chapter 7001 and section 3005(e) of the federal Resource Conservation and Recovery Act (RCRA) until either a permit is issued under chapter 7001 and section 3005 of RCRA or until applicable interim status closure and postclosure responsibilities are fulfilled and (2) those owners and operators of facilities in existence on November 19, 1980, who have failed to provide timely notification as required by section 3010(a) of RCRA or failed to file Part A of the permit application in chapter 7001. These standards, and those in parts 7045.0545 to 7045.0547, apply to owners and operators of existing facilities who have fully complied with the requirements for state or federal interim status until a permit is issued or until applicable interim status closure and postclosure responsibilities are fulfilled, and those who have failed to achieve state or federal interim status.

Parts 7045.0552 to ~~7045.0642~~ 7045.0651 apply to the owners and operators of all facilities that treat, store, or dispose of hazardous waste referred to in ~~parts 7045.1300 to 7045.1380~~ part 7045.1390, land disposal restrictions, and those restrictions are considered material conditions or requirements of parts 7045.0552 to ~~7045.0642~~ 7045.0651, interim status standards.

Subp. 1a. **Applicability for owners and operators of facilities not regulated as hazardous waste facilities by federal regulation.** Owners and operators of hazardous

waste facilities that are not federally regulated as hazardous waste facilities that are, for example, regulated as facilities by state rule only, are subject to the applicable requirements of parts 7045.0552 to ~~7045.0642~~ 7045.0651 on the effective date of any rules that make the facility subject to regulation. The facility shall submit a Part B application for a hazardous waste facility permit to the commissioner within one year of the effective date of any rules that first make the facility subject to the requirement to obtain a hazardous waste facility permit.

[For text of subp 2, see M.R.]

Subp. 3. **Exemptions.** The requirements of parts 7045.0552 to ~~7045.0648~~ 7045.0651 do not apply to the following specific waste management units, facilities, or activities, although all other waste management activities of the owner or operator may be regulated:

[For text of item A, see M.R.]

B. a facility managing recyclable hazardous wastes subject to regulation under part 7045.0125, 7045.0665, 7045.0675, or 7045.0685; however, this exemption does not apply where part 7045.0125, 7045.0665, 7045.0675, or 7045.0685 makes the requirements of parts 7045.0552 to ~~7045.0648~~ 7045.0651 applicable by cross-reference;

[For text of items C to E, see M.R.]

F. an elementary neutralization unit, a pretreatment unit, or a wastewater treatment unit, if the unit does not receive hazardous waste from generators other than the owner or operator of the unit, provided that if the owner or operator is diluting hazardous ignitable (D001) wastes (other than the D001 high TOC subcategory defined in Code of Federal Regulations, title 40, section 268.40, Table of Treatment Standards for Hazardous Wastes, as incorporated in part 7045.1390), or reactive (D003) waste, to remove the characteristic before land disposal, the owner or operator must comply with part 7045.0562, subpart 2;

[For text of items G to I, see M.R.]

J. (1) except as provided in subitem (2), treatment or containment activities during immediate response to any of the following situations: a discharge of a hazardous waste, an imminent and substantial threat of a discharge of a hazardous waste, or a discharge of a material which, when discharged, becomes a hazardous waste;

(2) a facility otherwise regulated by parts 7045.0552 to ~~7045.0642~~ 7045.0651 shall comply with all applicable requirements of parts 7045.0395, 7045.0397, 7045.0558, and 7045.0566 to 7045.0576; or

(3) a person who is covered by subitem (1) and who continues or initiates hazardous waste treatment or containment activities after the immediate response is over is subject to all applicable requirements of parts 7045.0552 to ~~7045.0642~~ 7045.0651 and the agency's permitting procedures for those activities;

K. treatment of hazardous waste by the generator in the generator's accumulation tanks or containers in accordance with part 7045.0292. If the treatment involves evaporation of aqueous waste or polymerization of polyester or other chemical fixation treatment processes in open containers, the generator is exempt from parts 7045.0552 to ~~7045.0642~~ 7045.0651, but before beginning the treatment process must submit to the commissioner the information required under part 7045.0539, subpart 2, items A to C, that is relevant to the treatment activity and must be notified by the commissioner that the treatment activity is approved. The commissioner shall approve the treatment activity if the commissioner finds that the treatment activity will not endanger human health and the environment; or

[For text of item L, see M.R.]

Subp. 4. **Restrictions.** Hazardous wastes F020, F021, F022, F023, F026, F027, and F028 listed under part 7045.0135, subpart ~~2~~ 1a, item B, must not be managed at facilities governed by interim status unless:

[For text of items A to C, see M.R.]

7045.0556 GENERAL FACILITY STANDARDS.

[For text of subps 1 and 2, see M.R.]

Subp. 3. **Required notices.** Notices are required in the following situations:

[For text of items A and B, see M.R.]

C. Before transferring ownership or operation of a facility during its operating life, or of a disposal facility during the postclosure care period, the owner or operator shall notify the new owner or operator in writing of the requirements of parts 7045.0552 to ~~7045.0642~~ 7045.0651. An owner's or operator's failure to notify the new owner or operator of these requirements does not relieve the new owner or operator of the obligation to comply with all applicable requirements.

[For text of item D, see M.R.]

Subp. 4. **Security.** Security measures include the following:

A. The owner or operator shall prevent the unknowing entry, and minimize the possibility for the unauthorized entry, of persons or livestock onto the active portion of the facility, unless:

[For text of subitem (1), see M.R.]

(2) disturbance of the waste or equipment, by the unknowing or unauthorized entry of persons or livestock onto the active portion of a facility, will not cause a violation of the requirements of parts 7045.0552 to ~~7045.0642~~ 7045.0651.

[For text of items B and C, see M.R.]

Subp. 5. **General inspection requirements.** General inspection requirements are listed in items A to E.

[For text of items A and B, see M.R.]

C. The frequency of inspection may vary for the items on the schedule. However, ~~it~~ the frequency must be based on the rate of possible deterioration of the equipment and the probability of an environmental or human health incident if the deterioration ~~or~~, malfunction, or any operator error goes undetected between inspections. Areas subject to spills, such as loading and unloading areas, must be inspected daily when in use. At a minimum, the inspection schedule must include the terms and frequencies called for in parts 7045.0626, subpart 5; 7045.0628, subparts 4 and 7; 7045.0630, subpart 5; 7045.0632, subpart 9; 7045.0634, subpart 4; 7045.0638, subpart 2c; 7045.0640, subpart 4; and 7045.0642, subpart 4; and the process vent ~~and~~, equipment leak , and tank, surface impoundment, and container standards in Code of Federal Regulations, title 40, sections ~~264.1033, 264.1052, 264.1053, and 264.1058~~ 265.1033, 265.1052, 265.1053, and 265.1058, as amended, and sections 265.1084 to 265.1090(b), as incorporated in part 7045.0645.

[For text of items D and E, see M.R.]

[For text of subps 6 to 8, see M.R.]

7045.0564 WASTE ANALYSIS REQUIREMENTS.

Subpart 1. **Waste analysis.** The analysis must comply with the requirements in items A to D.

A. Before an owner or operator treats, stores, or disposes of any hazardous waste, or nonhazardous waste if applicable under part 7045.0596, subpart 2a, the owner or operator shall obtain a detailed chemical and physical analysis of a representative sample of the waste. This analysis must contain all the information which must be known in order to treat, store, or dispose of the waste in accordance with the requirements of parts 7045.0552 to ~~7045.0642~~ 7045.0651 and ~~7045.1300 to 7045.1380~~ 7045.1390.

B. The analysis may include data developed under parts 7045.0102 to ~~7045.0143~~ 7045.0155, and existing published or documented data on the hazardous waste or on

hazardous waste generated from similar processes, including data obtained from the generator.

[For text of items C and D, see M.R.]

Subp. 2. **Waste analysis plan.** The owner or operator shall develop and follow a written waste analysis plan which describes the procedures the owner or operator will carry out to comply with subpart 1. The owner or operator shall keep this plan at the facility. The plan must specify:

[For text of items A to E, see M.R.]

F. Where applicable, the methods that will be used to meet the additional waste analysis requirements for specific waste management methods as specified in parts 7045.0628, subpart 12; 7045.0630, subpart 4; 7045.0632, subpart 3; 7045.0634, subpart 3; 7045.0638, subpart 7; 7045.0640, subpart 2; and 7045.0642, subpart 3; ~~and 7045.1315~~ Code of Federal Regulations, title 40, section 268.7, as incorporated in part 7045.1390; and the process vent ~~and~~, equipment leak, and tank, surface impoundment, and container test methods and procedures in Code of Federal Regulations, title 40, sections ~~264.1034(d) and 264.1063(d)~~ 265.1034(d) and 265.1063(d), as amended, and section 265.1084, as incorporated in part 7045.0645.

G. For off-site facilities, the waste analysis plan must also specify the procedures ~~which~~ that will be used to inspect and, if necessary, analyze each movement of hazardous waste received at the facility to ensure that it matches the identity of the waste designated on the accompanying manifest or shipping paper. The plan must describe:

(1) the procedures ~~which~~ that will be used to determine the identity of each movement of waste managed at the facility; ~~and~~

(2) the sampling method ~~which~~ that will be used to obtain a representative sample of the waste to be identified, if the identification method includes sampling; and

(3) the procedures that the owner or operator of an off-site landfill receiving containerized hazardous waste will use to determine whether a hazardous waste generator or treater has added a biodegradable sorbent to the waste in the container.

H. For surface impoundments exempted from the land disposal restrictions under ~~part 7045.1310~~ Code of Federal Regulations, title 40, section 268.4, as incorporated in part 7045.1390, the procedures and schedule for:

(1) the sampling of impoundment contents;

(2) the analysis of test data; and

(3) the annual removal of residues which are not delisted under part 7045.0075, subpart 2, or which exhibit a characteristic of hazardous waste under part 7045.0131, and either do not meet applicable treatment standards of ~~parts 7045.1350 to 7045.1360~~ Code of Federal Regulations, title 40, sections 268.40 to 268.42, as incorporated in part 7045.1390, or, where no treatment standards have been established, such residues are prohibited from land disposal under ~~parts 7045.1320 to 7045.1333~~ Code of Federal Regulations, title 40, sections 268.30 to 268.35, as incorporated in part 7045.1390, or RCRA section 3004(d).

I. For owners and operators seeking an exemption to the air emission standards in part 7045.0540 in accordance with Code of Federal Regulations, title 40, section 265.1083, as incorporated in part 7045.0645:

(1) if direct measurement is used for the waste determination, the procedures and schedules for waste sampling and analysis and the results of the analysis of test data to verify the exemption; and

(2) if knowledge of the waste is used for the waste determination, any information prepared by the facility owner or operator or by the generator of the hazardous

waste, if the waste is received from off site, that is used as the basis for knowledge of the waste.

7045.0584 OPERATING RECORD.

[For text of subps 1 and 2, see M.R.]

Subp. 3. **Record information.** The following information must be recorded, as it becomes available, and maintained in the operating record until closure of the facility:

[For text of items A and B, see M.R.]

C. A description and the quantity of each hazardous waste received, and the method and date of treatment, storage, or disposal at the facility in accordance with the record-keeping instructions in Code of Federal Regulations, title 40, part 265, Appendix I, as incorporated in part 7045.0643.

[For text of item D, see M.R.]

E. Records and results of waste analyses, waste determinations, and trial tests performed as specified in parts 7045.0564; 7045.0628, subpart 12; 7045.0630, subpart 4; 7045.0632, subpart 3; 7045.0634, subpart 3; 7045.0638, subpart 7; 7045.0640, subpart 2; and 7045.0642, subpart 3; ~~7045.1310; and 7045.1315~~ Code of Federal Regulations, title 40, sections 268.4(a) and 268.7, as incorporated in part 7045.1390; and the process vent ~~and~~, equipment leak, and tank, surface impoundment, and container test methods and procedures in Code of Federal Regulations, title 40, sections ~~264.1034 and 264.1063~~ 265.1034 and 265.1063, as amended, and section 265.1084, as incorporated in part 7045.0645.

[For text of items F and G, see M.R.]

H. Monitoring, testing, or analytical data, and corrective action where required by parts 7045.0556, subpart 8; 7045.0590, subparts 1, 6, 7, and 8; 7045.0592, subparts 1 and 7; 7045.0628, subparts 2, 4, and 7; 7045.0630, subparts 2a, 3, and 5; 7045.0632,

subparts 4b, 8, and 9; 7045.0634, subparts 4 and 6, item D, subitem (1); 7045.0636; 7045.0638, subparts 2a, 2b, and 2c; and 7045.0640, subpart 4, and the process vent ~~and~~, equipment leak, and tank, surface impoundment, and container test methods and procedures and record keeping requirements in Code of Federal Regulations, title 40, sections ~~264.1034~~ 265.1034(c) to (f), ~~264.1035, 264.1063~~ 265.1035, 265.1063(d) to (i), and ~~264.1064~~ 265.1064, as amended, and sections 265.1083 to 265.1090, as incorporated in part 7045.0645. As required by parts 7045.0590, subparts 6 and 7; and 7045.0592, subpart 7, monitoring data at disposal facilities must be kept throughout the postclosure period.

[For text of item I, see M.R.]

J. Records of the quantities and date of placement of each shipment of hazardous waste placed in land disposal units under an extension to the effective date of any land disposal restriction granted ~~under part 7045.0075, subpart 8 or 9,~~ by the United States Environmental Protection Agency under Code of Federal Regulations, title 40, section 268.5, monitoring data required pursuant to a petition under part 7045.0075, subpart 9, or a certificate and demonstration under Code of Federal Regulations, title 40, section 268.8, as ~~amended~~ incorporated in part 7045.1390, and the notice required by a generator under ~~part 7045.1315, subpart 1, item C~~ Code of Federal Regulations, title 40, section 268.7(a)(3), as incorporated in part 7045.1390.

K. For an off-site treatment facility, the notice, and the certification and demonstration, if applicable, required by a generator or the owner or operator under Code of Federal Regulations, title 40, ~~section~~ sections 268.7(a)(1) and 268.8, as ~~amended, and part 7045.1315, subpart 1, item A~~ incorporated in part 7045.1390.

L. For an on-site treatment facility, the information contained in the notice and the certification and demonstration, if applicable, required by a generator or the owner or operator under Code of Federal Regulations, title 40, ~~section~~ sections 268.7(a)(1) and

268.8, as ~~amended , and part 7045.1315, subpart 1, item A~~ incorporated in part 7045.1390, except for the manifest number required under ~~part 7045.1315, subpart 1, item A, subitem (3)~~ Code of Federal Regulations, title 40, section 268.7(a)(1)(i), as incorporated in part 7045.1390.

M. For an off-site land disposal facility, the notice, certification and demonstration, if applicable, required by the generator, owner or operator of a treatment facility under Code of Federal Regulations, title 40, section 268.7(b)(1)(2) or 268.8, as ~~amended, or part 7045.1315, subpart 2, items A and B~~ incorporated in part 7045.1390, for the facility or ~~part 7045.1315, subpart 1, item B~~ Code of Federal Regulations, title 40, section 268.7(a)(3), as incorporated in part 7045.1390, for the generator, whichever is applicable.

N. For an on-site land disposal facility, the information contained in the notice and the certification and demonstration, if applicable, required by a generator or the owner or operator under Code of Federal Regulations, title 40, section 268.7 or 268.8, as ~~amended~~ incorporated in part 7045.1390, ~~or part 7045.1315~~ except for the manifest number, whichever is applicable.

O. For an off-site storage facility, a copy of the notice, and the certification and demonstration if applicable, required by the generator or the owner or operator under Code of Federal Regulations, title 40, section 268.7 or 268.8, as ~~amended, or part 7045.1315~~ incorporated in part 7045.1390.

P. For an on-site storage facility, the information contained in the notice, except the manifest number, and the certification and demonstration if applicable, required by the generator or the owner or operator of a treatment facility under Code of Federal Regulations, title 40, section 268.7 or 268.8, as ~~amended, or part 7045.1315~~ incorporated in part 7045.1390.

7045.0586 RETENTION AND DISPOSITION OF RECORDS.

[For text of subpart 1, see M.R.]

Subp. 2. **Retention of records.** The retention period for all records required under parts 7045.0552 to ~~7045.0642~~ 7045.0651 is three years and is extended automatically during the course of any unresolved enforcement action regarding the facility.

[For text of subp 3, see M.R.]

7045.0588 REQUIRED REPORTS.

[For text of subps 1 to 3, see M.R.]

Subp. 4. **Additional reports.** In addition to submitting the manifest discrepancy report described in part 7045.0582, subpart 3, and the annual report and the unmanifested waste reports described in subparts 2 and 3, the owner or operator shall also report to the commissioner and the Environmental Protection Agency Region V Administrator:

[For text of items A to C, see M.R.]

D. as otherwise required by the process vent ~~and~~, equipment leak, and tank, surface impoundment, and container emission standards in ~~Code of Federal Regulations, title 40, part 265, subparts AA and BB, as amended~~ parts 7045.0645, 7045.0647, and 7045.0648.

7045.0594 CLOSURE.

[For text of subpart 1, see M.R.]

Subp. 2. **Closure performance standard.** The owner or operator shall close the facility in a manner minimizing the need for further maintenance. Closure procedures must result in controlling, minimizing, or eliminating, to the extent necessary to protect human health and the environment, postclosure escape of hazardous waste, hazardous constituents, leachate, contaminated runoff, or hazardous waste decomposition products to the ground or surface waters or to the atmosphere, in accordance with all closure

requirements including the requirements of parts 7045.0628, subpart 9; 7045.0630, subpart 6; 7045.0632, subpart 7; 7045.0634, subpart 6; 7045.0638, subpart 4; 7045.0640, subpart 5; and 7045.0642, subpart 5; and Code of Federal Regulations, title 40, section 265.1102, as incorporated in part 7045.0649.

Subp. 3. **Submittal of closure plan.** The closure plans must be submitted as follows:

A. A copy of the written closure plan and all revisions to the plan must be furnished to the commissioner upon request, including request by mail until final closure is completed and certified. For facilities without approved closure plans, the plan must also be provided to the commissioner as requested, during site inspections on the day of the inspection. The plan must identify steps necessary to perform partial and/or final closure of the facility at any point during its active life. The closure plan must include:

(1) A description of how each hazardous waste management unit will be closed, if applicable, and how the facility will be finally closed, in accordance with subpart 2. The description must identify the maximum extent of the operation which will be unclosed during the active life of the facility and how the facility will meet the requirements of ~~subpart 2, part~~ parts 7045.0590; 7045.0592; 7045.0594; 7045.0596 ~~, and the applicable closure requirements of parts~~; 7045.0626, subpart 8; 7045.0628, subpart 9; 7045.0630, subpart 6; 7045.0632, subpart 7; 7045.0634, subpart 6; 7045.0638, subpart 4; 7045.0640, subpart 5; 7045.0642, subpart 5; and 7045.0655, subpart 6, ~~will be met~~ and Code of Federal Regulations, title 40, section 265.1102, as incorporated in part 7045.0649;

[For text of subitems (2) to (6), see M.R.]

[For text of items B to F, see M.R.]

[For text of subp 4, see M.R.]

7045.0596 CLOSURE ACTIVITIES.

[For text of subps 1 and 2, see M.R.]

Subp. 2a. **Conditions for receiving nonhazardous waste.** The commissioner shall allow an owner or operator to receive only nonhazardous waste in a landfill, land treatment, or surface impoundment unit after the final receipt of hazardous waste at that unit if:

A. the owner or operator submits an amended Part B application, or a Part B application, if not previously required, and demonstrates that:

[For text of subitems (1) and (2), see M.R.]

(3) the nonhazardous waste will not be incompatible with any remaining wastes in the unit, or with the facility design and operating requirements of the unit or facility under parts 7045.0552 to ~~7045.0642~~ 7045.0651;

[For text of subitems (4) and (5), see M.R.]

[For text of items B to D, see M.R.]

[For text of subps 3 and 4, see M.R.]

7045.0600 POSTCLOSURE.

Subpart 1. **Scope.** This part and parts 7045.0602 to 7045.0606 apply to the owners and operators of all hazardous waste disposal facilities, including surface impoundments and waste piles from which the owner or operator intends to remove the wastes at closure, to the extent that the owner or operator is required to provide postclosure care in part 7045.0630, subpart 6, or ~~in part~~ 7045.0632, subpart 7~~, and also~~, tank systems that are required under part 7045.0628, subpart 9, to meet the requirements for landfills~~.~~, and containment buildings that are required under Code of Federal Regulations, title 40, section 265.1102, as incorporated in part 7045.0649, to meet the requirement for landfills, except as provided otherwise in part 7045.0552.

Subp. 2. **Submittal of postclosure plan.** The postclosure plan must be submitted as follows:

[For text of items A to C, see M.R.]

D. The commissioner shall provide the owner or operator and the public, through a newspaper notice, the opportunity to submit written comments, to request modification, or to request a public information meeting on the postclosure plan or substantive amendments to the postclosure plan within 30 days of the date of the notice. In response to a request or at his or her own discretion, the commissioner shall hold a public information meeting whenever a meeting might clarify one or more issues concerning the postclosure plan. The commissioner shall approve, modify, or disapprove postclosure plans for facilities having interim status within 90 days of the receipt of the plan. If the commissioner does not approve the plan, he or she shall provide the owner or operator with a detailed written statement of reasons for the refusal, and the owner or operator shall submit a modified or new plan for approval within 30 days after receiving this written statement. The commissioner shall approve or modify this plan in writing within 60 days. If the commissioner modifies the plan, this modified plan becomes the approved postclosure plan. A copy of the modified plan and a detailed statement of reasons for the modifications shall be mailed to the owner or operator. The commissioner shall ensure that the approved postclosure plan is consistent with ~~part~~ this part and with the postclosure care and use of property requirements in parts 7045.0602, 7045.0604, and 7045.0606.

[For text of subp 3, see M.R.]

7045.0608 FINANCIAL REQUIREMENTS.

Subpart 1. **Scope.** The requirements of parts 7045.0610, 7045.0612, and 7045.0620 to 7045.0624 apply to owners and operators of hazardous waste facilities except as provided otherwise in this part or in part 7045.0552.

The requirements of parts 7045.0614 to 7045.0618 apply only to owners and operators of disposal facilities ~~and~~; tank systems that are required under part 7045.0628, subpart 9, to meet the requirements for landfills; and containment buildings that are

required under Code of Federal Regulations, title 40, section 265.1102, as incorporated in part 7045.0649, to meet the requirements for landfills.

The state and the federal government are exempt from the requirements of parts 7045.0608 to 7045.0624.

[For text of subp 2, see M.R.]

7045.0610 COST ESTIMATE FOR FACILITY CLOSURE.

Subpart 1. **Cost estimate requirements.** The owner or operator shall prepare a detailed written estimate, in current dollars, of the cost of closing the facility in accordance with the closure plan in part 7045.0594 and applicable closure requirements in parts 7045.0626, subpart 8; 7045.0630, subpart 6; 7045.0632, subpart 7; 7045.0634, subpart 6; 7045.0638, subpart 4; 7045.0640, subpart 5; and 7045.0642, subpart 5; and Code of Federal Regulations, title 40, section 265.1102, as incorporated in part 7045.0649. The closure cost estimate must equal the cost of closure at the point in the facility's operating life when the extent and manner of its operation would make closure the most expensive, as indicated by its closure plan. The closure cost shall be estimated as follows:

[For text of items A to C, see M.R.]

[For text of subps 2 to 4, see M.R.]

7045.0612 FINANCIAL ASSURANCE FOR FACILITY CLOSURE.

[For text of subps 1 to 5, see M.R.]

Subp. 6. **Financial test and corporate guarantee for closure.** The financial test and corporate guarantee for closure is as follows:

[For text of items A to K, see M.R.]

L. An owner or operator may meet the requirements of this part by obtaining a written guarantee, hereafter referred to as "corporate guarantee." The guarantor must be

the parent corporation of the owner or operator. The guarantor must meet the requirements for owner or operator in items A to J; and must comply with the terms of the corporate guarantee. The wording of the corporate guarantee must be identical to the wording specified in part 7045.0524, subpart 8. A certified copy of the corporate guarantee must accompany the items sent to the commissioner as specified in item E. The terms of the corporate guarantee must provide that:

[For text of subitems (1) to (3), see M.R.]

[For text of subps 7 to 9, see M.R.]

7045.0616 FINANCIAL ASSURANCE FOR POSTCLOSURE CARE.

[For text of subps 1 to 5, see M.R.]

Subp. 6. **Financial test and corporate guarantee for postclosure care.** The following is the financial test and corporate guarantee for postclosure care:

[For text of items A to L, see M.R.]

M. An owner or operator may meet the requirements of this part by obtaining a written guarantee, hereafter referred to as "corporate guarantee." The guarantor must be the parent corporation of the owner or operator. The guarantor must meet the requirements for owners or operators in items A to K, and must comply with the terms of the corporate guarantee. The wording of the corporate guarantee must be identical to the wording specified in part 7045.0524, subpart 8. A certified copy of the corporate guarantee must accompany the items sent to the commissioner as specified in item E. The terms of the corporate guarantee must provide that:

[For text of subitems (1) to (3), see M.R.]

[For text of subps 7 to 9, see M.R.]

7045.0620 LIABILITY REQUIREMENTS.

Subpart 1. **Coverage for sudden accidental occurrences.** An owner or operator of a hazardous waste treatment, storage, or disposal facility, or a group of ~~these~~ such facilities, ~~shall~~ must demonstrate financial responsibility for bodily injury and property damage to third parties caused by sudden accidental occurrences arising from operations of the facility or group of facilities. The owner or operator ~~shall~~ must have and maintain liability coverage for sudden accidental occurrences in the amount of at least $1,000,000 per occurrence with an annual aggregate of at least $2,000,000, exclusive of legal defense costs. This liability coverage may be demonstrated ~~in one of three ways,~~ as specified in items A~~, B, and C~~ to F:

A. An owner or operator may demonstrate the required liability coverage by having liability insurance as specified in subitems (1) and (2):

(1) Each insurance policy must be amended by attachment of the hazardous waste facility liability endorsement or evidenced by a certificate of liability insurance. The wording of the endorsement must be identical to the wording specified in part 7045.0524, subpart 9. The wording of the certificate of insurance must be identical to the wording specified in part 7045.0524, subpart 10. The owner or operator ~~shall~~ must submit a signed duplicate original of the endorsement or the certificate of insurance to the commissioner. If requested by the commissioner, the owner or operator shall provide a signed duplicate original of the insurance policy.

(2) Each insurance policy must be issued by an insurer which is licensed to transact the business of insurance or eligible to provide insurance as an excess or surplus lines insurer in one or more states.

B. An owner or operator may meet the requirements of this part by passing a financial test or using the corporate guarantee for liability coverage as specified in subparts 5 and 6.

C. An owner or operator may meet the requirements of this part by obtaining a letter of credit for liability coverage as specified in subpart 7.

D. An owner or operator may meet the requirements of this part by obtaining a trust fund for liability coverage as specified in subpart 8.

E. An owner or operator may demonstrate the required liability coverage through the use of ~~the~~ combinations of insurance, financial test, ~~insurance, the corporate guarantee, a combination of the financial test and insurance, or a combination of the corporate guarantee and insurance as these mechanisms are specified in this part~~ corporate guarantee, letter of credit, and trust fund, except that the owner or operator may not combine a financial test covering part of the liability coverage requirement with a guarantee unless the financial statement of the owner or operator is not consolidated with the financial statement of the guarantor. The amounts of coverage demonstrated must total at least the minimum amounts required by ~~subpart 1~~ this part. If the owner or operator demonstrates the required coverage through the use of a combination of financial assurances under this item, the owner or operator must specify other assurance as "excess" coverage.

F. An owner or operator must notify the commissioner in writing within 30 days whenever:

(1) a claim results in a reduction in the amount of financial assurance for liability coverage provided by a financial instrument authorized in items A to E;

(2) a certification of valid claim for bodily injury or property damage caused by a sudden or nonsudden accidental occurrence arising from the operation of a hazardous waste treatment, storage, or disposal facility is entered between the owner or operator and third-party claimant for liability coverage under items A to E; or

(3) a final court order establishing a judgment for bodily injury or property damage caused by a sudden or nonsudden accidental occurrence arising from the operation of a hazardous waste treatment, storage, or disposal facility is issued against the owner

or operator or an instrument that is providing financial assurance for liability coverage under items A to E.

Subp. 2. **Coverage for nonsudden accidental occurrences.** An owner or operator of a surface impoundment, landfill, or land treatment facility which is used to manage hazardous waste, or a group of ~~these~~ such facilities, ~~shall~~ must demonstrate financial responsibility for bodily ~~damage~~ injury and property damage to third parties caused by nonsudden accidental occurrences arising from operations of the facility or group of facilities. The owner or operator ~~shall~~ must have and maintain liability coverage for nonsudden accidental occurrences in the amount of at least $3,000,000 per occurrence with an annual aggregate of at least $6,000,000, exclusive of legal defense costs. An owner or operator who must meet the requirements of this part may combine the required per-occurrence coverage levels for sudden and nonsudden accidental occurrences into a single per-occurrence level, and combine the required annual aggregate coverage levels for sudden and nonsudden accidental occurrences into a single annual aggregate level. Owners or operators who combine coverage levels for sudden and nonsudden accidental occurrences must maintain liability coverage in the amount of at least $4,000,000 per occurrence and $8,000,000 annual aggregate. This liability coverage may be demonstrated ~~in one of three ways~~ as specified in items A~~, B, and C~~ to F:

[For text of item A, see M.R.]

B. An owner or operator may meet the requirements of this part by passing a financial test or using the corporate guarantee for liability coverage as specified in subparts 5 and 6.

C. An owner or operator may meet the requirements of this part by obtaining a letter of credit for liability coverage as specified in subpart 7.

D. An owner or operator may meet the requirements of this part by obtaining a trust fund for liability coverage as specified in subpart 8.

E. An owner or operator may demonstrate the required liability coverage through use of ~~the~~ combinations of insurance, financial test, ~~insurance, the corporate guarantee, a combination of the financial test and insurance, or a combination of the corporate guarantee and insurance as these mechanisms are specified in this part~~ corporate guarantee, letter of credit, and trust fund, except that the owner or operator may not combine a financial test covering part of the liability coverage requirement with a guarantee unless the financial statement of the owner or operator is not consolidated with the financial statement of the guarantor. The amounts of coverage demonstrated must total at least the minimum amounts required by ~~subpart 1~~ this part. If the owner or operator demonstrates the required coverage through the use of a combination of financial assurances under this item, the owner or operator shall specify at least one such assurance as "primary" coverage and shall specify other assurance as "excess" coverage.

~~D. The required liability coverage for nonsudden accidental occurrences must be demonstrated by the dates specified in subitems (1), (2), (3), and (4). The total sales or revenues of the owner or operator in all lines of business, in the fiscal year preceding July 16, 1984, will determine which of the dates applies. If the owner and operator of a facility are two different parties, or if there is more than one owner or operator, the sales or revenues of the owner or operator with the largest sales or revenues determines the date by which the coverage must be demonstrated. The following dates apply:~~

~~(1) for an owner or operator not subject to the requirements of Code of Federal Regulations, title 40, section 265.147 (1983) with sales or revenues totaling $10,000,000 or more, six months after July 16, 1984;~~

~~(2) for an owner or operator not subject to the requirements of Code of Federal Regulations, title 40, section 265.147 (1983) with sales or revenues greater than $5,000,000 but less than $10,000,000, 18 months after July 16, 1984;~~

~~(3) all other owners or operators not subject to the requirements of Code of Federal Regulations, title 40, section 265.147 (1983) 30 months after July 16, 1984;~~

~~(4) for an owner or operator subject to the requirements of Code of Federal Regulations, title 40, section 265.147 (1983) on the date he or she is required to demonstrate coverage under Code of Federal Regulations, title 40, section 265.147 (1983).~~

~~E. By the date six months after July 16, 1984, an owner or operator who is within either of the categories in subitem (2) or (3) shall, unless he or she has demonstrated liability coverage for nonsudden accidental occurrences, send a letter to the commissioner, stating the date by which he or she plans to establish the coverage.~~

F. An owner or operator shall notify the commissioner in writing within 30 days whenever:

(1) a claim results in a reduction in the amount of financial assurance for liability coverage provided by a financial instrument authorized in items A to E;

(2) a certification of valid claim for bodily injury or property damage caused by a sudden or nonsudden accidental occurrence arising from the operation of a hazardous waste treatment, storage, or disposal facility is entered between the owner or operator and third-party claimant for liability coverage under items A to E; or

(3) a final court order establishing a judgment for bodily injury or property damage caused by a sudden or nonsudden accidental occurrence arising from the operation of a hazardous waste treatment, storage, or disposal facility is issued against the owner or operator or an instrument that is providing financial assurance for liability coverage under items A to E.

[For text of subps 3 and 4, see M.R.]

Subp. 5. **Financial test for liability coverage.** The financial test for liability coverage is as follows:

[For text of items A to G, see M.R.]

H. If the owner or operator no longer meets the requirements of item A, he or she ~~shall~~ must obtain insurance, a letter of credit, a trust fund, or a corporate guarantee for the entire amount of required liability coverage as specified in this part. Evidence of ~~insurance~~ liability coverage must be submitted to the commissioner within 90 days after the end of the fiscal year for which the year-end financial data show that the owner or operator no longer meets the test requirements.

[For text of item I, see M.R.]

Subp. 6. **Corporate guarantee for liability coverage.** The corporate guarantee for liability coverage is as follows:

A. Subject to item B, an owner or operator may meet the requirements of this part by obtaining a written corporate guarantee. The guarantor must be the parent corporation of the owner or operator. The ~~guarantee~~ guarantor must meet the requirements for owners or operators in subpart 5. The wording of the corporate guarantee must be identical to the wording specified in part 7045.0524, subpart 8a. The guarantee must be signed by two corporate officers of the parent corporation. A corporate resolution authorizing the parent corporation to provide the corporate guarantee for the subsidiary must be attached to the guarantee. A certified copy of the corporate guarantee must accompany the items sent to the commissioner as specified in subpart 5, item E. The terms of the corporate guarantee must provide that:

[For text of subitems (1) and (2), see M.R.]

[For text of item B, see M.R.]

Subp. 7. **Letter of credit for liability coverage.**

A. An owner or operator may satisfy the requirements of this part by obtaining an irrevocable standby letter of credit that conforms to the requirements of this subpart and submitting a copy of the letter of credit to the commissioner.

B. The financial institution issuing the letter of credit must be an entity that has the authority to issue letters of credit and whose letter of credit operations are regulated and examined by a federal or state agency.

C. The wording of the letter of credit must be identical to the wording in part 7045.0524, subpart 11.

D. An owner or operator who uses a letter of credit to satisfy the requirements of this part may also establish a standby trust fund. Under the terms of a letter of credit, all amounts paid pursuant to a draft by the trustee of the standby trust will be deposited by the issuing institution into the standby trust in accordance with instructions from the trustee. The trustee of the standby trust fund must be an entity that has the authority to act as a trustee and whose trust operations are regulated and examined by a federal or state agency.

E. The wording of the standby trust fund must be identical to the wording in part 7045.0524, subpart 13.

Subp. 8. **Trust fund for liability coverage.**

A. An owner or operator may satisfy the requirements of this part by establishing a trust fund that conforms to the requirements of this subpart and submitting an originally signed duplicate of the trust agreement to the commissioner.

B. The trustee must be an entity that has the authority to act as a trustee and whose trust operations are regulated and examined by a federal or state agency.

C. The trust fund for liability coverage must be funded for the full amount of the liability coverage to be provided by the trust fund before it may be relied upon to satisfy the requirements of this part. If at any time after the trust fund is created, the amount of funds

in the trust fund is reduced below the full amount of the liability coverage to be provided, the owner or operator, by the anniversary date of the establishment of the fund, must either add sufficient funds to the trust fund to cause its value to equal the full amount of liability coverage to be provided or obtain other financial assurance as specified in this part to cover the difference. For purposes of this subpart, "the full amount of the liability coverage to be provided" means the amount of coverage for sudden or nonsudden occurrences required to be provided by the owner or operator by this part, less the amount of financial assurance for liability coverage that is being provided by other financial assurance mechanisms being used to demonstrate financial assurance by the owner or operator.

D. The wording of the trust fund must be identical to the wording in part 7045.0524, subpart 13.

7045.0626 USE AND MANAGEMENT OF CONTAINERS.

Subpart 1. **Scope.** This part applies to owners and operators of hazardous waste facilities that store containers of hazardous waste, except as part 7045.0552 provides otherwise. Under ~~parts~~ part 7045.0127, subparts 2 to 4, and ~~7045.0135, subpart 4, item C~~ Code of Federal Regulations, title 40, section 261.33(c), as incorporated in part 7045.0135, if a hazardous waste is emptied from a container, the residue remaining in the container is not considered a hazardous waste if the container is empty, as defined in part 7045.0127, subparts 2 to 4. In that event, management of the container is exempt from the requirements of this part.

[For text of subps 2 to 6, see M.R.]

Subp. 7. **Special requirements for ignitable or reactive waste.** Containers holding ignitable or reactive waste must be located at least 15 meters (50 feet) from the facility's property line, when physically possible based on the dimensions of the property. When it is not physically possible to place containers at least 50 feet from the property line, based on the dimensions of the property, the ignitable or reactive waste must be placed at least as

far as the specified minimum distance from property line found in ~~Table Number 79.503-F of~~ the Minnesota ~~Uniform~~ State Fire Code ~~as incorporated by reference in part 7510.3510~~, chapter 7510. Nothing in this subpart shall relieve the facility owner or operator from the obligation to comply with any local, state, or federal law governing storage of these wastes.

[For text of subp 8, see M.R.]

Subp. 9. **Air emission standards.** The owner or operator must manage all hazardous waste placed in a container in accordance with the applicable requirements of parts 7045.0645, 7045.0647, and 7045.0648.

7045.0628 TANK SYSTEMS.

Subpart 1. **Scope.** This part applies to owners and operators of facilities that use tank systems, including tank systems, sumps, and other such collection devices or systems used in conjunction with drip pads, as defined in part 7045.0020 and regulated under part 7045.0644, to treat or store hazardous waste, except as items A and B and part 7045.0552 provide otherwise.

A. Tank systems that are used to store or treat hazardous waste containing no free liquids and that are located inside a building with an impermeable floor are exempt from the requirements of subpart 4. To demonstrate the absence or presence of free liquids in the stored or treated waste, ~~EPA~~ the following test must be used: Method 9095 (Paint Filter Liquids Test) as described in "Test Methods for Evaluating Solid ~~Wastes~~ Waste, Physical/Chemical Methods," ~~(~~EPA publication ~~No.~~ SW-846 ~~) must be used~~, incorporated by reference in part 7045.0065, item D.

[For text of item B, see M.R.]

[For text of subps 2 to 9, see M.R.]

Subp. 10. **Special requirements for ignitable or reactive waste.** Ignitable or reactive waste must not be placed in a tank unless:

[For text of items A and B, see M.R.]

C. the tank is used solely for emergencies.

The owner or operator of a facility which treats or stores ignitable or reactive waste in a tank shall comply with the requirements for the maintenance of protective distances between the waste management area and any public ways, streets, alleys, or an adjoining property line that can be built upon, as required in the buffer zone requirements for tanks, contained in ~~article 79 of~~ the Minnesota ~~Uniform~~ State Fire Code, ~~as incorporated by reference in part 7510.3510~~ chapter 7510.

[For text of subps 11 and 12, see M.R.]

Subp. 13. **Air emission standards.** The owner or operator of a facility must manage all hazardous waste placed in a tank in accordance with parts 7045.0645, 7045.0647, and 7045.0648.

7045.0629 REQUIREMENTS FOR SMALL QUANTITY AND VERY SMALL QUANTITY GENERATORS THAT ACCUMULATE HAZARDOUS WASTE IN TANKS.

[For text of subps 1 to 4, see M.R.]

Subp. 5. **Ignitable and reactive wastes.** Generators regulated under this part must comply with the following special requirements for ignitable or reactive waste:

[For text of item A, see M.R.]

B. The owner or operator of a facility which treats or stores ignitable or reactive waste in covered tanks must comply with the buffer zone requirements for tanks contained in ~~article 79 of~~ the Minnesota ~~Uniform~~ State Fire Code, ~~as incorporated by reference in part 7510.3510~~ chapter 7510.

[For text of subp 6, see M.R.]

7045.0630 SURFACE IMPOUNDMENTS.

[For text of subps 1 and 1a, see M.R.]

Subp. 2. **General operating requirements.**

A. A surface impoundment must maintain enough freeboard to prevent any overtopping of the dike by overfilling, wave action or a storm. There must be at least 60 centimeters (two feet) of freeboard. Any point source discharge from a surface impoundment to waters of the United States is subject to the requirements of the Federal Water Pollution Control Act Amendments of 1972, United States Code, title 33, section 1342, as amended. Spills may be subject to the Federal Water Pollution Control Act Amendments of 1972, United States Code, title 33, section 1312, as amended.

B. Surface impoundments that are newly subject to RCRA section 3005(j)(1) due to the promulgation of additional listings or characteristics for the identification of hazardous waste must be in compliance with subpart 1a not later than 48 months after the promulgation of the additional listing or characteristic. This compliance period shall not be cut short as the result of the promulgation of land disposal prohibitions under Code of Federal Regulations, title 40, part 268, as amended, or the granting of an extension to the effective date of a prohibition pursuant to Code of Federal Regulations, title 40, section 268.5, as incorporated in part 7045.1390, within this 48-month period.

[For text of subps 2a to 5, see M.R.]

Subp. 6. **Closure and postclosure care.** The requirements of closure and postclosure care are as follows:

[For text of item A, see M.R.]

B. If the owner or operator removes or decontaminates all the impoundment materials described in item A, the impoundment is not further subject to the requirements of parts 7045.0552 to ~~7045.0642~~ 7045.0651. At closure and throughout the operating period, unless the owner or operator can demonstrate that any waste removed from

the surface impoundment is not a hazardous waste, he or she becomes a generator of hazardous waste and must manage it in accordance with all applicable requirements of parts 7045.0205 to 7045.0397 and 7045.0552 to ~~7045.0642~~ 7045.0651.

[For text of items C and D, see M.R.]

Subp. 7. **Special requirements for ignitable or reactive wastes.** Ignitable or reactive waste must not be placed in a surface impoundment unless the waste and the impoundment satisfy all applicable requirements of ~~parts 7045.1300 to 7045.1380~~ part 7045.1390, and:

[For text of items A and B, see M.R.]

Subp. 8. **Special requirements for incompatible wastes.** Incompatible waste, or incompatible wastes and materials, must not be placed in the same surface impoundment unless part 7045.0562, subpart 2, is followed. For examples of potentially incompatible wastes, or incompatible waste and materials, see part 7045.0643, subpart 1, item D.

Subp. 9. **Air emission standards.** The owner or operator must manage all hazardous waste placed in a surface impoundment in accordance with parts 7045.0645 and 7045.0648.

7045.0632 WASTE PILES.

[For text of subps 1 to 4b, see M.R.]

Subp. 5. **Special requirements for ignitable or reactive waste.** Ignitable or reactive waste must not be placed in a pile unless the waste and pile satisfy all applicable requirements of ~~parts 7045.1300 to 7045.1380~~ part 7045.1390:

[For text of items A and B, see M.R.]

[For text of subps 6 to 9, see M.R.]

7045.0634 LAND TREATMENT.

[For text of subps 1 to 6, see M.R.]

Subp. 7. **Special requirements for ignitable or reactive waste.** Ignitable or reactive wastes must not be land treated, unless the waste and treatment zone meet all applicable requirements of ~~parts 7045.1300 to 7045.1380~~ part 7045.1390, and the waste is immediately incorporated into the soil so that the resulting waste, mixture, or dissolution of material no longer meets the definition of ignitable or reactive waste under parts 7045.0131, subpart 2 or 5; and 7045.0562, subpart 2 is complied with.

[For text of subp 8, see M.R.]

7045.0638 LANDFILLS.

[For text of subps 1 to 3, see M.R.]

Subp. 4. **Closure and postclosure.** Closure and postclosure requirements are as follows:

[For text of item A, see M.R.]

B. After final closure, the owner or operator shall comply with all postclosure requirements contained in parts 7045.0600 to 7045.0606 including maintenance and monitoring throughout the postclosure care period. The owner or operator must:

[For text of subitem (1), see M.R.]

(2) maintain and monitor the leak detection system in accordance with part 7045.0538, subparts 3, item C, subitems (3), unit (d), and (4); and 2c, item B, and comply with all other applicable leak detection system requirements of ~~this part~~ parts 7045.0552 to 7045.0651 governing interim status facility standards;

[For text of subitems (3) to (5), see M.R.]

Subp. 5. **Special requirements for ignitable or reactive waste.** Special requirements for ignitable or reactive waste are as follows:

A. Except as provided in item B, and subparts 7 and 9, ignitable or reactive waste must not be placed in a landfill unless the waste and landfill meet all applicable requirements of ~~parts 7045.1300 to 7045.1380~~ part 7045.1390, and the resulting waste, mixture, or dissolution of material no longer meets the definition of ignitable or reactive waste under part 7045.0131, subpart 2 or 5, and compliance with part 7045.0562, subpart 2, is maintained.

B. Except for prohibited wastes which remain subject to treatment standards in ~~parts 7045.1350 to 7045.1360~~ Code of Federal Regulations, title 40, sections 268.40 to 268.42, as incorporated in part 7045.1390, ignitable wastes in containers may be landfilled without meeting the requirements of item A if the wastes are disposed so that they are protected from any material or conditions which may cause them to ignite. Ignitable wastes must be disposed in nonleaking containers which are carefully handled and placed so as to avoid heat, sparks, rupture, or any other condition that might cause ignition of the wastes; must be covered daily with soil or other noncombustible material to minimize the potential for ignition of the wastes; and must not be disposed in cells that contain or will contain other wastes which may generate heat sufficient to cause ignition of the wastes.

[For text of subp 6, see M.R.]

Subp. 7. **Special requirements for liquid waste.** Bulk or noncontainerized liquid waste or waste containing free liquids, whether or not ~~absorbents~~ sorbents have been added, must not be placed in a landfill.

A. A container holding liquid waste or waste containing free liquids must not be placed in a landfill, unless:

(1) all free standing liquid has been removed by decanting, or other methods; has been mixed with ~~absorbent~~ sorbent or solidified so that free standing liquid is no longer observed; or has been otherwise eliminated;

[For text of subitems (2) to (4), see M.R.]

B. To demonstrate the ~~presence or~~ absence or presence of free liquids in either a containerized or a bulk waste, the following test must be ~~demonstrated using the Paint Filter Liquids Test,~~ used: Method 9095 (Paint Filter Liquids Test) as described in "Test Methods for Evaluating Solid ~~Wastes~~ Waste, Physical/Chemical Methods," EPA publication ~~number~~ SW-846, incorporated in part 7045.0065, item D.

C. Sorbents used to treat free liquids to be disposed of in landfills must be nonbiodegradable. Nonbiodegradable sorbents are materials listed or described in subitem (1) or materials that pass one of the tests in subitem (2).

(1) Nonbiodegradable sorbents:

(a) inorganic minerals, other inorganic materials, and elemental carbon (for example, aluminosilicates, clays, smectites, Fuller's earth, bentonite, calcium bentonite, montmorillonite, calcined montmorillonite, kaolinite, micas (illite), vermiculites, and zeolites; calcium carbonate (organic free limestone); oxides/hydroxides, alumina, lime, silica (sand), and diatomaceous earth; perlite (volcanic glass); expanded volcanic rock; volcanic ash; cement kiln dust; fly ash; rice hull ash; and activated charcoal/activated carbon);

(b) high molecular weight synthetic polymers (for example, polyethylene, high density polyethylene (HDPE), polypropylene, polystyrene, polyurethane, polyacrylate, polynorborene, polyisobutylene, ground synthetic rubber, cross-linked allylstyrene and tertiary butyl copolymers). This does not include polymers derived from biological material or polymers specifically designed to be degradable; or

(c) mixtures of these nonbiodegradable materials.

(2) Tests for nonbiodegradable sorbents must use the following methods. The methods are incorporated by reference under part 7045.0538, subpart 10, item D, subitem (2):

(a) the sorbent material is determined to be nonbiodegradable under ASTM Method G21-70 (1984a), Standard Practice for Determining Resistance of Synthetic Polymer Material to Fungi;

(b) the sorbent material is determined to be nonbiodegradable under ASTM Method G22-76 (1984b), Standard Practice for Determining Resistance of Plastics to Bacteria; or

(c) the sorbent material is determined to be nonbiodegradable under OECD test 301B: [CO_2 Evolution (Modified Sturm Test)].

[For text of subp 8, see M.R.]

Subp. 9. **Special requirements for disposal of laboratory packs.** Small containers of hazardous waste in overpacked drums, or laboratory packs, may be placed in a landfill if the requirements of items A to F are met:

A. Hazardous waste must be packaged in nonleaking inside containers. The inside containers must be of a design and constructed of a material that will not react dangerously with, be decomposed by, or be ignited by the waste held therein. Inside containers must be tightly and securely sealed. The inside containers must be of the size and type ~~specified~~ authorized in the United States Department of Transportation hazardous materials regulations under Code of Federal Regulations, title 49, parts 173, 178, ~~and~~ 179, and 180, as amended, if those regulations specify a particular inside container for the waste.

B. The inside containers must be overpacked in ~~an open~~ a removable head metal shipping container as specified in United States Department of Transportation regulations under Code of Federal Regulations, title 49, section 173.12 and parts 178 ~~and~~, 179, and 180, as amended~~, of no more than 416 liter (110 gallon) capacity, and~~. The inside containers must be surrounded by a sufficient quantity of ~~absorbent~~ chemically compatible sorbent material, determined to be nonbiodegradable in accordance with subpart 7, item C,

to completely ~~absorb~~ sorb all of the liquid contents of the inside containers. The gross weight of the complete package must not exceed 205 kilograms (452 pounds). The metal outer container must be full after ~~packing~~ it has been packed with inside containers and ~~absorbent~~ sorbent material.

C. The ~~absorbent~~ sorbent material used must not be capable of reacting dangerously with, being decomposed by, or being ignited by the contents of the inside containers, in accordance with part 7045.0562, subpart 2.

[For text of items D and E, see M.R.]

F. The disposal complies with ~~parts 7045.1300 to 7045.1380~~ part 7045.1390. Persons who incinerate lab packs ~~according to part 7045.1360~~ in accordance with Code of Federal Regulations, title 40, section 268.42(c)(1), as incorporated in part 7045.1390, may use fiber drums in place of metal outer containers. The fiber drums must meet the United States Department of Transportation specifications in Code of Federal Regulation, title 49, section 173.12, as amended, and be overpacked ~~according to~~ in accordance with item B.

7045.0643 APPENDICES TO INTERIM STATUS FACILITY STANDARDS.

Subpart 1. **Incorporation of federal regulations.** The following appendices found in Code of Federal Regulations, title 40, part 265, as amended, are incorporated by reference:

A. Appendix I, Recordkeeping Instructions;

B. Appendix III, EPA Interim Primary Drinking Water Standards;

C. Appendix IV, Tests for Significance;

D. Appendix V, Examples of Potentially Incompatible Waste; and

E. Appendix VI, Compounds with Henry's Law Constant Less Than 0.1 Y/X.

Subp. 2. **Additions, modifications, or exceptions to incorporated regulations.** Part 7045.0090, adoption and incorporation by reference, also applies.

7045.0645 AIR EMISSION STANDARDS FOR TANKS, SURFACE IMPOUNDMENTS, AND CONTAINERS.

Subpart 1. **Incorporation of federal regulations.** The owners and operators of interim status facilities that treat, store, or dispose of hazardous waste in tanks, surface impoundments, or containers must comply with Code of Federal Regulations, title 40, part 265, subpart CC, air emission standards for tanks, surface impoundments, and containers, sections 265.1080 to 265.1091, as amended, which are incorporated by reference subject to the exceptions in subpart 2.

Subp. 2. **Additions, modifications, or exceptions to incorporated regulations.**

A. The agency does not incorporate the following Code of Federal Regulations, title 40, part 265, subpart CC, provisions, as amended:

(1) Code of Federal Regulations, title 40, section 265.1080(d) to (g), governing specific exclusions; and

(2) Code of Federal Regulations, title 40, section 265.1083(c)(4)(ii), governing authority that EPA cannot delegate to states.

B. Part 7045.0090, adoption and incorporation by reference, also applies.

7045.0649 CONTAINMENT BUILDINGS.

Subpart 1. **Incorporation of federal regulations.** The owners and operators of interim status facilities that store or treat hazardous waste in containment buildings must comply with Code of Federal Regulations, title 40, part 265, subpart DD, Containment Buildings, sections 265.1100 to 265.1110, as amended, which are incorporated by reference subject to the exceptions in subpart 2.

Subp. 2. **Additions, modifications, or exceptions to incorporated regulations.** Part 7045.0090, adoption and incorporation by reference, also applies.

7045.0652 FACILITIES GOVERNED BY FACILITY STANDARDS.

Subpart 1. **General requirements.** Parts 7045.0652 and 7045.0655 apply in lieu of parts 7045.0450 to ~~7045.0642~~ 7045.0651 to the owner or operator of the following types of units or facilities:

[For text of items A to D, see M.R.]

[For text of subp 2, see M.R.]

7045.0655 GENERAL FACILITY STANDARDS.

[For text of subps 1 to 5, see M.R.]

Subp. 6. **Closure.** At closure, the owner or operator of an elementary neutralization unit, pretreatment unit, or wastewater treatment unit shall remove all hazardous waste and hazardous waste residues from the unit.

At closure, the owner or operator of a combustion waste facility shall analyze the waste present in the facility ~~according to~~ in accordance with parts 7045.0102 to ~~7045.0143~~ 7045.0155 and shall submit the waste analysis results and proposed closure methods to the commissioner. Based on the waste analysis and proposed closure methods, the agency shall determine which closure standards from parts 7045.0450 to 7045.0551, if any, apply to the facility.

[For text of subp 7, see M.R.]

7045.0665 ~~USE~~ HAZARDOUS WASTES USED IN A MANNER CONSTITUTING DISPOSAL.

Subpart 1. **Scope.** ~~Items A and B apply~~ This part applies to hazardous wastes that are used in a manner constituting disposal.

[For text of item A, see M.R.]

B. Hazardous wastes are not used in a manner constituting disposal if:

[For text of subitems (1) and (2), see M.R.]

(3) the products meet the applicable treatment standards in ~~parts 7045.1350 to 7045.1360 or applicable prohibition levels in part 7045.1330~~ Code of Federal Regulations, title 40, sections 268.40 to 268.49, as incorporated in part 7045.1390, or, if no treatment standards have been established, meet the applicable prohibition levels in Code of Federal Regulations, title 40, section 268.32, as incorporated in part 7045.1390, or RCRA section 3004(d) where no treatment standards have been established, for each ~~recyclable material~~ hazardous waste that they contain.

~~Commercial fertilizers that are produced for the general public's use that contain recyclable materials also are not presently subject to regulation provided they meet the same treatment standards or prohibition levels for each recyclable material that they contain. However, zinc-containing fertilizers using hazardous waste K061 that are produced for the general public's use are not presently subject to regulation.~~

C. Antiskid/deicing uses of slags, which are generated from high temperature metals recovery (HTMR) processing of hazardous waste K061, K062, and F006, in a manner constituting disposal are not covered by the exemption in item B and remain subject to regulation.

D. Fertilizers that contain recyclable materials are not subject to regulation provided that:

(1) they are zinc fertilizers that meet the requirements in Code of Federal Regulations, title 40, section 261.4(a)(21), as amended; or

(2) they meet the applicable treatment standards in Code of Federal Regulations, title 40, sections 268.40 to 268.49, as incorporated in part 7045.1390, for each hazardous waste that they contain.

[For text of subps 1a to 3, see M.R.]

Subp. 4. **Standards applicable to facilities managing wastes that are to be used in a manner that constitutes disposal.** Facilities managing wastes in a manner that constitutes disposal are subject to the following requirements:

A. owners or operators of facilities that store recyclable wastes that are to be used in a manner that constitutes disposal, but who are not the ultimate users of the wastes are subject to all applicable provisions of parts ~~7023.9000 to 7023.9050,~~ 7045.0450 to ~~7045.0534, 7045.0544~~ 7045.0551, and 7045.0552 to ~~7045.0632~~ 7045.0651, and chapter 7001; and

B. owners or operators of facilities that use recyclable wastes that are to be used in a manner that constitutes disposal are subject to all applicable provisions of parts ~~7023.9000 to 7023.9050,~~ 7045.0450 to ~~7045.0538, 7045.0544~~ 7045.0551, 7045.0552 to ~~7045.0638~~ 7045.0651, and 7045.1390 and chapter 7001.

7045.0686 SPECIAL REQUIREMENTS FOR MANAGEMENT OF SPENT OR WASTE HOUSEHOLD BATTERIES.

Subpart 1. **Scope.** The requirements of this part apply to operators who collect, store, transport, or reclaim spent or waste household batteries as a part of a household battery management program.

[For text of item A, see M.R.]

B. Operators who collect, transport, or store spent or waste household batteries which are sent for recycling but who do not reclaim them are subject to regulation under subparts 2 and 3, but are not otherwise subject to regulation under parts ~~7023.9000 to 7023.9050,~~ 7045.0205 to ~~7045.1380~~ 7045.1390, and chapter 7001 for such collection, transportation, and storage.

[For text of items C and D, see M.R.]

[For text of subps 2 to 4, see M.R.]

7045.0692 HAZARDOUS WASTE BURNED FOR ENERGY RECOVERY.

[For text of subps 1 to 4, see M.R.]

Subp. 5. **Standards applicable to marketers of hazardous waste fuel.** Marketers are subject to the requirements in items A to F.

[For text of items A and B, see M.R.]

C. If a marketer is a generator, or becomes a generator by initiating a shipment of hazardous waste fuel, the marketer must comply with parts 7045.0205 to 7045.0320. If the marketer operates a facility, the marketer must comply with parts 7045.0450 to ~~7045.0534~~ 7045.0551. If the marketer is operating a facility under interim status, the marketer must comply with parts 7045.0552 to ~~7045.0632~~ 7045.0651. If the marketer stores hazardous waste, the marketer must comply with the agency's permitting procedures in chapter 7001 ~~and parts 7023.9000 to 7023.9050~~ for storage of hazardous waste.

[For text of items D and E, see M.R.]

F. In addition to the applicable record keeping requirements of parts 7045.0205 to 7045.0320, 7045.0450 to ~~7045.0534~~ 7045.0551, and 7045.0552 to ~~7045.0632~~ 7045.0651, a marketer must keep a copy of each certification notice received or sent for three years from the date the marketer last engaged in a hazardous waste fuel marketing transaction with the person who sent or received the certification notice.

Subp. 6. **Standards applicable to burners of hazardous waste fuel.** Owners and operators of industrial furnaces and boilers identified in subpart 2, item B, that burn hazardous fuel are subject to the requirements in items A to F.

[For text of items A to D, see M.R.]

E. Generators who accumulate waste for longer than the time periods in item D, and burners who receive waste from off-site and store it, must comply with the following requirements:

(1) the agency's permitting procedures in chapter 7001 ~~and parts 7023.9000 to 7023.9050~~ for hazardous waste storage facilities, parts 7045.0205 to 7045.0536, 7045.0544, 7045.0552 to 7045.0632, 7045.1000 to 7045.1030, and ~~7045.1300 to 7045.1380~~ 7045.1390; and

[For text of subitem (2), see M.R.]

[For text of item F, see M.R.]

7045.0800 MIXTURES OF USED OIL AND HAZARDOUS WASTE.

[For text of subps 1 and 2, see M.R.]

Subp. 3. **Rebuttable presumption of mixing.** Except as provided in items A to C, used oil containing more than 1,000 ppm total halogens is presumed to have been mixed with a halogenated hazardous waste listed in part 7045.0135, and thus is subject to regulation as a listed hazardous waste. Persons may rebut this presumption by demonstrating that the used oil does not contain hazardous waste. Demonstration must either involve applying knowledge of the source of halogens or the use of an analytical method from Environmental Protection Agency document SW-846, ~~Edition III, (such as method 8010A or 8021)~~ as incorporated by reference in part 7045.0065, item D, to show that the used oil does not contain greater than 100 ppm of any individual halogenated hazardous constituent listed in part 7045.0139.

[For text of items A to C, see M.R.]

Subp. 4. **Characteristic waste.** Mixtures of used oil and hazardous waste that solely exhibits one or more of the hazardous waste characteristics identified in part 7045.0131 and mixtures of used oil and hazardous waste that is listed in part 7045.0135 solely because it exhibits one or more of the characteristics of hazardous waste identified in part 7045.0131 are subject to:

[For text of item A, see M.R.]

B. except as provided in item C, regulation as used oil under parts 7045.0790 to 7045.0990 and regulation under the land disposal restrictions of ~~parts 7045.1300 to 7045.1380~~ part 7045.1390, if the resultant mixture does not exhibit any characteristic of hazardous waste identified in part 7045.0131; or

[For text of item C, see M.R.]

7045.0805 WASTE CONTAINING OR CONTAMINATED WITH USED OIL.

A. Waste contaminated with used oil that is destined for disposal is subject to evaluation under parts 7045.0102 to ~~7045.0143~~ 7045.0155 to determine if it is hazardous waste, and the appropriate solid or hazardous waste management standards based on the results of the evaluation, unless the waste is:

[For text of subitems (1) and (2), see M.R.]

[For text of items B to E, see M.R.]

7045.0855 STANDARDS FOR USED OIL GENERATORS.

[For text of subpart 1, see M.R.]

Subp. 2. **Storage.**

A. Used oil generators shall comply with all applicable spill prevention, control, and countermeasures requirements of Code of Federal Regulations, title 40, part 112, as amended, in addition to the requirements of this part. Used oil generators shall also comply with the underground storage tank standards of ~~Code of Federal Regulations, title 40, part 280,~~ chapter 7150 for used oil stored in underground tanks, whether or not the used oil exhibits any characteristic of hazardous waste, in addition to the requirements of this part.

B. Used oil generators who store used oil ~~for more than seven days~~ in aboveground tanks ~~of at least 110 gallons in size~~ are subject to ~~parts 7100.0010 to 7100.0090~~ chapter 7151, in addition to the requirements of this part. Used oil generators

who store at least 10,000 gallons of used oil at one time are subject to the requirements of Minnesota Statutes, chapter 115E, to prepare and maintain a discharge prevention and response plan, in addition to the requirements of this part. All used oil generators shall comply with the storage and use requirements of ~~article 79 of~~ the Minnesota ~~Uniform~~ State Fire Code, ~~as incorporated by reference in part 7510.3510~~ chapter 7510, in addition to the requirements of this part.

[For text of items C and D, see M.R.]

Subp. 3. **On-site burning in small burning units designed to burn used oil.** Generators who store used oil in vessels directly connected to burning units shall comply with ~~article 61 of~~ the Minnesota ~~Uniform~~ State Fire Code, ~~as incorporated by reference in part 7510.3510~~ chapter 7510. Generators may burn used oil in burning units designed to burn used oil provided that:

[For text of items A to D, see M.R.]

E. the unit ~~is used in accordance~~ and its operation comply with the Minnesota ~~Statutes, section 299F.015~~ Fire Code.

[For text of subps 4 and 5, see M.R.]

Subp. 6. **Closure.**

A. Generators who store or process used oil in aboveground tanks must to the extent practical, at closure of the tank system, remove or decontaminate visible residues in tanks, contaminated containment system components, contaminated soils, and structures and equipment contaminated with used oil and manage them as hazardous waste unless the materials are not hazardous waste under parts 7045.0102 to ~~7045.0143~~ 7045.0155.

B. Owners and operators who store used oil in containers must, at closure, remove containers holding used oils or residues of used oil from the site. The owner or operator must remove or decontaminate used oil residues, contaminated containment

system components, contaminated soils, and structures and equipment contaminated with used oil, and manage them as hazardous waste unless the materials are not hazardous waste under parts 7045.0102 to ~~7045.0143~~ 7045.0155.

[For text of subp 7, see M.R.]

7045.0865 STANDARDS FOR USED OIL TRANSPORTERS AND TRANSFER FACILITIES.

[For text of subps 1 to 6, see M.R.]

Subp. 7. **Used oil discharges.**

[For text of items A to C, see M.R.]

D. An air, rail, highway, or water transporter who has discharged used oil must give notice, if required by Code of Federal Regulations, title 49, section 171.15, as amended, to the National Response Center (800) 424-8802, and report in writing as required by Code of Federal Regulations, title 49, section 171.16, as amended, to the ~~Director, Office of Hazardous Materials Regulations, Materials Transportation Bureau~~ Information Systems Manager, PHH-63, Pipeline and Hazardous Materials Safety Administration, Department of Transportation, Washington, D.C. 20590-0001, or submit an electronic hazardous materials incident report to the Information Systems Manager, DHM-63, Pipeline and Hazardous Materials Safety Administration, Department of Transportation, Washington, D.C. 20590-0001 at http://hazmat.dot.gov.

[For text of subp 8, see M.R.]

Subp. 9. **Used oil storage at transfer facilities.** This subpart applies to used oil transfer facilities where used oil is stored for more than 24 hours and no more than 35 days. Transfer facilities where used oil is stored for more than 35 days are subject to regulation under part 7045.0875.

A. Used oil transporters shall comply with all applicable spill prevention, control, and countermeasures requirements of Code of Federal Regulations, title 40, part 112, as amended, in addition to the requirements of this part. Used oil transporters shall also comply with the underground storage tank standards of ~~Code of Federal Regulations, title 40, part 280, as amended,~~ chapter 7150 for used oil stored in underground tanks, whether or not the used oil exhibits any characteristic of hazardous waste, in addition to the requirements of this part.

B. Used oil transporters who store used oil ~~for more than seven days~~ in aboveground tanks ~~of at least 110 gallons in size~~ are subject to ~~parts 7100.0010 to 7100.0090~~ chapter 7151, in addition to the requirements of this part. Used oil transporters who store at least 10,000 gallons of used oil at one time are subject to the requirements of Minnesota Statutes, chapter 115E, to prepare and maintain a discharge prevention and response plan, in addition to the requirements of this part. All used oil transporters shall comply with the storage and use requirements of ~~article 79 of~~ the Minnesota ~~Uniform~~ State Fire Code, ~~as incorporated by reference in part 7510.3510~~ chapter 7510, in addition to the requirements of this part.

C. Used oil transporters shall not store used oil in units other than containers or tanks and shall ensure that the following requirements for containers and tanks are met. Containers and tanks used to store used oil at transfer facilities must be in good condition, not leaking, and closed. Containers must be equipped with a secondary containment system consisting of dikes, berms, or retaining walls and a floor that covers the entire area within the dikes, berms, or retaining walls, or an equivalent secondary containment system. The entire containment system, including walls and floors, must be sufficiently impervious to used oil to prevent any used oil released into the containment system from migrating out of the system to the soil, groundwater, or surface water. Containers, aboveground tanks, and fill pipes of underground tanks used to store used oil at transfer facilities must be marked with the words "Used Oil." Aboveground tanks used to store

used oil at transfer facilities ~~are~~ may also be subject to the secondary containment requirements ~~of parts 7100.0010 to 7100.0090~~ and other requirements in chapter 7151. ~~Double-walled tanks meet this secondary containment requirement.~~

[For text of item D, see M.R.]

[For text of subps 10 to 12, see M.R.]

Subp. 13. **Closure.**

A. Owners and operators who store or process used oil in aboveground tanks must, at closure of the tank system, remove or decontaminate residues in tanks, contaminated containment system components, contaminated soils, and structures and equipment contaminated with used oil and manage them as hazardous waste unless the materials are not hazardous waste under parts 7045.0102 to ~~7045.0143~~ 7045.0155. If the owner or operator demonstrates that not all contaminated soils can be practicably removed or decontaminated as required in this item, then the owner or operator must close the tank system and perform postclosure care in accordance with the closure and postclosure care requirements of part 7045.0638, subpart 4, that apply to hazardous waste landfills.

B. Owners and operators who store used oil in containers must, at closure, remove containers holding used oils or residues of used oil from the site. The owner or operator must remove or decontaminate used oil residues, contaminated containment system components, contaminated soils, and structures and equipment contaminated with used oil, and manage them as hazardous waste unless the materials are not hazardous waste under parts 7045.0102 to ~~7045.0143~~ 7045.0155.

[For text of subp 14, see M.R.]

7045.0875 STANDARDS FOR USED OIL PROCESSORS AND REREFINERS.

[For text of subps 1 to 4, see M.R.]

Subp. 5. **Used oil storage and management.**

A. Used oil processors/rerefiners shall comply with all applicable spill prevention, control, and countermeasures requirements of Code of Federal Regulations, title 40, part 112, as amended, in addition to the requirements of this part. Used oil processors/rerefiners shall also comply with the underground storage tank standards of ~~Code of Federal Regulations, title 40, part 280, as amended,~~ chapter 7150 for used oil stored in underground tanks, whether or not the used oil exhibits any characteristic of hazardous waste, in addition to the requirements of this part.

B. Used oil processors/rerefiners who store used oil ~~for more than seven days~~ in aboveground tanks ~~of at least 110 gallons in size~~ are subject to ~~parts 7100.0010 to 7100.0090~~ chapter 7151, in addition to the requirements of this part. Used oil processors/rerefiners who store at least 10,000 gallons of used oil at one time are subject to the requirements of Minnesota Statutes, chapter 115E, to prepare and maintain a discharge prevention and response plan, in addition to the requirements of this part. All used oil processors/rerefiners shall comply with the storage and use requirements of ~~article 79 of~~ the Minnesota ~~Uniform~~ State Fire Code, ~~as incorporated by reference in part 7510.3510~~ chapter 7510, in addition to the requirements of this part.

C. Used oil processors/rerefiners shall not store used oil in units other than containers or tanks and shall ensure that the following requirements for containers and tanks are met. Containers and tanks used to store used oil at processing/rerefining facilities must be in good condition, not leaking, and closed. Containers must be equipped with a secondary containment system. The secondary containment system must consist of, at a minimum, dikes, berms, or retaining walls, and a floor which covers the entire area within the dike, berm, or retaining wall. An equivalent secondary containment system may be used for containers. The entire containment system, including walls and floor, must be sufficiently impervious to used oil to prevent any used oil released into the containment system from migrating out of the system to the soil, groundwater, or surface water. Containers, aboveground tanks, and fill pipes of underground tanks used to store used oil

at transfer facilities must be marked with the words "Used Oil." Aboveground tanks used to store used oil at transfer facilities ~~are~~ may also be subject to the secondary containment requirements ~~of parts 7100.0010 to 7100.0090~~ and other requirements in chapter 7151. ~~Double-walled tanks meet this secondary containment requirement.~~

[For text of item D, see M.R.]

E. Closure:

(1) Owners and operators who store or process used oil in aboveground tanks must, at closure of the tank system, remove or decontaminate residues in tanks, contaminated containment system components, contaminated soils, and structures and equipment contaminated with used oil, and manage them as hazardous waste unless the materials are not hazardous waste under parts 7045.0102 to ~~7045.0143~~ 7045.0155. If the owner or operator demonstrates that not all contaminated soils can be practicably removed or decontaminated as required in this subitem, then the owner or operator must close the tank system and perform postclosure care in accordance with the closure and postclosure care requirements of part 7045.0638, subpart 4, that apply to hazardous waste landfills.

(2) Owners and operators who store used oil in containers must, at closure, remove containers holding used oils or residues of used oil from the site. The owner or operator must remove or decontaminate used oil residues, contaminated containment system components, contaminated soils, and structures and equipment contaminated with used oil, and manage them as hazardous waste unless the materials are not hazardous waste under parts 7045.0102 to ~~7045.0143~~ 7045.0155.

[For text of subps 6 to 11, see M.R.]

7045.0885 STANDARDS FOR USED OIL BURNERS WHO BURN OFF-SPECIFICATION USED OIL FOR ENERGY RECOVERY.

[For text of subps 1 to 5, see M.R.]

Subp. 6. **Used oil storage.**

A. Applicability of federal storage regulations. Used oil burners must comply with all applicable spill prevention, control, and countermeasures requirements of Code of Federal Regulations, title 40, part 112, as amended, in addition to the requirements of this subpart. Used oil burners must comply with the underground storage tank standards of ~~Code of Federal Regulations, title 40, part 280, as amended,~~ chapter 7150 for used oil stored in underground tanks, whether or not the used oil exhibits any characteristic of hazardous waste, in addition to the requirements of this part.

B. Used oil burners who store used oil ~~for more than seven days~~ in aboveground tanks ~~of at least 110 gallons in size~~ are subject to ~~parts 7100.0010 to 7100.0090~~ chapter 7151, in addition to the requirements of this subpart. Used oil burners who store at least 10,000 gallons of used oil at one time are subject to the requirements of Minnesota Statutes, chapter 115E, to prepare and maintain a discharge prevention and response plan, in addition to the requirements of this part. All used oil burners shall comply with the storage and use requirements of ~~article 79 of~~ the Minnesota ~~Uniform~~ State Fire Code, ~~as incorporated by reference in part 7510.3510~~ chapter 7510, in addition to the requirements of this part.

C. Used oil burners shall not store used oil in units other than containers or tanks and must ensure that the following requirements for containers and tanks are met. Containers and tanks used to store used oil at burning facilities must be in good condition, not leaking, and closed. Containers must be equipped with a secondary containment system. The secondary containment system must consist of, at a minimum, dikes, berms, or retaining walls, and a floor which covers the entire area within the dike, berm, or retaining wall. An equivalent secondary containment system may be used for containers. The entire containment system, including walls and floor, must be sufficiently impervious to used oil to prevent any used oil released into the containment system from migrating

out of the system to the soil, groundwater, or surface water. Containers, aboveground tanks, and fill pipes of underground tanks used to store used oil at transfer facilities must be marked with the words "Used Oil." Aboveground tanks used to store used oil at burning facilities ~~are~~ may also be subject to the secondary containment requirements ~~of parts 7100.0010 to 7100.0090~~ and other requirements in chapter 7151. ~~Double-walled tanks meet this secondary containment requirement.~~

[For text of item D, see M.R.]

[For text of subps 7 to 9, see M.R.]

Subp. 10. **Closure.**

A. Owners and operators who store or process used oil in aboveground tanks must, at closure of the tank system, remove or decontaminate residues in tanks, contaminated containment system components, contaminated soils, and structures and equipment contaminated with used oil, and manage them as hazardous waste unless the materials are not hazardous waste under parts 7045.0102 to ~~7045.0143~~ 7045.0155. If the owner or operator demonstrates that not all contaminated soils can be practicably removed or decontaminated as required in this item, then the owner or operator must close the tank system and perform postclosure care in accordance with the closure and postclosure care requirements of part 7045.0638, subpart 4, that apply to hazardous waste landfills.

B. Owners and operators who store used oil in containers must, at closure, remove containers holding used oils or residues of used oil from the site. The owner or operator must remove or decontaminate used oil residues, contaminated containment system components, contaminated soils, and structures and equipment contaminated with used oil, and manage them as hazardous waste unless the materials are not hazardous waste under parts 7045.0102 to ~~7045.0143~~ 7045.0155.

[For text of subp 11, see M.R.]

7045.1390 LAND DISPOSAL RESTRICTIONS.

Subpart 1. **Incorporation of federal land disposal restrictions.** Code of Federal Regulations, title 40, part 268, as amended, land disposal restrictions, is incorporated by reference, except as provided in subparts 2 to 5.

Subp. 2. **General additions, modifications, or exceptions to incorporation of regulations.**

A. Part 7045.0090, adoption and incorporation by reference, also applies.

B. The agency does not incorporate the definitions of debris or hazardous debris in Code of Federal Regulations, title 40, section 268.2, or the regulations related to debris and hazardous debris throughout Code of Federal Regulations, title 40, part 268, including the treatment standards for hazardous debris in section 268.45. Wastes that would be federally regulated as debris or hazardous debris are regulated as hazardous waste.

Subp. 3. **Exceptions or additions to Code of Federal Regulations, title 40, subpart A.**

A. The agency does not incorporate Code of Federal Regulations, title 40, section 268.1(c)(3), allowing disposal into an injection well.

B. References to "EPA" in Code of Federal Regulations, title 40, sections 268.1(e)(3) and 268.2(j) mean the federal Environmental Protection Agency.

C. The agency does not incorporate the definitions found in Code of Federal Regulations, title 40, section 268.2, paragraph a, c, d, e, f, g, or h.

D. References in Code of Federal Regulations, title 40, section 268.7(a)(9)(iii), to D001 to D043 do not include D009.

E. The agency does not incorporate Code of Federal Regulations, title 40, section 268.5, governing procedures for case-by-case extensions to an effective date. That section is administered by the EPA.

F. The agency does not incorporate Code of Federal Regulations, title 40, section 268.6, governing petitions to allow land disposal of a waste prohibited under subpart C. Part 7045.0075, subpart 9, applies.

G. The agency does not incorporate Code of Federal Regulations, title 40, section 268.4(a)(3)(ii) and (iii), relating to waivers or modifications of surface impoundment requirements.

Subp. 4. **Exceptions or additions to Code of Federal Regulations, title 40, subpart B.** The agency does not incorporate the EPA schedule in Code of Federal Regulations, title 40, section 268.13, for wastes identified or listed after November 8, 1984. That section is administered by the Environmental Protection Agency.

Subp. 5. **Exceptions or additions to Code of Federal Regulations, title 40, subpart D.**

A. The agency does not incorporate Code of Federal Regulations, title 40, section 268.42(b), governing the demonstration of an alternative treatment method. That section is administered by the EPA.

B. The agency does not incorporate Code of Federal Regulations, title 40, section 268.44, paragraphs (a) to (g) or (o), governing variance from a treatment standard and wastes excluded in various states. That section is administered by the EPA.

REPEALER. Minnesota Rules, parts 7045.0020, subpart 45a; 7045.0075, subparts 8 and 10; 7045.0135, subparts 1, 2, 2a, 3, and 4; 7045.0139, subpart 2; 7045.0141, subparts 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, and 23; 7045.0143, subparts 2, 3, 4, 5, 6, 7, 9, 10, 12, 13, 14, 15, 17, 20, 21, 23, 25, and 27; 7045.0544, subparts 2 and 3; 7045.1300; 7045.1305; 7045.1309; 7045.1310; 7045.1315; 7045.1320; 7045.1325; 7045.1330; 7045.1333; 7045.1334; 7045.1335; 7045.1339; 7045.1350; 7045.1355; 7045.1358; 7045.1360; and 7045.1380, are repealed.

RCRA REVISION CHECKLIST 95
Land Disposal Restrictions for
Electric Arc Furnace Dust (K061)
56 FR 41164-41178
August 19, 1991
(RCRA Cluster II, HSWA Rule)

Note: This checklist revises and finalizes treatment standards for K061 nonwastewaters in the high zinc subcategory originally regulated in the First Third Land Disposal Restrictions rule addressed by Revision Checklist 50 (53 FR 31138; August 17, 1988). Other related checklists include Revision Checklist 62 (54 FR 18836; May 2, 1989) and Revision Checklist 66 (54 FR 36967; September 6, 1989), as these two checklists amended and corrected Revision Checklist 50.

Revision Checklist 100 Summary

Rule Title:	Liners and Leak Detection Systems for Hazardous Waste Land Disposal Units; Final Rule
Checklist Title:	Liners and Leak Detection Systems for Hazardous Waste Land Disposal Units
Reference:	57 FR 3462-3497
Promulgation Date:	January 29, 1992
Effective Date:	July 29, 1992
Cluster:	RCRA II
Provision Type:	HSWA/Non-HSWA
Linkage:	Checklists 17 H, 77, 137, 157
Optional:	No

Summary: This final rule modifies the existing regulations concerning double-liner and leachate collection and removal systems for hazardous waste surface impoundments, landfills and waste piles. The rule also requires owners and operators of hazardous waste surface impoundments, landfills and waste piles to install and operate leak detection systems at such time as these units are added, laterally expanded, or replaced. The January 29, 1992 final rule applies to such units regardless of their permit status, including facilities that were issued permits prior to November 8, 1984. The rule replaces the double-liner and leachate collection system standards codified on July 15, 1985 (Revision Checklist 17H), and amended on May 9, 1990 (Revision Checklist 77). EPA has not included additional leak detection standards for permitted land treatment units in this final rule because existing unsaturated zone monitoring requirements in 40CFR 264.278 and 265.278 for such units are sufficient to ensure the detection of leaks at the earliest practicable time. The January 29, 1992 rule finalizes EPA's proposed actions of March 28, 1986 and May 29, 1987, and completes the Agency's statutory rulemaking responsibilities imposed by RCRA §§3004(o)(4) and 3004(o)(5)(A).

The Agency is requiring owners and operators of units affected by this rule to develop a construction quality assurance (CQA) program for various components of surface impoundments, waste piles, and landfills. The program will be implemented through a construction quality assurance plan that the owner or operator will prepare to ensure that the constructed unit meets or exceeds all design criteria, plans and specifications.

State Authorization: EPA promulgated most of this rule in response to the requirements of HSWA, with the exception of the Construction Quality Assurance Program (CQA) as it applies to final cover requirements. EPA will implement the HSWA provisions in authorized States until States modify their programs and such modifications are approved by EPA. The non-HSWA provisions are applicable in only those States that are unauthorized. In authorized States, the non-HSWA requirements will not be applicable until the States revise their programs to adopt equivalent requirements under State law.

Both the HSWA and non-HSWA provisions are included in RCRA Cluster II. States may apply for either interim or final authorization for the HSWA provisions; only final authorization is available for the non-HSWA provisions. An interim final rule was published in mid December, 1992, extending interim authorization for HSWA provisions until January 1, 2003. The State modification deadline is July 1, 1993 (or July 1, 1994 if a State statutory change is necessary). The State Revision Application must include applicable regulations, AG statement addendum, Revision Checklist 100, other associated checklists and other application materials, i.e. a program description and an MOA, as determined by the Regional office.

Attorney General's Statement Entry: The following entry should be placed at Subsection XVI Y in the Model Attorney General's Statement.

Revision Checklist 100 Summary (cont'd)

Y. State statutes and regulations include specific Part B information requirements for surface impoundments, waste piles and landfills regarding liners; leachate collection, detection, and removal systems; and the construction quality assurance program requirements as indicated in Revision Checklist 100.

Federal Authority: RCRA §§3004, 3005, 3006 and 3015; 40 CFR 270.4(a), 270.17(b)&(c), 270.18(c)&(d), and 270.21(b)&(c) as amended January 29, 1992 (57 FR 3462).

Citation of Laws and Regulations; Date of Enactment and Adoption

Remarks of the Attorney General

Attorney General's Statement Entry: The following entry should be placed at Subsection XVII C in the Model Revision Attorney General's Statement.

C. State statutes and regulations require owners and operators of new units, expansions, and replacement units at surface impoundments, waste piles, and landfills to meet the monitoring and inspection Construction Quality Assurance (CQA) program, double liner, leachate collection and removal systems, leak detection systems, action leakage, response action plan and closure/post-closure care requirements as indicated in Revision Checklist 100.

Federal Authority: RCRA §§3004, 3005, 3006 and 3015; 40 CFR 264.19, 264.221-223, 264.226, 264.228, 264.251-264.254, 264.301-264.304, 264.310, 265.19, 265.221-265.223, 265.226-265.228, 265.254, 265.255, 265.259, 265.260, 265.301-265.304 and 265.310 as amended January 29, 1992 (57 FR 3462).

Citation of Laws and Regulations; Date of Enactment and Adoption

Remarks of the Attorney General

Revision Checklist 108 Summary

Rule Title:	Hazardous Waste Management System; Identification and Listing of Hazardous Waste; Toxicity Characteristic; Corrections
Checklist Title:	Toxicity Characteristic Revisions; Technical Corrections
Reference:	57 FR 30657-30658
Promulgation Date:	July 10, 1992
Effective Date:	July 10, 1992
Cluster:	RCRA III
Provision Type:	HSWA
Linkage:	Revision Checklist 74, 117 B, and 119
Optional:	No

Summary: This rule corrects errors made at the time of the promulgation of the final Toxicity Characteristic (TC) rule (March 29, 1990, 55 FR 11798; Revision Checklist 74). In the preamble, the exclusion from subtitle C regulation for arsenical-treated wood and wood products was revised inappropriately. As a result, EPA unintentionally narrowed the scope of the exclusion by excluding only arsenical-treated wood and wood products that failed the TC "solely for arsenic." The July 10, 1992 rule corrects that revision at 261.4(b)(9). The rule also corrects the regulatory language in 40 CFR 261.4(b)(6)(ii) and 265.301(d)(1) by deleting references to the Extraction Procedure (EP) Toxicity Characteristic and replacing them with references to the TC.

State Authorization: This rule is placed in RCRA Cluster III. The State modification deadline is July 1, 1994 (or July 1, 1995 if a State statutory change is necessary). All changes go into effect immediately, because this rule was promulgated under HSWA authorities. Both interim and final authorization are available, with the former expiring on January 1, 2003. The State Revision Application must include applicable regulations, an AG statement addendum, Revision Checklist 108, other associated checklists and other application materials, i.e., a program description and an MOA, as determined by the Regional office.

Attorney General's Statement Entry: The entry at Subsection I L in the Model Revision Attorney General's Statement should be replaced with the following:

> L. State statutes and regulations revise the existing toxicity characteristic by replacing the Extraction Procedure (EP) leach test with the Toxicity Characteristic Leaching Procedure (TCLP) for identifying wastes that are defined as hazardous and subject to regulation under Subtitle C of RCRA as indicated in Revision Checklists 74 and 108. State statutes and regulations also provide for the addition of 25 organic chemicals and their regulatory levels to the list of toxic constituents of concern as indicated in Revision Checklist 74.

Revision Checklist 108 Summary (cont'd)

Federal Authority: RCRA §§1006, 2002(a), 3001, 3002, 3004, 3005 and 3006; 40 CFR Parts 261, 264, 265 and 268 as amended March 29, 1990 (55 FR 11798), June 29, 1990 (55 FR 26986) and July 10, 1992 (57 FR 30657).

Revision Checklist 109 Summary

Rule Title:	Land Disposal Restrictions for Newly Listed Wastes and Hazardous Debris
Checklist Title:	Land Disposal Restrictions for Newly Listed Wastes and Hazardous Debris
Reference:	57 FR 37194-37282, 57 FR 39275, and 57 FR 41173
Promulgation Date:	August 18, 1992
Effective Date:	February 18, 1993 for 262.34, 264.110, 264.111, 264.112, 264.140, 264.142, part 264 subpart DD, 265.110, 265.111, 265.112, 265.140, 265.142, 265.221, and part 265 subpart DD; November 9, 1992[1] for 148.17(a), 260.10, 261.3(c)(2)(ii)(C), 268.2, 268.5, 268.7, 268.9, 268.36(a), 268.40, 268.41, 268.42, 268.43, 268.45, 268.46, 268.50, 270.14, 270.42, 270.72, and 271.1; and June 30, 1992 for the remainder of the rule
Cluster:	RCRA III
Provision Type:	HSWA
Linkage:	Revision Checklists 34, 39, 50, 63, 78, 103,106, 137, 151, 157, and 167A-C. (Indirectly, to the corrections to these rules--62, 66, 83 and 102.)
Optional:	No

Summary: This rule finalizes treatment standards under the land disposal restrictions (LDR) program for certain hazardous wastes listed after November 8, 1984, pursuant to a proposed consent decree filed with the District Court establishing a June 1992 promulgation date (*EDF vs. Reilly, Civ. No. 89-0598, D.D.C.*). This rule also finalizes revised treatment standards for debris contaminated with listed hazardous wastes or debris that exhibit certain hazardous waste characteristics. Several revisions are also made to existing standards and requirements.

Certain aspects of this rule could be affected by the recently proposed Hazardous Waste Identification rule (57 FR 21450; May 20, 1992) which deals with the question of when wastes are hazardous, concentration levels, and circumstances where wastes aren't hazardous. That rule also examines when land disposal prohibitions might and might not apply. However, the present *mixture* and *derived-from* rules remain in effect (57 FR 7268; March 3, 1992). The preamble to the August 18, 1992 rule codifies the "contained-in" policy with respect to contaminated debris. See 57 FR 37225, 3rd column, "2. Definition of Hazardous Debris."

State Authorization: This rule is promulgated pursuant to HSWA and is placed in RCRA Cluster III. Both interim and final authorization are available, with the former expiring on January 1, 2003. The State modification deadline is July 1, 1993 (or July 1, 1994 if a State statutory change is necessary). The State Revision Application must include applicable regulations, AG statement addendum, Revision Checklist 109, other associated checklists and other application materials, i.e., a program description and an MOA, as determined by the Regional office.

Attorney General's Statement Entry: The following entries should be placed at Subsections XXI K, L & M in the Model Revision Attorney General's Statement.

---

[1]Date was corrected from "November 16, 1992" to "November 19, 1992" by 57 FR 39275. This date was then corrected fr "November 19, 1992" to "November 9, 1992", by 57 FR 41173.

Revision Checklist 109 Summary (cont'd)

K. State statutes and regulations provide land disposal treatment standards for certain hazardous wastes listed after November 8, 1984 as well as treatment standards for debris contaminated with listed hazardous wastes or debris that exhibit certain hazardous waste characteristics as indicated in Revision Checklist 109.

Federal Authority: RCRA §§3004(d)-(k) and (m); 40 CFR 261.3(f), 268.2, 268.5, 268.7, 268.14, 268.36, 268.40, 268.41, 268.42, 268.43, 268.45, 270.13 and 270.14, as amended August 18, 1992 (57 FR 37194).

Citation of Laws and Regulations; Date of Enactment and Adoption

Remarks of the Attorney General

L. State statutes and regulations include revisions to existing land disposal restrictions including revision of F001-F005 spent solvents treatment standards, conversion of wastewater standards for twenty-four "F" and "K" water codes based on scrubber standards; revisions to K061, K062 and F006 treatment standards; change of recordkeeping requirements; and clarification of rules related to wastes listed because they exhibit a characteristic as indicated in Revision Checklist 109.

Federal Authority: RCRA §§3004(d)-(k) and (m); 40 CFR 261.3(a)&(c), 268.9, 268.41, 268.42, 268.43 and 268.46, as amended August 18, 1992 (57 FR 37194).

Citation of Laws and Regulations; Date of Enactment and Adoption

Remarks of the Attorney General

M. State statutes and regulations allow storage and treatment in containment buildings as indicated in Revision Checklist 109.

Federal Authority: RCRA §§3004(d)-(k) and (m); 40 CFR 260.10, 262.34, 264.110, 264.111, 264.112, 264.140, 264.142, 264 Subpart DD, 265.110, 265.111, 265.112, 265.140, 265.142, 265.221, 265 Subpart DD, 268.50, 270.42 and 270.72, as amended August 18, 1992 (57 FR 37194).

Citation of Laws and Regulations; Date of Enactment and Adoption

Remarks of the Attorney General

Revision Checklist 110 Summary

Rule Title:	Identification and Listing of Hazardous Waste; CERCLA Hazardous Designation; Reportable Quality Adjustment; Coke By-Products Wastes
Checklist Title:	Coke By-Products Listings
Reference:	57 FR 37284-37306
Promulgation Date:	August 18, 1992
Effective Date:	February 18, 1993
Cluster:	RCRA III
Provision Type:	HSWA
Linkage:	Revision Checklists 85, 98 and 105
Optional:	No

Summary: This rule adds seven wastes (K141-K145, K147 and K148) generated during the production, recovery, and refining of coke by-products produced from coal to the 40 CFR 261, Subpart D list of hazardous wastes from specific sources. Part 261, Appendix VII is also being amended. The rule also finalizes the proposed determination not to list as hazardous, wastewater from coking and tar refining operations. Finally, the June 22, 1992 (57 FR 27880) exclusion, from the definition of a solid waste for wastes from the coke by-products process that exhibit the TC and are recycled by being returned to coke ovens or mixed with coal tar, is amended and clarified.

State Authorization: This rule is placed in RCRA Cluster III. The State modification deadline is July 1, 1994 (or July 1, 1995, if a State statutory change is necessary). All changes go into effect immediately, because this rule was promulgated under HSWA authorities. Both interim and final authorization are available, with the former expiring on January 1, 2003. The State Revision Application must include applicable regulations, an AG statement addendum, Revision Checklist 110, other associated checklists and other application materials, i.e., a program description and an MOA, as determined by the Regional office.

Attorney General's Statement Entry: The following entry should replace the entry at I Y in the Model Revision Attorney General's Statement:

> Y. [OPTIONAL: This is a reduced requirement.] State statutes and regulations exclude from being a solid waste K060, K087, K141, K142, K143, K144, K145, K147 and K148, and those coke by-product residues that are hazardous only because they exhibit the Toxicity Characteristic when, subsequent to generation, these wastes are recycled by being returned to coke ovens, to the tar recovery process as a feedstock to produce coal tar, or mixed with coal tar as specified in Revision Checklists 105 and 110.
>
> Federal Authority: RCRA §§3001(e)(2) and (h); 40 CFR 261.4(a)(10) as amended June 22, 1992 (57 FR 27880) and August 18, 1992 (57 FR 37284).

> Citation of Laws and Regulations; Date of Enactment and Adoption
>
> Remarks of the Attorney General

The following entry should be placed at Subsection I A(23) in the Model Attorney General's Statement.

Revision Checklist 110 Summary (cont'd)

(23) Listing of seven wastes (K141, K142, K143, K144, K145, K147, and K148) generated during the production, recovery and refining of coke by-products produced from coal, 40 CFR 261.32, and Part 261 Appendix VII as amended August 18, 1992 [57 FR 37284], Revision Checklist 110.

[Note this entry does not need the sections titled "Federal Authority", "Citation of Laws and Regulations; Date of Enactment and Adoption", and "Remarks of the Attorney General", because there is a general statement of these for the entries under Subsection I A.]

Revision Checklist 113 Summary

Rule Titles: This rule consolidates the changes made by the following three rules:

- Standards Applicable to Owners and Operators of Hazardous Waste Treatment, Storage, and Disposal Facilities; Liability Coverage
- Standards Applicable to Owners and Operators of Hazardous Waste Treatment, Storage and Disposal Facilities; Liability Requirements
- Standards Applicable to Owners and Operators of Hazardous Waste Treatment, Storage and Disposal Facilities; Financial Responsibility for Third-Party Liability, Closure, and Post-Closure

Checklist Title: Consolidated Liability Requirements
References: 53 FR 33938-33960, 56 FR 30200, and 57 FR 42832-42844
Promulgation Dates: September 1, 1988; July 1, 1991; and September 16, 1992
Effective Dates: October 3, 1988; July 1, 1991; September 16, 1992
Cluster: RCRA Cluster III
Provision Type: Non-HSWA
Linkage: None
Optional: No, but certain portions of this checklist are optional

Summary: On September 1, 1988, (53 FR 33938), the Agency issued a final rule that expanded the instruments available to owners and operators to demonstrate financial responsibility for third-party liability assurance. This rule also established, at §§264.147 and 265.147, a claims reporting requirement for third-party claims. Chemical Waste Management, Inc. (CWM) challenged several portions of this rule and on February 23, 1990 entered into a settlement agreement with EPA in which the Agency agreed to make several changes to the liability coverage requirements. Because of this litigation and resulting settlement agreement, the checklist (i.e. Revision Checklist 51) for this rule was withheld. The Agency encouraged States to not adopt the provisions addressed by the September 1, 1988 rule until all of the amendments agreed to in the settlement agreement were made. On July 1, 1991 (56 FR 30200) a final rule correcting the September 1, 1988 rule was issued. Specifically, that rule corrected the omission of "miscellaneous" units as subject to the requirements of 264.147(b) and, as part of satisfying the settlement agreement, references to 264.147(f) and 265.147(f) were inserted into 264.147(a)(2) and 265.147(a)(2), respectively. The Agency also withheld the checklist (i.e., Revision Checklist 93) for that rule because this correction did not address all of the regulatory amendments required by the settlement agreement. The remaining settlement agreement amendments were made by the September 16, 1992 rule (57 FR 42832). That notice also promulgated a conforming change to §§264.147(f)(6) and 265.147(f)(6) to expand the instruments available to owners and operators that no longer meet the requirements of the financial test for liability coverage.

This present checklist, Revision Checklist 113, is a special checklist which consolidates the changes made to the Federal regulations by the September 1, 1988, the July 1, 1991, and the September 16, 1992 final rules so that States can adopt these changes at one time. Revision Checklists 51 and 93 will not be issued, nor will a separate checklist be developed for the September 16, 1992 rule. Rather, States should use this Consolidated Liability Requirements Checklist to adopt the provisions of these three final rules. States that

Revision Checklist 113 Summary (cont'd)

already have adopted changes based on the September 1, 1988 final rule are strongly encouraged to complete this consolidated checklist to ensure that all revisions pursuant to the later two amendments are correctly made in the State's code. Note that the deadline for this Consolidated Checklist is based on the promulgation date of the most recent of the rules.

State Authorization: This checklist is placed in RCRA Cluster III. The State modification deadline is July 1, 1994 (or July 1, 1995 if a State statutory change is necessary). These changes do not go into effect until States become authorized for them because this rule was promulgated under pre-HSWA authorities. Only final authorization is available.

Note that the claims reporting requirements as promulgated by the September 1, 1988 rule were originally classified as optional; however, as there were no reporting requirements prior to that time, the Agency has determined that these requirements were, in fact, more stringent. States should have been required to modify their programs to include these requirements by July 1, 1990. However, since States were not notified of this obligation, the Agency will, for the purposes of determining applicable deadlines under §271.21(e)(2), treat these requirements as if they were promulgated on September 16, 1992.

Note, however, that the revisions to the claims reporting requirements that were promulgated by the September 16, 1992 rule are not more stringent than the reporting requirement at §§264.147(a)(7)&(b)(7) and 265.147(a)(7)&(b)(7) as promulgated by the September 1, 1988 rule. Therefore, States that have already adopted the claims requirements as promulgated by the September 1, 1988 rule are not required to adopt the clarified reporting requirement, although EPA urges them to do so. States that have not yet adopted the September 1, 1988 rule's claims reporting requirements should not do so, but should adopt the clarified version promulgated by the September 16, 1992 rule as indicated by Revision Checklist 113.

The State revision application must include applicable regulations, an AG statement addendum, the Consolidated Liability Requirements Checklist, other associated checklists and other application materials, i.e. a program description and an MOA, as determined by the Regional office.

Attorney General's Statement Entry: The following entries should be placed at Subsections XV O, P and Q in the Model Revision Attorney General's Statement.

> O. [OPTIONAL: This is a reduced requirement.] State statutes and regulations allow the use of additional financial instruments (letter of credit, a surety bond, a guarantee, trust fund, and purchase of insurance by other firms) to meet the liability coverage requirements as specified in Revision Checklist 113.
>
> Federal Authority: RCRA §§2002(a), 3004 and 3005; 40 CFR 264.141, 264.147, 264.151, 265.141, 265.147 and 265.151 as amended September 1, 1988 (53 FR 33938), July 1, 1991 (56 FR 30200), and September 16, 1992 (57 FR 42832).

Revision Checklist 115 Summary

Rule Title:	Hazardous Waste Management System: Identification and Listing of Hazardous Waste and CERCLA Hazardous Substance Designation; Reportable Quantity Adjustment, Chlorinated Toluenes Production Wastes
Checklist Title:	Chlorinated Toluenes Production Waste Listing
Reference:	57 FR 47376-47386
Promulgation Date:	October 15, 1992
Effective Date:	April 15, 1993
Cluster:	RCRA Cluster III
Provision Type:	HSWA
Linkage:	None
Optional:	No

Summary: This rule adds to the list of hazardous wastes from specific sources three wastes (K149, K150 and K151) generated during the production of alpha- (or methyl-) chlorinated toluenes, ring chlorinated toluenes, benzoyl chlorides, and compounds with mixtures of these functional groups, collectively referred to in this rule as "chlorinated toluenes." Part 261, Appendix VII is also amended.

State Authorization: This rule is placed in RCRA Cluster III. The State modification deadline is July 1, 1994 (or July 1, 1995 if a State statutory change is necessary). All changes go into effect immediately, because this rule was promulgated under HSWA authorities. Both interim and final authorization are available, with the former expiring on January 1, 2003. The State Revision Application must include applicable regulations, an AG statement addendum, Revision Checklist 115, other associated checklists and other application materials, i.e., a program description and an MOA, as determined by the Regional office.

Attorney General's Statement Entry: The following entry should be placed at Subsection I A(24) in the Model Revision Attorney General's Statement.

> (24) Listing of three wastes (K149, K150, and K151) from the production of chlorinated toluenes, 40 CFR 261.32 and Part 261 Appendix VII, as amended October 15, 1992 [57 FR 47376], Revision Checklist 115.

[Note this entry does not need the sections titled "Federal Authority", "Citation of Laws and Regulations; Date of Enactment and Adoption", and "Remarks of the Attorney General", because there is a general statement of these for the entries under Subsection I A.]

Revision Checklist 116 Summary

Rule Title:	Hazardous Waste Management System: Land Disposal Restrictions
Checklist Title:	Hazardous Soil Case-by-Case Capacity Variance
Reference:	57 FR 47772-47776
Promulgation Date:	October 20, 1992
Effective Date:	October 13, 1992
Cluster:	RCRA Cluster III
Provision Type:	HSWA
Linkage:	Revision Checklists 78, 83, 103, 106, 123, 137 and 157
Optional:	No

Summary: On June 1, 1990 (55 FR 22520; Revision Checklist 78), EPA promulgated a final rule establishing prohibitions and treatment standards for Third Third wastes. Because of a lack of treatment capacity, EPA granted a two-year national capacity variance for those hazardous soils whose best demonstrated available technology (BDAT) was incineration, retorting, or vitrification, as well as for soils contaminated with radioactive mixed waste. As such, these wastes are prohibited from land disposal on May 8, 1992, unless the treatment standards are met. This October 20, 1992 rule provides, under 40 CFR 268.5, a one-year extension of the Land Disposal Restrictions (LDR) effective date for this same set of hazardous waste contaminated soils. The action is taken because EPA recognizes that owners and operators of treatment, storage and disposal facilities will have difficulty in obtaining treatment capacity that meets the existing treatment standards by May 8, 1992, when this national capacity variance expires. No further applications will be required at this time from persons granted an extension by this action. Specific recordkeeping and other requirements must be followed to qualify for this extension. Certain clarifications are also made to the amendatory language promulgated on June 26, 1992 (57 FR 28628; Revision Checklist 106) in connection with a similar extension for contaminated debris. These changes do not alter that extension and are intended solely to clarify the Agency's original extension. Note that a May 24, 1993 rule (58 FR 28506; Revision Checklist 123) amends the case-by-case extension for contaminated soils by clarifying that the extension granted on October 20, 1992 applied only to soils regulated under the Third Third Land Disposal Restriction rule.

State Authorization: This rule is placed in RCRA Cluster III. The State modification deadline is July 1, 1994 (or July 1, 1995 if a State statutory change is necessary). All changes go into effect immediately because this rule was promulgated under HSWA authorities. Both interim and final authorization are available, with the former expiring on January 1, 2003. The State Revision Application must include applicable regulations, an AG statement addendum, Revision Checklist 116, other associated checklists and other application materials, i.e., a program description and an MOA, as determined by the Regional office.

AttorneyGeneral's Statement Entry: The following entry should replace the entry at Subsection XXII in the Model Revision Attorney General's Statement.

> I. State statutes and regulations provide an extension of the land disposal restriction effective date for hazardous waste debris until May 8, 1993, as indicated in Revision Checklists 103 and 116.
>
> Federal Authority: RCRA §3004(h)(3); 40 CFR 268.35(c)-(e) as amended May 15, 1992 (57 FR 20766); and October 20, 1992 (57 FR 47772).

Revision Checklist 116 Summary (cont'd)

Citation of Laws and Regulations; Date of Enactment and Adoption

Remarks of the Attorney General

The following entry should be inserted at Subsection XXI N of the Model Revision Attorney General's Stateme

N. State statutes and regulations provide a case-by-case extension of the land disposal effective date until May 8, 1993 for Third Third hazardous soils whose best demonstrated available technology (BDAT) was incineration, retorting or vitrification, as well as for Third Third soils contaminated with radioactive mixed waste as indicated in Revision Checklist 116.

Federal Authority: RCRA §3004(h)(3); 40 CFR 268.35(c)-(e) as amended October 20, 1992 (57 FR 47772).

Citation of Laws and Regulations; Date of Enactment and Adoption

Revision Checklist 117 B Summary

Rule Title:	Hazardous Waste Management System; Definition of Hazardous Waste; "Mixture" and "Derived-From" Rules
Checklist Title:	Toxicity Characteristic Amendment
Reference:	57 FR 23062-23063
Promulgation Date:	June 1, 1992
Effective Date:	June 1, 1992
Cluster:	RCRA Cluster III
Provision Type:	HSWA
Linkage:	Revision Checklist 74, 108 and 119
Optional:	No

Summary: The Toxicity Characteristic rule [55 FR 11798 (March 29, 1990) Revision Checklist 74] and its subsequent amendments [55 FR 26986 (June 29, 1001) and 57 FR 30657 (July 10, 1992) Revision Checklist 74] omitted changing the reference to the "Extraction Procedure Toxicity Characteristic" at 261.3(a)(2)(i). The March 3, 1992 (57 FR 7628) reissuance of the "mixture" and "derived-from" rule reissued 261.3 with that error still in it. The June 1, 1992 amendment (57 FR 23062) to that reissued code corrected this error. Because this change makes the Federal code more stringent, it is required and was placed in a checklist separate from the other provisions (considered optional, for States) addressing the reissuance of the "mixture" and "derived-from" rules.

State Authorization: This rule is placed in RCRA Cluster III, due to the delay in developing a checklist for this change and its relationship to the reissuance of the "mixture" and "derived-from" rules addressed by Revision Checklist 117 A. The State modification deadline is July 1, 1994 (or July 1, 1995, if a State statutory change is necessary). This change is conducted under HSWA authorities because it is necessitated by the changes made by the Toxicity Characteristic rule, which was promulgated under HSWA authorities. The State Revision Application must include applicable regulations, AG statement addendum, Revision Checklist 117 B, other associated checklists and other application materials, i.e. a program description and an MOA, as determined by the Regional office.

Attorney General's Statement Entry: The entry at I L in the Model Revision Attorney General's Statement should be replaced with the following:

> L. State statutes and regulations revise the existing toxicity characteristic by replacing the Extraction Procedure (EP) leach test with the Toxicity Characteristic Leaching Procedure (TCLP) for identifying wastes that are defined as hazardous and subject to regulation under Subtitle C of RCRA as indicated in Revision Checklists 74, 108 and 117B. State statutes and regulations also provide for the addition of 25 organic chemicals and their regulatory levels to the list of toxic constituents of concern as indicated in Revision Checklist 74.

Revision Checklist 117 B Summary (cont'd)

Federal Authority: RCRA §§1006, 2002(a), 3001, 3002, 3004, 3005 and 3006; 40 CFR Parts 261, 264, 265 and 268 as amended March 29, 1990 (55 FR 11798), June 29, 1990 (55 FR 26986), June 1, 1992 (57 FR 23062), and July 10, 1992 (57 FR 30657).

Citation of Laws and Regulations; Date of Enactment and Adoption

Remarks of the Attorney General

Revision Checklist 118 Summary

Rule Title:	Hazardous Waste Management
Checklist Title:	Liquids in Landfills II
Reference:	57 FR 54452-54461
Promulgation Date:	November 18, 1992
Effective Date:	May 18, 1993
Cluster:	RCRA III
Provision Type:	HSWA
Linkage:	Revision Checklists 17 F and 145
Optional:	No

Summary: This rule's purpose is to assure the stability of materials in hazardous waste landfills. It satisfies the HSWA requirement that EPA issue a rule prohibiting disposal in landfills of liquids that have been sorbed by materials that biodegrade or that release liquids when compressed, as might occur during routine landfill operations. Specifically, the Paint Filter Test, Method 9095, is adopted for testing containerized liquids to which sorbents were added prior to land disposal. This rule also lists classes of nonbiodegradable sorbents and gives examples in each class. Two tests are identified that may be used to determine nonbiodegradability of sorbents not within a class on the list. Lab packs must also have nonbiodegradable sorbents.

State Authorization: This rule is placed in RCRA Cluster III. The State modification deadline is July 1, 1994 (or July 1, 1995 if a State statutory change is necessary). All changes go into effect immediately, because this rule was promulgated under HSWA authorities. Both interim and final authorization are available, with the former expiring on January 1, 2003. The State Revision Application must include applicable regulations, an AG statement addendum, Revision Checklist 118, other associated checklists and other application materials, i.e., a program description and an MOA, as determined by the Regional office.

Attorney General's Statement Entry: The following entry should be placed at Subsection X B in the Model Revision Attorney General's Statement.

> B. State statutes and regulations prohibit the disposal, in hazardous waste landfills, of liquids that have been sorbed in materials that are biodegradable or that release liquids during routine landfill operations, as indicated in Revision Checklist 118.
>

Revision Checklist 123 Summary

Rule Title:	Land Disposal Restrictions; Renewal of the Hazardous Waste Debris Case-by-Case Capacity Variance
Checklist Title:	Land Disposal Restrictions; Renewal of the Hazardous Waste Debris Case-by-Case Capacity Variance
Reference:	58 FR 28506-28511
Promulgation Date:	May 14, 1993
Effective Date:	May 8, 1993
Cluster:	RCRA Cluster III
Provision Type:	HSWA
Linkage:	Revision Checklists 78, 83, 103, 116, 137, 157, and 167A-C
Optional:	No

Summary: This is the fifth rule addressing hazardous debris and soil contaminants with Third Third wastes. Revision Checklist 78 (55 FR 22520; June 1, 1990) established a national capacity variance for certain hazardous waste soil and debris at 268.35(e). Revision Checklist 83 (56 FR 3864; January 31, 1991) amended 268.35(d) to also address mixed radioactive hazardous waste and amended 268.35(e) to address additional wastes. Revision Checklist 103 (57 FR 20766; May 15, 1992) established a case-by-case extension, until May 8, 1993, for contaminated debris only. Revision Checklist 116 (57 FR 47772; October 20, 1992), which added a case-by-case variance for certain hazardous soils, also clarified that the case-by-case extension for hazardous debris also included wastes mixed with radioactive hazardous waste. This current rule extends, until May 8, 1994, the case-by-case extension for hazardous debris granted by the May 15, 1992 final rule. However, only debris and mixed radioactive/hazardous debris contaminated with wastes listed in 268.12 and/or any characteristic waste for which treatment standards are established in Subpart D of Part 268 are included in this extension. No further variance or extension of the LDR effective dates for hazardous debris can be given after May 8, 1994. This final rule also amends the case-by-case extension for contaminated soils by clarifying that the extension granted on October 20, 1992 applied only to soils regulated under the Third Third Land Disposal Restriction Rule.

States that have already adopted any of the previous rules addressing hazardous debris and soil should adopt this rule as soon as possible. States that have not adopted Third Third regulations should adopt this rule when adopting the other Third Third rules.

State Authorization: This rule is placed in RCRA Cluster III. The State modification deadline is July 1, 1994 (or July 1, 1995 if a State statutory change is necessary). All changes go into effect immediately because this rule was promulgated under HSWA authorities. Both interim and final authorization are available. Interim authorization expires January 1, 2003. The State revision application must include applicable regulations, an AG statement addendum, Revision Checklist 123, other associated checklists and other application materials, i.e. a program description and an MOA, as determined by the Regional office.

Attorney General's Statement Entry: The following entry should replace the entry at Subsection XXII in the Model Revision Attorney General's Statement.

> I. State statutes and regulations provide an extension of the land disposal restriction effective date for hazardous waste debris until May 8, 1994, as indicated in Revision Checklists 103, 116, and 123.

Revision Checklist 123 Summary (cont'd)

Federal Authority: RCRA §3004(h)(3); 40 CFR 268.35(c)-(e) as amended May 15, 1992 (57 FR 20766), October 20, 1992 (57 FR 47772), and May 14, 1993 (58 FR 28506).

Citation of Laws and Regulations; Date of Enactment and Adoption

Remarks of the Attorney General

The following entry should replace the entry at Subsection XXI N of the Model Revision Attorney General's Statement:

N. State statutes and regulations provide a case-by-case extension of the land disposal effective date until May 8, 1994 for Third Third hazardous soils whose best demonstrated available technology (BDAT) was incineration, retorting or vitrification, as well as for Third Third soils contaminated with radioactive mixed waste as indicated in Revision Checklists 116 and 123.

Federal Authority: RCRA §3004(h)(3); 40 CFR 268.35(c)-(e) as amended October 20, 1992 (57 FR 47772) and May 14, 1993 (57 FR 28506).

Citation of Laws and Regulations; Date of Enactment and Adoption

Remarks of the Attorney General

Revision Checklist 124 Summary

Rule Title:	Land Disposal Restrictions for Ignitable and Corrosive Characteristic Wastes Whose Treatment Standards Were Vacated
Checklist Title:	Land Disposal Restrictions for Ignitable and Corrosive Characteristic Wastes Whose Treatment Standards Were Vacated
Reference:	58 FR 29860-29887
Promulgation Date:	May 24, 1993
Effective Date:	May 10, 1993
Cluster:	RCRA Cluster III
Provision Type:	HSWA
Linkage:	Revision Checklists 78, 83, 137, 151, 157, and 167A-C
Optional:	No

Summary: This rule amends the land disposal restriction treatment standards for certain ignitable (EPA Hazard code D001) and corrosive wastes (EPA hazard Code D002) that are not managed: 1) in centralized waste water treatment systems subject to the Clean Water Act (CWA), 2) in Class I injection wells regulated under the Safe Drinking Water Act, or 3) by a zero discharger with a waste water treatment equivalent to that used by CWA dischargers, prior to land disposal. While the requirement of deactivation to remove the hazardous characteristic is retained, this rule also sets numerical treatment standards. Alternate treatment standards are promulgated for incineration, fuel substituting, and recovery of organics for ignitable wastes. Precautionary measures are also established to prevent emissions of volatile organic constituents of violent reactions during the process of diluting ignitable reactive wastes. Finally, a 3-month national capacity variance for persons affected by this interim final rule is included in this notice. An extension (until February 10, 1994) is granted for persons disposing of affected waste in certain Class V UIC wells. These actions are being taken to comply with the September 25, 1992 decision of the U.S. Court of Appeals [Chemical Waste Management vs. EPA, 976 F.2d 2 (D.C. Cir. 1992)] which vacated these treatment standards. Without replacement of these standards, land disposal of these wastes would be prohibited.

State Authorization: This rule is placed in RCRA Cluster III. The State modification deadline is July 1, 1994 (or July 1, 1995 if a State statutory change is necessary). All changes go into effect immediately because this rule was promulgated under HSWA authorities. Both interim and final authorization are available. Interim authorization expires January 1, 2003. The State revision application must include applicable regulations, an AG statement addendum, Revision Checklist 124, other associated checklists and other application materials, i.e. a program description and an MOA, as determined by the Regional office.

AttorneyGeneral's Statement Entry: The following entry should be inserted at Subsection XXI O of the Model Revision Attorney General's Statement.

> O. State statutes and regulations include land disposal restrictions and treatment standards for certain ignitable and corrosive characteristic wastes whose treatment standards were vacated, as indicated in Revision Checklist 124.
>
> Federal Authority: RCRA §3004(d),(e)&(g); 40 CFR 268.37 as amended on May 24, 1993 (58 FR 29860).
>
> Citation of Laws and Regulations; Date of Enactment and Adoption

Revision Checklist 124 Summary (cont'd)

Remarks of the Attorney General

Revision Checklist 126 Summary

Rule 1 Title:	Testing and Monitoring Activities
Rule 2 Title:	Testing and Monitoring Activities, Land Disposal Restrictions Correction
Checklist Title:	Testing and Monitoring Activities
Reference:	58 FR 46040-46051 and 59 FR 47980-47982
Promulgation Date:	August 31, 1993 and September 19, 1994
Effective Date:	August 31, 1993 and August 31, 1993
Cluster:	RCRA Cluster IV
Provision Type:	HSWA/Non-HSWA
Linkage:	Revision Checklists 11, 35, 67, 73, 139, 141, 158 and 180
Optional:	No

Summary: The August 31 (58 FR 46040) rule replaces the current Second Edition (including Updates I and II) of the EPA-approved "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods," EPA Publication SW-846, by incorporating by reference the Third Edition (and its first update) in § 260.11. This rule also revises Part 261 Appendices II (Method 1311, Toxicity Characteristic Leaching Procedure) and III (Chemical Analysis Test Methods) to refer directly to SW-846; deletes Part 261 Appendix X (Method of Analysis for Chlorinated Dibenzo-p-dioxins and Dibenzofurans); and revises Part 268 Appendices I (Toxicity Characteristic Leaching Procedure) and IX (Extraction Procedure Toxicity Test) to refer to SW-846. In conjunction with these changes, various references to the methods formerly contained in these appendices are changed to refer directly to SW-846.

The September 19th (59 FR 47980) rule corrects the unintended removal of text from 40 CFR 268.7(a) by August rule. Paragraph 268.7(a) sets out the generator waste analysis and recordkeeping requirements of the land disposal restrictions under Subtitle C of RCRA. The August rule revised the reference to Appendix IX of Part 268 to refer to SW-846 Methods 1311 and 1310, instead. The Agency had intended to revise only the introductory text of 268.7(a) and to retain without changing the subparagraphs following the introductory text. Due to an inadvertent administrative error the subparagraphs following the introduction were removed. The September rule makes clear that it was not the Agency's intention to remove these paragraphs and that they remain in effect, and are regarded by the Agency, to have been in effect continuously in the form published in the CFR revised as of July 1, 1993. For this reason, the September rule was not made into a separate checklist.

State Authorization: These rules are placed in RCRA Cluster IV. The State modification deadline is July 1, 1995 (or July 1, 1996 if a State statutory change is necessary). The changes for all provisions except 261.22, 261.24, and Appendix II, Part 261, do not go into effect until States become authorized for them because this rule was promulgated under pre-HSWA authorities. Only final authorization is available. The changes to 261.22, 261.24, Appendix II, Part 261 and 268.7(a) affect the Toxicity Characteristic and the TCLP, both of which were added due to HSWA authority. Thus, these changes are considered HSWA provisions and go into effect immediately. Both interim and final authorization are available, with interim authorization expiring on January 1, 2003. The State Revision Application must include applicable regulations, AG statement addendum, Revision Checklist 126, other associated checklists and other application materials, i.e. a program description and an MOA, as determined by the Regional office

Attorney General's Statement Entry: The following new entry should be placed at Subsection I BB in the Model Revision Attorney General's Statement.

Revision Checklist 126 Summary (cont'd)

BB. State statutes and regulations replace the current Second Edition (including Updates I and II) of the "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods," EPA Publication SW-846, by incorporating by reference the Third Edition (and its first update) of this test methods manual. Throughout the State's code, references to test methods directly refer to the methods as they are found in SW-846, as indicated in Revision Checklist 126.

Federal Authority: RCRA §§1006; 2002, 3001, 3002, 3004, 3005, 3006, 3010, and 3014; 40 CFR 260.11(a); 260.22(d)(1)(i); 261.22(a)(1)&(2); 261.24(a); 261 Appendices II, III, and X; 264.190(a); 264.314(c); 265.190(a); 265.314(d); 268.7(a); 268.40(a); 268.41(a); 268 Appendices I & IX; 270.6(a); 270.19(c)(1)(iii)&(iv); 270.62(b)(2)(i)(C)&(D); and 270.66(c)(2)(i)&(ii) as amended August 31, 1993 (58 FR 46040) and September 19, 1994 (59 FR 47980).

Revision Checklist 128 Summary

Rule Title:	Hazardous Waste Management System; Identification and Listing of Hazardous Waste; Wastes from Wood Surface Protection
Checklist Title:	Wastes From the Use of Chlorophenolic Formulations in Wood Surface Protection
Reference:	59 FR 458-469
Promulgation Date:	January 4, 1994
Effective Date:	January 4, 1994
Cluster:	RCRA Cluster IV
Provision Type:	Non-HSWA
Linkage:	Revision Checklists 132, 139 and 180; Related to Revision Checklist 82 but not directly linked - see the summary
Optional:	No

Summary: Three categories of wastes (F032, F034 and F035) from wood preserving processes were listed as hazardous in 1990 (55 FR 50450; Revision Checklist 82). A final listing determination for wood surface protection wastes was deferred due to lack of data (53 FR 53282). This present rule announces that upon reviewing the public comments received on its proposal of April 27, 1993 (58 FR 25707), EPA has decided not to list wastes from the use of chlorophenolic formulations in wood surface protection processes. As a result of this determination, EPA is not mandating in this rule any specific operating or information collection requirements for owners/operators of wood surface protection plants. However, the Agency would very likely re-evaluate this decision not to list if use of chlorophenolic formulations resumes in the future. Although this final rule does not list as hazardous any wastes from wood surface protection processes, EPA believes that certain constituents contained in these wastes warrant inclusion in 40 CFR Part 261, Appendix VIII. Thus, the Agency is adding the following four chemicals to Part 261, Appendix VIII: the sodium and the potassium salts of pentachlorophenol and of tetrachlorophenol. This rule also finalizes the proposed amendment of SW-846 ("Test Methods for Evaluating Solid Waste, Physical/Chemical Methods") to include Method 4010 (Immunoassay Test for the Presence of Pentachlorophenol).

State Authorization: This rule is placed in RCRA Cluster IV and the changes addressed by it were made under non-HSWA authority. The State modification deadline is July 1, 1995 (or July 1, 1996 if a State statutory change is necessary). These changes do not go into effect until States become authorized for them because this rule was promulgated under pre-HSWA authorities. Only final authorization is available.

The State Revision Application must include applicable regulations, AG statement addendum, Revision Checklist 128, other associated checklists and other application materials, i.e. a program description and an MOA, as determined by the Regional office.

Attorney General's Statement Entry: The following new entry should be placed at Subsection I A (27) in the Model Revision Attorney General's Statement.

> (27) Listing of three chemicals from wood surface protection processes, 40 CFR 261 Appendix VIII, as amended January 4, 1994 [59 FR 458], Revision Checklist 128.

The following new entry should be placed at Subsection I CC in the Model Revision Attorney General's State

Revision Checklist 128 Summary (cont'd)

CC. State statutes and regulations incorporation by reference "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods," EPA Publication SW-846, the Third Edition (November 1986), as amended by Updates I, II and IIA, as indicated in Revision Checklist 128.

Federal Authority: RCRA §§2002(a), 3001(b), and 3001(e)(1); 40 CFR 260.11(a) as amended January 4, 1994 (59 FR 458).

Revision Checklist 131 Summary

Rule Title:	Recordkeeping Instructions
Checklist Title:	Recordkeeping Instructions; Technical Amendment
Reference:	59 FR 13891-13893
Promulgation Date:	March 24, 1994
Effective Date:	March 24, 1994
Cluster:	RCRA Cluster IV
Provision Type:	Non-HSWA
Linkage:	None
Optional:	No

Summary: This rule amends the recordkeeping instructions in Appendix I of Part 264 and Appendix I of Part 265 so that unit of measurement codes and handling codes, used by hazardous waste treatment, storage and disposal facilities to maintain records on-site, match the codes used by these facilities on the Part A Permit Application Form. This technical amendment also adds handling codes for the proper recording of those processes relating to Boilers and Industrial Furnaces and Miscellaneous Units facilities. The Agency intends this amendment to encourage the consistent recordkeeping and reporting of information by hazardous waste treatment, storage and disposal facilities.

State Authorization: This rule is placed in RCRA Cluster IV; the changes addressed by it were promulgated under non-HSWA authority. Thus, this regulation is immediately applicable only in states that do not have final authorization for a base RCRA program. For states that are authorized for a base program, these changes do not go into effect until States become authorized for them. Only final authorization is available. The State modification deadline is July 1, 1995 (or July 1, 1996 if a State statutory change is necessary).

The State Revision Application must include applicable regulations, AG statement addendum, Revision Checklist 131, other associated checklists and other application materials, i.e. a program description and an MOA, as determined by the Regional office.

Attorney General's Statement Entry: The following entry should be placed at Subsection VII F in the Model Revision Attorney General's Statement.

> F. State statutes and regulations incorporate updates to the recordkeeping instructions so that the codes used by hazardous waste treatment, storage and disposal facilities to maintain records on-site match the codes used by these facilities on the Part A Permit Application Form as indicated on Revision Checklist 131. The new handling codes for Miscellaneous Units and Boilers and Industrial Furnaces, addressed by Checklist 131, are also incorporated into the statutes and regulations.

Revision Checklist 132 Summary

Rule Title:	Hazardous Waste Management System: Identification and Listing of Hazardous Wastes; Wastes from Wood Surface Protection; Correction
Checklist Title:	Wood Surface Protection; Correction
Reference:	59 FR 28484
Promulgation Date:	June 2, 1994
Effective Date:	June 2, 1994
Cluster:	RCRA Cluster IV
Provision Type:	Non-HSWA
Linkage:	Revision Checklists 128, 139 and 180
Optional:	No

Summary: This notice corrects inaccurate references to EPA Publication SW-846 in the final rule published January 4, 1994 (59 FR 458; Revision Checklist 128).

State Authorization: This rule is placed in RCRA Cluster IV. The State modification deadline is July 1, 1995 (or July 1, 1996 if a State statutory change is necessary). This rule was promulgated under non-HSWA authority and the changes do not go into effect until States become authorized for them. Only final authorization is available.

The State Revision Application must include applicable regulations, AG statement addendum, Revision Checklist 132, other associated checklists and other application materials, i.e. a program description and an MOA, as determined by the Regional office.

AttorneyGeneral's Statement Entry: The entry at Subsection I CC in the Model Revision Attorney General's Statement should be replaced with the following revised entry:

> CC. State statutes and regulations incorporation by reference "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods," EPA Publication SW-846, the Third Edition (November 1986), as amended by Updates I, II and IIA, as indicated in Revision Checklists 128 and 132.
>
> Federal Authority: RCRA §§2002(a), 3001(b), and 3001(e)(1); 40 CFR 260.11(a) as amended January 4, 1994 (59 FR 458) and June 2, 1994 (59 FR 28484).

Revision Checklist 134 Summary

Rule Title:	Hazardous Waste Management System; Correction of Listing of P015--Beryllium Powder
Checklist Title:	Correction of Beryllium Powder (P015) Listing
Reference:	59 FR 31551-31552
Promulgation Date:	June 20, 1994
Effective Date:	June 20, 1994
Cluster:	RCRA Cluster IV
Provision Type:	Non-HSWA
Linkage:	None
Optional:	No

Summary: On April 22, 1988, EPA published a technical correction to the lists of hazardous wastes in 40 CFR 261.33(e) and (f) (Revision Checklist 46, 53 FR 13382). In that notice, the word "dust" was inadvertently omitted from the P015 listing for "beryllium dust" in the 261.33(e) list of hazardous wastes. In addition, the sole manufacturer of this commercial chemical product has since indicated that the term "beryllium dust" is not used by the industry to describe this commercial chemical product; the actual term used by the industry is "beryllium powder". This technical correction, thus, adds "powder" to the P015 hazardous waste listing for "beryllium" and makes conforming changes to the list of hazardous constituents in Part 261 Appendix VIII and to Table 2 in § 268.42(a). Conforming changes were also made to the CERCLA list of hazardous substances, although only the changes to the RCRA regulations are addressed by this checklist.

State Authorization: This rule is placed in RCRA Cluster IV. The State modification deadline is July 1, 1995 (or July 1, 1996 if a State statutory change is necessary). These changes do not go into effect until States become authorized for them because this rule was promulgated under pre-HSWA authorities. Only final authorization is available.

The State Revision Application must include applicable regulations, AG statement addendum, Revision Checklist 134, other associated checklists and other application materials, i.e., a program description and an MOA, as determined by the Regional office.

Attorney General's Statement Entry: Subsection I A(28) in the Model Revision Attorney General's Statement should be added to read as follows:

> (28) Listing of Beryllium (P015) is amended to read "Beryllium powder," 40 CFR 261.33 and Part 261 Appendix VIII, as amended June 20, 1994 [59 FR 31551], Revision Checklist 134.

The following new entry should be placed at Subsection XXI P in the Model Revision Attorney General's Statement.

Revision Checklist 134 Summary (cont'd)

P. State statutes and regulations include a revision to P015 listing in the land disposal restrictions technology-based treatment standards as indicated on Revision Checklist 134.

Federal Authority: RCRA §3004(d)-(k) and (m); 40 CFR 268.42(a)/Table 2, as amended June 20, 1994 (59 FR 31551).

Citation of Laws and Regulations; Date of Enactment and Adoption

Remarks of the Attorney General

Revision Checklist 136 Summary

Rule Title:	Standards for the Management of Specific Hazardous Wastes; Amendment to Subpart C--Recyclable Materials Used in a Manner Constituting Disposal; Final Rule
Checklist Title:	Removal of the Conditional Exemption for Certain Slag Residues
Reference:	59 FR 43496-43500
Promulgation Date:	August 24, 1994
Effective Date:	February 24, 1995
Cluster:	RCRA Cluster V
Provision Type:	HSWA
Linkage:	Revision Checklists 167A-C
Optional:	No

Summary: This rule amends 266.20 so that certain uses of slag residues produced from the high temperature metal recovery (HTMR) treatment of electric arc furnace dust (K061), steel finishing pickle liquor (K062), and electroplating sludges (F006) are not exempt from RCRA Subtitle C regulations. Specifically, this rule prohibits anti-skid/deicing uses of HTMR slags derived from K061, K062, and F006 as waste-derived products placed on the land, unless there is compliance with all Subtitle C standards applicable to land disposal. Because the land disposal requirements cannot be realistically met by entities that would use the HTMR slag in this fashion, EPA is effectively prohibiting uses of HTMR slags as anti-skid/deicing materials. This rule also clarifies the definition of non-encapsulated uses of HTMR slags by specifying these uses to be the anti-skid/deicing uses.

This rule partially implements a settlement agreement that EPA entered into on August 13, 1993 with the Natural Resources Defense Council and the Hazardous Waste Treatment Council. This agreement addresses the challenge made by both Councils to EPA's August 13, 1991 (Revision Checklist 95; 56 FR 41164) decision not to apply the generic exclusion levels at which K061 slags are deemed nonhazardous to K061 slags used as waste-derived products that are applied to or placed on the land. (This decision was extended to K062 and F006 HTMR slags on August 18, 1992 (Revision Checklist 109; 57 FR 37194)). The generic exclusion levels established for some metals in the K061 HTMR slags are lower than the BDAT standards that apply to K061. Therefore, while the generic exclusion requires nonhazardous K061 slags meeting exclusion levels to be disposed of in a Subtitle D unit, K061 slags that may exhibit metal levels above the exclusion levels, but below BDAT, may be used as products in a manner constituting disposal in the exemption in 266.20(b). While this amendment effectively prohibits the anti-skid/deicing uses of K061; K062; and F006-derived HTMR slags as waste-derived products placed on the land, it does not prohibit other uses of these slags that meet 266.20(b) requirements and does not prevent the disposal of HTMR slags in Subtitle D units if the residues can meet the risk-based exclusion levels specified at 261.3(c)(2). EPA proposed a rule covering the major HTMR slag uses on December 29, 1994 (59 FR 67256). The proposal has not been finalized yet.

State Authorization: This rule is placed in RCRA Cluster V. The State modification deadline is July 1, 1996 (or July 1, 1997 if a State statutory change is necessary). EPA views this rule as a HSWA regulation, as it is viewed as part of the process establishing land disposal prohibitions and treatment standards for K061, K062, and F006 hazardous wastes. Therefore these requirements go into effect immediately. Both interim and final authorization are available, with interim authorization expiring on January 1, 2003.

Revision Checklist 136 Summary (cont'd)

The State Revision Application must include applicable regulations, AG statement addendum, Revision Checklist 136, other associated checklists and other application materials, i.e. a program description and an MOA, as determined by the Regional office.

Attorney General's Statement Entry: The following entry should be placed at Subsection XV V in the Model Revision Attorney General's Statement.

> V. State statutes and regulations remove from the 266.20(b) exemption anti-skid/deicing uses of slags from high temperature metals recovery (HTMR) processing of hazardous wastes K061, K062, and F006 as indicated in Revision Checklist 136.
>

Revision Checklist 137 Summary

Rule Title:	Land Disposal Restrictions Phase II--Universal Treatment Standards, and Treatment Standards for Organic Toxicity Characteristic Wastes and Newly Listed Wastes
Checklist Title:	Universal Treatment Standards and Treatment Standards for Organic Toxicity Characteristic Wastes and Newly Listed Wastes
Reference:	59 FR 47982-48109 and 60 FR 242-302
Promulgation Date:	September 19, 1994 and January 3, 1995
Effective Date:	December 19, 1994
Cluster:	RCRA Cluster V
Provision Type:	HSWA/Non-HSWA
Linkage:	Revision Checklists 13, 34, 39, 50, 63, 66, 83, 100, 102, 103, 106, 109, 116, 123, 124, 151, 157, and 167A-C
Optional:	Partially

Summary: The September 19, 1994 rule promulgates Land Disposal Restrictions treatment standards for the newly identified organic toxicity characteristic (TC) wastes, except for those managed in the following:

- Clean Water Act (CWA) systems,
- CWA equivalent systems, or
- Class I Safe Drinking Water Act (SDWA) injection wells.

The September 19, 1994 rule also promulgates treatment standards for newly listed coke by-product and chlorotoluene production wastes. EPA is also promulgating dilution prohibitions for high total organic content (TOC) ignitable and toxicity characteristic pesticides. These newly promulgated treatment standards and dilution prohibitions fulfill the requirements of a proposed consent decree between EPA and the Environmental Defense Fund and of a settlement agreement between EPA, the Hazardous Waste Treatment Council, and a number of environmental groups including the Natural Resources Defense Council.

The September 19, 1994 rule also makes modifications to the existing Land Disposal Restrictions program to simplify and provide consistency in these requirements. Specifically:

- A single set of requirements, referred to as the universal treatment standards (UTS), is established that applies to most hazardous wastes. These standards replace the myriad constituent concentration levels with a uniform set of constituent levels.

- The three separate tables containing treatment standards are consolidated into a single table (the "Treatment Standards for Hazardous Wastes" table in 268.40).

- The information required on notification forms is reduced.

- The regulations for the treatment of lab packs are simplified.

The preamble to the September 19, 1994 rule also provides a series of easy-to-read flowcharts and a simple guide to paperwork requirements in order to make the rule's requirements clearer and easier to understand and implement.

Revision Checklist 137 Summary (cont'd)

Finally, the September 19, 1994 rule modifies the hazardous waste recycling requirements at 261.2(e)(1)(iii) to remove the requirement that the process be a primary production process. As a result, secondary materials that are recycled back into the secondary production process from which they were generated are excluded from the definition of solid waste.

The January 3, 1995 rule makes amendments to the September 19, 1994 rule including revising and republishing the 268.40 table.

State Authorization: This checklist is placed in RCRA Cluster V. The State modification deadline is July 1, 1996 (or July 1, 1997 if a State statutory change is necessary). Except for the modifications to the definition of solid waste, this rule was promulgated relative to HSWA authorities. Normally, all of the HSWA requirements would go into effect immediately. However, currently many States are authorized for the land disposal restrictions, and the modifications made to simplify the treatment standards (i.e., the Universal Treatment Standards (UTS)) would result in the authority for these programs to return, in part, to EPA. Because the Agency believes that it was not Congress' intent that the responsibility for already-authorized HSWA programs be returned to EPA every time EPA promulgates modifications to HSWA program requirements, EPA has decided not to implement the UTS separately for those wastes for which the State has already received LDR authorization. Under this approach, those States authorized for some or all of the LDRs will continue to implement those portions of the program for which they are authorized, whether or not they have adopted the new standards. In EPA's view, the regulated industry will be subject to the State standards, regardless of whether they differ from the new UTS. States are strongly urged to implement the new UTS standards as quickly as possible, both for simplicity of implementation and national consistency. (See the December 19, 1994 memo from Mike Shapiro in Appendix N of the SAM.)

This approach relative to implementation of HSWA authority applies only to the UTS for wastes that are already restricted. The treatment standards for the newly listed wastes addressed by the September 19, 1994 rule go into effect immediately in all States and will be enforced by EPA. This also is the case for changes made relative to the notification forms and to the regulations for the treatment of lab packs. The attached memo from the Director of the Office of Solid Waste outlines the rationale for this approach. Both interim and final authorization are available for those HSWA provisions going into effect immediately. Interim authorization expires January 1, 2003.

The changes to 260.30, 260.31, 260.32, 260.33, and 261.2 are considered non-HSWA changes. The changes to 261.2(e)(1)(iii) and 260.30(b) are considered by EPA to narrow the scope of the Federal regulations and are therefore designated as optional on the checklist. The changes to 260.30, 260.31, 260.32 and 260.33 are included to be consistent with the changes in the closed-loop exclusion and the related 260.30(b) variance. As such these also have also been marked as optional. EPA will implement these non-HSWA requirements only in States that do not have interim or final authorization. In authorized States, the non-HSWA requirements will not be applicable until the States revise their programs to adopt equivalent requirements under State law.

The State Revision Application must include applicable regulations, AG statement addendum, Revision Checklist 137, other associated checklists and other application materials, i.e. a program description and an MOA, as determined by the Regional office.

Attorney General's Statement Entries: The following entry should be placed at Subsection II C in the Model Revision Attorney General's Statement.

C. [OPTIONAL: This is a reduced requirement.] State statutes and regulations allow secondary materials that are recycled back into the secondary production process from which they

were generated to be excluded from the definition of solid as per 261.2(e)(1)(iii) and indicated in Revision Checklist 137.

Federal Authority: RCRA §§3001 and 3004; 40CFR 260.30, 260.30(b), 260.31(a)&(b), 260.32, 260.33, 260.33(a)&(b), and 261.2(e)(1)(iii) as amended September 19, 1994 (59 FR 47982).

Citation of Laws and Regulations; Date of Enactment and Adoption

Remarks of the Attorney General

The following entry should be placed at Subsection XXI Q in the Model Revision Attorney General's Statemer

Q. State statutes and regulations contain treatment standards for certain newly identified organic toxicity wastes and for newly listed coke product and chlorotoluene production wastes as well as dilution prohibitions for high total organic content (TOC) ignitable and toxicity characteristic pesticides as indicated in Revision Checklist 137.

Federal Authority: RCRA §§3004(d)-(k) and (m); 40CFR 264.1(g)(6), 265.1(c)(10), and 268 as amended September 19, 1994 (59 FR 47982) and January 3, 1995 (60 FR 242).

Citation of Laws and Regulations; Date of Enactment and Adoption

Remarks of the Attorney General

The following entry should be placed at Subsection XXI R in the Model Revision Attorney General's Statemer

R. State statutes and regulations contain modifications to the land disposal restrictions which simplify and provide consistency including the Universal Treatment Standards, treatment standards from three tables consolidated into one table, reduced information on notification forms, and simplified regulations for lab pack treatment as indicated in Revision Checklist 137.

Federal Authority: RCRA §§3004(d)-(k) and (m); 40CFR 264.1(g)(6), 265.1(c)(10), and 268 as amended September 19, 1994 (59 FR 47982) and January 3, 1995 (60 FR 242).

Citation of Laws and Regulations; Date of Enactment and Adoption

Remarks of the Attorney General

The following entry should be placed at Subsection XXI S in the Model Attorney General's Statement.

S. State statutes and regulations require compliance with the requirements in 40 CFR 268 applicable to users of materials that are used in a manner constituting disposal, as indicated in Revision Checklist 137.

Federal Authority: RCRA §§3004(d)-(k) and (m); 40 CFR 266.23(a), as amended September 19, 1994 (59 FR 47982).

Citation of Laws and Regulations; Date of Enactment and Adoption

Remarks of the Attorney General

The following entry should be placed at Subsection XX H in the Model Attorney General's Statement.

H. State statutes and regulations exempt certain mercury recovery furnaces from the requirements of 40 CFR 266.102 through 266.111, as indicated in Revision Checklist 137.

Federal Authority: RCRA §§ 2002 and 3004; 40 CFR 266.100(c)(1); 266.100(c)(3); and 266\Appendix XIII as amended September 19, 1994 (59 FR 47982).

Citation of Laws and Regulations; Date of Enactment and Adoption

Remarks of the Attorney General

RCRA REVISION CHECKLIST 138
(WITHDRAWN)

Organic Air Emission Standards for Tanks,
Surface Impoundments, and Containers
59 FR 62896-62953
December 6, 1994
(HSWA provisions)

Note: This checklist has been withdrawn. Its applicable provisions are included in Revision Checklist 154 which is a consolidation all of the rules associated with the organic air emission standards for tanks, surface impoundments, and container requirements (Subpart CC). This consolidated revision checklist is placed in RCRA Cluster VII.

Attached is a memorandum from Bruce Jordan, EPA Office of Air Quality Planning and Standards, that strongly encourages States to not adopt the December 6, 1994 rule, as well as its related amendments, until the final amendment to the Subpart CC rule is issued. This amendment was published in in the Federal Register on November 25, 1996 at 61 FR 59931. EPA encourages States to adopt Revision Checklist 154 which includes all of the following notices: 59 FR 62896, December 6, 1994; 60 FR 26828, May 19, 1995; 60 FR 56952, November 13, 1995; 61 FR 28508, June 5, 1996; 60 FR 50426, September 29, 1995; 61 FR 4903, February 9, 1996; and 61 FR 59931, November 25, 1996.

Revision Checklist 151 Summary

Rule Title:	Land Disposal Restrictions Phase III--Decharacterized Wastewaters, Carbamate Wastes, and Spent Potliners
Checklist Title:	Land Disposal Restrictions Phase III--Decharacterized Wastewaters, Carbamate Wastes, and Spent Potliners
Reference:	61 FR 15566-15660; 61 FR 15660-15668; 61 FR 19117; 61 FR 33680-33691; 61 FR 36419-36421; 61 FR 43924-43931; and 62 FR 7502-7600
Promulgation Date:	April 8, 1996 (61 FR 15566 and 61 FR 15660); April 30, 1996; June 28, 1996; July 10, 1996; August 26, 1996; and February 19, 1997
Effective Date:	April 8, 1996 for the April 8 and April 30 rules; June 28, 1996 for June 28 and July 10 rules; August 26, 1996 for the August 26, 1996 rule; and February 19, 1997 for the February 19, 1997 rule
Cluster:	RCRA Cluster VI
Provision Type:	HSWA
Linkage:	Revision Checklists 34, 39, 50, 66, 78, 83, 102, 109, 124, 137, 155, 157, 159, 160, 161, 162, 167A-C, 171 and 173
Optional:	No

Summary: There are seven rules associated with this Revision Checklist. The rule published on April 8, 1996 at 61 FR 15566-15660 was partially withdrawn and amended in the same Federal Register at 61 FR 15660-15668. The first April 8, 1996, rule (61 FR 15566) established treatment standards for hazardous wastes from the production of carbamate pesticides and from primary aluminum production under the Land Disposal Restrictions (LDR) program. In addition, this rule amended the treatment standards for hazardous wastes that exhibit the characteristic of reactivity and began the process of amending existing treatment standards for wastewaters which are hazardous because they display the characteristic of ignitability, corrosivity, reactivity or toxicity. Finally, EPA codified as a rule its existing enforcement policy that combustion of inorganic wastes is an impermissible form of treatment because hazardous constituents are being diluted rather than effectively treated.

Portions of the first April 8, 1996, rule published at 61 FR 15566, amended existing treatment standards for decharacterized wastewaters that are managed in surface impoundments regulated under the Clean Water Act (CWA) or in CWA-equivalent systems, and in Class I nonhazardous waste injection wells regulated under the Safe Drinking Water Act (SDWA). EPA promulgated these provisions to partially implement the holding and reasoning of the D.C. Circuit Court's opinion in CWM v. EPA, 976 F.2d 2 (D.C. Cir. 1992), cert. denied, 507 U.S. 1057 (1993). However, Congress passed the Land Disposal Flexibility Act of 1996 that put back in place the approach for centrally-managed, decharacterized wastewater which EPA adopted as part of the "Third Third" rule promulgated on June 1, 1990 (55 FR 22520). The purpose of the second April 8, 1996 rule (61 FR 15660) was to withdraw those portions

of the first April 8th rule which were inconsistent with the new law. This action put back into place, for certain wastewaters, the rules which existed prior to the LDR Phase III rule (i.e., only the characteristic property must be removed).

Three technical corrections were published on April 30, 1996 (61 FR 19117), June 28, 1996 (61 FR 33680-33691), and July 10, 1996 (61 FR 36419-36421). The sixth rule, published on August 26, 1996 (61 FR 43924-43931), was an emergency revision that addressed a serious analytic monitoring problem associated with the carbamate constituent treatment standards. The seventh rule, published on February 19, 1997 (62 FR 7502-7600), updated and corrected the 268.40 and 268.48 tables dealing with treatment standards, including the removal of treatment standards for the 25 waste codes whose listings were vacated by the November 1, 1996 D.C. Circuit Court of Appeals decision, Dithiocarbamate Task Force v. EPA, F.3d (D.C.Cir. 1996).

State Authorization: This rule is placed in RCRA Cluster VI. The State modification deadline is July 1, 1997 (or July 1, 1998 if a State statutory change is necessary). All changes go into effect immediately because this rule was promulgated under HSWA authorities. Both interim and final authorization are available. Interim authorization expires January 1, 2003.

The State Revision Application must include applicable regulations, AG statement addendum, Revision Checklist 151, other associated checklists and other application materials, i.e., a program description and an MOA, as determined by the Regional office.

Attorney General's Statement Entry: The following entry should be placed at Subsection XXI S in the Model Revision Attorney General's Statement.

> S. State statutes and regulations contain treatment standards for hazardous wastes from the production of carbamate pesticides and from primary aluminum production; contain the treatment standards for hazardous wastes that exhibit the characteristic of reactivity; and put back into place the LDR "Third Third" provisions for the treatment of certain wastewaters as indicated in Revision Checklist 151. These statutes and regulations also codify the Federal policy that combustion of inorganic waste is an impermissible form of treatment as also indicated in this checklist.
>
> Federal Authority: RCRA § 3004(d) through (k), 3004(m); Public Law 104-119, 100 Stat. 830, 40 CFR part 268 as amended April 8, 1996 (61 FR 15566 and 61 FR 15660); April 30, 1996 (61 FR 19117); June 28, 1996 (61 FR 33680); July 10, 1996 (61 FR 36419); August 26, 1996 (61 FR 43924), and February 19, 1997 (62 FR 7502).

Revision Checklist 151 Summary (cont'd)

Remarks of the Attorney General

Incorporation by Reference: Note that the CFR generally includes all rules published through July 1; however, the CFR revised as of July 1, 1996, includes the July 10, 1996 rule. Also, note that two rules were promulgated after July 10, 1996 (August 26, 1996 and the February 19, 1997 rules). States incorporating the 1996 CFR by reference should be aware of this and be sure to add the August 26, 1996 and February 19, 1997 rules to their incorporation by reference in order to completely adopt this revision checklist.

Revision Checklist 154 Summary

Rule Title:	Hazardous Waste Treatment, Storage, and Disposal Facilities and Hazardous Waste Generators; Organic Air Emission Standards for Tanks, Surface Impoundments, and Containers
Checklist Title:	Consolidated Organic Air Emission Standards for Tanks, Surface Impoundments, and Containers
Reference:	59 FR 62896-62953, 60 FR 26828-26829, 60 FR 50426-50430, 60 FR 56952-56954, 61 FR 4903-4916, 61 FR 28508-28511, and 61 FR 59932-59997
Promulgation Date:	December 6, 1994; May 19, 1995; September 29, 1995; November 13, 1995; February 9, 1996; June 5, 1996; and November 25, 1996
Effective Date:	December 6, 1996
Cluster:	RCRA Cluster VII
Provision Type:	HSWA
Linkage:	Revision Checklists 79, 87, 163 and 177
Optional:	No

Summary: These rules complete the second phase of EPA's regulatory development to implement the Congressional directive under RCRA §3004(n) to promulgate RCRA air standards that control organic emissions. The first phase (Revision Checklists 79 and 87) addressed controlling organic emissions vented from certain hazardous waste treatment processes (i.e., distillation, fractionation, thin-film evaporation, solvent extraction, steam stripping, and air stripping), as well as from leaks in certain ancillary equipment used for hazardous waste management processes.

On December 6, 1994, EPA promulgated air standards that will further reduce organic emissions from hazardous waste management activities. (These standards are known colloquially as the "subpart CC standards" due to their inclusion in subpart CC of Parts 264 and 265.) The December 6, 1994 rule contains air standards to reduce organic emissions from tanks, surface impoundments, containers and miscellaneous units managing particular types of hazardous waste. In addition, the December 6, 1994 final rule establishes a new EPA reference test method (Method 25E) to determine the organic vapor pressure of a waste. The December 6, 1994 rule added air emission control requirements for hazardous waste generators accumulating waste on-site in RCRA permit-exempt tanks and containers as per the requirements at 262.34. The initial effective date for the subpart CC standards was June 5, 1995.

On May 19, 1995, EPA published a notice of postponed effective date. The effective date of the December 6, 1994 final rule was postponed until December 6, 1995.

On September 29, 1995, EPA issued a stay subject to conditions for air standards applicable to TSDFs. The stay is applicable to tanks and containers used for the management of certain hazardous wastes generated by organic peroxide manufacturing processes. Certain organic peroxide

manufacturing wastes are inherently unstable and cannot safely be confined in closed units or systems. EPA believes that the administrative stay for this waste is needed, because the promulgated regulations could (in limited circumstances) make it more dangerous to manage the waste. Therefore, this stay is not optional.

On November 13, 1995, EPA further postponed the effective date of the subpart CC requirements. The effective date of December 6, 1995 was postponed until June 6, 1996.

On February 9, 1996, EPA published clarifying amendments in the regulatory text of the final standards, corrected typographical and grammatical errors, and clarified certain language in the preamble to the December 6, 1994 final rule.

The June 5, 1996, Federal Register article postponed the effective date of the December 6, 1994 final rule for a third time. The effective date was postponed until October 6, 1996.

On November 25, 1996, EPA amended and clarified the regulatory text of the final standards, clarified certain language in the preamble to the December 6, 1994 final rule, and in doing so provided additional options for compliance that give owners and operators increased flexibility in meeting the requirements of the rules while still providing sufficient controls to be protective of human health and the environment. In addition, the rule suspended the applicability and implementation of subpart CC of Parts 264 and 265 from October 6, 1996 to December 6, 1996.

On December 8, 1997, EPA published a final set of technical amendments to the rules. The preamble to those amendments also interprets certain provisions of the rule. These subpart CC rule technical amendments became effective as of December 8, 1997. The technical amendments are not incorporated into the attached checklist, but will be in a future checklist.

State Authorization: This rule is placed in RCRA Cluster VII based on the promulgation date of the most recent of the amendments, excluding the December 8, 1997 technical amendments. The State modification deadline is July 1, 1998 (or July 1, 1999, if a State statutory change is necessary). All changes go into effect in all states on December 6, 1996, because this rule was promulgated under HSWA authorities. Both interim and final authorization are available. Interim authorization expires January 1, 2003.

The State Revision Application must include applicable regulations, AG statement addendum, Revision Checklist 154, other associated checklists and other application materials, i.e., a program description and an MOA, as determined by the Regional Office.

Attorney General's Statement Entry: The following entry should be placed at Subsection XV (W) in the Model Revision Attorney General's Statement.

Revision Checklist 154 Summary (cont'd)

W. State statutes and regulations provide for organic air emission standards for tanks, surface impoundments and containers and provide that air emission control requirements be added to the permit terms and provisions specified for miscellaneous units as specified in Revision Checklist 154.

Federal Authority: RCRA § 3004(n); 40 CFR 60 Appendix A, 260, 261, 262, 264, 265, and 270 as amended December 6, 1994 (59 FR 62896); May 19, 1995 (60 FR 26828); September 29, 1995 (60 FR 50426); November 13, 1995 (60 FR 56952); February 9, 1996 (61 FR 4903); June 5, 1996 (61 FR 28508); and November 25, 1996 (61 FR 59932)

Citation of Laws and Regulations; Date of Enactment and Adoption

Remarks of the Attorney General

Incorporation by Reference:

EPA strongly encourages States to adopt the Subpart CC requirements as reflected on this consolidated revision checklist. States incorporating the Federal regulations by reference should be aware that five of the seven rules for the Subpart CC standards were promulgated after June 30, 1995.

States choosing to incorporate the Federal regulations through June 30, 1995, should add the September 29, 1995 rule; the November 13, 1995 rule; the February 9, 1996 rule; the June 5, 1996 rule; and the November 25, 1996 rule to their incorporation by reference in order to completely adopt Revision Checklist 154.

If the State incorporates the Federal regulations through June 30, 1996, only the last of the rules for the Subpart CC standards (the November 25, 1996 final rule) need be added to the incorporation by reference in order to completely adopt Revision Checklist 154.

Note that the provisions at 265.1083(c)(4)(ii), which were added by the November 5, 1996 rule, reference §268.42(b) which is not delegable to States. Thus, a State should not replace the reference to EPA approval under §268.42(b) with its analogous State terms when adopting or incorporating by reference these provisions.

Revision Checklist 154 Summary (cont'd)

Revision Checklist 155 Summary

Rule Title:	Land Disposal Restrictions Phase III-- Emergency Extension of the K088 Capacity Variance
Checklist Title:	Land Disposal Restrictions Phase III-- Emergency Extension of the K088 Capacity Variance
Reference:	62 FR 1992-1997
Promulgation Date:	January 14, 1997
Effective Date:	January 8, 1997
Cluster:	RCRA Cluster VII
Provision Type:	HSWA
Linkage:	Revision Checklists 151, 160, and 173
Optional:	No

Summary: This rule extends for six (6) months the current national capacity variance for spent potliners from primary aluminum production (Hazardous Waste Number K088). Thus, K088 wastes do not have to be treated to meet LDR treatment standards until July 8, 1997, six months from the original effective date of January 8, 1997. There have been unanticipated performance problems with the treatment technology (the Reynold's process) which provides most of the available treatment capacity for these wastes. EPA has found that this primary treatment process, as it is presently performing and as it includes disposal in non-subtitle C units, is not satisfying the requirements of RCRA § 3004. The primary treatment process does not protect human health and the environment (RCRA § 3004(h)(2), and the remaining treatment capacity is far below that needed to accommodate the volume of K088 waste being generated. The length of the extension for the national capacity variance reflect's EPA's best current estimate of how long it will take to correct the current deficiencies in treatment performance.

State Authorization: This rule is placed in RCRA Cluster VII. The State modification deadline is July 1, 1998 (or July 1, 1999 if a State statutory change is necessary). All changes go into effect immediately because this rule was promulgated under HSWA authorities. Both interim and final authorization are available. Interim authorization expires January 1, 2003.

The State Revision Application must include applicable regulations, AG statement addendum, Revision Checklist 155, other associated checklists and other application materials, i.e. a program description and an MOA, as determined by the Regional office.

Attorney General's Statement Entry: The following entry should be placed at Subsection XXI (U) in the Model Revision Attorney General's Statement.

> U. State statutes and regulations provide a six (6) month extension of the current national capacity variance for spent potliners from primary aluminum production (Hazardous Waste Number K088) so that K088 wastes do not have to be treated to

Revision Checklist 155 Summary (cont'd)

meet LDR treatment standards until July 8, 1997, as indicated in Revision Checklist 155.

Federal Authority: RCRA §§ 3004(d) through (k), and 3004(m); 40 CFR 268.39(c) as amended January 14, 1997 (62 FR 1992).

Citation of Laws and Regulations; Date of Enactment and Adoption

Remarks of the Attorney General

Incorporation by Reference Guidance:

There is no special guidance for States that incorporate by reference with respect to this Revision Checklist.

Revision Checklist 157 Summary

Rule Title:	Land Disposal Restrictions -- Phase IV: Treatment Standards for Wood Preserving Wastes, Paperwork Reduction and Streamlining, Exemptions From RCRA for Certain Processed Materials; and Miscellaneous Hazardous Waste Provisions
Checklist Title:	Land Disposal Restrictions -- Phase IV
Reference:	62 FR 25998-26040
Promulgation Date:	May 12, 1997
Effective Date:	August 11, 1997 for all provisions, except §§148.18(b) and 268.30(b) which are effective May 12, 1999.
Cluster:	RCRA Cluster VII
Provision Type:	HSWA
Linkage:	Revision Checklists 34, 39, 50, 63, 66, 83, 100, 102, 103, 106, 109, 116, 123, 124, 137, 151
Optional:	No; however, certain provisions are optional

Summary: This rule finalizes treatment standards for hazardous waste generated from wood preserving operations and makes a uniform change to the standard for wastes from products of chlorinated aliphatics which carry the F024 waste code. It also 1) revises the land disposal restrictions to reduce paperwork, 2) finalizes the decision to employ polymerization as an alternative treatment method, 3) clarifies an exemption for de minimis amounts of characteristic wastewaters and 4) excludes processed circuit boards and scrap metal from RCRA regulation. This rule also discusses the Agency's decision not to ban certain wastes from biological treatment.

State Authorization: This rule is placed in RCRA Cluster VII. The State modification deadline is July 1, 1998 (or July 1, 1999 if a State statutory change is necessary). This rule contains HSWA provisions. These provisions take effect on this rule's effective date in authorized States with the exception of revisions that are considered optional. Optional changes only take effect when the State adopts and receives authorization for them. States may apply for interim or final authorization, however, interim authorizations will expire January 1, 2003. The State Revision application must include applicable regulations, an AG statement addendum, Revision Checklist 157, other associated checklists and other application materials, i.e., a program description and an MOA, as determined by the Regional office.

Revision Checklist 157 Summary (cont'd)

Attorney General's Statement Entry: The following entries should be placed at Subsections XXI (V)-(Y) in the Model Revision Attorney General's Statement.

V. State statutes and regulations prohibit the land disposal of the wood preserving waste F032, F034 and F035 by August 11, 1997, and also prohibit any soil and debris and radioactive waste mixed with above chemicals from land disposal effective May 12, 1999. In between these effective dates, mixtures may only be land disposed if the facilities follow certain procedures included in State statutes and regulations as indicated in Revision Checklist 157. State statutes and regulations also include revisions to update the land disposal restrictions to better reflect the current program, as indicated in Revision Checklist 157.

Federal Authority: RCRA §§3004(d)-(k) and (m); 40 CFR 268.4(a)(2)(iv), 268.7(c)(2), 268.9(a), 268.9(d)(1)(ii), 268.30(a)-(e), 268.32-36, 268.40/Table, 268.44(o), and Part 268 Appendices I-III, VI, VII, VIII and X as amended May 12, 1997 (62 FR 25998).

Citation of Laws and Regulations; Date of Enactment and Adoption

Remarks of the Attorney General

W. [OPTIONAL: This is a reduced requirement.] State statutes and regulations include revisions of record keeping and paperwork requirements indicated in Revision Checklist 157.

Federal Authority: RCRA §§3004(d)-(k) and (m); 40 CFR 268.4(a)(4), 268.7(a)-(b)(6) and (c)(1) as amended May 12, 1997 (62 FR 25998).

Citation of Laws and Regulations; Date of Enactment and Adoption

Remarks of the Attorney General

X. [OPTIONAL: This is a reduced requirement.] State statutes and regulations include revisions introducing polymerization as an alternative treatment method as indicated in Revision Checklist 157.

Federal Authority: RCRA §§3004(d)-(k) and (m); 40 CFR 268.42/Table 1 as amended May 12, 1997 (62 FR 25998).

Citation of Laws and Regulations; Date of Enactment and Adoption

Remarks of the Attorney General

Revision Checklist 157 Summary (cont'd)

Y. [OPTIONAL: This is a reduced requirement.] State statutes and regulations include revisions which indicate that the *de minimis* provision applies to minor losses of characteristic wastes as indicated in Revision Checklist 157.

Federal Authority: RCRA §§3004(d)-(k) and (m); 40 CFR 268.1(e)(4) as amended May 12, 1997 (62 FR 25998).

Citation of Laws and Regulations; Date of Enactment and Adoption

Remarks of the Attorney General

The following entry should be placed at Subsection I (KK) in the Model Revision Attorney General's Statement.

KK. [OPTIONAL: This is a reduced requirement.] State statutes and regulations include revisions of the exclusion of scrap metal and circuit boards from RCRA regulation as indicated in Checklist 157.

Federal Authority: RCRA §§3001; 40 CFR 261.1(c)(9)-(12), 261.2(c)/Table 1, 261.4(a)(13), 261.4(a)(14), and 261.6(a)(3)(ii) as amended May 12, 1997 (62 FR 25998).

Citation of Laws and Regulations; Date of Enactment and Adoption

Remarks of the Attorney General

Incorporation by Reference Guidance: The dates given at 268.30 are HSWA dates and should not be replaced with the State regulatory effective date.

Revision Checklist 157 Summary

Rule Title:	Land Disposal Restrictions -- Phase IV: Treatment Standards for Wood Preserving Wastes, Paperwork Reduction and Streamlining, Exemptions From RCRA for Certain Processed Materials; and Miscellaneous Hazardous Waste Provisions
Checklist Title:	Land Disposal Restrictions -- Phase IV
Reference:	62 FR 25998-26040
Promulgation Date:	May 12, 1997
Effective Date:	August 11, 1997 for all provisions, except §§148.18(b) and 268.30(b) which are effective May 12, 1999.
Cluster:	RCRA Cluster VII
Provision Type:	HSWA
Linkage:	Revision Checklists 34, 39, 50, 63, 66, 83, 100, 102, 103, 106, 109, 116, 123, 124, 137, 151
Optional:	No; however, certain provisions are optional

Summary: This rule finalizes treatment standards for hazardous waste generated from wood preserving operations and makes a uniform change to the standard for wastes from products of chlorinated aliphatics which carry the F024 waste code. It also 1) revises the land disposal restrictions to reduce paperwork, 2) finalizes the decision to employ polymerization as an alternative treatment method, 3) clarifies an exemption for de minimis amounts of characteristic wastewaters and 4) excludes processed circuit boards and scrap metal from RCRA regulation. This rule also discusses the Agency's decision not to ban certain wastes from biological treatment.

State Authorization: This rule is placed in RCRA Cluster VII. The State modification deadline is July 1, 1998 (or July 1, 1999 if a State statutory change is necessary). This rule contains HSWA provisions. These provisions take effect on this rule's effective date in authorized States with the exception of revisions that are considered optional. Optional changes only take effect when the State adopts and receives authorization for them. States may apply for interim or final authorization, however, interim authorizations will expire January 1, 2003. The State Revision application must include applicable regulations, an AG statement addendum, Revision Checklist 157, other associated checklists and other application materials, i.e., a program description and an MOA, as determined by the Regional office.

Revision Checklist 157 Summary (cont'd)

Attorney General's Statement Entry: The following entries should be placed at Subsections XXI (V)-(Y) in the Model Revision Attorney General's Statement.

V. State statutes and regulations prohibit the land disposal of the wood preserving waste F032, F034 and F035 by August 11, 1997, and also prohibit any soil and debris and radioactive waste mixed with above chemicals from land disposal effective May 12, 1999. In between these effective dates, mixtures may only be land disposed if the facilities follow certain procedures included in State statutes and regulations as indicated in Revision Checklist 157. State statutes and regulations also include revisions to update the land disposal restrictions to better reflect the current program, as indicated in Revision Checklist 157.

Federal Authority: RCRA §§3004(d)-(k) and (m); 40 CFR 268.4(a)(2)(iv), 268.7(c)(2), 268.9(a), 268.9(d)(1)(ii), 268.30(a)-(e), 268.32-36, 268.40/Table, 268.44(o), and Part 268 Appendices I-III, VI, VII, VIII and X as amended May 12, 1997 (62 FR 25998).

Citation of Laws and Regulations; Date of Enactment and Adoption

Remarks of the Attorney General

W. [OPTIONAL: This is a reduced requirement.] State statutes and regulations include revisions of record keeping and paperwork requirements indicated in Revision Checklist 157.

Federal Authority: RCRA §§3004(d)-(k) and (m); 40 CFR 268.4(a)(4), 268.7(a)-(b)(6) and (c)(1) as amended May 12, 1997 (62 FR 25998).

Citation of Laws and Regulations; Date of Enactment and Adoption

Remarks of the Attorney General

X. [OPTIONAL: This is a reduced requirement.] State statutes and regulations include revisions introducing polymerization as an alternative treatment method as indicated in Revision Checklist 157.

Federal Authority: RCRA §§3004(d)-(k) and (m); 40 CFR 268.42/Table 1 as amended May 12, 1997 (62 FR 25998).

Citation of Laws and Regulations; Date of Enactment and Adoption

Remarks of the Attorney General

Revision Checklist 157 Summary (cont'd)

Y. [OPTIONAL: This is a reduced requirement.] State statutes and regulations include revisions which indicate that the *de minimis* provision applies to minor losses of characteristic wastes as indicated in Revision Checklist 157.

Federal Authority: RCRA §§3004(d)-(k) and (m); 40 CFR 268.1(e)(4) as amended May 12, 1997 (62 FR 25998).

Citation of Laws and Regulations; Date of Enactment and Adoption

Remarks of the Attorney General

The following entry should be placed at Subsection I (KK) in the Model Revision Attorney General's Statement.

KK. [OPTIONAL: This is a reduced requirement.] State statutes and regulations include revisions of the exclusion of scrap metal and circuit boards from RCRA regulation as indicated in Checklist 157.

Federal Authority: RCRA §§3001; 40 CFR 261.1(c)(9)-(12), 261.2(c)/Table 1, 261.4(a)(13), 261.4(a)(14), and 261.6(a)(3)(ii) as amended May 12, 1997 (62 FR 25998).

Citation of Laws and Regulations; Date of Enactment and Adoption

Remarks of the Attorney General

Incorporation by Reference Guidance: The dates given at 268.30 are HSWA dates and should not be replaced with the State regulatory effective date.

Revision Checklist 159 Summary

Rule Title:	Hazardous Waste Management System; Carbamate Production, Identification and Listing of Hazardous Waste; Land Disposal Restrictions
Checklist Title:	Conformance With the Carbamate Vacatur
Reference:	62 FR 32974-32980
Promulgation Date:	June 17, 1997
Effective Date:	May 29, 1997
Cluster:	RCRA Cluster VII
Provision Type:	HSWA
Linkage:	Revision Checklist 140 and 151
Optional:	Yes

Summary: This rule amends regulations to conform with the Federal appeals court ruling in *Dithiocarbamate Task Force v. EPA* (98 F.3d 1394 (D.C. Cir. 1996)) that invalidated, in part, Agency regulations listing certain carbamate wastes as hazardous. These regulations also pertain to certain hazardous waste management of carbamate industry wastes under RCRA. The vacated hazardous waste listings and associated regulatory requirements are to be treated as if they were never in effect. States regulations, which may be more stringent or broader in scope than federal rules, are not necessarily affected by the court ruling and can list these wastes. Note that Revision Checklist 140, which addressed the carbamate testing, did not include the vacated wastes.

State Authorization: This rule is placed in RCRA Cluster VII. The rule is promulgated under HWSA authorities; thus, all changes go into effect immediately in States unauthorized for the HSWA base program. Because the standards in this checklist narrow and reduce regulatory requirements which preceded it, states are not required to adopt the changes addressed by this rule. States may, however, impose requirements that are broader in scope or more stringent than those imposed under Federal regulations. As such, the checklist developed for this rule has been designated optional. For states that choose to adopt the checklist, the State modification deadline is July 1, 1998 (or July 1, 1999 if a State statutory change is necessary). Both interim and final authorization are available. Interim authorization expires January 1, 2003. The State Revision Application must include applicable regulations, AG statement addendum, Revision Checklist 159, other associated checklists and other application materials, i.e. a program description and an MOA, as determined by the Regional office.

Attorney General's Statement Entry: The following entry should be placed at Subsection I (MM) in the Model Revision Attorney General's Statement.

> MM. [OPTIONAL: This is a reduced requirement.] State statutes and regulations include revisions designed to conform with the Federal appeals court ruling (98 F.3d 1394 (D.C. Cir. 1996)) which invalidated, in part, certain EPA regulations listing certain carbamate wastes as hazardous as indicated in Revision Checklist 159.

Federal Authority: RCRA 3001 and 3004; 40 CFR 261.32, 261.33(f), 261 Appendix VII, 261 Appendix VIII as amended June 17, 1997 (62 FR 32974).

Citation of Laws and Regulations; Date of Enactment and Adoption

Remarks of the Attorney General

The following entry should be placed at Subsection XXI (Z) in the Model Revision Attorney General's Statement.

Z. [OPTIONAL: This is a reduced requirement.] State statutes and regulations include revisions designed to conform with the Federal appeals court ruling (98 F.3d 1394 (D.C. Cir. 1996)) which invalidated, in part, certain EPA regulations including the land disposal prohibitions and treatment standards for the vacated carbamate wastes as indicated in Revision Checklist 159.

Federal Authority: RCRA 3004(d)-(k) and (m); 40 CFR 268.39(a), 268.39(d), and 268.40 as amended June 17, 1997 (62 FR 32974).

Citation of Laws and Regulations; Date of Enactment and Adoption

Remarks of the Attorney General

Incorporation by Reference Guidance:

There is no special guidance for States that incorporate by reference with respect to this Revision Checklist.

Revision Checklist 160 Summary

Rule Title:	Land Disposal Restrictions Phase III -- Emergency Extension of the K088 National Capacity Variance
Checklist Title:	Land Disposal Restrictions Phase III -- Emergency Extension of the K088 National Capacity Variance, Amendment
Reference:	62 FR 37694-37699
Promulgation Date:	July 14, 1997
Effective Date:	July 7, 1997
Cluster:	RCRA Cluster VIII
Provision Type:	HSWA
Linkage:	Revision Checklists 151, 155 and 173
Optional:	No

Summary: This rule extends, for (3) months, the national capacity variance for spent potliners from primary aluminum production (Hazardous Waste Number K088). Thus, K088 wastes do not have to be treated to meet LDR treatment standards until October 8, 1997, three months from the treatment standard effective date of July 8, 1997, established by Revision Checklist 155. EPA is taking this action because it appears that sufficient treatment capacity exists. EPA is extending the national capacity variance in order to provide time for generators to make contractual and other logistical arrangements relating to utilization of the treatment capacity.

State Authorization: This rule is placed in RCRA Cluster VIII. The State modification deadline is July 1, 1999 (or July 1, 2000 if a State statutory change is necessary). All changes go into effect immediately because this rule was promulgated under HSWA authorities. Both interim and final authorization are available. Interim authorization expires January 1, 2003.

The State Revision Application must include applicable regulations, AG statement addendum, Revision Checklist 160, other associated checklists and other application materials, i.e. a program description and an MOA, as determined by the Regional office.

Attorney General's Statement Entry: The following entry should replace the entry at Subsection XXI (U) in the Model Revision Attorney General's Statement.

> U. State statutes and regulations provide for an extension of the national capacity variance for spent potliners from primary aluminum production (Hazardous Waste Number K088) so that K088 wastes do not have to be treated to meet LDR treatment standards until October 8, 1997, as indicated in Revision Checklists 155 and 160.
>
> Federal Authority: RCRA §3004(d)-(k), and (m), 40 CFR 268.39(c) as amended January 14, 1997 (62 FR 1992) and July 14, 1997 (62 FR 37694).

Revision Checklist 160 Summary (cont'd)

Incorporation by Reference Guidance: None

Revision Checklist 161 Summary

Rule Title:	Second Emergency Revision of the Land Disposal Restrictions (LDR) Treatment Standards for Listed Hazardous Wastes From Carbamate Production
Checklist Title:	Emergency Revision of the Carbamate Land Disposal Restrictions
Reference:	62 FR 45568-45573
Promulgation Date:	August 28, 1997
Effective Date:	August 21, 1997
Cluster:	RCRA Cluster VIII
Provision Type:	HSWA
Linkage:	Revision Checklists 151 and 171
Optional:	No

Summary: The emergency revision extends by one year the time that alternate carbamate treatment standards are in place. EPA is taking this action because analytical problems associated with the measurement of constituent levels in carbamate waste residues have not been resolved. This notice applies only to the carbamate wastes that remain listed as hazardous wastes. This is the second emergency rule related to the carbamate treatment standards. The first was promulgated on August 26, 1996 (61 FR 43924; Revision Checklist 151, Rule 151.5). That rule established temporary alternative treatment standards for carbamate wastes for a one-year period, because the Agency believed that one year was sufficient time for laboratory standards to be developed and for laboratories to take appropriate steps to conduct the necessary analysis for these wastes. This current rule further extends these alternate treatment standards, because not all of the laboratory standards have been developed. Additionally, there is confusion as to which analytical methods can be used to measure carbamate constituents.

State Authorization: This rule is placed in RCRA Cluster VIII. The State modification deadline is July 1, 1999 (or July 1, 2000 if a State statutory change is necessary). Because this rule was promulgated under HSWA authorities, these requirements go into effect in all States on the effective date of the rule. Both interim and final authorization are available. Interim authorization expires January 1, 2003.

The State Revision Application must include applicable regulations, AG statement addendum, and Revision Checklist 161. Revisions to a State's program description and MOA are not needed.

Attorney General's Statement Entry: The following entry should be placed at Subsection XXI (AA) in the Model Revision Attorney General's Statement.

Revision Checklist 161 Summary *(cont'd)*

AA. State statutes and regulations provide an extension until August 26, 1998, the time that alternate carbamate treatment standards are in place as indicated in Revision Checklist 161.

Federal Authority: RCRA §3004(d)-(k) and (m); 40 CFR 268.40(g) and 268.48(a) as amended on August 28, 1997 (62 FR 45568).

Citation of Laws and Regulations; Date of Enactment and Adoption

Remarks of the Attorney General

Incorporation by Reference Guidance:

The dates in 268.40(g) and 268.48(a) should not be replaced with State effective dates.

Revision Checklist 162 Summary

Rule Title:	Clarification of Standards for Hazardous Waste Land Disposal Restriction Treatment Variances
Checklist Title:	Clarification of Standards for Hazardous Waste LDR Treatment Variances
Reference:	62 FR 64504-64509
Promulgation Date:	December 5, 1997
Effective Date:	December 5, 1997
Cluster:	RCRA Cluster VIII
Provision Type:	HSWA
Linkage:	Revision Checklists 34, 50, 66, 151, and 157
Optional:	Yes

Summary: This rule finalizes clarifying amendments to the rule authorizing treatment variances from the national LDR treatment standards, adopting EPA's interpretation that a treatment variance may be granted when treatment of any given waste to the level or by the method specified in the regulations is not appropriate, under either technical or environmental circumstances. EPA has also incorporated preamble language from the August 17, 1988 rule (53 FR 31200), requiring public participation for site-specific variances. Additionally, this rule withdraws the proposal to reissue the treatment variance granted to Citgo Petroleum under the clarified standard, and withdrawn the treatment variance for Citgo Petroleum.

State Authorization: 40 CFR 268.44 contains two types of variances. The provisions at 40 CFR 268.44(a)-(g) address general treatment standard variances. The authority for such variances is not delegable because these variances could result in nationally applicable standards for a new waste treatability group. The provisions at 40 CFR 268.44(h)-(m), on the other hand, address site-specific variances. In the HWIR-Media Proposal (61 FR 18780, 18828, April 29, 1996), EPA clarified that the authority to review and approve this second type of treatment variance can be delegated to States. The amendment to both types of treatment variances addressed by the December 5, 1997 rule are included in this checklist. States that have correctly adopted 40 CFR 268.44(a)-(g), leaving the authority for these variances with EPA, are encouraged to make the indicated amendments to these provisions so that the State's provisions are consistent with their Federal counterparts.

This rule is placed in RCRA Cluster VIII. All changes go into effect immediately because this rule was promulgated under HSWA authorities. Because the standards in this rule narrow and reduce regulatory requirements which preceded it, States are not required to adopt the changes addressed by this rule. As such, the checklist for this rule has been designated optional. For States that choose to adopt the checklist, the State modification deadline is July 1, 1999 (or July 1, 2000 if a State statutory change is necessary). Both interim and final authorization are available. Interim authorization expires January 1, 2003. The State Revision Application must include applicable regulations, AG statement addendum, Revision Checklist 162, other associated

checklists and other application materials; i.e., a program description and an MOA, as determined by the Regional office.

Attorney General's Statement Entry: The following entry should be placed at Subsection XXI (BB) in the Model Revision Attorney General's Statement.

> BB. [OPTIONAL: This is a reduced requirement.] State statutes and regulations include revisions to the LDR treatment variances at 40 CFR 268.44, and specify that a variance may be granted when treatment to the level or by the method specified in the regulations either is not physically possible or is not appropriate under either technical or environmental circumstances as indicated in Revision Checklist 162.
>
> Federal Authority: RCRA 3004(m); 40 CFR 268.44(a), 268.44(h), and 268.44(m) as amended December 5, 1997 (62 FR 64504).
>
> Citation of Laws and Regulations; Date of Enactment and Adoption
>
> Remarks of the Attorney General

Incorporation by Reference Guidance: The term “Administrator” in 40 CFR 268.44(a) should not be substituted with an analogous state term because this provision is not delegable. “Administrator” at 40 CFR 268.44(h) should only be substituted if the State has or is seeking authorization for the site-specific variances at 40 CFR 268.44(h)-(m).

Revision Checklist 163 Summary

Rule Title:	Hazardous Waste Treatment, Storage, and Disposal Facilities and Hazardous Waste Generators; Organic Air Emission Standards for Tanks, Surface Impoundments, and Containers
Checklist Title:	Organic Air Emission Standards for Tanks, Surface Impoundments, and Containers; Clarification and Technical Amendment
Reference:	62 FR 64636-64671
Promulgation Date:	December 8, 1997
Effective Date:	December 8, 1997
Cluster:	RCRA Cluster VIII
Provision Type:	HSWA
Linkage:	Revision Checklists 154 and 177
Optional:	No

Summary: Under the RCRA authority, the EPA has promulgated standards (59 FR 62896, December 6, 1994; see Revision Checklist 154 for a complete history) to reduce organic air emissions from certain hazardous waste management activities to levels that are protective of human health and the environment. In response to public comments and inquiries since the publication of the final standards on December 6, 1994, EPA is making clarifying amendments to these subpart CC standards and providing clarification of certain preamble language that was contained in previous documents for this rulemaking.

State Authorization: This rule is placed in RCRA Cluster VIII. The State modification deadline is July 1, 1999 (or July 1, 2000 if a State statutory change is necessary). All changes go into effect immediately because this rule was promulgated under HSWA authorities. Both interim and final authorization are available. Interim authorization expires January 1, 2003.

The State Revision Application must include applicable regulations, AG statement addendum, Revision Checklist 163, other associated checklists and other application materials, i.e., a program description and an MOA, as determined by the Regional office.

Attorney General's Statement Entry: The entry at Subsection XV (W) in the Model Revision Attorney General's Statement should be replaced with the following revised entry:

> W. State statutes and regulations provide for organic air emission standards for tanks, surface impoundments and containers and provide that air emission control requirements be added to the permit terms and provisions specified for miscellaneous units as specified in Revision Checklists 154 and 163.

Revision Checklist 163 Summary (cont'd)

Federal Authority: RCRA § 3004(n); 40 CFR 60 Appendix A, 260, 261, 262, 264, 265, and 270 as amended December 6, 1994 (59 FR 62896); May 19, 1995 (60 FR 26828); September 29, 1995 (60 FR 50426); November 13, 1995 (60 FR 56952); February 9, 1996 (61 FR 4903); June 5, 1996 (61 FR 28508); November 25, 1996 (61 FR 59932); and December 8, 1997 (62 FR 64636)

Incorporation by Reference Guidance:
There is no special guidance for States that incorporate by reference with respect to this checklist.

Revision Checklists 167 A-F Summary - Revised

Rule Title: Land Disposal Restrictions Phase IV – Treatment Standards for Metal Wastes and Mineral Processing Wastes; Mineral Processing Secondary Metals and Bevill Exclusion Issues; Treatment Standards for Hazardous Soils; and Exclusion of Recycled Wood Preserving Wastewaters

Checklist Title:

A. Land Disposal Restrictions Phase IV – Treatment Standards for Metal Wastes and Mineral Processing Wastes
B. Land Disposal Restrictions Phase IV – Hazardous Soils Treatment Standards and Exclusions
C. Land Disposal Restrictions Phase IV – Corrections
D. Mineral Processing Secondary Materials Exclusion
E. Bevill Exclusion Revisions and Clarification
F. Exclusion of Recycled Wood Preserving Wastewaters

Reference: 63 FR 28556-28753 and 63 FR 31266

Promulgation Date: May 26, 1998 and June 8, 1998

Effective Date: August 24, 1998 for May 26, 1998 rule, except for the following:

For definition of solid waste provisions at 261.2 and 261.4(a)(16)[1]: November 27, 1998 (non-HSWA).[2, 3]

For revision of the Bevill exclusion at 261.4(b): November 27, 1998 (non-HSWA).

For exclusion of recycled wood preserving wastewaters at 40 CFR 261.4(a)(9): May 26, 1998 (non-HSWA).

For prohibition on land disposal of wastes from elemental phosphorous processing and on mixed radioactive wastes at 40 CFR 268.34(b): May 26, 2000.

For land disposal restrictions treatment standards at 40 CFR 268.49 for soil contaminated with previously prohibited wastes: May 26, 1998 .

June 8, 1998 for June 8, 1998 correction.

Revision Checklist 167 A-F Summary (cont'd)

Cluster: RCRA Cluster VIII

Provision Type: HSWA/non-HSWA

Optional: Checklists 167 B, 167 D and 167 F are optional; portions of Checklists 167 A and 167 E are optional.

Summary: This rule addresses four interrelated areas associated with the land disposal restrictions:

(1) This rule promulgates new land disposal restriction treatment standards for wastes identified as hazardous because they exhibit the toxicity characteristic for metals. The universal treatment standards for 12 metal constituents are also revised.

(2) This rule establishes a land disposal prohibition and treatment standards for a group of newly identified hazardous wastes/mineral processing wastes that exhibit a characteristic of hazardous waste. This group includes not only those mineral processing wastes exhibiting the toxicity characteristic but also mineral processing wastes exhibiting the characteristics of ignitability (D001), corrosivity (D002) or reactivity (D003).

(3) This rule includes alternative treatment standards for soil that contains a listed hazardous waste or which exhibits a characteristic of hazardous waste.

(4) Finally, this rule clarifies certain portions of the land disposal restrictions as well as corrects typographical errors.

This rule address three changes to the scope of the hazardous waste program by revising or clarifying which materials are considered solid waste and/or hazardous waste:

Revision Checklist 167 A-F Summary (cont'd)

(1) This rule defines the circumstances when secondary materials generated within the primary mineral processing industry from which minerals, acids, cyanide, water or other values are recovered by mineral processing are excluded from the definition of solid waste. Note, however, that the U.S. D.C. Circuit Court of Appeals vacated the portion of this rule that attempted to regulate as waste certain sludges and by-products exhibiting a characteristic of hazardous waste that are not listed in 40 CFR 261.31 or 261.32.

(2) This rule also addresses issues related to whether materials are within the scope of the Bevill exclusion and allows secondary materials from mineral processing to be co-processed with normal raw materials in beneficiation operations which generate Bevill exempt wastes, without changing the exempt status of the resulting Bevill wastes, provided certain requirements are met.
(3) This rule provides an exclusion from RCRA jurisdiction for certain wood preserving wastewaters and spent wood preserving solutions when recycled.

There are some changes described in the preamble to the May 26, 1998 final rule which were not addressed in the amendments portion of the rule. For instance, on page 63 FR 28600, Column 1 of the May 26, 1998 final rule (63 FR 28556; Revision Checklist 167), it is stated that EPA "is revoking five remanded waste listings (K064, K065, K066, K090 and K091) because there is a lack of information demonstrating threats to human health or the environment that would justify a listing at this time". However, the Agency did not amend 40 CFR 261.32 (listings of hazardous wastes from specific sources) to remove the remanded wastes. EPA intends to issue a technical correction in the future, that will include an amendment to remove K064, K065, K066, K090 and K091 from 40 CFR 261.32. Note that these five K wastes will still be regulated under RCRA Subtitle C if they exhibit a hazardous waste characteristic.

Another example is where EPA explained that the rule includes changes that clarify that a previously promulgated exclusion from hazardous waste regulation for recycled shredded circuit boards also applies to whole circuit boards under certain conditions. The language of the exclusion was not actually modified in the amendments portion of the rule.

Impact of Court Decisions: Two decisions by the D.C. Circuit Court of Appeals have impacted this rule:

(1) As mentioned in the first paragraph of this summary, an April 21, 2000, court decision vacated a portion of this rule addressed by Revision Checklist 167D (63 FR 28556; May 26, 1998). Prior to the May 26, 1998, final rule, all reclaimed spent materials and scrap metal were classified as solid waste while reclaimed sludges and by-products were only classified as solid waste if they had been specifically listed as hazardous waste by EPA. The May 26, 1998, final rule attempted to expand the definition of solid waste to include non-listed, characteristic sludges and by-products generated within the primary mineral processing industry from which minerals, acids, cyanide, water or other values are recovered by mineral processing unless the secondary materials are handled in accordance with the

requirements in 40 CFR 261.4(a)(16). However, in the April 21, 2000, opinion, the court held that EPA cannot extend its authority to regulate these materials as solid waste simply because they are not stored prior to reclamation in accordance with the provisions promulgated at 40 CFR 261.4(a)(16). As such, the court set aside the parenthetical "(except as provided under 40 CFR 261.4(a)(16))" - to the second sentence, through which EPA attempted to expand its regulation of mineral processing secondary materials. (Association of Battery Recyclers, Inc. v. EPA, 208 F.3d 1047 (D.C. Cir. 2000)). Based on the wording of 40 CFR 261.4(a)(16), listed sludges and by-products are never excluded from the definition of solid waste; therefore, as a result of the court decision, only reclaimed spent materials are covered by the conditional exclusion in that provision.

(2) On April 9, 1999, the U.S. Court of Appeals for the District of Columbia, in Great Lakes Chemical Corporation versus EPA (Docket No. 98-1312), granted the U.S. Government's motion for a voluntary vacatur of the organobromine production wastes K140 and U408, which were added to the listings of hazardous wastes at 40 CFR 268.40 and 268.48 by the May 4, 1998 rule (63 FR 24596) as amended June 29, 1998 (63 FR 35147).

State Authorization: EPA places this rule in RCRA Cluster VIII. Except for the modifications to the definition of solid waste, definition of hazardous waste, and exclusions relative to wood preserving and mineral processing secondary materials, this rule was promulgated under HSWA authorities. Normally, all of the HSWA requirements would go into effect immediately. However, the new Land Disposal Restrictions (LDR) treatment standards for mineral processing wastes will not apply unless the wastes are currently included in the authorized State's definition of solid waste. As per the December 19, 1994 memorandum, the revisions to the existing Universal Treatment Standards (UTS) numbers will not be implemented under HSWA authority separately for those States which have received LDR authorization for a particular waste. EPA views these changes from the existing limits to be neither more or less stringent since the technology basis of the standards has not changed. Accordingly, EPA will not implement the amendments to the UTS in those States with authorization for the treatment standards. The requirement to treat Underlying Hazardous Constituents, however, applies in all States except those authorized for Phase II. EPA will also not implement the treatment standards for soil contaminated with hazardous waste, and the associated site-specific risk based variance provision for contaminated soils, in States that are authorized for existing standards (i.e., authorized for Phase II) because the new standards are less stringent than the existing standards. Both interim and final authorization are available for the HSWA provisions. Only final authorization is available for the non-HSWA requirements. EPA will implement the non-HSWA requirements only in States that do not have interim or final authorization. In authorized States, the non-HSWA requirements will not be applicable until the States revise their programs to adopt equivalent requirements under State law. The State modification deadline is July 1, 1999 (or July 1, 2000 if a State statutory change is necessary). Interim authorization expires January 1, 2003.

The changes to 261.2(c)(3), 261.2(c)(4), 261.2(e)(1)(iii), 261.4(a)(9) and 261.4(a)(16), as well as the changes relative to soils contaminated with hazardous waste, are considered by EPA to be less

stringent than the existing Federal regulations and are designated as optional on the checklist (with the exception of the vacated change to 261.2(c)(3) which added the parenthetical to the second sentence). EPA strongly encourages the adoption of these provisions in order for there to be national consistency, properly conduct material recovery by the wood preserving industry, and encourage cleanups of contaminated sites based on remedies involving treatment of contaminated soils.

States that choose to ignore the April 21, 2000, court decision and include the second parenthetical in 261.2(c)(3), will have a broader in scope program because the effect is to include materials that are not considered solid waste by EPA. If a State has already adopted this language but does not wish to be broader in scope, the second parenthetical may be removed and the change addressed as a state-initiated change in the next authorization application package.

If a State chooses to follow the April 9, 1999 vacatur, it should remove the vacated wastes in the tables at 40 CFR 268.40 and 268.48. If the vacatur is not followed by a State, then the vacated wastes should remain as shown in the May 26, 1998 rule in tables 40 CFR 268.40 and 268.48. Note, in this latter case, that the State's regulations will be broader in scope to the extent that the wastes addressed by this listing are not hazardous under the hazardous waste characteristic criteria. The State's regulations will also be more stringent because certain requirements, regarding mixtures and when wastes are no longer hazardous are more stringent for listed hazardous wastes than for characteristic hazardous wastes.

To accommodate this rule's broad scope, EPA has broken it into a series of six checklists to allow States to choose those portions of the rule they want to adopt. This organization will also allow better tracking of those portions of the RCRA program for which States are authorized. The first three checklists deal with Land Disposal Restrictions Phase IV, with the first checklist (CL 167 A) addressing treatment standards for TC metal wastes and mineral processing wastes. This checklist is not optional and addresses only HSWA provisions. The second checklist (CL 167 B) addresses hazardous soil treatment standards and exclusions. It is optional and includes only HSWA provisions. The third checklist (CL 167 C) addresses corrections to the existing land disposal restrictions provision and also addresses only HSWA provisions. The fourth checklist (CL 167 D) addressing the exclusion of mineral processing secondary materials is both optional and addresses only non-HSWA provisions. The fifth checklist (167 E) deals with revisions and clarification to the Bevill Exclusion. The sixth and final checklist (CL 167 F) addresses the exclusion of recycled wood preserving wastewaters, is optional and addresses only non-HSWA provisions.

The State Revision Application must include applicable regulations, AG statement addendum, Revision Checklist 167(A-F), other associated checklists, and other application materials (i.e., a program description and an MOA) as determined by the Regional office.

Revision Checklist 167 A-F Summary (cont'd)

Attorney General's Statement Entry: The following entries should be placed at Subsections I (OO) and (PP) in the Model Attorney General's Statement.

OO. [OPTIONAL: This is a reduced requirement.] State statutes and regulations provide for secondary materials from mineral processing to be co-processed with normal raw materials in beneficiation operations which generate Bevill exempt wastes, without changing the exempt status of the resulting Bevill waste, provided certain conditions are met as indicated in Revision Checklist 167 E.

Federal Authority: RCRA §3001; 40 CFR 261.4(b)(7) as amended May 26, 1998 (63 FR 28556).

Citation of Laws and Regulations; Date of Enactment and Adoption

Remarks of the Attorney General

PP. State statutes and regulations contain clarifying amendments to requirements regarding exclusion of mixtures under 261.4(b)(7) involving Bevill waste, as indicated in Revision Checklist 167 E.

Federal Authority: RCRA §3001; 40 CFR 261.3(a)(2)(i)&(iii) as amended May 26, 1998 (63 FR 28556).

Citation of Laws and Regulations; Date of Enactment and Adoption

Remarks of the Attorney General

The following entries should be placed at Subsections II (D) & (E) in the Model Attorney General's Statement.

D. [OPTIONAL: This is a reduced requirement.] State statutes and regulations provide for a conditional exclusion from the definition of solid wastes for mineral processing spent materials as indicated in Revision Checklist 167 D.

Federal Authority: RCRA §3001; 40 CFR 261.2(c)(3), 261.2(c)(4) Table 1, 261.2(e)(1)(iii) and 261.4(a)(16) as amended May 26, 1998 (63 FR 28556).

Citation of Laws and Regulations; Date of Enactment and Adoption

Remarks of the Attorney General

Revision Checklist 167 A-F Summary (cont'd)

E. [OPTIONAL: This is a reduced requirement.] State statutes and regulations provide for an exclusion from the definition of solid waste for certain materials generated and recycled by the wood preserving industry as indicated in Revision Checklist 167 F.

Federal Authority: RCRA §3001; 40 CFR 261.4(a)(9)(iii) as amended May 26, 1998 (63 FR 28556).

Citation of Laws and Regulations; Date of Enactment and Adoption

Remarks of the Attorney General

The following entries should be placed at Subsections XXI (DD)-(GG) in the Model Attorney General's Statement.

DD. State statutes and regulations include prohibitions and treatment standards for metal hazardous constituents in all hazardous wastes including the toxic characteristic wastes as indicated in Revision Checklist 167 A.

Federal Authority: RCRA §§3004(g)(4) and (m); 40 CFR 268.2(i), 268.3(d), 268.34, 268.40(e)&(h), 268.40 table, and 268.48 as amended May 26, 1998 (63 FR 28556).

Citation of Laws and Regulations; Date of Enactment and Adoption

Remarks of the Attorney General

EE. State statutes and regulations include treatment standards for mineral processing wastes as indicated in Revision Checklist 167 A.

Federal Authority: RCRA §§3004(g)(4) and (m); 40 CFR 268.40 and 268.48 as amended May 26, 1998 (63 FR 28556).

Citation of Laws and Regulations; Date of Enactment and Adoption

Remarks of the Attorney General

FF. [OPTIONAL: This is a reduced requirement.] State statutes and regulations include treatment standards for contaminated soils as indicated in Revision Checklist 167 B.

Federal Authority: RCRA §§3004(d)-(k) and (m); 40 CFR 268.2(k), 268.7(a)(1)-(6), 268.7(b)(1)-(3), 268.7(b)(4) intro, 268.7(e), 268.44(h)(3)-(5), 268.49 as amended May 26, 1998 (63 FR 28556).

Citation of Laws and Regulations; Date of Enactment and Adoption

Remarks of the Attorney General

The following entry should be placed at Subsection XXI (GG) in the Model Attorney General's Statement.

GG. State statutes and regulations include corrections and clarifications to the land disposal restrictions as indicated in Revision Checklist 167 C.

Federal Authority: RCRA §§3004(d)-(k) and (m); 40 CFR 268.4(a)(2)(ii)&(iii), 268.7(a)(7), 268.7(b)(3)(ii)/Table, 268.7(b)(4)(iv)&(v), 268.7(b)(5)&(6), 268.40/Table, 268.40(e), 268.42(a), 268.45(a) intro, 268.45(d)(3)&(4), 268.48, 268 Appendices VII & VIII as amended May 26, 1998 (63 FR 28556) and June 8, 1998 (63 FR 31266).

Citation of Laws and Regulations; Date of Enactment and Adoption

Remarks of the Attorney General

Incorporation by Reference Guidance:

States choosing to follow the April 9, 1999 vacatur should exclude from their incorporation by reference the following entries:

1. the entries for K140 and U408 in the table at 40 CFR 268.40; and

2. the entry for 2,4,6-Tribromophenol in the table at 40 CFR 268.48(a).

States choosing not to follow the vacatur should not exclude the entries listed above. It should be noted that this makes the State more stringent and broader in scope as explained in the summary above. This should be noted in the Attorney General's Statement submitted with the authorization package containing this Revision Checklist.

State choosing to recognize the April 21, 2000, opinion of the D.C. Circuit Court of Appeals should exclude from their incorporation by reference the parenthetical to the second sentence in 40 CFR 261.2(c)(3). States choosing to include the parenthetical are broader in scope as explained in the

summary above. This should be noted in the Attorney General's Statement submitted with the authorization package containing this Revision Checklist.

At 261.4(a)(9)(iii)(E), States should replace the phrases "appropriate Regional Administrator or State Director" with the applicable State notification authority.

[1] Note there are typographical errors in 40 CFR 261.2 and 261.4(a)(16) provisions as amended by this rule. The provisions refer to 261.4(a)(15) rather than 261.4(a)(16) as they should. Revision Checklist 179 (64 FR 25408-25417; May 11, 1999) has redesignated 261.4(a)(16) as 261.4(a)(17).

[2] For the list of correct effective dates, see the memorandum entitled "Phase IV Land Disposal Restrictions Rule -- Clarification of Effective Dates", signed by Elizabeth Cotsworth, Acting Director, Office of Solid Waste, U.S. EPA, and dated October 19, 1998 (attached). On August 10, 1998, a final rule/correction of effective date and technical amendments was promulgated which affects CL 165 (rules promulgated May 4, 1998 and June 29, 1998) and CL 167 (rule promulgated May 26, 1998). The affected entries in CL 165 are the 268.40 and 268.48 tables. However, CL 167 includes the corrections to the affected tables in CL 165. Therefore, States should treat CL 167 as being later in time than the August 10, 1998 rule because the correct entries were included in the tables which were revised and reprinted entirely by the May 26, 1998 rule (CL 167). However, there is an error in the 268.40 Table as reprinted (rule promulgated May 26, 1998, 63 FR 28556, 28737) in which the CAS number for U408 listed as 111-79-6 should be 118-79-6. The August 10, 1998 rule affected the effective dates of CL 167. The correct effective dates for CL 167 are set forth in the memorandum cited at the beginning of this endnote.

[3] These provisions relating to the definition of solid waste apply only in unauthorized States.

Revision Checklist 170 Summary

Rule Title:	Hazardous Waste Recycling; Land Disposal Restrictions; Final Rule
Checklist Title:	Land Disposal Restrictions Phase IV -- Zinc Micronutrient Fertilizers, Administrative Stay
Reference:	63 FR 46332-46334
Promulgation Date:	August 31, 1998
Effective Date:	August 21, 1998
Cluster:	RCRA Cluster IX
Provision Type:	HSWA
Linkage:	Revision Checklists 167A and 179
Optional:	Yes

Summary: On May 26, 1998 (63 FR 28556), EPA published an amendment to the Land Disposal Restriction treatment standards for metal-bearing hazardous wastes which exhibit the characteristic of toxicity (developed as Revision Checklist 167, commonly referred to as the Phase IV rule). The Agency believes that the new, Phase IV treatment standards in that rule are not well suited for zinc micronutrient fertilizers and that the new standards could result in greater use of zinc fertilizers that contain relatively higher concentrations of hazardous constituents. EPA expects to develop a more consistent and comprehensive approach to regulating hazardous waste-derived fertilizers, and currently intends to leave this amendment, which places an administrative stay on the new treatment standards, in place until those new regulations are adopted. In the interim, the fertilizers affected by this amendment would remain subject to the previous treatment standards for toxic metals found at 40 CFR 268.41 in the July 1, 1990 edition of the CFR.

State Authorization: This rule is placed in RCRA Cluster IX. The State modification deadline is July 1, 2000 (or July 1, 2001 if a State statutory change is necessary). For States adopting this checklist, all changes go into effect immediately because this rule was promulgated under HSWA authorities. Both interim and final authorization are available. Interim authorization expires January 1, 2003.

The State Revision Application must include applicable regulations, AG statement addendum, Revision Checklist 170, other associated checklists and other application materials, i.e., a program description and an MOA, as determined by the Regional office.

Attorney General's Statement Entry: The following entry should be placed at Subsection XXI (II) in the Model Revision Attorney General's Statement.

> II. [OPTIONAL: This is a reduced requirement.] State statutes and regulations stay the May 26, 1998 Phase IV Land Disposal Restriction treatment standards for metal-bearing hazardous wastes which exhibit the characteristic of toxicity, until EPA develops more consistent and comprehensive regulations for hazardous waste-derived fertilizers. In the interim, affected fertilizers are subject

to the treatment standards that previously existed for toxic metals as specified on Revision Checklist 170.

Federal Authority: RCRA §§3001 and 3004(d), 40 CFR 268.40(i), as amended August 31, 1998 (63 FR 46332).

Citation of Laws and Regulations; Date of Enactment and Adoption

Remarks of the Attorney General.

Incorporation by Reference Guidance: There is no special guidance for States that incorporate by reference with respect to this checklist.

Revision Checklist 171 Summary

Rule Title:	Emergency Revision of the Land Disposal Restrictions (LDR) Treatment Standards for Listed Hazardous Wastes from Carbamate Production
Checklist Title:	Emergency Revision of the Land Disposal Restrictions (LDR) Treatment Standards for Listed Hazardous Wastes from Carbamate Production
Reference:	63 FR 47410-47418
Promulgation Date:	September 4, 1998
Effective Dates:	August 26, 1998 for the rule
Compliance Dates:	Treatment standards for the wastes specified in 40 CFR 261.33 as P185, P191, P192, P197, U364, U394, and U395; August 26, 1998. The existing alternative standards of 40 CFR 268.40(g) continue to apply until March 4, 1999 . The numerical standards specified in 40 CFR 268.40 for the wastes specified in 261.33 as K156-K159, and K161, and in 261.33 as P127, P128, P185, P188-P192, P194, P196-P199, P201-P205, U271, U278-U280, U364, U367, U372, U373, U387, U389, U394-U395, U404, and U409-U411 and the numerical standards associated with the waste constituents in 268.48; March 4, 1999.
Cluster:	RCRA Cluster IX
Provision Type:	HSWA
Linkage:	Revision Checklists 151, 161, and 179
Optional:	No

Summary: This rule revises the waste treatment standards applicable to 40 waste constituents associated with the production of carbamate wastes. First, the rule establishes revised treatment standards for seven specific carbamate waste constituents (A2213; bendiocarb phenol; diethylene glycol, dicarbamate; dimetilan; formparanate; isolan; and tirpate) for which there are no available analytical reference standards. The revised treatment standards for the seven hazardous waste constituents are effective immediately; they extend indefinitely the temporary alternative treatment standards previously in effect, which expired on August 26, 1998. This rule also deletes the treatment standard for one additional constituent (o-phenylenediamine) for which available analytical methods do not achieve reliable measurements.

Secondly, this rule deletes the eight affected carbamate waste constituents listed above as underlying hazardous constituents.

Revision Checklist 171 Summary (cont'd)

Thirdly, the rule extends for an additional six months (until March 4, 1999), the temporary alternative treatment standards for 32 carbamate waste constituents that expired on August 26, 1998.

State Authorization: This rule is placed in RCRA Cluster IX. The State modification deadline is July 1, 2000 (or July 1, 2001 if a State statutory change is necessary). All changes go into effect immediately because this rule was promulgated under HSWA authorities. Both interim and final authorization are available. Interim authorization expires January 1, 2003.

The State Revision Application must include applicable regulations, AG statement addendum, Revision Checklist 171, other associated checklists and other application materials, i.e. a program description and an MOA, as determined by the Regional office.

Attorney General's Statement Entry: The following entry should be placed at Subsection XXI (JJ) in the Model Revision Attorney General's Statement.

> JJ. State statutes and regulations provide revised treatment standards for seven carbamate wastes and extend indefinitely the temporary treatment standards; remove the treatment standard for one carbamate waste; delete certain carbamate wastes as underlying hazardous constituents; and extend for six months the temporary alternative treatment standards for the other 32 carbamate wastes as indicated in Revision Checklist171.

Revision Checklist 172 Summary

Rule Title:	Characteristic Slags Generated From Thermal Recovery of Lead by Secondary Lead Smelters; Land Disposal Restrictions; Final Rule; Extension of Compliance Date
Checklist Title:	Land Disposal Restrictions Phase IV -- Extension of Compliance Date for Characteristic Slags
Reference:	63 FR 48124-48127
Promulgation Date:	September 9, 1998
Effective Dates:	August 28, 1998
Cluster:	RCRA Cluster IX
Provision Type:	HSWA
Linkage:	Revision Checklist 167A
Optional:	Yes

Summary: This rule extends the compliance date until November 26, 1998 for a limited portion of the Phase IV Final Rule (63 FR 28556). The Phase IV Final Rule amended the Land Disposal Restriction treatment standards for metal-bearing hazardous wastes exhibiting the toxicity characteristic. This action extends the date for treatment standards only for secondary lead slags exhibiting the toxicity characteristic for one or more metals that are generated from thermal recovery of lead-bearing wastes (principally batteries). This action is being taken because of potential short term logistical difficulties that may result in a temporary shortage of available treatment capacity for these particular wastes. In the interim, the affected wastes are still subject to the treatment standards for TC metals set forth in the Third Third Final Rule (55 FR 22520).

State Authorization: This rule is placed in RCRA Cluster IX. The State modification deadline is July 1, 2000 (or July 1, 2001 if a State statutory change is necessary). All changes go into effect immediately because this rule was promulgated under HSWA authorities. Both interim and final authorization are available. Interim authorization expires January 1, 2003.

The State Revision Application must include applicable regulations, AG statement addendum, Revision Checklist 172, other associated checklists and other application materials, i.e. a program description and an MOA, as determined by the Regional office.

Attorney General's Statement Entry: The following entry should be placed at Subsection XXI (KK) in the Model Revision Attorney General's Statement.

> KK. State statutes and regulations provide for an extension of the compliance date until November 26, 1998, for treatment standards for secondary lead slags that exhibit the toxicity characteristic for metals as indicated in Revision Checklist172.
>
> Federal Authority: RCRA § 3004(d)-(k) & (m); 40 CFR 268.34(b) as amended September 9, 1998 (63 FR 48124).

Revision Checklist 172 Summary (cont'd)

Citation of Laws and Regulations; Date of Enactment and Adoption

Remarks of the Attorney General

Incorporation by Reference Guidance:

The date in 268.34(b) should not be replaced with a State effective date.

Revision Checklist 173 Summary

Rule Title:	Land Disposal Restrictions: Treatment Standards for Spent Potliners from Primary Aluminum Reduction (K088); Final Rule
Checklist Title:	Land Disposal Restrictions – Treatment Standards for Spent Potliners from Primary Aluminum Reduction (K088); Final Rule
Reference:	63 FR 51254-51267.
Promulgation Date:	September 24, 1998
Effective Date:	September 21, 1998
Cluster:	RCRA Cluster IX
Provision Type:	HSWA
Linkage:	Revision Checklists 151, 155, 160, and 179
Optional:	No

Summary: EPA is announcing interim replacement standards for spent potliners from primary aluminum reduction (EPA hazardous waste K088) under its Land Disposal Restrictions program. Spent potliners will now be prohibited from land disposal unless the wastes have been treated in compliance with the numerical standards contained within this rule. The newly promulgated treatment standards will be in place until EPA has fully reviewed all information on all treatment processes which may serve as a basis for a more permanent revised standard. In addition, EPA has extended the K088 national capacity variance until September 21, 1998.

State Authorization: EPA places this rule in RCRA Cluster IX. All changes go into effect immediately because this rule was promulgated under HSWA authorities. Both interim and final authorization are available. Interim authorization expires January 1, 2003.

The State Revision Application must include applicable regulations, AG statement addendum, Revision Checklist 173, other associated checklists and other application materials, i.e., a program description and an MOA, as determined by the Regional office.

Attorney General's Statement Entry: The entry at Subsection XXI (U) should be replaced with the following entry:

U. State statutes and regulations provide for an extension of the national capacity variance for spent potliners from primary aluminum production (Hazardous Waste Number K088) so that K088 wastes do not have to be treated to meet LDR treatment standards until September 21, 1988, as indicated in Revision Checklists 155, 160, and 173.

Federal Authority: RCRA §3004(d)-(k), and (m), 40 CFR 268.39(c) as amended January 14, 1997 (62 FR 1992), July 14, 1997 (62 FR 37694), and September 24, 1998 (63 FR 51254).

Revision Checklist 173 Summary (cont'd)

The following entry should be placed at Subsection XXI (LL) in the Model Attorney General's Statement.

LL. State statutes and regulations provide for interim replacement standards for spent potliners from primary aluminum reduction (EPA hazardous waste K088) as indicated in Revision Checklist 173.

Federal Authority: RCRA §3004(d)-(k), and (m); 40 CFR 268.40, as amended September 24, 1998 (63 FR 51254).

Citation of Laws and Regulations; Date of Enactment and Adoption

Remarks of the Attorney General

Incorporation by Reference Guidance:

The date in 40 CFR 268.39(c) should not be replaced with a State effective date.

Revision Checklist 177 Summary

Rule Title:	Hazardous Waste Treatment, Storage, and Disposal Facilities and Hazardous Waste Generators; Organic Air Emission Standards for Tanks, Surface Impoundments, and Containers
Checklist Title:	Organic Air Emission Standards: Clarification and Technical Amendments
Reference:	64 FR 3382
Promulgation Date:	January 21, 1999
Effective Date:	January 21, 1999
Cluster:	RCRA Cluster IX
Provision Type:	HSWA
Linkage:	Revision Checklists 154 and 163
Optional:	No

Summary: Previously, the EPA set standards to reduce organic air emissions from certain hazardous waste management activities to levels that are protective of human health and the environment (59 FR 62896, December 6, 1994; see Revision Checklist 154 for a complete history). The standards were amended by the December 8, 1997 rule (62 FR 64636-64671, Revision Checklist 163), in response to public comments and inquiries. Today's amendments clarify certain regulatory text and reinstate certain regulatory provisions that were previously contained in the rules and later inadvertently removed.

State Authorization: This rule is placed in RCRA Cluster IX. The State modification deadline is July 1, 2000 (or July 1, 2001 if a State statutory change is necessary). All changes go into effect immediately because this rule was promulgated under HSWA authorities. Both interim and final authorization are available. Interim authorization expires January 1, 2003.

The State Revision Application must include applicable regulations, AG statement addendum, Revision Checklist 177, other associated checklists and other application materials, i.e., a program description and an MOA, as determined by the Regional office.

Attorney General's Statement Entry: The entry at Subsection XV (W) in the Model Revision Attorney General's Statement should be replaced with the following revised entry:

> W. State statutes and regulations provide for organic air emission standards for tanks, surface impoundments and containers and provide that air emission control requirements be added to the permit terms and provisions specified for miscellaneous units as specified in Revision Checklists 154, 163 and 177.

Federal Authority: RCRA § 3004(n); 40 CFR 60 Appendix A, 260, 261, 262, 264, 265, and 270 as amended December 6, 1994 (59 FR 62896); May 19, 1995 (60 FR

26828); September 29, 1995 (60 FR 50426); November 13, 1995 (60 FR 56952); February 9, 1996 (61 FR 4903); June 5, 1996 (61 FR 28508); November 25, 1996 (61 FR 59932); December 8, 1997 (62 FR 64636); and January 21, 1999 (64 FR 3382).

Citation of Laws and Regulations; Date of Enactment and Adoption

Remarks of the Attorney General

Incorporation by Reference Guidance: There is no special guidance for States that incorporate by reference with respect to this checklist.

Revision Checklist 179 Summary - Revised

Rule Title:	Land Disposal Restrictions -- Phase IV: Treatment Standards for Wood Preserving Wastes, Treatment Standards for Metal Wastes, Zinc Micronutrient Fertilizers, Carbamate Treatment Standards, and K088 Treatment Standards; Final Rule
Checklist Title:	Land Disposal Restrictions Phase IV -- Technical Corrections and Clarifications to Treatment Standards
Reference:	64 FR 25408-25417
Promulgation Date:	May 11, 1999
Effective Date:	May 11, 1999
Cluster:	RCRA Cluster IX
Provision Type:	HSWA/non-HSWA
Linkage:	Revision Checklists 157, 167A-E, 170, 171, and 173
Optional:	No

Summary: This rule clarifies and/or makes technical corrections to the following five final rules published by EPA:

(1) May 12, 1997, regulations promulgating Land Disposal Restrictions (LDR) treatment standards for wood preserving wastes, as well as reducing the paperwork burden for complying with LDRs (Revision Checklist 157);

(2) May 26, 1998, regulations promulgating LDR treatment standards for metal-bearing wastes, as well as amending the LDR treatment standards for soil contaminated with hazardous waste, and amending the definition of which secondary materials from mineral processing are considered to be wastes subject to the LDRs (Revision Checklist 167A-E);

(3) August 31, 1998, an administrative stay of the metal-bearing waste treatment standards as they apply to zinc micronutrient fertilizers (Revision Checklist 170);

(4) September 4, 1998, an emergency revision of the LDR treatment standards for hazardous wastes from the production of carbamate wastes (Revision Checklist 171); and,

(5) September 24, 1998, revised treatment standards for spent aluminum potliners from primary aluminum production (Revision Checklist 173).

State Authorization: This rule is placed in RCRA Cluster IX. The State modification deadline is July 1, 2000 (or July 1, 2001 if a State statutory change is necessary).

The revisions to 262.34(d)(4), 268.2(h), 268.2(k), 268.7(a)(4)/Table, 268.7(b)(3)(ii)/Table, 268.7(b)(4)(iv), 268.9(d)(2) intro, 268.9(d)(2)(i), 268.40(i), 268.40(j), 268.40/Table, 268.48(a)/Table, 268.49(c)(3) intro, 268.49(c)(3)(A)&(B) are made pursuant to HSWA. These regulations go into effect on the Federal effective date in all States. The revisions to 261.2(c)(3), 261.2(c)(4)/Table, 261.2(e)(1)(iii), first paragraph 261.4(a)(16), 261.4(a)(17)intro & (v), and 261.4(b)(7)(iii)&(iii)(A) are made related to non-HSWA authority. EPA will implement these requirements only in States that do not have interim or final authorization. In authorized States, the non-

Revision Checklist 179 Summary (cont'd)

HSWA requirements will not be applicable until the States revise their programs to adopt equivalent requirements under State law, unless the wastes are designated as hazardous due to the Toxicity Characteristic, which was promulgated relative to HSWA. In this latter case, the requirements relative to such wastes would become effective in all States on the rule's effective date. Both interim and final authorization are available for the HSWA provisions. Interim authorization expires January 1, 2003. Only final authorization is available for the non-HSWA provisions.

Note that the provisions at 261.2 and 261.4(a) that are amended by this checklist were previously amended by Revision Checklist 167 D (May 26, 1998; 63 FR 28556). An April 21, 2000, court decision set aside the parenthetical "(except as provided under 40 CFR 261.4(a)(16))" - to the second sentence, through which EPA attempted to expand its regulation of mineral processing secondary materials. (Association of Battery Recyclers, Inc. v. EPA, 208 F.3d 1047 (D.C. Cir. 2000)). As such, Revision Checklist 167 D and this checklist have been revised to reflect the court decision by only referring to the parenthetical added to the first sentence. States that have elected to ignore the April 21, 2000, court decision and include the second parenthetical in 261.2(c)(3), will have a broader in scope program because the effect is to include materials that are not considered solid waste by EPA.

The State Revision Application must include applicable statutes and regulations, Revision Checklist 179, and other application materials, i.e. a supplemental AG statement, a program description, and/or an MOA, as determined by the Regional office. Note that under 271.21(b), the Regional office is allowed flexibility to determine what specific documents must be included in an application. Also, under 40 CFR 271.21(d), the Regional office may require the submission of any additional application materials it deems necessary.

Attorney General's Statement Entries: The entry at Subsection I (OO) in the Model Revision Attorney General's Statement should be replaced with the following revised entry:

> OO. [OPTIONAL: This is a reduced requirement.] State statutes and regulations provide for secondary materials from mineral processing to be co-processed with normal raw materials in beneficiation operations which generate Bevill exempt wastes, without changing the exempt status of the resulting Bevill waste, provided certain conditions are met as indicated in Revision Checklists 167 E and 179.

The entry at Subsection XXI (JJ) in the Model Revision Attorney General's Statement should be replaced with the following revised entry:

> JJ. State statutes and regulations provide revised treatment standards for seven carbamate wastes and extend indefinitely the temporary treatment standards; remove the treatment standard for one carbamate waste; delete certain carbamate wastes as underlying hazardous constituents; and extend for six months the temporary alternative treatment standards for the other 32 carbamate wastes as indicated in Revision Checklists 171 and 179.

Revision Checklist 179 Summary (cont'd)

Federal Authority: RCRA § 3004(d)-(k) and (m); 40 CFR 268.40(g)-(j), 268.40/Table, and 268.48(a)/Table as amended September 4, 1998 (63 FR 47410) and May 11, 1999 (64 FR 25408).

Citation of Laws and Regulations; Date of Enactment and Adoption

Remarks of the Attorney General

The entry at Subsection XXI (LL) in the Model Revision Attorney General's Statement should be replaced with the following revised entry:

LL. State statutes and regulations provide for interim replacement standards for spent potliners from primary aluminum reduction (EPA hazardous waste K088) as indicated in Revision Checklists 173 and 179.

Federal Authority: RCRA §3004(d)-(k), and (m); 40 CFR 268.40, as amended September 24, 1998 (63 FR 51254) and May 11, 1999 (64 FR 25408).

Citation of Laws and Regulations; Date of Enactment and Adoption

Remarks of the Attorney General

Incorporation by Reference Guidance: As explained in the state authorization section of this summary and in the summary for Revision Checklists 167 A-E, States choosing to include the parenthetical to the second sentence as introduced by Revision Checklist 167D are broader in scope; this should be noted in the Attorney General's Statement submitted with the authorization package containing this Revision Checklist. States electing not to be broader in scope should recognize the April 21, 2000, opinion of the D.C. Circuit Court of Appeals by excluding from their incorporation by reference the parenthetical to the second sentence in 40 CFR 261.2(c)(3).

Revision Checklist 183 Summary

Rule Title:	Land Disposal Restrictions Phase IV: Final Rule Promulgating Treatment Standards for Metal Wastes and Mineral Processing Wastes; Mineral Processing Secondary Materials and Bevill Exclusion Issues; Treatment Standards for Hazardous Soils, and Exclusion of Recycled Wood Preserving Wastewaters
Checklist Title:	Land Disposal Restrictions Phase IV -- Technical Corrections
Reference:	64 FR 56469-56472
Promulgation Date:	October 20, 1999
Effective Date:	October 20, 1999
Cluster:	RCRA Cluster X
Provision Type:	HSWA/Non-HSWA
Linkage:	157, 167 B, 167 C, 171, 173, 179
Optional:	No; however, some provisions are optional

Summary: This rule corrects two minor typographical errors and one omission in the May 11, 1999 technical amendment (Revision Checklist 179; 64 FR 25408) to the Phase IV Land Disposal Restrictions (LDR). This rule also corrects three errors in the May 26, 1998 LDR Phase IV final rule (Revision Checklist 167; 63 FR 28556).

State Authorization: This rule is placed in RCRA Cluster X. The State modification deadline is July 1, 2001 (or July 1, 2002 if a State statutory change is necessary).

The revisions to 262.34(a)(4), 268.7(a)(3)(iii), 268.40(j), 268.40 Table, 268.49(c)(1)(A) and 268.49(c)(1)(B) are promulgated pursuant to HSWA authorities. There are HSWA revisions that are considered more stringent than the existing Federal regulations as well as HSWA revisions that are considered less stringent than the existing Federal regulations. An authorized State is required to adopt Federal regulations that are more stringent than the authorized State regulations. These required HSWA revisions take effect in an authorized State on the Federal effective date. A State is not required to modify its program when EPA promulgates Federal regulations that are less stringent than the authorized State regulations. As such, optional revisions are not effective under HSWA in an authorized State until the State adopts and receives authorization for the changes. The revisions to 261.32 are promulgated pursuant to non-HSWA authorities. The non-HSWA changes do not go into effect in an authorized State until the State adopts and receives authorization for the revisions. Both interim and final authorization are available for the HSWA provisions. Interim authorization expires January 1, 2003. Only final authorization is available for the non-HSWA provisions.

The State Revision Application must include applicable statutes and regulations, Revision Checklist 183, and other application materials, i.e. a supplemental AG statement, a program description, and/or an MOA, as determined by the Regional office. Note that under 271.21(b), the Regional office is allowed flexibility to determine what specific documents must be included in an application. Also, under

Revision Checklist 183 Summary (cont'd)

271.21(d), the Regional office may require the submission of any additional application materials it deems necessary.

Attorney General's Statement Entry: The following entry should be placed at Subsection I (A)(32) in the Model Revision Attorney General's Statement.

(32) [OPTIONAL: This is a reduced requirement.] Removal of five vacated K-code wastes (K064, K065, K066, K090, and K091) from table at 40 CFR 261.32, as amended October 20, 1999 [64 FR 56469], Revision Checklist 183.

The entries at Subsection XXI (W), (FF), (JJ), and (LL) in the Model Revision Attorney General's Statement should be replaced with the following revised entries.

W. [OPTIONAL: This is a reduced requirement.] State statutes and regulations include revisions of record keeping and paperwork requirements indicated in Revision Checklists 157, 167 C, 179, and 183.

Federal Authority: RCRA §§3004(d)-(k) and (m); 40 CFR 262.34(a)(4), 262.34(d)(4), 268.4(a)(4), 268.7(a)-(b)(6), 268.7(c)(1), 268.9(d)(2) intro, and 268.9(d)(2)(i) as amended May 12, 1997 (62 FR 25998), May 26, 1998 (63 FR 28556), May 11, 1999 (64 FR 25408), and October 20, 1999 (64 FR 56469).

Citation of Laws and Regulations; Date of Enactment and Adoption

Remarks of the Attorney General

FF. [OPTIONAL: This is a reduced requirement.] State statutes and regulations include treatment standards for contaminated soils as indicated in Revision Checklists 167 B, 179, and 183.

Federal Authority: RCRA §§3004(d)-(k) and (m); 40 CFR 268.2(k), 268.7(a)(1)-(6), 268.7(b)(1)-(3), 268.7(b)(4) intro, 268.7(b)(4)(iv), 268.7(e), 268.44(h)(3)-(5), and 268.49 as amended May 26, 1998 (63 FR 28556), May 11, 1999 (64 FR 25408), and October 20, 1999 (64 FR 56469).

Incorporation by Reference Guidance: There is no special guidance for States that incorporate by reference.

Revision Checklist 185 Summary

Rule Title:	Organobromine Production Wastes; Identification and Listing of Hazardous Waste; Land Disposal Restrictions; Listing of CERCLA Hazardous Substances, Reportable Quantities; Final Rule
Checklist Title:	Vacatur of Organobromine Production Waste Listings
Reference:	65 FR 14472-14475
Promulgation Date:	March 17, 2000
Effective Date:	March 17, 2000
Cluster:	RCRA Cluster X
Provision Type:	HSWA
Linkage:	165 (withdrawn)
Optional:	Yes

Summary: EPA is amending its regulations to conform with an order issued on April 9, 1999 by the United States Court of Appeals for the D.C. Circuit in *Great Lakes Chemical Corporation v. EPA* [Docket No. 98-1312] that vacated Agency regulations listing certain organobromine wastes as hazardous wastes under RCRA (63 FR 24596; withdrawn Revision Checklist 165). The land disposal restrictions treatment standards of 40 CFR part 268 are also modified by deleting these wastes and their associated treatment standards. The vacated Federal hazardous waste listings and regulatory requirements based on those listings are to be treated as though they were never in effect. State regulations, which may be more stringent than Federal rules, were not necessarily affected by the court's ruling. Due to the vacatur, EPA withdrew Revision Checklist 165. Therefore, this revision checklist is only relevant for States that have already adopted the final rule addressed by withdrawn Revision Checklist 165 and wish to amend their regulations to conform to the vacatur.

State Authorization: This rule is placed in RCRA Cluster X. The State modification deadline is July 1, 2001 (or July 1, 2002 if a State statutory change is necessary). This rule was promulgated under HSWA authorities. The rule contains revisions that are considered less stringent than the existing Federal regulations. A State is not required to modify its program when EPA promulgates Federal regulations that are less stringent than the authorized State regulations. As such, optional revisions are not effective under HSWA in an authorized State until the State adopts and receives authorization for the changes. Both interim and final authorization are available. Interim authorization expires January 1, 2003.

The State Revision Application must include applicable statutes and regulations, Revision Checklist 185, and other application materials, i.e., a supplemental AG statement, a program description, and/or an MOA, as determined by the Regional office. Note that under 271.21(b), the Regional office is allowed flexibility to determine what specific documents must be included in an application. Also, under 271.21(d), the Regional office may require the submission of any additional application materials it deems necessary.

Revision Checklist 185 Summary (cont'd)

Attorney General's Statement Entry: The following entry should be placed at Subsection I(A)(33) in the Model Revision Attorney General's Statement.

(33) [OPTIONAL: This is a reduced requirement.] Removal of two vacated wastes (K140 and U408) from tables at 40 CFR 261.32, 261.33(f), and Part 261 Appendices VII and VIII , as amended March 17, 2000 [65 FR 14472], Revision Checklist 185.

The following entry should be placed at Subsection XXI (MM) in the Model Revision Attorney General's Statement.

MM. [OPTIONAL: This is a reduced requirement.] State statutes and regulations include the removal of a waste-specific prohibition and treatment standards for K140 and U408 wastes under the land disposal restrictions program as indicated in Revision Checklist 185.

Federal Authority: RCRA §3004(d)-(k) and (m); 40 CFR 268.33, 268.40, and 268.48(a)/Table as amended March 17, 2000 (65 FR 14472).

Citation of Laws and Regulations; Date of Enactment and Adoption

Remarks of the Attorney General

Incorporation by Reference Guidance: There is no special guidance for States that incorporate by reference with respect to this checklist.

Revision Checklist 187 Summary

Rule Title:	Organobromines Production Wastes; Petroleum Refining Wastes; Identification and Listing of Hazardous Waste; Land Disposal Restrictions; Final Rule and Correcting Amendments
Checklist Title:	Petroleum Refining Process Wastes -- Clarification
Reference:	64 FR 36365-36367
Promulgation Date:	June 8, 2000
Effective Date:	June 8, 2000
Cluster:	RCRA Cluster X
Provision Type:	HSWA
Linkage:	169
Optional:	Conditionally optional

Summary: This rule corrects an error made in the August 6, 1998 rule (63 FR 42110; Revision Checklist 169) which listed four wastes from the petroleum refining industry as hazardous. The amending language in the August 6, 1998 rule included a typographical error that made the intent of the amendment unclear. The June 8, 2000 final rule addressed by this checklist revises the listing description for hazardous waste code F037 in 40 CFR 261.31(a) to reflect the original intent of the August 6, 1998 amendment. States that adopted the optional changes to 261.31(a) made by Revision Checklist 169 should also adopt the correction made by this rule.

Note that in the preamble to the June 8, 2000 rule, it states that the Agency neglected to delete the reference to U408 in Appendix VII of 40 CFR Part 268 in the March 17, 2000 rule (65 FR 14472; Revision Checklist 185). However, there was no entry for U408 in that Appendix. The actual amendment for the June 8, 2000 rule incorrectly removes the entry for U048 from Appendix VII to 40 CFR Part 268. U048 should not be removed from Appendix VII. States should not adopt any changes to this Appendix as part of the Revision Checklist.

State Authorization: This rule is placed in RCRA Cluster X. The State modification deadline is July 1, 2001 (or July 1, 2002 if a State statutory change is necessary).

This rule was promulgated under HSWA authorities. This rule contains a correction to an optional revision made by Revision Checklist 169. Therefore, this rule only takes effect on the Federal effective date in authorized States that have adopted the optional Revision Checklist 169 changes to 261.31(a). The rule does not take effect in authorized States that never adopted the Revision Checklist 169 changes to 261.31(a) until the State adopts and receives authorization for those changes. Both interim and final authorization are available. Interim authorization expires January 1, 2003.

The State Revision Application must include applicable statutes and regulations, Revision Checklist 187, and other application materials, i.e. a supplemental AG statement, a program description, and/or an MOA, as determined by the Regional office. Note that under 271.21(b), the Regional office is

allowed flexibility to determine what specific documents must be included in an application. Also, under 271.21(d), the Regional office may require the submission of any additional application materials it deems necessary.

Attorney General's Statement Entry: The entry at Subsection II (G) in the Model Revision Attorney General's Statement should be replaced with the following entry.

> G. [OPTIONAL: This is a reduced requirement.] State statutes and regulations include revisions to the exclusion for certain oil-bearing hazardous secondary materials, as well as new exclusions for petrochemical recovered oil, and spent caustic solutions from petroleum refining processes, and the related revisions to the references to these exclusions as indicated in Revision Checklists 169 and 187.
>
> Federal Authority: RCRA § 3001; 40 CFR 261.3(c)(2)(ii)(B), 261.4(a)(12), 261.4(a)(18) & (19), 261.6(a)(3)(iv)(C), 261.6(a)(3)(v), 261.31(a), and 266.100(b)(3), as amended August 6, 1998 (63 FR 42110), October 9, 1998 (63 FR 54356), and June 8, 2000 (64 FR 36365).
>

>
> Remarks of the Attorney General

Incorporation by Reference Guidance: States should not adopt the revision to Appendix VII of 40 CFR 268, because the revision was made in error as explained in the above Summary section.

Revision Checklist 189 Summary

Rule Title:	Hazardous Waste Management System; Identification and Listing of Hazardous Waste; Chlorinated Aliphatics Production Wastes; Land Disposal Restrictions for Newly Identified Wastes; and CERCLA Hazardous Substance Designation and Reportable Quantities
Checklist Title:	Chlorinated Aliphatics Listing and LDRs for Newly Identified Wastes
Reference:	65 FR 67068-67133
Promulgation Date:	November 8, 2000
Effective Date:	May 7, 2001
Cluster:	RCRA Cluster XI
Provision Type:	HSWA
Linkage:	None
Optional:	No

Summary: (1) This rule adds two wastes (K174 and K175) generated by the chlorinated aliphatics industry to the list of hazardous wastes at 40 CFR 261.32. The new wastes will be subjected to stringent management and treatment standards under RCRA and to emergency notification requirements. EPA is allowing a contingent-management listing approach for the K174 listing. Under this approach, the waste will not be a listed hazardous waste if sent to a specific type of management facility.

(2) In this rule, EPA also finalizes determinations not to list as hazardous four wastes generated by the chlorinated aliphatics industry.

State Authorization: This rule is placed in RCRA Cluster XI. The State modification deadline is July 1, 2002 (or July 1, 2003 if a State statutory change is necessary).

This rule was promulgated under HSWA authorities. The rule contains revisions that are considered more stringent than the existing Federal regulations. An authorized State is required to adopt Federal regulations that are more stringent than the authorized State regulations. These required HSWA revisions take effect in an authorized State on the Federal effective date. Both interim and final authorization are available. Interim authorization expires January 1, 2003.

Attorney General Certification Guidance: Specific AG certification of statutory authority may not be required for this checklist as long as the AG has previously demonstrated authority for identification and listing of hazardous waste.

Revision Checklist 189 Summary (cont'd)

Program Description Guidance: A State seeking authorization for this checklist should determine whether the revisions impacts the program describe in the Program Description. Specifically, the State should determine the extent that the new waste listings will impact the size of the regulated community. The State should submit a Program Description revision that either (1) explains that the listed waste is not handled in the State, or (2) describes changes in the size of the regulated community. When describing changes to the scope of the program, the State should describe strategies and methods for identifying new members of the regulated community. When applicable, the State should provide an estimate of generators, transporters, and TSD facilities handling the newly listed wastes and an estimate of the quantity of newly regulated hazardous waste. The State should also describe any additional resources required to implement compliance monitoring and enforcement of newly regulated entities and activities associated with the newly listed hazardous wastes.

Incorporation by Reference Guidance: There is no special guidance for States that incorporate by reference.

Revision Checklist 189 Summary

Rule Title:	Hazardous Waste Management System; Identification and Listing of Hazardous Waste; Chlorinated Aliphatics Production Wastes; Land Disposal Restrictions for Newly Identified Wastes; and CERCLA Hazardous Substance Designation and Reportable Quantities
Checklist Title:	Chlorinated Aliphatics Listing and LDRs for Newly Identified Wastes
Reference:	65 FR 67068-67133
Promulgation Date:	November 8, 2000
Effective Date:	May 7, 2001
Cluster:	RCRA Cluster XI
Provision Type:	HSWA
Linkage:	None
Optional:	No

Summary: (1) This rule adds two wastes (K174 and K175) generated by the chlorinated aliphatics industry to the list of hazardous wastes at 40 CFR 261.32. The new wastes will be subjected to stringent management and treatment standards under RCRA, and to emergency notification requirements. EPA is allowing a contingent-management listing approach for one of these new wastes. Under this approach, the waste will not be a listed hazardous waste if sent to a specific type of management facility.

(2) In this rule, EPA also finalizes determinations not to list as hazardous four wastes generated by the chlorinated aliphatics industry.

State Authorization: This rule is placed in RCRA Cluster XI. The State modification deadline is July 1, 2002 (or July 1, 2003 if a State statutory change is necessary).

This rule was promulgated under HSWA authorities. The rule contains revisions that are considered more stringent than the existing Federal regulations. An authorized State is required to adopt Federal regulations that are more stringent than the authorized State regulations. These required HSWA revisions take effect in an authorized State on the Federal effective date. Both interim and final authorization are available. Interim authorization expires January 1, 2003.

The State Revision Application must include applicable statutes and regulations, Revision Checklist 189, and other application materials, i.e. a supplemental AG statement, a program description, and/or an MOA, as determined by the Regional office. Note that under 40 CFR 271.21(b), the Regional office is allowed flexibility to determine what specific documents must be included in an application. Also, under 40 CFR 271.21(d), the Regional office may require the submission of any additional application materials it deems necessary.

Attorney General's Statement Entry: The following entry should be placed at Subsection I (A)(34) in the Model Revision Attorney General's Statement:

(34) Listing of two wastes (K174 and K175) generated during chlorinated aliphatic hydrocarbon production, 40 CFR 261.32, Part 261 Appendix VII and Part 261

Appendix VIII as amended November 8, 2000 (65 FR 67068), Revision Checklist 189.

The entry at Subsection XXI (**NN**) in the Model Revision Attorney General's Statement should be replaced with the following revised entry:

NN. State statutes and regulations provide for stringent management and treatment standards for two wastes (K174 and K175) generated by the chlorinated aliphatics industry as indicated in Revision Checklist 189.

Federal Authority: RCRA §§2002(a), 3001(b), 3001(e)(2), and 3007(a); 40 CFR 268.33, 268.40/Table, and 268.48(a)/Table as amended November 8, 2000 (65 FR 67068).

Revision Checklist 190 Summary

Rule Title:	Deferral of Phase IV Standards for PCBs as a Constituent Subject to Treatment in Soil
Checklist Title:	Land Disposal Restrictions Phase IV – Deferral for PCBs in Soil
Reference:	65 FR 81373-81381
Promulgation Date:	December 26, 2000
Effective Date:	December 26, 2000
Cluster:	RCRA Cluster XI
Provision Type:	HSWA
Linkage:	Revision Checklist 167 B
Optional:	Yes

Summary: This rule temporarily defers the requirement that polychlorinated biphenyls (PCBs) be treated as a constituent subject to treatment (CST) when present in soils that exhibit the Toxicity Characteristic for metals. This temporary deferral is in response to comments from the regulated community and gives the Agency more time to study the issue of appropriate treatment standards for metal-contaminated soils containing PCBs as CST. Only States that adopted the optional Revision Checklist 167 B will be eligible to consider adopting this rule.

State Authorization: This rule is placed in RCRA Cluster XI. The State modification deadline is July 1, 2002 (or July 1, 2003 if a State statutory change is necessary).

This rule was promulgated under HSWA authorities. The rule contains revisions that are considered less stringent than the existing Federal regulations. A State is not required to modify its program when EPA promulgates Federal regulations that are less stringent than the authorized State regulations. As such, optional revisions are not effective under HSWA in an authorized State until the State adopts and receives authorization for the changes. Both interim and final authorization are available. Interim authorization expires January 1, 2003.

This rule has been designated as minor or routine; therefore, as indicated in the April 28, 1999 memorandum from the Acting Director of the Office of Solid Waste, States are not required to submit an Attorney General's (AG) statement, program description, and an MOA. The State Revision Application must include applicable regulations and Revision Checklist 190. Note that under 40 CFR 271.21(d), the Regional office retains the ability to request an AG statement addendum, other associated checklists, a program description and an MOA if necessary.

Attorney General's Statement Entry: The entry at Subsection XXI (OO) in the Model Revision Attorney General's Statement should be replaced with the following revised entry:

> OO. [OPTIONAL: This is a reduced requirement.] State statutes and regulations include a temporary deferral from the requirement that PCBs be treated as a constituent subject to

treatment when present in soils that exhibit the toxicity characteristic for metals, as indicated in Revision Checklist 190.

Federal Authority: RCRA §§3004(g) and (m); 40 CFR 268.32, 268.48(a)/Table UTS, 268.49(d), and Part 268 Appendix III as amended December 26, 2000 (65 FR 81373).

Citation of Laws and Regulations; Date of Enactment and Adoption

Remarks of the Attorney General

Incorporation by Reference Guidance: There is no special guidance for States that incorporate by reference.

Revision Checklist 190 Summary

Linkage:	Revision Checklist 167 B
Optional:	Yes

Summary: This rule temporarily defers the requirement that polychlorinated biphenyls (PCBs) be regarded as a Constituent Subject to Treatment (CST) when present in soils that exhibit the Toxicity Characteristic for metals. This temporary deferral is in response to comments from the regulated community and gives the Agency more time to study the issue of appropriate treatment standards for metal-contaminated soils containing PCBs as CST. Only States that adopted the optional Revision Checklist 167 B will be eligible to consider adopting this rule.

State Authorization: This rule is placed in RCRA Cluster XI. The State modification deadline is July 1, 2002 (or July 1, 2003 if a State statutory change is necessary).

This rule was promulgated under HSWA authorities. The rule contains revisions that are considered less stringent than the existing Federal regulations. A State is not required to modify its program when EPA promulgates Federal regulations that are less stringent than the authorized State regulations. As such, optional revisions are not effective under HSWA in an authorized State until the State adopts and receives authorization for the changes. Both interim and final authorization are available. Interim authorization expires January 1, 2003.

Attorney General Certification Guidance: Specific AG certification of statutory authority may not be required for this checklist as long as the AG has previously demonstrated authority for land disposal restrictions.

Program Description Guidance: A State seeking authorization for this checklist may not need to submit a revised Program Description if the current Program Description already addresses land disposal restrictions.

Incorporation by Reference Guidance: There is no special guidance for States that incorporate by reference.

Revision Checklists 192 A and B Summary

Rule Title:	Hazardous Waste Identification Rule (HWIR): Revisions to the Mixture and Derived-From Rules
Checklist Title:	A. Mixture and Derived-From Rules Revisions B. Land Disposal Restrictions Correction
Reference:	66 FR 27266-27297
Promulgation Date:	May 16, 2001
Effective Date:	August 14, 2001
Cluster:	RCRA Cluster XI
Provision Type:	HSWA/Non-HSWA
Linkage:	Checklist 192 A: Revision Checklists 117A and 117B Checklist 192 B: Revision Checklist 187
Optional:	Checklist 192 A is **not** optional**, but certain provisions are optional**. Checklist 192 B is not optional

Summary: (A) This rule finalizes the retention and revision of the mixture and derived-from rules as proposed on November 19, 1999 (64 FR 63382). The mixture and derived-from rules that are being finalized today include two revisions. The first revision expands the exclusion for mixtures and/or derivatives of wastes listed solely for the ignitability, corrosivity and/or reactivity characteristic. The second revision is a new conditional exemption from the mixture and derived-from rules for radioactive mixed waste.

(B) This rule also corrects an error made by the June 8, 2000 rule (65 FR 36365; Revision Checklist 187). The June 8, 2000 rule inadvertently removed the entry for hazardous waste code U048 from 40 CFR part 268, Appendix VII. Revision Checklist 192 B reinserts the entry for U048.

State Authorization: This rule is placed in RCRA Cluster XI. The State modification deadline is July 1, 2002 (or July 1, 2003 if a State statutory change is necessary).

The revisions to 40 CFR 261.3(g) and 261.3(h)(1)-(3) are promulgated pursuant to HSWA authorities. The HSWA revisions **to 261.3(h)** are considered less stringent than the existing Federal regulations. **(Note the preamble to 66 FR 27266 implied that the revisions to 261.3(g) were not required. At that time, this was correct because there were no wastes listed because they exhibited the TC. However with the listing of K176 (Revision Checklist 195, 66 FR 58258), this is no longer the case and States are required to adopt the 261.3(g) changes.)** A State is not required to modify its program when EPA promulgates Federal regulations that are less stringent than the authorized State regulations. As such, optional revisions are not effective under HSWA in an authorized State until the State adopts and receives authorization for the changes. The revisions to 40 CFR 261.3(a)(2)(iii) and (iv), and 261.3(c)(2)(i) are promulgated pursuant to non-HSWA authorities. The non-HSWA changes do

Revision Checklists 192 A and B Summary (cont'd)

not go into effect in an authorized State until the State adopts and receives authorization for the revisions. Both interim and final authorization are available for the HSWA provisions. Interim authorization expires January 1, 2003. Only final authorization is available for the non-HSWA provisions.

This rule also contains a revision to 40 CFR 268, Appendix VII that is considered more stringent than the existing Federal regulations. An authorized State is required to adopt Federal regulations that are more stringent than the authorized State regulations. This required HSWA revision to 40 CFR 268, Appendix VII takes effect in an authorized State on the Federal effective date. Both interim and final authorization are available. Interim authorization expires January 1, 2003.

Attorney General Certification Guidance: Specific AG certification of statutory authority may not be required for this checklist as long as the AG has previously demonstrated authority for the mixture and derived-from rules and for the land disposal restrictions.

Program Description Guidance: A State seeking authorization for this checklist may not need to submit a revised Program Description if the current Program Description already addresses the mixture and derived-from rules and land disposal restrictions.

Incorporation by Reference Guidance: There is no special guidance for States that incorporate by reference.

Revision Checklists 192 A and B Summary

Rule Title:	Hazardous Waste Identification Rule (HWIR): Revisions to the Mixture and Derived-From Rules
Checklist Title:	A. Mixture and Derived-From Rules Revisions B. Land Disposal Restrictions Correction
Reference:	66 FR 27266-27297
Promulgation Date:	May 16, 2001
Effective Date:	August 14, 2001
Cluster:	RCRA Cluster XI
Provision Type:	HSWA/Non-HSWA
Linkage:	Checklist 192 A: Revision Checklists 117A and 117B Checklist 192 B: Revision Checklist 187
Optional:	Checklist 192 A is optional Checklist 192 B is not optional

Summary: (A) This rule finalizes the retention of the mixture rule and the derived-from rule with two revisions. The first revision expands the exclusion for mixtures and/or derivatives of wastes listed solely for the ignitability, corrosivity and/or reactivity characteristic. The second revision is a new conditional exemption from the mixture and derived-from rules for mixed wastes.

(B) This rule also corrects an error made by the June 8, 2000 rule (65 FR 36365; Revision Checklist 187). The June 8, 2000 rule inadvertently removed the entry for hazardous waste code U048 from 40 CFR part 268, Appendix VII. Revision Checklist 192 B reinserts the entry for U048.

State Authorization: This rule is placed in RCRA Cluster XI. The State modification deadline is July 1, 2002 (or July 1, 2003 if a State statutory change is necessary).

The revisions to 40 CFR 261.3(g) and 261.3(h)(1)-(3) are promulgated pursuant to HSWA authorities. The HSWA revisions are considered less stringent than the existing Federal regulations. A State is not required to modify its program when EPA promulgates Federal regulations that are less stringent than the authorized State regulations. As such, optional revisions are not effective under HSWA in an authorized State until the State adopts and receives authorization for the changes. The revisions to 40 CFR 261.3(a)(2)(iii) and (iv), and 261.3(c)(2)(i) are promulgated pursuant to non-HSWA authorities. The non-HSWA changes do not go into effect in an authorized State until the State adopts and receives authorization for the revisions. Both interim and final authorization are available for the HSWA provisions. Interim authorization expires January 1, 2003. Only final authorization is available for the non-HSWA provisions.

This rule also contains a revision to 40 CFR 268, Appendix VII that is considered more stringent than the existing Federal regulations. An authorized State is required to adopt Federal regulations that are more stringent than the authorized State regulations. This required HSWA revision to 40 CFR 268, Appendix VII takes effect in an authorized State on the Federal effective date. Both interim and final authorization are available. Interim authorization expires January 1, 2003.

The State Revision Application must include applicable statutes and regulations, Revision Checklists 192 A and/or B, and other application materials, i.e. a supplemental AG statement, a program description, and/or an MOA, as determined by the Regional office. Note that under 271.21(b), the Regional office is allowed flexibility to determine what specific documents must be included in an application. Also, under 40 CFR 271.21(d), the Regional office may require the submission of any additional application materials it deems necessary.

Attorney General's Statement Entry: The following entry should be placed at Subsection I (VV) in the Model Revision Attorney General's Statement:

> VV. [OPTIONAL: This is a reduced requirement.] State statutes and regulations expand the exclusion from classification as hazardous to include mixtures and/or derivatives of wastes listed solely for ignitability, corrosivity and/or reactivity characteristics, and provide a conditional exemption from mixture and derived-from rules for mixed wastes as indicated in Revision Checklist 192 A.
>
> Federal Authority: RCRA §§1006, 2002(a), and 3001-3005; 40 CFR 261.3(a)(2)(iv), (c)(2)(i), (g) and (h) as amended May 16, 2001 (66 FR 27266).

The entry at Subsection XXI (GG) in the Model Revision Attorney General's Statement should be replaced with the following revised entry:

> GG. State statutes and regulations include corrections and clarifications to the land disposal restrictions as indicated in Revision Checklists 167 C, 179 and 192 B.

Federal Authority: RCRA §§3004(d)-(k) and (m); 40 CFR 268.4(a)(2)(ii)&(iii), 268.40/Table, 268.40(e), 268.42(a), 268.45(a) intro, 268.45(d)(3)&(4), 268.48, 268 Appendices VII & VIII as amended May 26, 1998 (63 FR 28556), June 8, 1998 (63 FR 31266), May 11, 1999 (64 FR 25408), and May 16, 2001 (66 FR 27266).

Citation of Laws and Regulations; Date of Enactment and Adoption

Remarks of the Attorney General

Incorporation by Reference Guidance: There is no special guidance for States that incorporate by reference.

Revision Checklist 194 Summary

Rule Title:	Correction to the Hazardous Waste Identification Rule (HWIR): Revisions to the Mixture and Derived-From Rules
Checklist Title:	Mixture and Derived-From Rules Revision II
Reference:	66 FR 50332-50334
Promulgation Date:	October 3, 2001
Effective Date:	February 1, 2002 (see 66 FR 61053, December 3, 2001)
Cluster:	RCRA Cluster XII
Provision Type:	HSWA/Non-HSWA
Linkage:	192 A and 117A&B
Optional:	Yes, conditionally optional

Summary: This rule finalizes a clarifying revision to the May 16, 2001 (Revision Checklist 192A; 66 FR 27266) mixture rule. Specifically, the rule clarifies that mixtures of certain excluded wastes, commonly referred to as Bevill wastes, and listed hazardous wastes that are listed solely because they contain a characteristic of ignitability, corrosivity, and/or reactivity, are exempt once the characteristic has been removed. Only states that adopted the optional Revision Checklist 192 A should adopt this rule.

On December 3, 2001, EPA reopened the comment period for thirty days, and delayed the effective date of this rule by 60 days. The rule will be effective February 1, 2002, unless adverse comment is received.

State Authorization: This rule is placed in RCRA Cluster XII. The State modification deadline is July 1, 2003 (or July 1, 2004 if a State statutory change is necessary).

The revision to 40 CFR 261.3(g) is promulgated pursuant to HSWA authorities. The HSWA revision is considered less stringent than the existing Federal regulations. A State is not required to modify its program when EPA promulgates Federal regulations that are less stringent than the authorized State regulations. As such, optional revisions are not effective under HSWA in an authorized State until the State adopts and receives authorization for the changes. Both interim and final authorization are available for the HSWA provisions. Interim authorization expires January 1, 2003.

No new State authorities are needed to implement this rule. No revisions made by this rule create a direct requirement for changes in the State's Memorandum of Agreement with EPA. This rule also makes no revisions which require a change in the State's Program Description, except to address the expanded number of rules adopted by the State. This rule has been designated as minor or routine; therefore, States are not required to submit an Attorney General's (AG) statement, program description, and an MOA. The State Revision Application must include applicable regulations and, if required by the applicable Region, Revision Checklist 194. Note that under 40 CFR 271.21(d), the Regional office retains the ability to request an AG

statement addendum, other associated checklists, a program description, and an MOA if necessary.

Attorney General Certification Guidance: Specific AG certification of statutory authority may not be required for this checklist as long as the AG has previously demonstrated authority for identification and listing of hazardous waste.

Program Description Guidance: A State seeking authorization for this checklist should determine whether the revisions impacts the program describe in the Program Description. Specifically, the State should determine the extent that the new waste listings will impact the size of the regulated community. The State should submit a Program Description revision that either (1) explains that the listed waste is not handled in the State, or (2) describes changes in the size of the regulated community. When describing changes to the scope of the program, the State should describe strategies and methods for identifying new members of the regulated community. When applicable, the State should provide an estimate of generators, transporters, and TSD facilities handling the newly listed wastes and an estimate of the quantity of newly regulated hazardous waste. The State should also describe any additional resources required to implement compliance monitoring and enforcement of newly regulated entities and activities associated with the newly listed hazardous wastes.

Incorporation by Reference Guidance: In the 2001 version of the CFR, 40 CFR 261.3(a)(2)(iv) is incorrect. States that incorporate by reference the 2001 version of the CFR should exclude 40 CFR 261.3(a)(2)(iv) from the incorporation and instead, adopt the version found at either 66 FR 27297 (Revision Checklist 192 A; May 16, 2001) or 66 FR 50333 (Revision Checklist 194; October 3, 2001).

Revision Checklist 199 Summary

Rule Title:	Hazardous Waste Management System; Definition of Solid Waste; Toxicity Characteristic
Checklist Title:	Vacatur of Mineral Processing Spent Materials Being Reclaimed as Solid Wastes and TCLP Use with MGP Waste
Reference:	67 FR 11251-11254
Promulgation Date:	March 13, 2002
Effective Date:	March 13, 2002
Cluster:	RCRA Cluster XII
Provision Type:	Non-HSWA
Linkage:	Revision Checklist 167
Optional:	No; however, most provisions are conditionally optional

Summary: This rule was promulgated in response to vacaturs ordered by the United States Court of Appeals for the District of Columbia Circuit in *Association of Battery Recyclers, v. EPA 208 F.3d 1047 (2000)*. The court vacated two parts of the May 26, 1998 Phase IV LDR rule (63 FR 28556; Revision Checklist 167) in response to a legal challenge from the Association of Battery Recyclers, the National Mining Association and other trade groups. The first vacated part of the rule required deletion of regulatory language classifying mineral processing characteristic by-products and sludges being reclaimed as solid wastes. The second vacated part disallows the Toxicity Characteristic Leaching Procedure (TCLP) to be used for determining whether manufactured gas plant (MGP) waste is hazardous.

State Authorization: This rule is placed in RCRA Cluster XII. The State modification deadline is July 1, 2003 (or July 1, 2004 if a State statutory change is necessary).

All revisions in this rule are promulgated under non-HSWA authority and will only become effective in an authorized State when the State amends its regulations to include these vacaturs and receives authorization. For States without authorization, the vacaturs go into effect on the effective date of this rule.

With the exception of changes to 261.24(a), the revisions in this rule are conditionally optional; if a State adopted the optional provisions when it was added to the Federal program by Revision Checklist 167, then the State must make the Revision Checklist 199 revision.

Attorney General (AG) Certification Guidance: Specific AG certification of statutory authority may not be required for this checklist as long as the AG has previously demonstrated authority for identification and listing of hazardous waste.

Program Description (PD) Guidance: A State seeking authorization for this checklist should determine whether the revisions impact the program described in the Program Description. EPA

Revision Checklist 199 Summary (cont'd)

believes that this rule does not include any significant changes or additions affecting the RCRA program and thus, States should not need to submit a revised PD.

Incorporation by Reference Guidance: States that followed the IBR guidance for Revision Checklist 167 D should remove any exceptions to the IBR for 40 CFR 261.2(c)(3). Instead, they should incorporate by reference, the rule addressed by this checklist.

[NOTE: See MN Rule language corrections for 40 CFR 261.3(c)(2)(ii)(C) at MNR 7045.0214, 3, E on this page of this document. This checklist was submitted in a prior authorization application and this amendment addresses an EPA comment from that application.]

RCRA REVISION CHECKLIST 95

Land Disposal Restrictions for
Electric Arc Furnace Dust (K061)
56 FR 41164-41178
August 19, 1991
(RCRA Cluster II, HSWA Rule)

Note: This checklist revises and finalizes treatment standards for K061 nonwastewaters in the high zinc subcategory originally regulated in the First Third Land Disposal Restrictions rule addressed by Revision Checklist 50 (53 FR 31138; August 17, 1988). Other related checklists include Revision Checklist 62 (54 FR 18836; May 2, 1989) and Revision Checklist 66 (54 FR 36967; September 6, 1989), as these two checklists amended and corrected Revision Checklist 50.

SPA 12

	EXCLUSIONS			
†	add new paragraph which excludes as solid waste nonwastewater splash condenser dross residue from the treatment of K061 in high temperature metals recovery units, provided it is shipped in drums (if shipped) and not land disposed before recovery	261.4(a)(11)	7045.0125, 4, K	existing rule identical to 2001 CFR

PART 268 - LAND DISPOSAL RESTRICTIONS

SUBPART D - TREATMENT STANDARDS

TREATMENT STANDARDS EXPRESSED AS CONCENTRATIONS IN WASTE EXTRACT			
in Table CCWE revise entry for K061, high zinc subcategory as shown below (see 56 FR 41177)	268.41(a)/Table CCWE	7045.1390	IBR
at end of paragraph add "except that mixtures of high and low zinc nonwastewater K061 are subject to the treatment standard for high zinc K061"	268.41(b)	7045.1390	IBR
TREATMENT STANDARDS EXPRESSED AS SPECIFIED TECHNOLOGIES			
in Table 2 remove entry for K061	268.42(a)/Table 2	7045.1390	IBR

RCRA REVISION CHECKLIST 100

Liners and Leak Detection Systems for Hazardous Waste
Land Disposal Units
57 FR 3462-3497
January 29, 1992
(RCRA Cluster II, Both HWSA and Non-HWSA provisions)

Note: As is explained in the preamble (57 FR 3480 & 3481), EPA considers all of this rule to be promulgated pursuant to HSWA, with the exception of the Construction Quality Assurance Program (CQA) as it applies to final cover requirements.

[NOTE: See MN Rule language corrections for 40 CFR 264.310(b)(3) at MNR 7045.0538, 7, B, (4), and for 40 CFR 265.310(b)(2) at MNR 7045.0638, 4, B, (2) in this document. This checklist was submitted in a prior authorization application and these amendments address EPA comments from that application so the MPCA only completed the checklist items needing revision. The other provisions, addressed in a prior version of this checklist, remain in effect.]

DESIGN AND OPERATING REQUIREMENTS						
completely revise paragraph; surface impoundments which must install two or more liners and a leachate collection and removal system between such liners; "construction commences" defined under "existing facility"	264.221(c)					
liner system must include:	264.221(c)(1)(i)					
top liner designed and constructed to prevent migration of hazardous constituents into liner for specified period	264.221(c)(1)(i)(A)					
[3] composite bottom liner consisting of at least two components; upper component to prevent migration of hazardous constituents into this component during specified period; lower component designed and constructed to minimize such migration if upper component is breached; specified thickness and hydraulic conductivity	264.221(c)(1)(i)(B)					
liners must comply with 264.221(a)(1),(2)&(3)	264.221(c)(1)(ii)					

FEDERAL REQUIREMENTS	FEDERAL RCRA CITATION	ANALOGOUS STATE CITATION	STATE ANALOG IS: EQUIV-ALENT	LESS STRIN-GENT	MORE STRIN GENT	BROADER IN SCOPE
relationship between leachate collection and removal system and a "leak detection system"; what system must be capable of; minimum requirements	264.221(c)(2)					
bottom slope of 1 percent or more	264.221(c)(2)(i)					
[4] constructed of: 1) granular drainage materials with $1x10^{-1}$cm/sec or more hydraulic conductivity and 12 in. (30.5 cm) or more thickness, or 2) synthetic or geonet drainage materials with $3x10^{-4}m^2$/sec or more transmissivity	264.221(c)(2)(ii)					
construction material specifications	264.221(c)(2)(iii)					
designed and operated to minimize clogging during active life and post-closure care period	264.221(c)(2)(iv)					
specifications for sumps and liquid removal methods	264.221(c)(2)(v)					
collect and remove pumpable liquids in sumps to minimize head on bottom liner	264.221(c)(3)					
what must be demonstrated if leak detection system is not located completely above seasonal high water table	264.221(c)(4)					
Regional Administrator may approve alternate design or operating practices if owner or operator can demonstrate that design/practices will:	264.221(d)					

FEDERAL REQUIREMENTS	FEDERAL RCRA CITATION	ANALOGOUS STATE CITATION	STATE ANALOG IS: EQUIV-ALENT	LESS STRIN-GENT	MORE STRIN GENT	BROADER IN SCOPE
prevent hazardous constituent migration into ground or surface water as effectively as system specified in 264.221(c), and	264.221(d)(1)					
allow detection of hazardous constituent leaks through top liner at least as effectively	264.221(d)(2)					
redesignate old 264.221(f) as 264.221(g); add new paragraph on exemption from 264.221(c) for replacement surface impoundment unit	264.221(f)					
meets RCRA 3004(o)(1)(A)(i) and (o)(5) design standards	264.221(f)(1)					
no reason to believe liner is not functioning as designed	264.221(f)(2)					
old 264.221(f),(g)&(h) become 264.221(g),(h)&(i)	264.221(g)-(i)					
ACTION LEAKAGE RATE						
Regional Administrator approval of action leakage rate for surface impoundment units subject to 264.221(c)or(d); definition of action leakage rate; adequate safety margin	264.222(a)					
how to determine if action leakage rate has been exceeded; unless another calculation approved, average daily flow rate calculated weekly, during active life and closure period and monthly during post-closure care period	264.222(b)					
RESPONSE ACTIONS						

FEDERAL REQUIREMENTS	FEDERAL RCRA CITATION	ANALOGOUS STATE CITATION	STATE ANALOG IS: EQUIV-ALENT	LESS STRIN-GENT	MORE STRIN GENT	BROADER IN SCOPE
approved response action plan before receipt of waste for surface impoundments subject to 264.221(c)or(d); address actions if action leakage rate exceeded; at a minimum plan must describe actions in 264.223(b)	264.223(a)					
responsibilities if flow rate into leak detection system exceeds the action leakage rate for any sump:	264.223(b)					
notify Regional Administrator in writing within seven days of determination	264.223(b)(1)					
preliminary assessment to Regional Administrator within 14 days of determination; what assessment must address	264.223(b)(2)					
determine location, size and cause of any leak	264.223(b)(3)					
determine whether 1) waste receipt should cease or be curtailed, 2) waste should be removed for inspection, repairs, or controls, or 3) unit should be closed	264.223(b)(4)					
determine short- and longer-term actions to mitigate or stop any leaks	264.223(b)(5)					

FEDERAL REQUIREMENTS	FEDERAL RCRA CITATION	ANALOGOUS STATE CITATION	STATE ANALOG IS: EQUIV-ALENT	LESS STRIN-GENT	MORE STRIN GENT	BROADER IN SCOPE
within 30 days after Regional Administrator notification, submit the results of 264.223(b)(3)-(5) analyses, the results of actions taken, and actions planned; thereafter, as long as flow rate exceeds action leakage rate, monthly report to Regional Administrator summarizing results of remedial actions taken and actions planned	264.223(b)(6)					
how the 264.223(b)(3)-(5) determinations must be made:	264.223(c)					
assess the source of liquids and amounts by source	264.223(c)(1)(i)					
conduct analyses of liquids in leak detection system to identify sources of liquids and location of leaks, and the hazard and mobility of the liquid	264.223(c)(1)(ii)					
assess seriousness of leaks	264.223(c)(1)(iii)					
document why assessments not needed	264.223(c)(2)					
MONITORING AND INSPECTION						
if leak detection system required under 264.221(c)or(d), record amount of liquids removed from each sump, at least weekly during active life and closure period	264.226(d)(1)					

FEDERAL REQUIREMENTS	FEDERAL RCRA CITATION	ANALOGOUS STATE CITATION	STATE ANALOG IS: EQUIV-ALENT	LESS STRIN-GENT	MORE STRIN GENT	BROADER IN SCOPE
after final cover installed, at least monthly record the amount of liquids removed from each leak detection sump; when quarterly and semi-annual recording allowed; when monthly recording must resume	264.226(d)(2)					
definition of "pump operating level"	264.226(d)(3)					CLOSURE AND POST-CLOSURE CARE
redesignate old 264.228(b)(2) as 264.228(b)(3); add new paragraph addressing maintaining and monitoring leak detection system in accordance with 264.221(c)(2)(iv)&(3) and 264.226(d); comply with other applicable Part 264 leak detection requirements	264.228(b)(2)					
redesignated 264.228(b)(2) becomes new 264.228(b)(3)	264.228(b)(3)					
redesignated 264.228(b)(3) becomes new 264.228(b)(4)	264.228(b)(4)					

SUBPART L - WASTE PILES

DESIGN AND OPERATING REQUIREMENTS

FEDERAL REQUIREMENTS	FEDERAL RCRA CITATION	ANALOGOUS STATE CITATION	STATE ANALOG IS: EQUIV-ALENT	LESS STRIN-GENT	MORE STRIN GENT	BROADER IN SCOPE
redesignate old 264.251(c) as 264.251(g); add new paragraph addressing waste piles that must install two or more liners and a leachate collection and removal system above and between these liners; "construction commences" defined under "existing facility"	264.251(c)					
liner system must include:	264.251(c)(1)(i)					
top liner designed and constructed to prevent migration of hazardous constituents into liner for specified period	264.251(c)(1)(i)(A)					
composite bottom liner consisting of at least two components; upper component to prevent migration of hazardous constituents into this component during specified period; lower component designed and constructed to minimize such migration if upper component is breached; specified thickness and hydraulic conductivity	264.251(c)(1)(i)(B)					
liners must comply with 264.251(a)(1)(i)-(iii)	264.251(c)(1)(ii)					

FEDERAL REQUIREMENTS	FEDERAL RCRA CITATION	ANALOGOUS STATE CITATION	STATE ANALOG IS: EQUIV-ALENT	LESS STRIN-GENT	MORE STRIN GENT	BROADER IN SCOPE
leachate collection and removal system must collect and remove leachate from the waste pile during the active life and post-closure care period; Regional Administrator to specify permit conditions to ensure leachate depth over liner does not exceed 30 cm (1 ft); leachate collection and removal system must comply with 264.251(c)(3)(iii)&(iv)	264.251(c)(2)					
relationship between leachate collection and removal system and the leak detection system; what the leak detection system must be capable of; minimum requirements:	264.251(c)(3)					
bottom slope of 1 percent or more	264.251(c)(3)(i)					
constructed of: 1) granular drainage materials with hydraulic conductivity of $1x10^{-2}$cm/sec or more, and 12 in. (30.5 cm) or more thickness; or 2) synthetic or geonet drainage materials with 3x10_$^{5}m^{2}$/sec or more transmissivity	264.251(c)(3)(ii)					
construction material specifications	264.251(c)(3)(iii)					
designed/operated to minimize clogging during active life and post-closure care period	264.251(c)(3)(iv)					
specifications for sumps and liquid removal methods	264.251(c)(3)(v)					

FEDERAL REQUIREMENTS	FEDERAL RCRA CITATION	ANALOGOUS STATE CITATION	STATE ANALOG IS: EQUIV-ALENT	LESS STRIN-GENT	MORE STRIN GENT	BROADER IN SCOPE
collect and remove pumpable liquids in leak detection system sumps to minimize head on the bottom liner	264.251(c)(4)					
what must be demonstrated if leak detection system not located completely above seasonal high water table	264.251(c)(5)					
redesignate old 264.251(d) as 264.251(h); add new paragraph addressing circumstances under which Regional Administrator may approve alternate design or operating practices if owner/operator can demonstrate that design/practices will:	264.251(d)					
prevent hazardous constituent migration into ground or surface water as effectively as system specified in 264.251(c), and	264.251(d)(1)					
allow detection of hazardous constituent leaks through top liner at least as effectively	264.251(d)(2)					
redesignate old 264.251(e) as 264.251(i); add new paragraph addressing monofills granted a 264.221(e) waiver by Regional Administrator	264.251(e)					
redesignate old 264.251(f) as 264.251(j); add new paragraph addressing when a replacement waste pile owner/operator is exempt from 264.251(c)	264.251(f)					
meets RCRA 3004(o)(1)(A)(i) and (o)(5) design standards	264.251(f)(1)					

FEDERAL REQUIREMENTS	FEDERAL RCRA CITATION	ANALOGOUS STATE CITATION	STATE ANALOG IS: EQUIV-ALENT	LESS STRIN-GENT	MORE STRIN GENT	BROADER IN SCOPE
no reason to believe liner is not functioning as designed	264.251(f)(2)					
old 264.251(c)-(g) become new 264.251(g)-(k)	264.251(f)(g)-(k)					
ACTION LEAKAGE RATE						
Regional Administrator approval of action leakage rate for waste pile units subject to 264.251(c) or (d); definition of action leakage rate; adequate safety margin	264.252(a)					
how to determine if action leakage rate has been exceeded; unless another calculation approved, average daily flow rate calculated weekly, during active life and closure period	264.252(b)					RESPONSE ACTIONS
approved response action plan before receipt of waste for waste piles subject to 264.251(c) or (d); address actions if action leakage rate exceeded; plan must describe actions in 264.253(b)	264.253(a)					
responsibilities if flow rate into leak system exceeds the action leakage rate for any sump:	264.253(b)					
notify Regional Administrator in writing within seven days of determination	264.253(b)(1)					
preliminary assessment to Regional Administrator within 14 days of determination; what assessment must address	264.253(b)(2)					

FEDERAL REQUIREMENTS	FEDERAL RCRA CITATION	ANALOGOUS STATE CITATION	STATE ANALOG IS: EQUIV-ALENT	LESS STRIN-GENT	MORE STRIN GENT	BROADER IN SCOPE
determine location, size and cause of any leak	264.253(b)(3)					
determine if 1) waste receipt should cease or be curtailed, 2) waste should be removed for inspection, repairs, or controls, and 3) unit should be closed	264.253(b)(4)					
determine short- and longer-term actions to mitigate or stop any leaks	264.253(b)(5)					
within 30 days after Regional Administrator notification, submit the results of 264.253(b)(3)-(5) analyses, the results of actions taken and actions planned; thereafter, as long as flow rate exceeds action leakage rate, monthly report to Regional Administrator summarizing results of remedial actions taken and actions planned	264.253(b)(6)					
how the 264.253(b)(3), (4), & (5) determinations must be made	264.253(c)					
assess the source of liquids and amounts by source	264.253(c)(1)(i)					
conduct analyses of liquids in leak detection system to identify sources of liquids and location of leaks, and the hazard and mobility of the liquid	264.253(c)(1)(ii)					
assess seriousness of leaks	264.253(c)(1)(iii)					

FEDERAL REQUIREMENTS	FEDERAL RCRA CITATION	ANALOGOUS STATE CITATION	STATE ANALOG IS: EQUIV-ALENT	LESS STRIN-GENT	MORE STRIN GENT	BROADER IN SCOPE
document why assessments not needed	264.253(c)(2)					MONITORING AND INSPECTION
if leak detection system required under 264.251(c), record amount of liquids removed from each sump, at least weekly during active life and closure period	264.254(c)					
SUBPART N - LANDFILLS						
DESIGN AND OPERATING REQUIREMENTS						
completely revise paragraph; landfills that must install two or more liners and a leachate collection and removal system above and between such liners; "construction commences" defined under "existing facility"	264.301(c)					
the liner system must include:	264.301(c)(1)(i)					
top liner designed and constructed to prevent migration of hazardous constituents into liner for specified period	264.301(c)(1)(i)(A)					
composite bottom liner consisting of at least two components; upper component to prevent migration of hazardous constituents into this component during specified period; lower component designed and constructed to minimize such migration if upper component is breached; specified thickness and hydraulic conductivity	264.301(c)(1)(i)(B)					

FEDERAL REQUIREMENTS	FEDERAL RCRA CITATION	ANALOGOUS STATE CITATION	STATE ANALOG IS: EQUIV-ALENT	LESS STRIN-GENT	MORE STRIN GENT	BROADER IN SCOPE

PERMIT MODIFICATION AT THE REQUEST OF THE PERMITTEE						
add the "7. a. & b." entries under "B. General Facility Standards"; add the "6., and 7. a., b. & c." entries under "H. Surface Impoundments"; add the entries "7., and 8. a., b. & c." entries under "J. Landfills and Unenclosed Waste 270.42/Piles"	270.42/Appendix I					

[1] This section is considered to be both a HSWA and a Non-HSWA provision. It is Non-HSWA only to the extent that it applies to the final cover requirements for the Construction Quality Assurance Program.

[2] Note that there is a typographical error in the Federal Register; "COA" should be "CQA."

[3] Note that there is a technical error in the Federal Register; "1x10^{-7}/cm/sec" should be "1x10^{-7}cm/sec."

[4] Note that there are two technical errors in the Federal Register; "1x10/$^{-1}$/cm/sec" should be "1x10^{-1}cm/sec" and 3x10/$^{-4}$/m^{2}sec" should be 3x10^{-4}m^{2}/sec."

[5] Note that there is a typographical error in the Federal Register; "surface impoundment" should be "waste pile."

[6] Note that there is a technical error in the Federal Register; "paragraphs (3)(c)(iii) and (iv)" should be "paragraphs (c)(3)(iii) and (iv)."

[7] Note that there is a typographical error in the Federal Register; "surface impoundment" should be "landfill."

[8] Note that there is a typographical error in the Federal Register; "surface impoundment" should be "waste pile."

[9] Note that in the Federal Register this section is incorrectly designated as 270.21(c).

RCRA REVISION CHECKLIST 108

Toxicity Characteristics Revisions: Technical Corrections
57 FR 30657-30658
July 10, 1992
(RCRA Cluster III, HSWA provisions)

Note: This Revision Checklist corrects errors made at the time of the promulgation of the final Toxicity Characteristic (TC) rule on March 29, 1990 (55 FR 11798; Revision Checklist 74). States that have not adopted Revision Checklist 74 provisions are strongly encouraged to adopt these corrections at the same time that the Revision Checklist 74 provisions are adopted.

FEDERAL REQUIREMENTS	FEDERAL RCRA CITATION	ANALOGOUS STATE CITATION	STATE ANALOG IS:			
			EQUIV-ALENT	LESS STRIN-GENT	MORE STRIN-GENT	BROADER IN SCOPE
PART 261 - IDENTIFICATION AND LISTING OF HAZARDOUS WASTE						
SUBPART A - GENERAL						
EXCLUSIONS						
i replace "characteristic of EP toxicity, and do not fail the test for" with "toxicity characteristic for any other constituent, and do not exhibit"	261.4(b)(6)(ii)	NA (MN Rules 7045.0120, 1, K omit the CL74 lists of excluded processes. EPA authorized MN for CL74—more stringent)			X	
insert "arsenical-treated" after "discarded"; replace "solely for arsenic" with "for Hazardous Waste Codes D004 through D017"; delete "or reasons," after "reason"	261.4(b)(9)	NA (MN has not exempted treated wood. May in part 7045.0120, 2, but plans to be more stringent).			X	

RCRA REVISION CHECKLIST 108: Toxicity Characteristics Revisions:
Technical Corrections (cont'd)

PART 265 - INTERIM STATUS STANDARDS FOR OWNERS AND OPERATORS OF HAZARDOUS WASTE TREATMENT, STORAGE, AND DISPOSAL FACILITIES						
SUBPART N - LANDFILLS						
DESIGN REQUIREMENTS						
[ii] replace "EP toxicity characteristics" with "Toxicity Characteristic"; insert ", with EPA Hazardous Waste Number D004 through D017" after "chapter"	265.301(d)(1)	NA (MN Rule 7045.0638, 2, C/D, omits 265.301(d)(1) as MN requires double liners; EPA has authorized CL74 in MN)			X	

There is an error in the Federal Register at 57 FR 30658. "Specific waste" should read "Specific wastes" as found in the 1991 CFR. Note that there is also an error in the July 1, 1991 CFR for this citation; "charactristic of EP" should be "characteristic of EP."

There are several errors in the Federal Register for this citation. First, "such waste does not" should read "such wastes do not" and "261.4 of this chapter" should read "261.24 of this chapter" as they are found in the March 29, 1990 Federal Register and in the 1991 CFR. Second, "Waste Number" should be "Waste Numbers."

RCRA REVISION CHECKLIST 109

Land Disposal Restrictions for Newly Listed Wastes
and Hazardous Debris
57 FR 37194-37282
August 18, 1992
(RCRA Cluster III, HSWA provisions)

Note: This checklist may be subject to change in the future. EPA's State and Regional Programs Branch is currently discussing the relationship of hazardous waste injection issues to the State authorization program. In question are the changes made to 40 CFR Part 148 by the final rule addressed by this checklist and whether they should be included in the checklist. This present checklist does not include these changes.

2) The following Part 268 sections are not delegable to States because of the national concerns that must be examined when decisions are made relative to them: 268.5 (case-by-case effective date extensions); 268.42(b) (application for alternate treatment method); and 268.44 (variance from a treatment standard). "No migration" petitions under 268.6 will be handled by EPA, even though States may be authorized to grant such petitions in the future. States have the authority to grant such petitions under RCRA Section 3006 because such decisions do not require a national perspective, as do decisions under 268.5, 268.42(b) or 268.44. However, EPA has had few opportunities to implement the land disposal restrictions and expects to gain valuable experience and information from reviewing "no-migration" petitions. In the past, the nondelegable sections/paragraphs of the LDR regulations have been omitted from the LDR checklists because States could not assume the authority for them. However, this procedure has led to confusion among the States on how to handle the sections/paragraphs in their code. For this reason, the Agency has decided to include these nondelegable sections on the LDR checklists. To differentiate these sections from the delegable portions of the LDR restrictions, asterisks precede (a single row) and follow (a double row) each nondelegable section.

---

i This revision fixes an error in the July 1, 1991 CFR which makes it appear that there are two paragraphs designated as 262.34(a)(2) (see the editorial note in the CFR). Revision Checklist 82 originally inserted the first 262.34(a)(2), 262.34(a)(2)(i), 262.34(a)(2)(ii) and redesignated the old 262.34(a)(2)-(4) as 262.34(a)(3)-(5). However, Revision Checklist 92 redesignated 262.34(a)(3) as 262.34(a)(2), effectively removing the first 262.34(a)(2) and incorporating these requirements into 262.34(a)(1) at 262.34(a)(1)(iii) and (iii)(A)&(B). It was not the Agency's intent to include these requirements both at 262.34(a)(1)(iii)(A)&(B) and at 262.34(a)(2) as is indicated in the July 1, 1991 CFR. The first 262.34(a)(2) in that CFR should not be in the code. Revision Checklist 92 also redesignated 262.34(a)(3)-(5) as 262.34(a)(2)-(4), i.e., returned these subparagraphs to their original numbering prior to the redesignation by Revision Checklist 82. The revision, which is part of Revision Checklist 109, removes the first 262.34(a)(2), returning the code to what was intended by Checklist 92.

ii Note that there is an error in the Federal Register; the deadline for the written notice should be February 18, 1993, rather than November 16, 1992 as it appears in the Federal Register, in keeping with the effective date of these provisions, with the preamble to the rule at 57 FR 37215 (second full paragraph in the right-hand column), and with the similar provision under 265.1101(b)(4)(i).

iii Note that there is a typographical error in the Federal Register; "lead" should be "led."

iv There is a typographical error in the Federal Register article for this rule. The internal reference to "264.1102" should be to "265.1102".

v Note that the Federal Register for this rule introduces an error into the second-to-last sentence of this subparagraph by inserting an extraneous "with" between "§§" and "265.111."

vi Note there is an error in the Federal Register article for this rule. The phrase "as needed to permit" should read "as needed to prevent."

vii Note there is a typographical error in the Federal Register article for this checklist. The instructions preceding 268.7 (on page 57 FR 37270) incorrectly say that 268.7(a)(1)(v) is added. It is a new 268.7(a)(1)(iv) which is added, and the old 268.7(a)(1)(iv) is redesignated as 268.7(a)(1)(v).

viii Note that there is a typographical error in the Federal Register article for this checklist. The instructions preceding 268.7 (on page 57 FR 37270) incorrectly say 268.7(a)(3)(vi) is added. It is a new 268.7(a)(3)(v) which is added and the old 268.7(a)(3)(v) is redesignated as 268.7(a)(3)(vi).

ix Note that there is a typographical error in the Federal Register article for this checklist; there should be a comma, not a semicolon, after the second occurrence of "containers" in 268.7(a)(4).

x The addition of 268.14 to Federal code means that Subpart B of Part 268 is relevant to the States for the first time. The other sections of code in Subpart B, 268.10 through 268.13, contain the schedule by which EPA must evaluate wastes for land disposal restrictions. As such, States do not need requirements equivalent to 268.10 through 268.13. The surface impoundment exemptions of 268.14, however, address the length of time interim status impoundments can be used to receive or generate newly identified or listed hazardous wastes and resolve the potential conflicts between RCRA §§3004(h)(4), 3004(j)(6) and 3004(j)(11) [see the discussion in the Federal Register for this rule, pp. 37218-37221]. Therefore, States must adopt requirements analogous to 268.14(a)-(c).

xi Note there are two different entries in Table CCW for K030. Because there isn't an entry for K043, likely the second "K030" should read "K043." Also, the Federal Register adds an entry for K111, but this is not noted in the revision instructions for the table.

RCRA REVISION CHECKLIST 113

Consolidated Liability Requirements
53 FR 33938-33960
September 1, 1988
56 FR 30200
July 1, 1991
57 FR 42832-42844
September 16, 1992
(RCRA Cluster III, Non-HSWA provisions)

Notes: I.) This special consolidated checklist addresses changes made to the Federal code by the September 1, 1988 final rule (53 FR 33938, withheld Revision Checklist 51) as well as amendments made by the July 1, 1991 (56 FR 30200, withheld Revision Checklist 93) and the September 16, 1992 (57 FR 42832) final rules. The September 1, 1988 rule was the subject of litigation and its checklist, Revision Checklist 51, was withheld by EPA to encourage States not to adopt those changes until a final settlement agreement could be reached and implemented. The July 1, 1991 and September 16, 1992 rules were promulgated to make the revisions mandated by the settlement agreement. Now that all requirements of the settlement agreement have been met, EPA is issuing this Consolidated Liability Requirements Checklist to aid States in correctly adopting the changes made by these three rules.

Revision Checklists 51 and 93 will not be issued individually. Rather, States should use this Consolidated Liability Requirements Checklist to adopt the provisions of the three final rules. States that have already adopted changes based on the September 1, 1988 final rule are strongly encouraged to complete this consolidated checklist to ensure that all revisions pursuant to the two amendments are correctly made in the State's code. Note that the deadline for this consolidated checklist is July 1, 1994, based on the promulgation date of the most recent of the amendments.

II.) In the September 1, 1988 final rule, all changes were classified as less stringent and, therefore, optional with regard to State adoption. Note that, as part of the settlement agreement with Chemical Waste Management, Inc., the claims reporting requirements were reclassified as more stringent and, therefore, required for State adoption. Only those changes marked as optional (†) in this consolidated checklist should be considered less stringent provisions. The September 16, 1992 rule modified the claims reporting requirements (264.147(a)(7)&(b)(7) and 265.147(a)(7)&(b)(7)) and they are less stringent than the claim reporting requirements promulgated in the September 1, 1988 rule. Thus, States which have already adopted the September 1, 1988 provisions are not required to adopt the "clarified" reporting requirements of the September 16, 1992 rule, although EPA strongly encourages them to do so. States that did not adopt the September 1, 1988 claims reporting requirements should not do so but should, instead, adopt the clarified September 16, 1992 version included in this consolidated checklist.

III.) This checklist includes a "rule" reference column. To simplify references to the three rules addressed by this checklist, "51" will signify the September 1, 1988 rule, "93" will signify the July 1, 1991 rule, and "113" will indicate the September 16, 1992 rule.

IV.) There were several typographical errors in the September 1, 1988 Federal Register article. These are explained in endnotes in this consolidated checklist.

RCRA REVISION CHECKLIST 113: Consolidated Liability Requirements (cont'd)

V.) The optional designation (†) is placed in the margin of the consolidated checklist if a checklist introduced a new optional paragraph into the Federal code. If a checklist addresses optional changes to an existing paragraph, the optional designation is placed beside the corresponding checklist number.

Note that there is an error in the Federal Register; "direct of higher tier" should be "direct or higher tier."

The September 1, 1988 (53 FR 33938) rule added 264.147(a)(7) and (b)(7) to the code, and the September 16, 1992 rule (57 FR 42832) revised them (including adding 264.147(a)(7)(iii) and (b)(7)(iii)). Note that the preamble of the September 1, 1988 Federal Register incorrectly characterized these paragraphs as less stringent. The September 16, 1992 Federal Register clarified this issue by stating that, in fact, these paragraphs are more stringent because they address an additional reporting requirement. The amendment made by the September 16, 1992 rule made these requirements less stringent than those introduced by the September 1, 1988 rule. Thus, those States that adopted the more stringent September 1, 1988 provisions are not required to adopt the amendments made by the September 16, 1992 rule, although EPA urges them to do so. States that did not adopt the September 1, 1988 requirements at 264.147(a)(7) and (b)(7) should not do so but should adopt the clarified version promulgated by the September 16, 1992 rule.

Revision Checklist 45 added the reference to miscellaneous units to the first sentence of this paragraph. When the September 1, 1988 rule revised this paragraph, the Revision Checklist 45 change was inadvertently omitted. The July 1, 1991 rule restored the Revision Checklist 45 reference to miscellaneous units.

Note that only (g)(1)(ii) is removed and reserved; (g)(1)(i) remains as it was prior to the September 1, 1988 final rule.

Note that there is an error in the Federal Register; "letter or credit" should be "letter of credit".

The changes addressed by Revision Checklist 113 at this citation are "conditionally optional" because they are linked to whether a State chooses to adopt the Revision Checklist 113 optional changes at 264.143(f)(10), 264.143(f)(11), 265.143(e)(10) and 265.143(e)(11). If a State chooses to adopt the optional changes at 264.143(f)(10), 264.143(f)(11), 265.143(e)(10) and 265.143(e)(11), it must also adopt the changes at this citation. If the State does not adopt those changes, it should not adopt the Revision Checklist 113 changes at 264.151(f).

The changes addressed by Revision Checklist 113 at this citation are "conditionally optional" because they are linked to whether a State chooses to adopt the Revision Checklist 113 optional changes at 264.147(f)(6) and 265.147(f)(6). If a State chooses to adopt the optional changes at 264.147(f)(6) and 265.147(f)(6), it must also adopt the changes at this citation. If the State does not adopt those changes, it should not adopt the Revision Checklist 113 changes at 264.151(g).

Note that there are several typographical errors in the Federal Register at 264.151(g) as indicated below:

RCRA REVISION CHECKLIST 113: Consolidated Liability Requirements (cont'd)

Federal citation	Federal Register location	Error/Corrections
264.151(g) paragraph 4, line 5	57 FR 42837, column 3	"..'nonsudden' of 'both sudden.." should read "..'nonsudden' or 'both sudden.."
264.151(g), item 3., line 8	57 FR 42838, column 1	"subpart H or 40 CFR parts" should read "subpart H of 40 CFR parts"
264.151(g), Part A, Alternative I.3	57 FR 42838, column 1	"Current $" should read "Current liabilities $"
264.151(g), Part B, Alternative II.7., line 5	57 FR 42838, column 3	")___$___" should be ") $

The changes addressed by Revision Checklist 113 at this citation are "conditionally optional" because they are linked to whether a State chooses to adopt the Revision Checklist 113 optional changes at 264.147(h)(4), 264.147(h)(5), 265.147(h)(4) and 265.147(h)(5). If a State chooses to adopt the optional changes at 264.147(h)(4), 264.147(h)(5), 265.147(h)(4) and 265.147(h)(5), it must also adopt the changes at this citation. If the State does not adopt those changes, it should not adopt the Revision Checklist 113 changes at 264.151(h)(1).

Note that there are several typographical errors in the Federal Register at 264.151(h)(2) as indicated below:

Federal citation	Federal Register location	Error/Corrections

264.151(h)(2), Guarantee for Liability Coverage, line 15	57 FR 42839, column 3	"or which guarantor is" should read "of which guarantor is"
264.151(h)(2), Guarantee for Liability Coverage, line 19	57 FR 42839, column 3	"264.141(h)]" should read "264.141(h) or 265.141(h)]"
264.151(h)(2), Certification of Valid Claim, line 8	57 FR 42840, column 2	insert "]" after "facility"

Note that there is a typographical error in the Federal Register; in line three of the revised text of (j)(2)(d) shown at 53 FR 33955, "corportation" should be "corporation".

Note that there are several typographical errors in the Federal Register at 264.151(k) as indicated below:

Federal citation	Federal Register location	Error/Corrections
264.151(k), Irrevocable Standby Letter of Credit, line 26	57 FR 42840, column 3	insert "]" after "trust fund:"

264.151(k), (2), 2nd paragraph, lines 2 & 5	57 FR 42841, column 1	delete "]" in "[date]" in line 2 add "]" after "[date" in line 5
264.151(k), (2), 4th paragraph, line 7	57 FR 42841, column 1	end paragraph with "]"

Note that there are several errors in the September 1, 1988 Federal Register. Explanatory paragraph 10, as well as the actual text of the revised code, should read "(l)" rather than "(1)" (letter rather than number one). Also, the first sentence of the introductory text for the surety bond should reference "§ 264.147(i) or § 265.147(i)" rather than "§ 264.147(h) or § 265.147(h)".

Note that the introductory paragraph for 264.151(m)(2) is not clearly distinguished from the preceding and following certifications. In the middle of the third column at 53 FR 33958, the paragraph numbered (2) and ending with "of this acknowledgement." is the introductory paragraph and should have been printed in the larger type size used for such paragraphs. The example of the certification begins "State of".

Note that there are several typographical errors in the Federal Register at 264.151(n)(1) as indicated below:

RCRA REVISION CHECKLIST 113: Consolidated Liability Requirements (cont'd)

Federal citation	Federal Register location	Error/Corrections
264.151(n)(1) Standby Trust Agreement (e)(3)	57 FR 42841, column 3	insert "to" after "Property loaned"

Note that the September 1, 1988 Federal Register incorrectly labels this paragraph "264.141" rather than "265.141".

Note that there is an error in the September 16, 1992 Federal Register. In the preamble text at the bottom of the second column at 57 FR 42834, "265.143(e)(11)" should be "265.143(e)(10)".

Note that an error which appears in the July 1, 1989, 1990 and 1991 CFRs has only been partially corrected in the July 1, 1992 CFR. The July 1, 1989, 1990 and 1991 CFRs incorrectly omit 265.147(a)(1)(i)&(ii) and 265.147(b(1)(i)&(ii). The September 23, 1991 Federal Register (56 FR 47912) reinstated 265.147(a)(1)(i)&(ii) but erroneously did not reinstate 265.147(b)(1)(i)(&(ii). Thus, the July 1, 1992 CFR omits 265.147(b)(1)(i)&(ii). A technical correction will be published in the near future to correct this error. In the meantime, States should include analogous requirements in their regulations.

The September 1, 1988 rule added 265.147(a)(7) and (b)(7) to the code, and the September 16, 1992 rule revised them (including adding 265.147(a)(7)(iii) and (b)(7)(iii)). Note that the preamble of the September 1, 1988 Federal Register incorrectly characterized these paragraphs as less stringent. The September 16, 1992 Federal Register clarified this issue by stating that, in fact, these paragraphs are more stringent because they address an additional reporting requirement. The amendment made by the September 16, 1992 rule made these requirements less stringent than those introduced by the September 1, 1988 rule. Thus, those States that adopted the more stringent September 1, 1988 provisions are not required to adopt the amendments made by the September 16, 1992 rule, although EPA urges them to do so. States that did not

adopt the September 1, 1988 requirements at 265.147(a)(7) and (b)(7) should not do so but should adopt the clarified, less stringent version promulgated by the September 16, 1992 rule.

The Federal Register for Revision Checklist 51, in Item 3. in the first column at 53 FR 33959, erroneously indicates that 265.147(b)(5) is a new paragraph to be added. In fact, this final rule replaces the old 265.147(b)(5) with a new paragraph (b)(5).

Note that there is a typographical error in the Federal Register: "264.151(1)" [number 1], should be "264.151(l)" [letter l].

RCRA REVISION CHECKLIST 115

RCRA REVISION CHECKLIST 117B

Toxicity Characteristic Amendment
57 FR 23062-23063
June 1, 1992
(RCRA Cluster III, HSWA provision)

Note: The Toxicity Characteristic rule [55 FR 11798 (March 29, 1990); Revision Checklist 74] and its subsequent amendments [55 FR 26986 (June 29, 1001) and 57 FR 30657 (July 10, 1992); Revision Checklist 74] omitted changing the reference to the "Extraction Procedure Toxicity Characteristic" at 261.3(a)(2)(i). The March 3, 1992 reissuance of the "mixture" and "derived-from" rules, reissued 261.3 with that error still in it. The June 1, 1992 amendment (57 FR 23062) to that reissued code corrected this error. Because this change makes the Federal code more stringent, it is required and was placed in a checklist separate from the other provisions (considered optional, for States) addressing the reissuance of the "mixture" and "derived-from" rules.

DISPOSAL OF SMALL CONTAINERS OF HAZARDOUS WASTE IN OVERPACKED DRUMS (LAB PACKS)						
change "absorbent" to "sorbent" in both places; add ", determined to be nonbiodegradable in accordance with § 265.314(f)," before "to completely"; change "absorb" to "sorb"; change "packing" to "it has been packed"	265.316(b)	7045.0638, 9, B	X			
[ii] change "absorbent" to "sorbent"; add "," after "containers"	265.316(c)	7045.0638, 9, C	X			

Note that there is a typographical error in the Federal Register article; at 265.314(f)(1)(ii), "polysobutylene" should be "polyisobutylene."

Note that there is an error in the Federal Register article; "container's" should be "containers,".

RCRA REVISION CHECKLIST 123

Land Disposal Restrictions;
Renewal of the Hazardous Waste Debris Case-by-Case Capacity Variance
58 FR 28506-28511
May 14, 1993
(RCRA Cluster III, HSWA provisions)

Notes:
1) This is the fifth rule addressing hazardous debris and soil contaminants with Third Third wastes. Revision Checklist 78 (55 FR 22520; June 1, 1990) established a national capacity variance for certain hazardous waste soil and debris at 268.35. Revision Checklist 83 (56 FR 3864; January 31, 1991) amended 268.35(d) to also address mixed radioactive hazardous waste and amended 268.35(e) to address additional wastes. Revision Checklist 103 (57 FR 20766; May 15, 1992) established a case-by-case extension, until May 8, 1993, for contaminated debris only. Revision Checklist 116 (57 FR 47772; October 20, 1992) clarified that the case-by-case extension applied to mixed radioactive hazardous waste. This current rule extends, until May 8, 1994, the case-by-case extension for hazardous debris promulgated by the October 20, 1992 final rule. It also clarifies the extension by addressing mixed radioactive hazardous waste debris separately from other debris. The case-by-case extension for hazardous soil retains the May 8, 1993 deadline as specified in the October 20, 1992 rule, but is also clarified. States that have already adopted any of the previous rules addressing hazardous debris and soil should adopt this rule as soon as possible. States that have not adopted Third Third regulations should adopt this rule when adopting the other Third Third rules.

2) Although reprinted in the final rule addressed by this checklist, the 268.35(e) introduction did not change and was not included on this checklist.

RCRA REVISION CHECKLIST 124

Land Disposal Restrictions for Ignitable and Corrosive Characteristic Wastes
Whose Treatment Standards Were Vacated
58 FR 29860-29887
May 24, 1993
(RCRA Cluster III, HSWA provisions)

Note: This Revision Checklist amends the treatment standards under the land disposal restrictions program for certain wastes displaying the characteristics of ignitability (EPA Hazard Code D001) and corrosivity (EPA Hazard Code D002). The treatment standards for these wastes were vacated by the September 25, 1992, decision of the U.S. Court of Appeals [Chemical Waste Management vs. EPA, 976 F.2d 2 (D.C. Cir. 1992)]. Without this replacement of these standards, land disposal of these wastes would be prohibited.

wastewaters under designated circumstances: such wastes at facilities whose ultimate discharge is subject to regulation under the CWA, provided the annualized flow of laboratory wastewater into facility's headwork does not exceed 1%, or provided that the laboratory wastes' combined annualized average concentration does not exceed one part per million in the facility's headwork						
DEFINITIONS APPLICABLE IN THIS PART						
add new paragraph; definition of "underlying hazardous constituent"	268.2(i)	7045.1390	IBR			

RCRA REVISION CHECKLIST 124: Land Disposal Restrictions for Ignitable and Corrosive Characteristic Wastes Whose Treatment Standards Were Vacated (cont'd)

	WASTE ANALYSIS AND RECORDKEEPING						
	in two places, delete "of this part," after "268.32"; add "of this chapter" after "appendix II" and after "subpart C"; add sentence at end regarding what the generator must do if he determines that his waste displays characteristic of ignitability or corrosivity and is prohibited under 268.37	268.7(a)	7045.1390	IBR			
[ii]	change "F039 and" to "F039,"; after "3004(d)" add ", and for underlying hazardous constituents (as defined in § 268.2 of this part), in D001 and D002 wastes if those wastes are prohibited under §268.37 of this part"	268.7(a)(1)(ii)		IBR			
Error ! Bookmark not defined.	change "F039 and" to "F039,"; after "3004(d)" add ", and for underlying hazardous constituents (as defined in § 268.2 of this part), in D001 and D002 wastes if those wastes are prohibited under §268.37 of this part"	268.7(b)(4)(ii)		IBR			
	SPECIAL RULES REGARDING WASTES THAT EXHIBIT A CHARACTERISTIC						
	add new sentence at end; if generator determines that his waste displays characteristic of ignitability (and is not in	268.9(a)	7045.1390	IBR			

RCRA REVISION CHECKLIST 124: Land Disposal Restrictions for Ignitable and Corrosive Characteristic Wastes Whose Treatment Standards Were Vacated (cont'd)

the High TOC Ignitable Liquid Subcategory or is not treated by INCIN, FSUBS or RORGS of § 268.42, Table 1) or corrosivity and is prohibited under 268.37, generator must determine what underlying hazardous characteristics are reasonably expected to be present in the waste						

RCRA REVISION CHECKLIST 124: Land Disposal Restrictions for Ignitable and Corrosive Characteristic Wastes Whose Treatment Standards Were Vacated (cont'd)

SUBPART C - PROHIBITIONS ON LAND DISPOSAL						
WASTE SPECIFIC PROHIBITIONS--IGNITABLE AND CORROSIVE CHARACTERISTIC WASTES WHOSE TREATMENT STANDARDS WERE VACATED						
effective August 9, 1993, wastes specified in 261.21 as D001 (and not in the High TOC Ignitable Liquids subcategory) and in 261.22 as D002 that are managed in systems other than those whose discharge is regulated under the CWA or that inject in Class I deep wells regulated under the SDWA or are zero dischargers that engage in CWA-equivalent treatment before ultimate land disposal, are prohibited from land disposal; CWA-equivalent treatment defined	268.37(a)	7045.1390	IBR			
effective February 10, 1994, wastes specified in 261.21 as D001 (and not in the High TOC Ignitable Liquids subcategory) and in 261.22 as D002 that are managed in systems defined in 40 CFR 144.6(e) and 146.6(e) as Class V injection wells that do not engage in CWA-equivalent treatment before injection are prohibited from land disposal	268.37(b)		IBR			
SUBPART D - TREATMENT STANDARDS						

RCRA REVISION CHECKLIST 124: Land Disposal Restrictions for Ignitable and Corrosive Characteristic Wastes Whose Treatment Standards Were Vacated (cont'd)

APPLICABILITY OF TREATMENT STANDARDS						
add commas before and after "or hazardous debris for which a treatment technology is specified under § 268.45"; add sentence at end--for waste displaying characteristic of ignitability and reactivity that are diluted to meet deactivation treatment standard in 268.42(a) Tables 1 & 2, the treater must comply with precautionary measures specified in 264.17(b) and 265.17(b)	268.40(b)	7045.1390	IBR			
TREATMENT STANDARDS EXPRESSED AS CONCENTRATIONS IN WASTE EXTRACT						
revise Table CCWE entry for F039; add "(and D001 and D002 wastes prohibited under § 268.37)" after "F039" in first column; in third column, add "Table 2 in 268.42, and" before "Table CCW"	268.41(a), Table CCWE	7045.1390	IBR			
TREATMENT STANDARDS EXPRESSED AS SPECIFIED TECHNOLOGIES						
Revise Table 2 as shown at 58 FR 29886	268.42(a), Table 2	7045.1390	IBR			
TREATMENT STANDARDS EXPRESSED AS WASTE CONCENTRATIONS						
revise Table CCW entry for F039; add "(and D001 and D002 wastes prohibited under § 268.37)" after "F039" in first column; in third column, add "Table 2 in 268.42, and" before	268.43(a), Table CCW	7045.1390	IBR			

RCRA REVISION CHECKLIST 124: Land Disposal Restrictions for Ignitable and Corrosive Characteristic Wastes Whose Treatment Standards Were Vacated (cont'd)

"Table CCWE"						
PART 270 - EPA ADMINISTERED PERMIT PROGRAMS: THE HAZARDOUS WASTE PERMIT PROGRAM						
SUBPART D - CHANGES TO PERMIT						
PERMIT MODIFICATION AT THE REQUEST OF THE PERMITTEE						
remove second item designated as B(1)(b); redesignate item B(1)(c) as B(1)(d); add new B(1)(c) as shown at 58 FR 29887	270.42 Appendix I	Not in equivalent Mn Rules	X			

There is a typographical error in title of this section as printed in the Federal Register; "scope/and" should be "scope and". States should retain the correct title as it appears in the CFR.

There is a typographical error in the Federal Register; "reactive cyanides" should appear in italic type as it does in the CFR.

SUBPART D - TREATMENT STANDARDS						
APPLICABILITY OF TREATMENT STANDARDS						
replace "the test method in appendix II of part 261" with "Method 1311, the Toxicity Characteristic Leaching Procedure"; replace "the test method in 40 CFR part 261, appendix II, or the test method in appendix IX of this part" with reference to Methods 1310 and 1311; add sentence, at end of paragraph, regarding Methods 1310 and 1311 in "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods"	268.40(a)	7045.1390	IBR			
TREATMENT STANDARDS EXPRESSED AS CONCENTRATIONS IN WASTE EXTRACT						
replace "the test method in appendix I of this part" with "Method 1311, the Toxicity Characteristic Leaching Procedure,"; add sentence regarding Method 1311 in "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods" at end of paragraph	268.41(a)	7045.1390	IBR			

APPENDIX I TO PART 268						
TOXICITY CHARACTERISTIC LEACHING PROCEDURE (TCLP)						
replace note regarding TCLP in Appendix II of part 261 with note regarding TCLP in "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods"	268 Appendix I	7045.1390	IBR			
APPENDIX IX TO PART 268						
EXTRACTION PROCEDURE (EP) TOXICITY TEST METHOD AND STRUCTURAL INTEGRITY TEST (METHOD 1310)						
replace EP Toxicity Test method with note regarding EP in "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods"	268 Appendix IX	7045.1390	IBR			
PART 270 - EPA ADMINISTERED PERMIT PROGRAMS: THE HAZARDOUS WASTE PERMIT PROGRAM						
SUBPART A - GENERAL INFORMATION						
REFERENCES						
replace information on "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods" with reference to 260.11	270.6(a)	7045.0065, D	X			

SUBPART B - PERMIT APPLICATION						
SPECIFIC PART B INFORMATION REQUIREMENTS FOR INCINERATORS						
in the last sentence, change "methods for the evaluation of" to "Methods for Evaluating"; add a comma after "Physical/Chemical Methods"; replace "(incorporated by reference, see § 270.6 and referenced in 40 CFR part 261, appendix III)" with "EPA Publication SW-846, as incorporated by reference in § 260.11 of this chapter and § 270.6"	270.19(c)(1)(iii)	7001.0630, C	X			
change "the Evaluation of" to "Evaluating"; add a comma after "Physical/Chemical Methods"; replace "(incorporated by reference, see § 270.6)" with "EPA Publication SW-846, as incorporated by reference in § 260.11 of this chapter and § 270.6"	270.19(c)(1)(iv)	7001.0630, C, (1), (e)	X			

SUBPART F - SPECIAL FORMS OF PERMITS						
HAZARDOUS WASTE INCINERATOR PERMITS						
in the last sentence, change "the Evaluation of" to "Evaluating"; add a comma after "Physical/Chemical Methods"; replace "(incorporated by reference, see § 270.6)" with "EPA Publication SW-846, as incorporated by reference in § 260.11 of this chapter and § 270.6"	270.62(b)(2)(i)(C)	7001.0700, 3, A, ~~(3-5)~~	X			
change "the Evaluation of" to "Evaluating"; replace "(incorporated by reference, see § 270.6)" with "EPA Publication SW-846, as incorporated by reference in § 260.11 of this chapter and § 270.6"	270.62(b)(2)(i)(D)	7001.0700, 3, A, ~~(3-5)~~	X			

PERMITS FOR BOILERS AND INDUSTRIAL FURNACES BURNING HAZARDOUS WASTE						
in the last sentence, insert "waste" before "analysis"; add opening quotation mark before "Test"; add comma and closing quotation mark after "Physical/Chemical Methods"; replace "(incorporated by reference, see § 270.6)" with "EPA Publication SW-846, as incorporated by reference in § 260.11 of this chapter and § 270.6"	270.66(c)(2)(i)	Not in MR				
add opening quotation mark before "Test Methods"; add comma and closing quotation mark after "Physical/Chemical Methods"; replace "(incorporated by reference, see § 270.6)" with "EPA Publication SW-846, as incorporated by reference in § 260.11 of this chapter and § 270.6"	270.66(c)(2)(ii)	Not in MR				

1/The September 19 (59 FR 47980) rule indicates that it was not EPA's intention to remove the subparagraphs of 268.7(a) as the August 31, 1993 rule (58 FR 46040) implied. The provisions have remained in affect continuously in the form published in the CFR revised as of July 1, 1993.

RCRA REVISION CHECKLIST 128

Wastes From the Use of Chlorophenolic Formulations
in Wood Surface Protection

PART 260 - HAZARDOUS WASTE MANAGEMENT SYSTEM: GENERAL						
SUBPART B - DEFINITIONS						
REFERENCES						
i revise the reference to "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods" by replacing "[Third Edition (September, 1986), as amended by Update I (July 1992)]" with "(Third Edition (November, 1986), as amended by Updates I, II and IIA)"; in the second sentence, replace "Update I" with "Updates I, II and IIA"; remove the last sentence regarding where copies may be inspected	260.11(a)	7045.0065	IBR			

RCRA REVISION CHECKLIST 128: Wastes From the Use of Chlorophenolic Formulations in Wood Surface Protection (cont'd)

PART 261 - IDENTIFICATION AND LISTING OF HAZARDOUS WASTE

APPENDIX VIII TO PART 261

HAZARDOUS CONSTITUENTS

add the specified hazardous constituents in alphabetical order as shown below:	Appendix VIII	~~7045.0135, 1a, N~~ 7045.0150, 1, E	IBR			

Chemical abstracts Common Name	Chemical Abstracts name	Hazardous waste No.	CAS No.	
* * * * * * * * * *				
Potassium pentachlorophenate	Pentachlorophenol, potassium salt		7778736	None
* * * * * * * * * *				
Sodium pentachlorophenate	Pentachlorophenol, sodium salt		131522	None
* * * * * * * * * *				
2,3,4,6-tetrachlorophenol, potassium salt	same		53535276	None
2,3,4,6-tetrachlorophenol, sodium salt	same		25567559	None
* * * * * * * * * *				

Note the date (November 1986) given in the FR appears to be an error because the date on the third edition of SW-836 is September 1986 as was indicated in the Federal Register (58 FR 46040; August 31, 1993) addressed by Revision Checklist 126.

Table 2.-Handling Codes for Treatment, Storage and Disposal Methods

Enter the handling code(s) listed below that most closely represents the technique(s) used at the facility to treat, store or dispose of each quantity of hazardous waste received.

1. Storage

S01	Container (barrel,
S02	drum, etc.)
S03	Tank
S04	Waste Pile
S05	Surface
S06	Impoundment
S99	Drip Pad
	Containment
	Building (Storage)
	Other Storage
	(specify)

2. Treatment

(a) Thermal Treatment--

T06	Liquid injection
T07	incinerator
T08	Rotary kiln
T09	incinerator
T10	Fluidized bed
T11	incinerator
T12	Multiple hearth
T13	incinerator
T14	Infrared furnace
T15	incinerator
T18	Molten salt
	destructor
	Pyrolysis
	Wet air oxidation
	Calcination
	Microwave
	discharge
	Other (specify)

(b) Chemical Treatment--

T19	Absorption
T20	mound
T21	Absorption field
T22	Chemical fixation
T23	Chemical

RCRA REVISION CHECKLIST 131: Recordkeeping Instructions;
Technical Amendment (cont'd)

T24	oxidation
T25	Chemical
T26	precipitation
T27	Chemical
T28	reduction
T29	Chlorination
T30	Chlorinolysis
T31	Cyanide
T32	destruction
T33	Degradation
T34	Detoxification
	Ion exchange
	Neutralization
	Ozonation
	Photolysis
	Other (specify)

(c) Physical Treatment--

(1) Separation of components:

T35	Centrifugation
T36	Clarification
T37	Coagulation
T38	Decanting
T39	Encapsulation
T40	Filtration
T41	Flocculation
T42	Flotation
T43	Foaming
T44	Sedimentation
T45	Thickening
T46	Ultrafiltration
T47	Other (specify)

(2) Removal of Specific Components:

T48	Absorption-molec
T49	ular sieve
T50	Activated carbon
T51	Blending
T52	Catalysis
T53	Crystallization
T54	Dialysis
T55	Distillation
T56	Electrodialysis
T57	Electrolysis
T58	Evaporation
T59	High gradient
T60	magnetic
T61	separation
T62	Leaching
T63	Liquid ion
T64	exchange
T65	Liquid-liquid
T66	extraction
	Reverse osmosis
	Solvent recovery
	Stripping
	Sand filter
	Other (specify)

(d) Biological Treatment

T67	Activated sludge
T68	Aerobic lagoon
T69	Aerobic tank
T70	Anaerobic tank

RCRA REVISION CHECKLIST 131: Recordkeeping Instructions;
Technical Amendment (cont'd)

T71	Composting
T72	Septic tank
T73	Spray irrigation
T74	Thickening filter
T75	Tricking filter
T76	Waste
T77	stabilization pond
T78	Other (specify)
T79	[Reserved]
	[Reserved]

RCRA REVISION CHECKLIST 131: Recordkeeping Instructions; Technical Amendment (cont'd)

(e) Boilers and Industrial Furnaces

T80	Boiler
T81	Cement Kiln
T82	Lime Kiln
T83	Aggregate Kiln
T84	Phosphate Kiln
T85	Coke Oven
T86	Blast Furnace
T87	Smelting, Melting, or Refining Furnace
T88	Titanium Dioxide Chloride Process Oxidation Reactor
T89	Methane Reforming Furnace
T90	Pulping Liquor Recovery Furnace
T91	Combustion Device Used in the Recovery of Sulfur Values from Spent Sulfuric Acid
T92	Halogen Acid Furnaces
T93	Other Industrial Furnaces Listed in 40 CFR 260.10 (specify)

(f) Other Treatment

T94	Containment Building (Treatment)

3. Disposal

D79	Underground Injection
D80	Landfill
D81	Land Treatment
D82	Ocean Disposal
D83	Surface Impoundment (to be closed as a landfill)
D99	Other Disposal (specify)

4. Miscellaneous (Subpart X)

X01	Open Burning/Open Detonation
X02	Mechanical Processing
X03	Thermal Unit
X04	Geologic Repository
X99	Other Subpart X (specify)

PART 265 - INTERIM STATUS STANDARDS FOR OWNERS AND OPERATORS OF HAZARDOUS WASTE TREATMENT, STORAGE, AND DISPOSAL FACILITIES

RCRA REVISION CHECKLIST 134

Correction of Beryllium Powder (P015) Listing
59 FR 31551-31552
June 20, 1994
(RCRA Cluster IV, Non-HSWA provisions)

Note: On April 22, 1988, EPA published a technical correction to the lists of hazardous wastes in 40 CFR 261.33(e) and (f) (Revision Checklist 46, 53 FR 13382). In that notice, however, the word "dust" was inadvertently omitted from the P015 listing for "beryllium dust" in the 261.33(e) list of hazardous wastes. In addition, it became apparent that the term "beryllim dust" is not used by the industry to describe this commerical chemical product; the actual term used by the industry is "beryllium powder". This technical correction adds "powder" to the P015 hazardous waste listing for "beryllium" and makes conforming changes to the list of hazardous constituents in Part 261 Appendix VIII and to Table 2 in § 268.42(a).

	with a paragraph containing a list of the EPA hazardous waste codes for hazardous wastes that may not be placed in lab packs under the alternative lab pack treatment standards at 268.42(c)						
	APPENDIX V TO PART 268						
	remove and reserve	268/Appendix V	7045.1390	IBR			
	APPENDIX X TO PART 268						
3,viii	add new appendix containing 1) a table addressing recordkeeping, notification, and/or certification requirements and 2) certification statements A-G; include amendment to Certification Statement B made by 60 FR 242, (January 3, 1995)	268/Appendix X	7045.1390	IBR			

---

i Note, in the September 19, 1994 FR article for this rule, there is an error in the internal references in this paragraph--"subparts A through N of parts 124, 264, 265, 268 and 270" should be "subparts A through N of parts 264 and 265, and parts 268, 270, and 124." The correct internal references are given on the checklist.

ii There is a typographical error in the September 19, 1994 FR article: the reference to "appendix IX" should be to "appendix XI." In the version of 266.100(c)(3)(i)(A) prior to this rule, the reference was to "appendix XI", but this rule incorrectly changed it to "appendix IX." States should not make this change. As such, this change was not listed on the checklist.

iii Amended by 60 FR 242 (January 3, 1995).

iv Note, there are two typographical errors in the September 19, 1994 FR article: there should be a ")" after "§268.2" and "(SW-846))" should be "(SW-846)".

v There appears to be an error in the January 3, 1995 amendment. The phrase "or State authorized to implement part 268 requirements" is printed twice in the same sentence. On the checklist, the second occurrence is not included.

vi Note that there is a typographical error in the Federal Register article for Revision Checklist 137 (59 FR 47982; September 19, 1994). There should be a closing parenthesis following the phrase "(as defined in 268.2(i)".

vii There is a typographical error in the September 19, 1994 FR article: there should be a ")" after "D043".

viii Note there is a typographical error in Certification Statement G. The beginning of the second sentence should read "I am aware that..." rather than "Am aware that...".

RCRA REVISION CHECKLIST 138
(WITHDRAWN)

Organic Air Emission Standards for Tanks,
Surface Impoundments, and Containers
59 FR 62896-62953
December 6, 1994
(HSWA provisions)

Note: This checklist has been withdrawn. Its applicable provisions are included in Revision Checklist 154 which is a consolidation all of the rules associated with the organic air emission standards for tanks, surface impoundments, and container requirements (Subpart CC). This consolidated revision checklist is placed in RCRA Cluster VII.

Attached is a memorandum from Bruce Jordan, EPA Office of Air Quality Planning and Standards, that strongly encourages States to not adopt the December 6, 1994 rule, as well as its related amendments, until the final amendment to the Subpart CC rule is issued. This amendment was published in in the Federal Register on November 25, 1996 at 61 FR 59931. EPA encourages States to adopt Revision Checklist 154 which includes all of the following notices: 59 FR 62896, December 6, 1994; 60 FR 26828, May 19, 1995; 60 FR 56952, November 13, 1995; 61 FR 28508, June 5, 1996; 60 FR 50426, September 29, 1995; 61 FR 4903, February 9, 1996; and 61 FR 59931, November 25, 1996.

RCRA REVISION CHECKLIST 140

Carbamate Production Identification and Listing of Hazardous Waste
60 FR 7824-7859
February 9, 1995
as amended at 60 FR 19165, April 17, 1995
and at 60 FR 25619, May 12, 1995
(RCRA Cluster V, HSWA provisions)

Note: 1) On August 8, 1995, EPA published an interpretive rule in the Federal Register (see 60 FR 41817-41818) regarding a change in the Agency's interpretation of the February 9, 1995 rule that lists wastes from carbamate production as hazardous wastes under RCRA. Under this new interpretation, wastes from the production of non-carbamate intermediates that are used exclusively in the production of carbamates but are not produced at the ultimate site of manufacture of the carbamates will not be subject to the February 9, 1995 rule. These wastes are among those given in the RCRA waste code designations K156 and K157 in that rule.

2) On November 1, 1996, the U.S. Court of Appeals for the District of Columbia Circuit (*Dithiocarbamate Task Force v. EPA,* CA DC 95-1249, 11/1/96) vacated the following carbamate wastes listed by the February 9, 1995 (60 FR 7824) listing rule: U277, U365, U366, U375, U376, U377, U378, U379, U381, U382, U383, U384, U385, U386, U390, U391, U392, U393, U396, U400, U401, U402, U403, U407, and K160. In addition, the court vacated K156, K157 and K158 in so far as they encompass 3-iodo-2-propynyl n-butylcarbamate (IPBC), which was listed as product waste U375. These vacated wastes are not included on this checklist, because they are no longer required for authorization for this rule. States may choose to list these wastes as a matter of State law. In this case, the State-listed wastes will be broader in scope or more stringent than the Federal requirements, depending on whether or not the listed wastes also exhibit a 40 CFR 261, Subpart C hazardous waste characteristic.

3) States that incorporate the CFR by reference should be careful in their incorporation, particularly those States that have a statutory or regulatory restriction against being more stringent or broader in scope than the Federal requirements, because the U.S. Court of Appeals' vacatur may not be transferable to State law. See the special guidance for States that incorporate by reference on the Summary for this checklist.

	FEDERAL REQUIREMENTS	FEDERAL RCRA CITATION	ANALOGOUS STATE CITATION	STATE ANALOG IS:

RCRA REVISION CHECKLIST 151

Land Disposal Restrictions Phase III -
Decharacterized Wastewaters, Carbamate Wastes, and Spent Potliners
61 FR 15566-15660
April 8, 1996

as amended April 8, 1996, at 61 FR 15660-15668
April 30, 1996, 61 FR 19117
June 28, 1996, 61 FR 33680-33690
July 10, 1996, 61 FR 36419-36421
August 26, 1996, 61 FR 43924-43931
February 19, 1997 (62 FR 7502-7600)

(RCRA Cluster VI, HSWA provisions)

Notes: 1) On April 8, 1996 (61 FR 15566), EPA published the rule addressing the Phase III land disposal restrictions in the Federal Register. On the same day, at 61 FR 15660, EPA published a second rule that partially withdrew and amended the rule published at 61 FR 15566-15560. Subsequent to April 8, 1996, four technical amendments and corrections were published in the Federal Register. Due to the number of rules (seven total) that comprise Revision Checklist 151, a column has been added to this checklist that provides a reference to the rule that affected each provision. The rules are designated as follows:

Rule 151 :	April 8, 1996	(61 FR 15566-15660);
Rule 151.1:	April 8, 1996	(61 FR 15660-15668);
Rule 151.2:	April 30, 1996	(61 FR 19117);
Rule 151.3:	June 28, 1996	(61 FR 33680-33690);
Rule 151.4:	July 10, 1996	(61 FR 36419-36421);
Rule 151.5:	August 26, 1996	(61 FR 43924-43931); and
Rule 151.6:	February 19, 1997	(62 FR 7502-7600)

2) This Revision Checklist includes a national capacity variance for spent potliners from primary aluminum production (Hazardous Waste Number K088) at 268.39(c). Thus, as of January 8, 1997, KO88 wastes and soil or debris contaminated with these wastes were prohibited from land disposal. However, States should note that the national capacity variance has been extended by two subsequent rules. The January 14, 1997, final rule (62 FR 1992; Revision Checklist 155) extended the variance until July 8, 1997. The July 14, 1997, final rule (62 FR 37694; Revision Checklist 160) further extended the variance until October 8, 1997. Therefore, K088 wastes do not have to be treated to meet the Land Disposal Restrictions until October 8, 1997, instead of the January 8, 1997, deadline reflected in this Revision Checklist.

RCRA REVISION CHECKLIST 151: Land Disposal Restrictions Phase III - Decharacterized Wastewaters, Carbamate Wastes, and Spent Potliners (cont'd)

	FEDERAL REQUIREMENTS	RULE REFERENCE	FEDERAL RCRA CITATION	ANALOGOUS STATE CITATION	STATE ANALOG IS: EQUIV-ALENT	LESS STRIN-GENT	MORE STRIN-GENT	BROADER IN SCOPE
	PART 268 - LAND DISPOSAL RESTRICTIONS							
	SUBPART A - GENERAL							
	PURPOSE, SCOPE AND APPLICABILITY

RCRA REVISION CHECKLIST 151: Land Disposal Restrictions Phase III - Decharacterized Wastewaters, Carbamate Wastes, and Spent Potliners (cont'd)

---

i The second Federal Register article published on April 8, 1996, (61 FR 15660; rule 151.1) removed and reserved 268.1(c)(3) (see page 15663, column 1). The June 28, 1996, technical correction (61 FR 33680; rule 151.3), however, added a new 268.1(c)(3) that is very similar to the paragraph that existed in 40 CFR prior to the second April 8, 1996, amendment (rule 151.1). The changes noted on this checklist compare the June 28, 1996, (rule 151.3) version to the version found in the July 1, 1995, CFR. Note that the June 28, 1996, technical correction (rule 151.3) made no real changes to 268.1(c)(3)(i) and removed 40 CFR 268.1(c)(3)(iii).

ii There is a typographical error in the June 28, 1996, technical correction (61 FR 33680; rule 151.3): the internal reference "40 CFR 146.6(a)" should be 40 CFR "144.6(a)".

iii Note that the original 268.1(c)(4), as introduced by Revision Checklist 34 (51 FR 40572; November 7, 1986), was removed by Revision Checklist 66 (54 FR 36967; September 6, 1989). The June 28, 1996, technical correction in Revision Checklist 151 (61 FR 33680; rule 151.3) added a new 268.1(c)(4) and (c)(4)(i)-(iv).

iv There is a typographical error in the first April 8, 1996, Federal Register article (61 FR 15566; rule 151): in the last sentence, insert a closing parenthesis after "as defined in § 268.2". This error also appears in the July 1, 1996, CFR.

v There is a typographical error in the first April 8, 1996, Federal Register article (61 FR 15566; rule 151): "and (f)" should be "and (f))", i.e., there should be a second ")" after "(f)".

vi This section was removed and reserved by the first article published on April 8, 1996, (61 FR 15566; rule 151). Note, however, there are numerous internal references to this section throughout the CFR that were not removed.

vii This section was originally introduced by the first Federal Register article published on April 8, 1996, (61 FR 15566; rule 151). It was withdrawn and then re-added by the second article published on April 8, 1996, (61 FR 15660; rule 151.1). Paragraph 268.39(e) was subsequently revised by the June 28, 1996, technical correction (61 FR 33680; rule 151.3).

viii Note there is a typographical error in the second article published on April 8, 1996, (61 FR 15660; rule 151.1): "268.40))." should be "268.40).)".

ix There are two typographical errors in the August 26, 1996 Federal Register (61 FR 43924; rule

151.5): "biodegradation as definded by the technolgy code BIODG" should be "biodegradation as defined by the technology code BIODG".

x The original table in §268.40 was amended by rule 151, 151.1, 151.3, 151.4, and 151.5. The table was entirely replaced by the table in the February 19, 1997, Federal Register article (62 FR 7502; rule 151.6). The table below lists the errors associated with those rules.

Waste Code Number	Rule Reference (Federal Register page number)	Error(s)	Comment
F027	151 (p. 15610)	There is a typographical error in the Waste Description column: the last closing period should be placed inside of the last closing parenthesis.	This error is found in rules 151, 151.1, and 151.6. It is also found in the 1996 CFR.
F039	151 (p. 15613)	(1) The extra period at the end of the Waste Description should be removed.	(1) This error is found in rule 151 and 151.6. It is also found in the 1996 CFR.
	151 (p. 15615) 151.3 (p. 33686)	(2) The Nonwastewater Concentrations of 13 for "Diphenylamine" and "Diphenylnitrosamine" were changed to NA. Also, the Nonwastewater Concentration of 1.5 for 1,2-Diphenylhydrazine was changed to NA.	(2) It appears that the Nonwastewater Concentrations in rule 151 were replaced with "NA" by 151.3. The 1996 CFR, however, retains the rule 151 versions of these concentrations. Rule 151.6 kept "NA" as the Nonwastewater Concentrations.
endnote 8	151.3 (p. 33690)	There is a typographical error in the endnote: the last closing period should be placed inside of the last closing parenthesis.	This error is found in rules 151.3 and 151.6. It is also found in the 1996 CFR.
endnote 9	151.3 (p. 33690)	There is a typographical error in the endnote: the last closing period should be placed inside of the last closing parenthesis.	This error is found in rules 151.3 and 151.6. It is also found in the 1996 CFR.
	151.6 (p.7595)	The section symbol ("§") is omitted from the internal reference.	

RCRA REVISION CHECKLIST 154

Consolidated Organic Air Emission Standards for Tanks,
Surface Impoundments, and Containers
59 FR 62896-62953
December 6, 1994

as amended by
60 FR 26828-26829, May 19, 1995
60 FR 50426-50430, September 29, 1995
60 FR 56952-56954, November 13, 1995
61 FR 4903-4916, February 9, 1996
61 FR 28508-28511, June 5, 1996
61 FR 59932-59997, November 25, 1996

(RCRA Cluster VII, HSWA provisions)

Notes: 1) This special consolidated checklist addresses changes made to the Federal code by the December 6, 1994 final rule regarding Subpart CC standards (59 FR 62896), as well as six subsequent final rules. With the publication of the November 25, 1996 final rule, EPA is issuing this Consolidated Revision Checklist to aid States in correctly adopting the changes made by the seven rules. Note that the State modification deadline for this consolidated checklist is July 1, 1998 (or July 1, 1999 if a statutory change is necessary) based on the promulgation date of the most recent of the amendments.

2) Due to the large number of rules (seven total) that comprise Consolidated Revision Checklist 154, a "Rule" reference column has been added to this checklist to reflect the rule(s) that affected each provision. The rules are designated as follows:

154: 61 FR 59932-59997 (November 25, 1996)
154.1: 59 FR 62896-62953 (December 6, 1994) (Formerly Revision Checklist 138)
154.2: 60 FR 26828-26829 (May 19, 1995) (Formerly Revision Checklist 143)
154.3: 60 FR 50426-50430 (September 29, 1995) (Formerly Revision Checklist 146)
154.4: 60 FR 56952-56954 (November 13, 1995) (Formerly Revision Checklist 143, Rule 143.1)
154.5: 61 FR 4903-4916 (February 9, 1996) (Formerly Revision Checklist 149)
154.6: 61 FR 28508-28511 (June 5, 1996) (Formerly Revision Checklist 143, Rule 143.2)

3) Note that this checklist adds a new method to Appendix A of 40 CFR Part 60. This addition has been included because this method is referenced in Subpart CC of both Part 264 and Part 265. Thus, a State must either directly reference the method at 40 CFR Part 60, Appendix A or incorporate this method into its regulations and reference the method within its regulations. If the first approach is used, the State must make sure that its Administrative Procedures Act allows the State to reference the Federal regulations. While the following regulations/methods/appendices were not added by this rule, they are referenced in this new rule. A State, thus, must either directly reference these regulations/methods/appendices or incorporate them into its regulations and reference the appropriate State analog:

- 40 CFR part 60
  - Specific references noted:
    - 60.112(b)
    - 60.114(b)
    - Subpart VV
    - Appendix A

- 40 CFR part 61
  - Specific references noted:
    - 61.346(a)(1)
    - 61.346(b)(1) through (b)(3)
    - Subpart V

- 40 CFR part 63
  - Specific references noted:
    - Appendix A
    - Appendix C

SUBPART AA - AIR EMISSION STANDARDS FOR PROCESS VENTS							
APPLICABILITY							
delete first "§"; insert ", paragraphs" prior to "(d)"; remove hyphen in "10-ppmw"; insert "one of the following" at end of sentence	154	264.1030(b)	7045.0547	IBR			
replace "Units" with "A unit"; replace "are subject" with "is subject"; insert "40 CFR" before "part 270"	154	264.1030(b)(1)					
completely revise paragraph: unit not exempt from permitting under 262.34(a) & is located at a hazardous waste management facility subject to part 270, or	154	264.1030(b)(2)					
unit that is exempt from	154	264.1030(b)(3)					

FEDERAL REQUIREMENTS	RULE REFERENCE	FEDERAL RCRA CITATION	ANALOGOUS STATE CITATION	STATE ANALOG IS:			
				EQUIV-ALENT	LESS STRIN-GENT	MORE STRIN-GENT	BROADER IN SCOPE
permitting under 262.34(a)							
delete "262.34" from note at end of section	154	264.1030/note at end	7045.0547	IBR			
STANDARDS: CLOSED-VENT SYSTEMS AND CONTROL DEVICES							
in second sentence, replace "18 months" with "30 months"	154.5	264.1033(a)(2)	7045.0547	IBR			
replace "at two locations and have" with "with"; replace first "^{o}C" with "degrees Celsius (^{o}C)"; replace "One temperature" with "The temperature"; replace ", and a second temperature sensor shall be installed at a location in the coolant fluid exiting the condenser" with "exit (i.e., product side)"	154	264.1033(f)(2)(vi)(B)					
add new paragraph: design requirements for closed-vent system are either:	154	264.1033(k)					
completely revise: to operate with no detectable emissions as determined by 264.1034(b) & visual inspections; or	154	264.1033(k)(1)					
completely revise: to operate at a pressure below atmospheric pressure; how to equip system	154.1 154.5 154	264.1033(k)(2)					
redesignate 264.1033(l) as 264.1033(m); add new 264.1033(l): owner/operator to monitor & inspect closed-vent system to ensure proper operation & maintenance by implementing following:	154	264.1033(l)					
closed-vent system used to comply with 264.1033(k)(1) shall be inspected & monitored in accordance with:	154	264.1033(l)(1)					
initial leak detection monitoring shall be conducted by owner/operator using procedures	154	264.1033(l)(1)(i)					

FEDERAL REQUIREMENTS	RULE REFERENCE	FEDERAL RCRA CITATION	ANALOGOUS STATE CITATION	STATE ANALOG IS:			
				EQUIV-ALENT	LESS STRIN-GENT	MORE STRIN-GENT	BROADER IN SCOPE
in 264.1034(b)							
owner/operator shall inspect & monitor the closed-vent system, after initial leak detection monitoring required in 264.1033(l)(1)(i)	154	264.1033(l)(1)(ii)	7045.0547	IBR			
	154	264.1033(l)(1)(ii)(A)					
	154	264.1033(l)(1)(ii)(B)					
in event that defect or leak is detected, the owner/operator shall repair in accordance with 264.1033(l)(3)	154	264.1033(l)(1)(iii)					
owner/operator shall maintain record of inspection & monitoring in accordance with 264.1035	154	264.1033(l)(1)(iv)					
a closed-vent system used to comply with 246.1033(k)(2) shall be inspected & monitored in accordance with specified requirements	154	264.1033(l)(2)					
	154	264.1033(l)(2)(i)					
	154	264.1033(l)(2)(ii)					
	154	264.1033(l)(2)(iii)					
	154	264.1033(l)(2)(iv)					
owner/operator shall repair all detected defects as follows:	154	264.1033(l)(3)					
detectable emissions shall be controlled as soon as practicable, but not later than 15 days after detection, except as in 264.1033(l)(3)(iii)	154	264.1033(l)(3)(i)					
first attempt at repair to be made no later than 5 days after emission is detected	154	264.1033(l)(3)(ii)					
when delay of closed-vent repair allowed; if repair is infeasible without shutdown or emissions resulting from repair are greater	154	264.1033(l)(3)(iii)					

	FEDERAL REQUIREMENTS	RULE REFERENCE	FEDERAL RCRA CITATION	ANALOGOUS STATE CITATION	STATE ANALOG IS: EQUIV-ALENT	LESS STRIN-GENT	MORE STRIN-GENT	BROADER IN SCOPE
	than those from delay, then repair shall be completed by end of next shutdown							
	owner/operator shall maintain record of repair in accordance with 264.1035	154	264.1033(l)(3)(iv)	7045.0547	IBR			
	redesignate former 264.1033(l) as (m)	154	264.1033(m)					
iii	owner/operator using carbon adsorption system shall document that carbon that is hazardous & removed from control device is managed in one of following manners:	154.1 154.5 154	264.1033(n)					
	regenerated or reactivated in a thermal treatment unit that meets one of following:	154.1 154.5 154	264.1033(n)(1)					
	owner/operator has been issued final permit under part 270, which implements subpart X requirements; or	154	264.1033(n)(1)(i)					
	unit is equipped with & operating air emission controls in accordance with subparts AA & CC of 264 or 265; or	154	264.1033(n)(1)(ii)					
	unit is equipped with & operating air emission controls in accordance with national emission standards of parts 61 or 63	154	264.1033(n)(1)(iii)					
	incinerated in a hazardous waste incinerator for which the owner/operator either:	154.1 154.5 154	264.1033(n)(2)					
	has been issued a final permit under part 270 which implements the requirements of subpart O; or	154.5 154	264.1033(n)(2)(i)					
	has designed & operates the incinerator in accordance with part 265, subpart O	154.5 154	264.1033(n)(2)(ii)					
	burned in a boiler or industrial	154.1	264.1033(n)(3)	7045.0547	IBR

owner/operator shall demonstrate the performance of each flare in accordance with 264.1033(e)	154.1	264.1087(c)(5)(ii)					
for a performance test, owner/operator shall use test methods & procedures in 264.1034 (c)(1)-(4)	154.1	264.1087(c)(5)(iii)					
design analysis shall meet requirements specified in 264.1035(b)(4)(iii)	154.1	264.1087(c)(5)(iv)					
owner/operator shall demonstrate that carbon adsorption system achieves the 264.1087(c)(1) performance requirements	154.1	264.1087(c)(5)(v)					
if owner/operator & Regional Administrator do not agree on a demonstration of control device performance using a design analysis, then disagreement shall be resolved using a performance test in accordance with 264.1087(c)(5)(iii); Regional Administrator may choose authorized representative to observe	154.1	264.1087(c)(6)					
control device shall be inspected & monitored by owner/operator in accordance with 264.1033(f)(2) & 264.1033(l); readings from each monitoring device inspected at least once each day; any necessary corrective measures immediately implemented	154	264.1087(c)(7)	7045.0540	IBR			
12 INSPECTION AND MONITORING REQUIREMENTS							
owner/operator shall inspect & monitor air emission control	154	264.1088(a)	7045.0540	IBR			

	FEDERAL REQUIREMENTS	RULE REFERENCE	FEDERAL RCRA CITATION	ANALOGOUS STATE CITATION	STATE ANALOG IS: EQUIV-ALENT	LESS STRIN-GENT	MORE STRIN-GENT	BROADER IN SCOPE
	equipment in accordance with 264.1084-1087							
	owner/operator shall develop & implement written plan & schedule to perform inspections & monitoring required by 264.1088(a); shall incorporate plan into facility inspection plan under 264.15	154	264.1088(b)					
	RECORDKEEPING REQUIREMENTS							
xvi	owner/operators subject to 264, Subpart CC shall record & maintain information specified in 264.1089(b)-(i); with exception, records shall be maintained for at least 3 years; documentation maintained until air emission control equipment is replaced; information required by 264.1089 (i) shall be maintained as long as tank or container is not using air emission controls in 264.1084-264.1087	154	264.1089(a)	7045.0540	IBR			
16	owner/operator of tank using air emission controls in accordance with 264.1084 shall prepare & maintain records that include:	154	264.1089(b)					
	for tank using air emission controls in accordance with 264.1084, owner/ operator shall record:	154	264.1089(b)(1)					
	tank identification number	154	264.1089(b)(1)(i)	7045.0540	IBR			
	record for each inspection required by 264.1084 that includes inspection date & other information for defects detected	154	264.1089(b)(1)(ii)					
		154	264.1089(b)(1)(ii)(A)					
		154	264.1089(b)(1)(ii)(B)					
	owner/operator shall record	154	264.1089(b)(2)					

	FEDERAL REQUIREMENTS	RULE REFERENCE	FEDERAL RCRA CITATION	ANALOGOUS STATE CITATION	STATE ANALOG IS: EQUIV-ALENT	LESS STRIN-GENT	MORE STRIN-GENT	BROADER IN SCOPE
	following information, as applicable to the tank:							
	owner/operator using a fixed roof shall prepare & maintain records for each maximum organic vapor pressure determination in accordance with 264.1084(c); date & time of sample collection, analysis method, & results	154	264.1089(b)(2)(i)					
	owner/operator using internal floating roof shall prepare & maintain documentation describing design	154	264.1089(b)(2)(ii)					
	owners/operators using external floating roof shall prepare & maintain documentation & records for specified items	154	264.1089(b)(2)(iii)					
		154	264.1089(b)(2)(iii)(A)					
		154	264.1089(b)(2)(iii)(B)					
	each owner/operator using an enclosure shall prepare & maintain specified records	154	264.1089(b)(2)(iv)					
		154	264.1089(b)(2)(iv)(A)					
		154	264.1089(b)(2)(iv)(B)					
16	owner/operator of a surface impoundment using air emission controls in accordance with 264.1085 shall prepare & maintain records that include:	154	264.1089(c)					
	surface impoundment identification number	154	264.1089(c)(1)	7045.0540	IBR			
	documentation describing floating membrane cover that includes description of cover design, & certification that it meets specifications in 264.1085(c)	154	264.1089(c)(2)					
	record for each inspection	154	264.1089(c)(3)

---

i Rule 154.1 (December 6, 1994; 59 FR 62896) initially revised 262.34(a)(1)(i) and 262.34(a)(1)(ii) by adding Subparts AA, BB, and CC as internal references, and Rule 154.5 (February 9, 1996; 61 FR 4903) made technical corrections to 262.34(a)(1)(i). Rule 154 (November 25, 1996; 61 FR 59932) finally amended these paragraphs by reversing the changes made by Rules 154.1 and 154.5. See the July 1, 1994 CFR for the correct version of these paragraphs.

ii At 264.73(b)(6), there is a typographical error in Rule 154.1 (December 6, 1994; 59 FR 62896). The internal reference "264.1034(c) through 264.304(f)" should be "264.1034(c) through 264.1034(f)".

iii Rule 154.1 (December 6, 1994; 59 FR 62896) originally introduced text at 264.1033(m), (m)(1), (m)(2), and (m)(3). Rule 154.5 (February 9, 1996; 61 FR 4903) significantly revised this paragraph and added subparagraphs (m)(2)(i)-(ii) and (m)(3)(i)-(ii). Rule 154 (November 25, 1996; 61 FR 59932) subsequently redesignated 264.1033(m) as 264.1033(n). The November 25, 1996 rule then revised the newly redesignated text at 264.1033(n) and added subparagraphs (n)(1)(i)-(iii).

iv At 264.1080(a), there is a typographical error in Rule 154.1 (December 6, 1994; 59 FR 62896): "subparts" should be "subpart".

v This paragraph was introduced by Rule 154.1 (December 6, 1994; 59 FR 62896). Although the paragraph was included in Rule 154 (November 25, 1996; 61 FR 59932), no changes were made to the text.

vi Rule 154.1 (December 6, 1994; 59 FR 62896) originally introduced 264.1082(c)(2)(iii). It was amended by Rule 154.5 (February 9, 1996; 61 FR 4903). Although 264.1082(c)(2)(iii) was included in Rule 154 (November 25, 1996; 61 FR 59932), no changes were made to the text.

vii Rule 154.1 (December 6, 1994; 59 FR 62896) introduced 264.1082(c)(2)(vi) and (vii) to the Federal code. Rule 154 (November 25, 1996; 61 FR 59932) subsequently redesignated 264.1082(c)(2)(vi) and (vii) as 264.1082(c)(2)(vii) and (viii) and added a new 264.1082(c)(2)(vi).

viii Rule 154.1 (December 6, 1994; 59 FR 62896) originally introduced paragraphs 264.1082(d) and (e) into the Federal code. Paragraph 264.1082(d) was subsequently amended by Rule 154.5 (February 9, 1996; 61 FR 4903). Rule 154 (November 25, 1996; 61 FR 59932) then removed the text at 264.1082(d). The November 25, 1996 rule revised 264.1082(e) and redesignated it as 264.1082(d).

ix Rule 154.1 (December 6, 1994; 59 FR 62896) originally introduced the text at 264.1082(d)(3)-(5) at 264.1082(e)(2)-(4). Rule 154 (November 25, 1996; 61 FR 59932) redesignated the text at 264.1082(e)(2)-(4) as (d)(3)-(5) and introduced new text at 264.1082(d)(2). The rule also removed the text originally introduced by Rule 154.1 (December 6, 1994; 59 FR 62896) at 264.1082(d) and redesignated 264.1082(e) as 264.1082(d).

x This subparagraph was introduced by Rule 154.1 (December 6, 1994; 59 FR 62896) and amended by Rule 154.5 (February 9, 1996; 61 FR 4903). Although this subparagraph was included in Rule 154 (November 25, 1996; 61 FR 59932), no changes were made to the text.

xi The introductory text of this paragraph was introduced by Rule 154.1 (December 6, 1994; 59 FR 62896). Although this text was included in Rule 154, no changes were made to it.

xii Sections 264.1084, 264.1085, 264.1086, and 264.1088 were originally introduced by Rule 154.1 (December 6, 1994; 59 FR 62896) and amended by Rule 154.5 (February 9, 1996; 61 FR 4903). Rule 154 (November 25, 1996; 61 FR 59932) completely revised these sections. States should take care to adopt the version of sections 264.1084, 264.1085, 264.1086, and 264.1088 from Rule 154 (November 25, 1996) as reflected on this consolidated revision checklist.

xiii An error exists in the July 1, 1997 CFR in that the paragraph is missing "(1)" to designate the first paragraph of the section.

xiv Paragraphs 264.1087(b)(3) and 264.1087(c)(2) and their subparagraphs were originally introduced by Rule 154.1 (December 6, 1994; 59 FR 62896). Rule 154 (November 25, 1996; 61 FR 59932) completely revised these paragraphs. States should take care to adopt the version of these paragraphs from Rule 154 as reflected on this consolidated revision checklist.

xv Note there is an error in 264.1087(c)(3)(ii). Rule 154.5 (February 9, 1996; 61 FR 4903) replaced "§ 264.1033(m)" with "§ 264.1033(n)". It is likely the reference to 264.1033(n) should be to 264.1033(m) because 264.1033(n) did not exist at the time.

xvi Paragraphs 264.1089(a) through (g) were originally introduced by Rule 154.1 (December 6, 1994; 59 FR 62896). Rule 154.5 (February 9, 1996; 61 FR 4903) subsequently amended 264.1089(a)(1) and (e). Rule 154 (November 25, 1996; 61 FR 59932) completely revised the structure and text of these paragraphs. States should take care to adopt the version of paragraphs 264.1089(a) through (g) from Rule 154 (November 25, 1996) as reflected on this consolidated revision checklist.

xvii The language at 264.1089(i), (i)(1), (i)(2), and (i)(3) was introduced by Rule 154.3 (September 29, 1995; 60 FR 50426). Although these paragraphs were included in Rule 154 (November 25, 1996; 61 FR 59932), no changes were made to the text.

xviii An error exists in the July 1, 1997 CFR. The third sentence is a duplicate of the second sentence, except that it does not include the option designations "(1)" and "(2)" which were introduced by Rule 154.5. The sentence should have been replaced by the Rule 154.5 sentence and not left in the regulations.

xix Section 264.1091, Alternative Control Requirements for Tanks, was introduced by Rule 154.1 (December 6, 1994; 59 FR 62896). It was subsequently removed and reserved by Rule 154 (November 25, 1996; 61 FR 59932).

xx Despite reference to 265.1091, that section has been removed and reserved by Rule 154 (November 25, 1996; 61 FR 59932).

xxi Note there is a typographical error in 265.1033(f)(2)(vi)(B) in Rule 154 (November 25, 1996; 61 FR 59932): "Celsius (oC) or ± 0.5 oC" should be "Celsius (^{o}C) or ± 0.5 ^{o}C".

xxii Rule 154.1 (December 6, 1994; 59 FR 62896) originally introduced text at 265.1033(l), (l)(1), (l)(2), and (l)(3). Rule 154.5 (February 9, 1996; 61 FR 4903) significantly revised the paragraph and added subparagraphs (l)(2)(i)-(ii) and (l)(3)(i)-(ii). Rule 154 (November 25, 1996; 61 FR 59932) subsequently redesignated 265.1033(l) as 265.1033(m). The November 25, 1996 rule then revised the newly redesignated text at 265.1033(m) and added subparagraphs (m)(1)(i)-(iii).

xxiii At 265.1080(a), there is a typographical error in Rule 154.1 (December 6, 1994; 59 FR 62896): "subparts" should be "subpart".

xxiv Rule 154.1 (December 6, 1994; 59 FR 62896) originally introduced 265.1083(c)(2)(iii). It was amended by Rule 154.5 (February 9, 1996; 61 FR 4903). Although it was included in Rule 154 (November 25, 1996; 61 FR 59932), no changes were made to the text.

xxv Rule 154.1 (December 6, 1994; 59 FR 62896) introduced 265.1083(c)(2)(vi) and (vii) into the Federal code. Rule 154 (November 25, 1996; 61 FR 59932) subsequently redesignated 265.1083(c)(2)(vi) and (vii) as 265.1083(c)(2)(vii) and (viii) and added a new 265.1083(c)(2)(vi).

xxvi Rule 154.1 (December 6, 1994; 59 FR 62896) originally introduced paragraphs 265.1083(d) and (e) into the Federal code. Paragraph 265.1083(d) was subsequently amended by Rule 154.5 (February 9, 1996; 61 FR 4903). Rule 154 (November 25, 1996; 61 FR 59932) then removed the text at 265.1083(d). The November 25, 1996 rule revised 265.1083(e) and redesignated it as 265.1083(d).

xxvii Rule 154.1 (December 6, 1994; 59 FR 62896) originally introduced the text at 265.1083(d)(3)-(5) at 265.1083(e)(2)-(4). Rule 154 (November 25, 1996; 61 FR 59932) redesignated the text at 265.1083(e)(2)-(4) as (d)(3)-(5) and introduced new text at 265.1083(d)(2). The rule also removed the text originally introduced by Rule 154.1 at 265.1083(d) and redesignated 265.1083(e) as 265.1083(d).

xxviii This subparagraph was introduced by Rule 154.1 (December 6, 1994; 59 FR 62896). Although this subparagraph was included in Rule 154 (November 25, 1996; 61 FR 59932), no changes were made to the text.

xxix Sections 265.1085, 265.1086, 265.1087, and 265.1089 were originally introduced by Rule 154.1 (December 6, 1994; 59 FR 62896) and amended by Rule 154.5 (February 9, 1996; 61 FR 4903). Rule 154 (November 25, 1996; 61 FR 59932) completely revised these sections. States should take care to adopt the version of sections 265.1085, 265.1086, 265.1087, and 265.1089 from Rule 154 (November 25, 1996) as reflected on this consolidated revision checklist.

xxx Paragraphs 265.1088(b)(3) and 265.1088(c)(2) and their subparagraphs were originally introduced by Rule 154.1 (December 6, 1994; 59 FR 62896). Rule 154 (November 25, 1996; 61 FR 59932) completely revised these paragraphs. States should take care to adopt the version of these paragraphs from Rule 154 as reflected on this consolidated revision checklist.

xxxi Note there is an error in 265.1088(c)(3)(ii). Rule 154.5 (February 9, 1996; 61 FR 4903) replaced "§ 265.1033(l)" with "§ 265.1033(m)". It is likely the reference to 265.1033(m) should be to 265.1033(l) because 265.1033(m) did not exist at the time.

xxxii Paragraphs 265.1090(a) through (g) were originally introduced by Rule 154.1 (December 6, 1994; 59 FR 62896). Rule 154.5 (February 9, 1996; 61 FR 4903) subsequently amended 265.1090(a)(1) and (e). Rule 154 (November 25, 1996; 61 FR 59932) completely revised the structure and text of these paragraphs. States should take care to adopt the version of paragraphs 265.1090(a) through (g) from Rule 154 (November 25, 1996) as reflected on this consolidated revision checklist.

xxxiii The language at 265.1090(i), (i)(1), (i)(2), and (i)(3) was introduced by Rule 154.3 (September 29, 1995; 60 FR 50426). Although these paragraphs were included in Rule 154 (November 25, 1996; 61 FR 59932), no changes were made to the text.

xxxiv Section 265.1091, Alternative Tank Emissions Control Requirements, was introduced by Rule 154.1 (December 6, 1994; 59 FR 62896). It was subsequently removed and reserved by Rule 154 (November 25, 1996; 61 FR 59932).

	FEDERAL REQUIREMENTS	FEDERAL RCRA CITATION	ANALOGOUS STATE CITATION	STATE ANALOG IS: EQUIV-ALENT	LESS STRIN-GENT	MORE STRIN-GENT	BROADER IN SCOPE
	268.7(b)(6); notification for recyclable materials used in a manner constituting disposal and subject to 266.20(b); with each shipment 268.7(b)(5) certification and 268.7(b)(4) notice to Regional Administrator; records of recipients of waste-derived products						
†	delete ", and the certification specified in 268.8 if applicable."	268.7(c)(1)					
	replace "method described in Appendix I of this part or using any method required by generators under 268.32 of this part" with the wording referencing method 1311 SW-846 and 260.11	268.7(c)(2)					
	SPECIAL RULES REGARDING WASTES THAT EXHIBIT A CHARACTERISTIC						
	revise paragraph; initial generator of solid waste must determine each EPA Hazardous Waste Number in order to determine treatment standards under subpart D; for 268, waste will carry the waste code for any applicable listed waste; where waste exhibits characteristic, it will carry one or more of the characteristic waste codes, except when treatment standard operates in lieu of treatment standard for characteristic waste, as specified 268.9(b); if generator determines that waste displays hazardous characteristic, generator	268.9(a)	7045.1390	IBR			

FEDERAL REQUIREMENTS	FEDERAL RCRA CITATION	ANALOGOUS STATE CITATION	STATE ANALOG IS:			
			EQUIV-ALENT	LESS STRIN-GENT	MORE STRIN-GENT	BROADER IN SCOPE
must determine defined hazardous constituent except for certain D001 wastes						
replace "Hazardous Waste Number(s)" with "hazardous waste code(s)"; replace "in D001 and D002 wastes prohibited under §268.37 or D0012-D0043 wastes under §268.38" with a phrase and sentence renaming listing requirement if all underlying hazardous constituents will be treated and monitored	268.9(d)(1)(ii)					
SUBPART C -- PROHIBITIONS ON LAND DISPOSAL						
WASTE SPECIFIC PROHIBITIONS -- WOOD PRESERVING WASTES						
completely revise paragraph; effective August 11, 1997, the following wastes are prohibited from land disposal: F032, F034, F035	268.30(a)	7045.1390	IBR			
REMOVED	268.30(a)(1)-(4)					
completely revise paragraph; effective May 12, 1999, soil and debris contaminated with F032, F034, F035 and radioactive wastes mixed with F032, F034, F035 are prohibited from land disposal	268.30(b)					
completely revise paragraph; between May 12, 1997 and May 12, 1999, soil and debris contaminated with F032, F034, F035 and	268.30(c)					

FEDERAL REQUIREMENTS	FEDERAL RCRA CITATION	ANALOGOUS STATE CITATION	STATE ANALOG IS:			
			EQUIV-ALENT	LESS STRIN-GENT	MORE STRIN-GENT	BROADER IN SCOPE
radioactive waste mixed with F032, F034, F035 may be disposed in a landfill or surface impoundment only if 268.5(h)(2) requirements are met						
completely revise paragraph; requirements of 268.30 (a) and (b) do not apply if:	268.30(d)					
insert "applicable treatment" before "standards"; replace "of Subpart D" with "specified in Subpart D"; remove "or" at end of paragraph	268.30(d)(1)					
remove "or" at end of paragraph	268.30(d)(2)					
redesignate old 268.30(d)(3) as new 268.30(d)(4); add new 268.30(d)(3); the wastes meet the applicable alternate treatment standards established pursuant to a petition granted under 268.44	268.30(d)(3)					
old 268.30(d)(3) is new 268.30(d)(4); persons have been granted an extension to effective date of prohibition pursuant to 268.5 with respect to wastes covered by extension	268.30(d)(4)					
add new paragraph; to determine whether a hazardous waste identified in 268.40 exceeds applicable treatment standards, initial generator must test a sample of	268.30(e)					

	FEDERAL REQUIREMENTS	FEDERAL RCRA CITATION	ANALOGOUS STATE CITATION	STATE ANALOG IS: EQUIV-ALENT	LESS STRIN-GENT	MORE STRIN-GENT	BROADER IN SCOPE
	waste extract or entire waste; if waste contains constituents in excess of applicable treatment levels of 268.48, waste is prohibited from land disposal and all requirements of 268 are applicable unless otherwise specified						
	REMOVED AND RESERVED	268.32 - 268.36					
	SUBPART D-- TREATMENT STANDARDS						
	APPLICABILITY OF TREATMENT STANDARDS						
	add entries for F032, F034 and F035; revise entries for D001 and F024 as per 62 FR 26023-26025	268.40/ Table of Treatment Standards for Hazardous Wastes	7045.1390	IBR			
†	TREATMENT STANDARDS EXPRESSED AS SPECIFIC TECHNOLOGIES						
	add entry for "POLYM" as per 62 FR 26025	268.42/ Table 1	7045.1390	IBR			
	VARIANCE FROM A TREATMENT STANDARD						
iv	revise paragraph; the following facilities are excluded from the treatment standards under 268.40 and are subject to the following constituent concentrations:	268.44(o)	7045.1390	IBR			
†	revise title of table to read "Table--Wastes Excluded from the Treatment Standards Under §268.40"	268.44(o)/ Table 1					
	APPENDIX I, II, III and X TO PART 268						
	REMOVED AND RESERVED	268 Appendices I, II, III and X	7045.1390	IBR			
	APPENDIX VI TO PART 268						
	RECOMMENDED TECHNOLOGIES TO ACHIEVE DEACTIVATION OF CHARACTERISTICS IN SECTION 268.42						

	FEDERAL REQUIREMENTS	FEDERAL RCRA CITATION	ANALOGOUS STATE CITATION	STATE ANALOG IS: EQUIV-ALENT	LESS STRIN-GENT	MORE STRIN-GENT	BROADER IN SCOPE
†	revise introduction to appendix; treatment standard for many characteristic wastes is stated in 268.40; characteristic wastes that are not managed in a facility must be treated not only by "deactivating" but also to achieve UTS for underlying constituents; the appendix presents a partial list that may help meet treatment standards; use of these treatment standards is not mandatory	268 Appendix VI	7045.1390	IBR			
	APPENDIX VII TO PART 268						
	LDR EFFECTIVE DATES OF SURFACE DISPOSED PROHIBITED HAZARDOUS WASTES						
†	revise tables 1 and 2 as shown in 62 FR 26025-26037	268 Appendix VII	7045.1390	IBR			
	APPENDIX VIII TO PART 268						
v	NATIONAL CAPACITY LDR VARIANCES FOR UIC WASTES						
†	revise table as shown in 62 FR 26037-26039	268 Appendix VIII	7045.1390	IBR			
	APPENDIX X TO PART 268						
	RECORDKEEPING, NOTIFICATION, AND/OR CERTIFICATION REQUIREMENTS						
†	removed and reserved	268 Appendix X	7045.1390	IBR			

† Optional.

†★ Conditionally optional. While the provisions indicated were optional when first added to the CFR, States which have chosen to adopt them must also adopt the subsequent revisions. The revisions, therefore, are considered conditionally optional.

[i] This section heading has been revised. The former heading read "Waste analysis and recordkeeping".

[ii] If a State has chosen to adopt the lab pack option (see Revision Checklist 78), then it must make the revisions specified in this checklist for this provision. If the lab pack option has not been adopted, these revisions are not required. As a reminder, the requirements for the lab pack options are 264.316(f), 265.316(f), 268.7(a)(9), 268.42(c), 268.42(c)(1-(4), Appendix IV and V to Part 268.

[iii] Subparagraphs 268.7(b)(5)-(b)(5)(v) were redesignated and revised by Revision Checklist 157 as 268.7(b)(4)-(b)(4)(iii).

[iv] Note that 268.44(o) was added to the Federal code by a March 25, 1991 rule at 56 FR 12351. The provision contains a variance from the treatment standards under 268.43(a) that only affects two facilities located in Chicago, Illinois. The March 25, 1991 rule also added and reserved paragraphs 268.44(m) and (n). Due to the limited applicability of this variance, no revision checklist was necessary for this rule. Revision Checklist 157 made changes to 268.44(o) and is included in this checklist for completeness. However, States would likely not want to include 268.44(m)-(o) in their code, unless the variance is extended to a facility in that particular State.

[v] Note that there is an error at 62 FR 26037. The title for Appendix VIII should be listed as "National Capacity LDR Variances for UIC Wastes" but is incorrectly listed in the Federal Register as "LDR Effective Dates of Surface Disposed Prohibited Hazardous Wastes".

column for K156, K157 and K158						

[i] Note that there is a typographical error in the Federal Register. "Potassium hyroxymethyl-..." should be "Potassium hydroxymethyl-...". (62 FR 32977).

RCRA REVISION CHECKLIST 160

Land Disposal Restrictions Phase III -- Emergency Extension of the K088 National Capacity Variance, Amendment
62 FR 37694-37699
July 14,1997
(RCRA Cluster VIII, HSWA provisions)

FEDERAL REQUIREMENTS	FEDERAL RCRA CITATION	ANALOGOUS STATE CITATION	STATE ANALOG IS: EQUIV-ALENT	LESS STRIN-GENT	MORE STRIN-GENT	BROADER IN SCOPE
PART 268 - LAND DISPOSAL RESTRICTIONS						
SUBPART C - PROHIBITIONS ON LAND DISPOSAL						
WASTE SPECIFIC PROHIBITIONS - SPENT ALUMINUM POTLINERS; REACTIVE; AND CARBAMATE WASTE						
[i] revise paragraph: replace "July 8" with "October 8"; replace "these wastes" with "this waste"; remove "on July 8, 1997" from last sentence	268.39(c)	7045.1390	Incorporated by reference (IBR)			

[i] According to the Office of Solid Waste in the EPA, the change of "these wastes" to "this waste" was unintentional. The final rule should only have changed the date in this paragraph. The previous wording was more consistent.

PART 268						
SUBPART D - TREATMENT STANDARDS						
† VARIANCES FROM A TREATMENT STANDARD						
**********						
Guidance Note: 40 CFR 268.44(a)-(g) are not delegable because the variance addressed by these provisions could result in nationally-applicable standards for a new waste treatability group. States who have correctly adopted these provisions with the authority remaining with EPA are strongly encouraged to make the optional revisions to 40 CFR 268.44(a) addressed by this checklist.						
completely revise paragraph; based on petition, Administrator may approve a variance from applicable treatment standard if:	268.44(a) intro	7045.1390	Incorporated by reference (IBR)			
add new subparagraph; it is not physically possible to treat waste to level specified in or by method specified as the treatment standard; petitioner must demonstrate that physical/chemical properties of waste differ significantly from waste analyzed in developing treatment standard; or	268.44(a)(1)		IBR			

FEDERAL REQUIREMENTS	FEDERAL RCRA CITATION	ANALOGOUS STATE CITATION	STATE ANALOG IS:			
			EQUIV-ALENT	LESS STRIN-GENT	MORE STRIN-GENT	BROADER IN SCOPE
add new subparagraph; it is inappropriate to require waste to be treated to level specified or by method specified, even though such treatment is technically possible; petitioner must demonstrate that:	268.44(a)(2) intro	7045.1390	IBR			
add new subparagraph; treatment to specified level or by specified method is technically inappropriate; or	268.44(a)(2)(i)		IBR			
add new subparagraph; for remediation waste only, treatment is environmentally inappropriate because it would discourage aggressive remediation	268.44(a)(2)(ii)		IBR			
**********						
completely revise paragraph; based on petition, Administrator or delegated representative may approve a site-specific variance from an applicable treatment standard if:	268.44(h) intro		IBR			
add new subparagraph; it is not physically possible to treat waste to level specified in or by method specified as the treatment standard; petitioner must demonstrate that	268.44(h)(1)		IBR

insert “of this part” following “264.15(b)” and following “264.1088"	270.14(b)(5)	7001.0560, E	X			

i Note the December 8, 1997 rule (62 FR 64636) added paragraph 265.1030(d). There is no 265.1030(c); therefore, it is assumed that 265.1030(c) is reserved.

ii At (b)(3)(iii) there is a typographical error. The internal reference to “(b)(4)(iii)” should be “(a)(4)(iii)”.

iii At 265.1090(f)(1) there is a typographical error. The reference to “265.1084(c)(2)(i)” should be “265.1083(c)(2)(i)”.

RCRA REVISION CHECKLIST 167 A

Land Disposal Restrictions Phase IV –
Treatment Standards for Metal Wastes
and Mineral Processing Wastes
63 FR 28556-28753
May 26, 1998
(RCRA Cluster VIII, HSWA provisions)

Notes: 1) This rule makes changes to 40 CFR Part 148, addressing Land Disposal Restrictions for Underground Injection Programs relative to mineral processing wastes. These changes are outside the Subtitle C program and are not addressed by this Revision Checklist.

2) On August 10, 1998 (63 FR 42580), a rule was promulgated to clarify the correct adoption sequence of the May 4, 1998 rule (63 FR 24596, CL 165), the May 26, 1998 rule (63 FR 28556, CL 167), and the June 29, 1998 (63 FR 35147) technical amendment to the May 4, 1998 rule, as they relate to the organobromine production waste entries at 40 CFR 268.40 and 268.48. The August 10, 1998 rule does not change the regulatory requirements promulgated by those rules, but merely clarifies that the typographical error in the May 4 rule, which was corrected by the June 29, 1998 technical amendment, was not included in the 40 CFR 268.40 and 268.48 tables that were completely reprinted on May 26, 1998 (CL 167). The August 10, 1998 rule added the effective date of the May 4, 1998 rule to the May 26, 1998 rule (CL 167) for those States adopting the organobromine entries as reprinted in the tables at 40 CFR 268.40 and 268.48.

FEDERAL REQUIREMENTS	FEDERAL RCRA CITATION	ANALOGOUS STATE CITATION	STATE ANALOG IS:			
			EQUIV-ALENT	LESS STRIN-GENT	MORE STRIN-GENT	BROADER IN SCOPE
PART 268 - LAND DISPOSAL RESTRICTIONS						
SUBPART A - GENERAL						
DEFINITIONS APPLICABLE IN THIS PART						
insert “selenium, sulfides,” after “except fluoride,”; delete comma after “hazardous waste”	268.2(i)	7045.1390	Incorporated by reference (IBR)			
DILUTION PROHIBITED AS A SUBSTITUTE FOR TREATMENT						
add new paragraph; adding iron filings or other metallic forms of iron to lead-containing hazardous wastes to achieve land disposal restriction treatment standard for lead is a form of impermissible dilution and is prohibited; list of lead-containing wastes	268.3(d)	7045.1390	IBR			

FEDERAL REQUIREMENTS	FEDERAL RCRA CITATION	ANALOGOUS STATE CITATION	STATE ANALOG IS: EQUIV-ALENT	LESS STRIN-GENT	MORE STRIN-GENT	BROADER IN SCOPE
SUBPART C - PROHIBITIONS ON LAND DISPOSAL						
i WASTE SPECIFIC PROHIBITIONS - TOXICITY CHARACTERISTIC METAL WASTES						
effective August 24, 1998, the specified wastes are prohibited from land disposal	268.34(a)	7045.1390	IBR			
effective May 26, 2000, the specified wastes are prohibited from land disposal	268.34(b)					
between May 26, 1998 and May 26, 2000, newly identified characteristic wastes mixed with D004–D011 wastes, or mixed with newly identified characteristic mineral processing wastes, soil, or debris may be disposed in a landfill or surface impoundment if unit is in compliance with 268.5(h)(2)	268.34(c)					
requirements of 268.34(a) & (b) do not apply if:	268.34(d) intro					
wastes meet applicable treatment standards specified in part 268, subpart D	268.34(d)(1)					
persons have been granted an exemption from prohibition pursuant to a petition under 268.6, with respect to wastes & units covered	268.34(d)(2)					
wastes meet applicable alternate treatment standards pursuant to a petition under 268.44; or	268.34(d)(3)					
persons have been granted an exemption to the effective date of a prohibition pursuant to 268.5, with respect to wastes	268.34(d)(4)					

	FEDERAL REQUIREMENTS	FEDERAL RCRA CITATION	ANALOGOUS STATE CITATION	STATE ANALOG IS: EQUIV-ALENT	LESS STRIN-GENT	MORE STRIN-GENT	BROADER IN SCOPE
	covered by extension						
	to determine whether a hazardous waste exceeds treatment standards in 268.40, test the waste extract or entire waste, or use knowledge of the waste; if waste contains constituents in excess of applicable UTS levels of 268.48, waste is prohibited from land disposal and all requirements of 268 apply, except as specified	268.34(e)					
	SUBPART D - TREATMENT STANDARDS						
	APPLICABILITY OF TREATMENT STANDARDS						
	replace "(D001–D003, and D012–D043)" with "(D001–D043)"; insert "and are not managed in a wastewater treatment system...injection well," after "Hazardous Wastes,"; replace "'Table UTS,'" with "Table Universal Treatment Standards,"	268.40(e)	7045.1390	IBR			
	add new paragraph; prohibited D004–D011 mixed radioactive wastes & mixed radioactive listed wastes containing metals, previously treated & put into storage, do not have to be retreated prior to land disposal	268.40(h)					
ii	replace existing table with the table found at 63 FR 28643-28738 (May 26, 1998)	268.40/Table "Treatment Standards for Hazardous Wastes"					
	UNIVERSAL TREATMENT STANDARDS						

Note: The revised numerical Universal Treatment Standards (UTS) for metal constituents Barium, Lead, Selenium, Beryllium, Nickel, Thallium, and Vanadium are less stringent (†) than existing standards and are optional for State adoption. The revised UTS for Cadmium, Chromium, Silver, Antimony and Zinc are more stringent. The UTS for Mercury is printed in the rule because of the ongoing discussion regarding changing

FEDERAL REQUIREMENTS	FEDERAL RCRA CITATION	ANALOGOUS STATE CITATION	STATE ANALOG IS: EQUIV-ALENT	LESS STRIN-GENT	MORE STRIN-GENT	BROADER IN SCOPE
the standards; however, at this time the UTS for Mercury remains unchanged.						
iii replace existing table with the table found at 63 FR 28739-28750 (May 26, 1998)	268.48(a)/Table UTS	7045.1390	IBR			

[i] CL 157 (62 FR 26022, May 12, 1997) removed and reserved § 268.34. The July 1, 1997 CFR contains the section, with a note indicating the removal effective August 11, 1997. The May 26, 1998 rule (63 FR 28556) instructions indicate that §268.34 is being revised, but the entire section is new since the section was reserved at the time the rule was promulgated.

[ii] The CAS # for U408 which is listed on 63 FR 2838 should be “118-79-6” instead of “111-79-6” as printed.

[iii] Note also, that there is no change to the 2,4,6-tribromophenol entry in the UTS Table in 268.48, although that table has been revised to reflect the new UTS for metal constituents.

RCRA REVISION CHECKLIST 167 B

Land Disposal Restrictions Phase IV –
Hazardous Soils Treatment Standards and Exclusions
63 FR 28556-28753
May 26, 1998
(RCRA Cluster VIII, HSWA provisions)

	FEDERAL REQUIREMENTS	FEDERAL RCRA CITATION	ANALOGOUS STATE CITATION	STATE ANALOG IS: EQUIV-ALENT	LESS STRIN-GENT	MORE STRIN-GENT	BROADER IN SCOPE
	PART 268 - LAND DISPOSAL RESTRICTIONS						
	SUBPART A - GENERAL						
	DEFINITIONS APPLICABLE IN THIS PART						
†	add new paragraph; definition of soil	268.2(k)	7045.1390	Incorporated by reference (IBR)			
	TESTING, TRACKING, AND RECORDKEEPING REQUIREMENTS FOR GENERATORS, TREATERS, AND DISPOSAL FACILITIES						
†	delete “Determine if the waste ...as follows:”; delete “a” after “generator of”; replace "§268.40 or §268.45" with "§268.40, §268.45, or §268.49";after “before they can be land disposed” insert “and some soils are contaminated by such hazardous wastes”;after “These wastes” insert “, and soils contaminated with such wastes,”;after “they are managing a waste” insert “or soil contaminated with a waste,”	268.7(a)(1)	7045.1390	IBR			
†	insert “or contaminated soil” after “If the waste”	268.7(a)(2)					
†	add new paragraph; for	268.7(a)(2)(i)					

	FEDERAL REQUIREMENTS	FEDERAL RCRA CITATION	ANALOGOUS STATE CITATION	STATE ANALOG IS: EQUIV-ALENT	LESS STRIN-GENT	MORE STRIN-GENT	BROADER IN SCOPE
	contaminated soil certification statement should be included, signed by an authorized representative; certification statement						
†	add and reserve new paragraph	268.7(a)(2)(ii)					
†	insert “or contaminated soil” after “If the waste” in the first sentence	268.7(a)(3) intro					
i,†	completely revise; for contaminated soil, with initial shipment of wastes generator must send notice & place copy in file; notice to include information in 268.7(a)(4) table	268.7(a)(3)(ii)					
†	insert “or contaminated soil” after “certain wastes” and after “hazardous wastes”	268.7(a)(4)					
†,ii,iii	redesignate entry 8 as 9; add new 8 as indicated at 63 FR 28640	268.7(a)(4)/table					
†	insert “or contaminated soil” after “prohibited waste”	268.7(a)(5)					
†	insert “or contaminated soil” after “that the waste”	268.7(a)(6)					
†	insert “or contaminated soil” after “For wastes”; delete “as concentrations”; delete the comma after “chapter)”	268.7(b)(1)					
†	insert “or contaminated soil” after “For wastes”	268.7(b)(2)					
†	insert “or contaminated soil” after “shipment of waste”	268.7(b)(3)					

FEDERAL REQUIREMENTS	FEDERAL RCRA CITATION	ANALOGOUS STATE CITATION	STATE ANALOG IS: EQUIV-ALENT	LESS STRIN-GENT	MORE STRIN-GENT	BROADER IN SCOPE
†,3 redesignate entry 5 as 6; add new 5 as indicated at 63 FR 28640	268.7(b)(3)(ii)/Table					
† add new sentence & new certification statement after certification statement; a certification is also necessary for contaminated soil; certification statement	268.7(b)(4) intro					
† add new paragraph; generators & treaters who receive a determination that contaminated soil subject to 268.49(a) no longer contains a listed hazardous waste and determine that contaminated soil no longer exhibits a characteristic of hazardous waste must:	268.7(e) intro					
† add new subparagraph; prepare a one-time only documentation of determinations including supporting information and,	268.7(e)(1)					
† add new subparagraph; maintain that information in the facility files & other records for a minimum 3 years	268.7(e)(2)					
SUBPART D - TREATMENT STANDARDS						
VARIANCE FROM A TREATMENT STANDARD						
† redesignate 268.44(h)(3) as 268.44(h)(5); add new 268.44(h)(3); for contaminated soil only, treatment would result in hazardous constituent concentrations below that	268.44(h)(3) intro	7045.1390	IBR			

FEDERAL REQUIREMENTS	FEDERAL RCRA CITATION	ANALOGOUS STATE CITATION	STATE ANALOG IS: EQUIV-ALENT	LESS STRIN-GENT	MORE STRIN-GENT	BROADER IN SCOPE
necessary to minimize threats to human health and environment; treatment variances must:						
† at a minimum, impose alternative land disposal restriction treatment standards that, using a reasonable maximum exposure scenario, meet the listed specifications	268.44(h)(3)(i) 268.44(h)(3)(i)(A) 268.44(h)(3)(i)(B)					
† not consider post-land-disposal controls	268.44(h)(3)(ii)					
† add new paragraph; for contaminated soil only, treatment would result in hazardous constituent concentrations below natural background concentrations at the site of land disposal	268.44(h)(4)					
† redesignate former 268.44(h)(3) as 268.44(h)(5)	268.44(h)(5)					
iv ALTERNATIVE LDR TREATMENT STANDARDS FOR CONTAMINATED SOIL						
† applicability; LDRs must be complied with prior to placing contaminated soil into a land disposal unit; chart describes whether compliance with LDRs is necessary prior to placing contaminated soil into a land disposal unit; add table as shown at 63 FR 28751(May 26, 1998)	268.49(a)	7045.1390	IBR			
† prior to land disposal, contaminated soil identified by 268.49(a) must be treated according to 268.49(c) or 268.48 UTS applicable to contaminating waste	268.49(b)					

	FEDERAL REQUIREMENTS	FEDERAL RCRA CITATION	ANALOGOUS STATE CITATION	STATE ANALOG IS: EQUIV-ALENT	LESS STRIN-GENT	MORE STRIN-GENT	BROADER IN SCOPE
	and/or applicable characteristic; 268.49(c) treatment standards and the UTS may be modified through a variance approved under 268.44						
†	treatment standards for contaminated soils; prior to land disposal, contaminated soil identified by 268.49(a) as needing to comply with LDRs must be treated according to 268.49(c)(1)-(3) or 268.48 UTS	268.49(c) intro					
†	all soils; prior to land disposal, all constituents subject to treatment must be treated according to standards specified	268.49(c)(1) intro 268.49(c)(1)(A) 268.49(c)(1)(B) 268.49(c)(1)(C)					
†	soils that exhibit characteristic of ignitability, corrosivity or reactivity; in addition to treatment required by 268.49(c)(1), prior to land disposal soils that exhibit a characteristic must be treated to eliminate characteristic	268.49(c)(2)					
†	soils that contain nonanalyzable constituents; in addition to requirements of 268.49(c)(1)&(2), prior to land disposal specified treatment is required	268.49(c)(3) intro 268.49(c)(3)(A) 268.49(c)(3)(B)					

FEDERAL REQUIREMENTS	FEDERAL RCRA CITATION	ANALOGOUS STATE CITATION	STATE ANALOG IS: EQUIV-ALENT	LESS STRIN-GENT	MORE STRIN-GENT	BROADER IN SCOPE
† constituents subject to treatment; when applying soil treatment standards in 268.49(c), constituents subject to treatment are any listed in 268.48, Table UTS that are reasonably expected to be present, with exceptions, and are present at greater than 10 times the UTS	268.49(d)					
† management of treatment residuals; treatment residuals from treating contaminated soil identified by 268.49(a) must be managed as follows:	268.49(e) intro					
† soil residuals are subject to treatment standards of 268.49	268.49(e)(1)					
† non-soil residuals are subject to the standards specified	268.49(e)(2) intro 268.49(e)(2)(A) 268.49(e)(2)(B)					

[i] Note there is a typographical error at §268.7(a)(3)(ii) in the rule. The reference to "information in “268.7(a)(3) of the Generator” should be “information in column “268.7(a)(3)” of the Generator”.

[ii] There is a typographical error in the Table at 268.7(a)(4). At the #8 entry “complies with' “ should be “complies with]”

[iii] Note that the Tables at 268.7(a)(4) and (b)(3)(ii) are also addressed by Revision Checklist 167 C. That checklist revised entries 1 and 3 in the Table at 268.7(a)(4) and entries 1 and 2 in the Table at 268.7(b)(3)(ii).

[iv] The entire section 268.49 was added by 63 FR 28556, May 26, 1998.

RCRA REVISION CHECKLIST 167 C

Land Disposal Restrictions Phase IV – Corrections
63 FR 28556-28753
May 26, 1998
as amended at 63 FR 31266, June 8, 1998
(RCRA Cluster VIII, HSWA provisions)

Note: On August 10, 1998 (63 FR 42580), a rule was promulgated to clarify the correct adoption sequence of the May 4, 1998 rule (63 FR 24596, CL 165), the May 26, 1998 rule (63 FR 28556, CL 167), and the June 29, 1998 (63 FR 35147) technical amendment to the May 4, 1998 rule, as they relate to the organobromine production waste entries at 40 CFR 268.40 and 268.48. Subsequently, on April 9, 1999, the U.S. Court of Appeals vacated the listing of these organobromine production wastes and in turn, the May 4, 1998; June 29, 1998; and August 10, 1998 rules have been withdrawn. If a State chooses to follow this vacatur, it should remove the vacated wastes in the tables at 40 CFR 268.40 and 268.48, as indicated in footnotes 3 and 4. If the vacatur is not followed by a State, then the vacated wastes should remain as shown in the May 26, 1998 rule in tables 40 CFR 268.40 and 268.48.

†★ These changes are conditionally optional. If the State has adopted the optional revisions to the recordkeeping and paperwork requirements in Revision Checklist 157, then the State is required to adopt the changes to 268.7 in this

checklist with the exception of adding the entries for contaminated soils in the Tables at 268.7(a)(4) and 268.7(b)(3)(iii).

RCRA REVISION CHECKLIST 167 C: Land Disposal Restrictions
Phase IV--Corrections (cont'd)

[i] Note that the Tables at 268.7(a)(4) and (b)(3)(ii) are also addressed by Revision Checklist 167 B. That checklist redesignated entry 8 as 9 and added a new entry 8 in the Table at 268.7(a)(4), and it redesignated entry 5 as 6 and added a new 5 in the Table at 268.7(b)(3)(ii). These changes should not be adopted unless the State adopts the other changes made by Revision Checklist 167 B.

[ii] The internal reference at 268.7(b)(6) has incorrectly been changed from "266.20(b)" to "268.20(b)". There is no 40 CFR 268.20; therefore, the original reference appears to have been correct and should be retained.

[iii] Revisions made at 268.40(e), and the replacement of the 268.40 and 268.48 tables, are included on both Revision Checklists 167A and 167C as revisions were made to these tables both because of changes due to the new LDR Phase IV restrictions and because of corrections needed to the existing tables.

[iv] If a State has chosen to follow the April 9, 1999 vacatur, it should not include entries for K140 and U408 when it revises/replaces its analog to the 40 CFR 268.40 "Treatment Standards for Hazardous Wastes" table. Wastes K140 and U408 were added by Revision Checklist 165 (63 FR 24596, May 4, 1998; 63 FR 35147, June 29, 1998).

[v] Revision Checklist 167C removed subparagraphs at 40 CFR 268.42(a)(1)-(a)(3). Beginning with the 1998 version, the CFR contains an error in that these paragraphs were not removed.

[vi] If a State has chosen to follow the April 9, 1999 vacatur, it should not include the entry for "2,4,6-Tribromophenol" when it revises/replaces its analog to the 40 CFR 268.48(a) "Universal Treatment Standards" table. This waste was added by Revision Checklist 165 (63 FR 24596, May 4, 1998; 63 FR 35147, June 29, 1998). Revision Checklist 165 was withdrawn by EPA because the listing of "2,4,6-Tribromophenol" was vacated on April 9, 1999 by the U.S. Court of Appeals for the District of Columbia in Great Lakes Chemical Corporation vs. EPA.

RCRA REVISION CHECKLIST 167 D - REVISED

Mineral Processing Secondary Materials Exclusion
63 FR 28556-28753
May 26, 1998

(RCRA Cluster VIII, non-HSWA provisions)

NOTE: The rule addressed by this checklist defines the circumstances under which secondary materials generated within the primary mineral processing industry from which minerals, acids, cyanide, water or other values are recovered by mineral processing are excluded from the definition of solid waste. Note, however, that the U.S. D.C. Circuit Court of Appeals vacated the portion of the rule that attempted to regulate as waste certain sludges and by-products exhibiting a characteristic of hazardous waste that are not listed in 40 CFR 261.31 or 261.32. As a result of the court decision and based on the wording of 40 CFR 261.4(a)(16), listed sludges and by-products are never excluded from the definition of solid waste; therefore, only reclaimed spent materials are covered by the conditional exclusion introduced by the rule. This checklist has been revised to reflect these changes. See the summary for this checklist for an explanation of the vacatur and how it impacts authorization of state programs.

	FEDERAL REQUIREMENTS	FEDERAL RCRA CITATION	ANALOGOUS STATE CITATION	STATE ANALOG IS:			
				EQUIV-ALENT	LESS STRIN-GENT	MORE STRIN-GENT	BROADER IN SCOPE
	PART 261 - IDENTIFICATION AND LISTING OF HAZARDOUS WASTE						
	SUBPART A - GENERAL						
	DEFINITION OF SOLID WASTE						
†,[1],[2]	insert "(except as provided under 40 CFR 261.4(a)(15))" at end of first sentence	261.2(c)(3)	MN Statutes, section 116.06, subdivision 11	X			
†,	revise Table 1 by inserting in third column heading "(except as provided in 261.4(a)(15) for mineral processing secondary materials)" following "Reclamation (§ 261.2(c)(3))"	261.2(c)(4)/Table	MN Statutes, section 116.06, subdivision 11	X			

[1] Note that there are typographical errors at 261.2(c)(3), 261.2(c)(4) [Table heading], 261.2(e)(1)(iii) and 261.4(a)(16)(iii). All make reference to "261.4(a)(15)", the Kraft Mill Steam Strippers exclusion, when they should be referring to "261.4(a)(16)" the exclusion for secondary materials generated by the primary mineral processing industry. Note that Revision Checklist 179 (64 FR 25408-25417; May 11, 1999) redesignated the provision as 261.4(a)(17).

[2] The rule addressed by Revision Checklist 167D included a change that added "(except as provided under 40 CFR 261.4(a)(15))" at the end of the second sentence in 261.2(c)(3). This revision was set aside by the U.S. D.C. Circuit Court of Appeals in Association of Battery Recyclers, Inc. v. EPA, 208 F.3d 1047 (D.C. Cir. 2000). In that decision, the Court held that the expansion of the definition of solid waste to include materials based on how they are stored prior to reclamation is not appropriate. This checklist was revised to reflect this court decision. A State that chooses to include the parenthetical to the second sentence should indicate that its analog is broader in scope as explained in the summary for this checklist.

†,,[3]	add sentence; where materials are generated and reclaimed within the primary mineral processing industry, the conditions of the exclusion at 261.4(a)(15) apply	261.2(e)(1)(iii)	MN Statutes, section 116.06, subdivision 11	X			

[3] The preamble to the May 26, 1998 (CL 167D) rule indicates that language is being added to the existing provision at 261.2(e)(1)(iii). The instructions indicate that the paragraph is being revised. It is not EPA's intention to remove the existing language and replace it with the May 26, 1998 provision. EPA intends to issue a technical correction which clarifies this provision. Until that amendment is available, it is recommended that the new sentence be added at the end of the existing provision.

	EXCLUSIONS						
†	add new paragraph; secondary materials generated within the primary mineral processing industry from which minerals, acids, cyanide, water or other values are recovered, provided that:	261.4(a)~~(16)~~(17) intro	7045.0120, 1, X	X			
†	add new subparagraph; secondary material is legitimately recycled to recover minerals, acids, cyanide, water or other values	261.4(a)~~(16)~~(17)(i)	7045.0120, 1, X, (1)	X			
†	add new subparagraph; secondary material is not accumulated speculatively	261.4(a)~~(16)~~(17)(ii)	7045.0120, 1, X, (2)	X			
†,	add new subparagraph; except as provided in 261.4(a)(15)(iv), the secondary material is stored in tanks, containers, or buildings meeting the specified minimum integrity standards; if tanks or containers contain particulate subject to wind dispersal, owner/operator must operate units in a manner which controls fugitive dust; units must be designed, constructed and operated to prevent significant releases to the environment of these materials	261.4(a)~~(16)~~(17)(iii)	7045.0120, 1, X, (3)	X			

†	add new subparagraph; Regional Administrator or State Director may make a site-specific determination that only solid mineral processing secondary materials may be placed on pads, rather than in tanks, containers, or buildings; solid mineral processing secondary materials do not contain free liquid; pads must be designed, constructed & operated to prevent significant releases and provide same degree of containment afforded by the non-RCRA tanks, containers & buildings eligible for exclusion	261.4(a)~~(16)~~(17)(iv)	7045.0120, 1, X, (4)	X			
†	add new subparagraph; environmental considerations for pads	261.4(a)~~(16)~~(17)(iv)(A)	7045.0120, 1, X, (4), (a)	X			
†	add new subparagraph; minimum standards for pads	261.4(a)~~(16)~~(17)(iv)(B)	7045.0120, 1, X, (4), (b)	X			
†	add new subparagraph; notice and comment opportunity requirements before decision	261.4(a)~~(16)~~(17)(iv)(C)	7045.0120, 1, X, (4), (c)	X			

†	add new paragraph; owner/operator provides notice to Regional Administrator or State Director identifying specified information; notification must be updated when type of materials recycled or location changes	261.4(a)~~(16)~~(17)(v)	7045.0120, 1, X, (5)	X			
†	add new paragraph; for purposes of 261.4(b)(7), mineral processing secondary materials must be the result of mineral processing & may not contain listed hazardous wastes; listed & characteristic hazardous wastes generated by non-mineral processing industries are not eligible for exclusion	261.4(a)~~(16)~~(17)(vi)	7045.0120, 1, X, (6)	X

RCRA REVISION CHECKLIST 170

Land Disposal Restrictions Phase IV -- Zinc Micronutrient Fertilizers, Amendment
63 FR 46332-46334
August 31, 1998
(RCRA Cluster IX, HSWA)

Note: This August 31, 1998 (63 FR 46332) notice stays the land disposal treatment standards for metal-bearing hazardous wastes which exhibit the characteristic of toxicity as it applies to zinc micronutrient fertilizers. Zinc micronutrient fertilizers are now subject to the applicable treatment standards in 268.41 contained in the July 1, 1990 edition of the CFR. The stay remains in effect until further regulatory action is taken by the Agency. If and when further action is taken, EPA will publish a notice in the Federal Register (a notice of Proposed Rulemaking is expected in 1999). A checklist is necessary because the code is affected. Because this amendment raises the level to which certain constituents must be treated and is, therefore, less stringent than previous standards, States are not required to adopt this checklist. As such, this checklist has been designated as optional.

	FEDERAL REQUIREMENTS	FEDERAL RCRA CITATION	ANALOGOUS STATE CITATION	STATE ANALOG IS: EQUIV-ALENT	LESS STRIN-GENT	MORE STRIN-GENT	BROADER IN SCOPE
	PART 268 - LAND DISPOSAL RESTRICTIONS						
	SUBPART D - TREATMENT STANDARDS						
	APPLICABILITY OF TREATMENT STANDARDS						
i,†	add new subparagraph; zinc-containing fertilizers produced for general public use and produced from or containing recycled characteristic hazardous wastes (D004-D011) are subject to 268.41 treatment standards in the July 1, 1990 edition of the CFR	268.40(i) (first entry)	7045.1390	IBR			

i Note that paragraph 268.40(i) was added by 63 FR 46332-46334(August 31, 1998, Revision Checklist 170) and a second paragraph 268.40(i) was added 63 FR 47410-47418 (September 4, 1998, Revision Checklist 171).

RCRA REVISION CHECKLIST 171

Emergency Revision of the Land Disposal Restrictions (LDR) Treatment Standards
for Listed Hazardous Wastes from Carbamate Production
63 FR 47410-47418
September 4, 1998
(RCRA Cluster IX, HSWA)

	FEDERAL REQUIREMENTS	FEDERAL RCRA CITATION	ANALOGOUS STATE CITATION	STATE ANALOG IS: EQUIV-ALENT	LESS STRIN-GENT	MORE STRIN-GENT	BROADER IN SCOPE
	PART 268 - LAND DISPOSAL RESTRICTIONS						
	SUBPART D - TREATMENT STANDARDS						
	APPLICABILITY OF TREATMENT STANDARDS						
	replace "August 26, 1997 and August 26, 1998" with **"**August 26, 1996 and March 4, 1999"	268.40(g)	7045.1390	IBR			
i	add new paragraph; effective September 4, 1998, treatment standards for certain "P" and "U" wastes specified in 261.33 may be satisfied by either meeting constituent concentrations in "Treatment Standards for Hazardous Wastes" table, or by treating the waste by technologies specified	second entry 268.40(i)		IBR			
ii,iii	revise "Treatment Standards for Hazardous Wastes" table and footnotes to table as shown at 63 FR 47416-47417	268.40/Table		IBR			
	UNIVERSAL TREATMENT STANDARDS						
iv	remove entries for the following: A2213; Bendiocarb phenol; Diethylene glycol, dicarbamate; Dimetilan;	268.48(a)/Table		IBR			

FEDERAL REQUIREMENTS	FEDERAL RCRA CITATION	ANALOGOUS STATE CITATION	STATE ANALOG IS:			
			EQUIV-ALENT	LESS STRIN-GENT	MORE STRIN-GENT	BROADER IN SCOPE
Formparanate; Isolan; o-Phenylenediamine; and Tirpate; remove footnote “6” in column one, after the following: Aldicarb sulfone; Barban; Bendiocarb; Benomyl; Butylate; Carbaryl; Carbenzadim; Carbofuran; Carbofuran phenol; Carbosulfan; m-Cumenyl methylcarbamate; Dithiocarbamates (total); EPTC; Formetanate hydrochloride; Methiocarb; Methomyl; Metolcarb; Mexacarbate; Molinate; Oxamyl; Pebulate; o-Phenylenediamine; Physostigmine; Physostigmine salicylate; Promecarb; Propham; Propoxur; Prosulfocarb; Thiodicarb; Thiophanate-methyl; Triallate; Triethylamine; and Vernolate; and by removing footnote 6 itself						

---

i Paragraph 268.40(i) was added by 63 FR 46332-46334(August 31, 1998, Revision Checklist 170) and a second paragraph 268.40(i) was added 63 FR 47410-47418 (September 4, 1998, Revision Checklist 171). While the instructions for the 64 FR 25408 rule (May 11, 1999, Revision Checklist 179) indicate that the first paragraph should be redesignated as 268.40(j), the revisions made by this rule to 268.40(i) are made to the language introduced by the first paragraph; therefore, it is assumed that the second paragraph 268.40(i) should be redesignated as 268.40(j), and the first paragraph remain 268.40(i).

ii Note that on pages 47416-47417 of the September 4, 1998 rule, "mg/l" has been erroneously expressed as "mg/L" throughout the table "Treatment Standards for Hazardous Wastes" and throughout the footnotes to this table. Milligrams per liter is correctly abbreviated as "mg/l".

iii Footnote 11 to the table "Treatment Standards for Hazardous Wastes" was inadvertently revised to "mg/L TCLP". The correct version of footnote 11 is found in the May 26, 1998 FR notice (63 FR 28738).

iv This rule, 63 FR 47410-47418 (September 4, 1998, Revision Checklist 171), incorrectly removes footnote 6 from the 268.48(a)/Table. The footnote has been reinserted by Revision Checklist 179 (May 11, 1999, 64 FR 25408).

RCRA REVISION CHECKLIST 172

Land Disposal Restrictions Phase IV -- Extension of Compliance
Date for Characteristic Slags
63 FR 48124-48127
September 9, 1998
(RCRA Cluster IX, HSWA)

DEFINITIONS						
revise “Equipment”; insert “or other connector” after “flange”	264.1031	7045.0547	Incorporated by reference (IBR)			
revise “Open-ended valve or line”; replace “process fluid” with “hazardous waste”	264.1031	7045.0547	IBR			
add “sampling connection	264.1031	7045.0547	IBR			

FEDERAL REQUIREMENTS	FEDERAL RCRA CITATION	ANALOGOUS STATE CITATION	STATE ANALOG IS:			
			EQUIV-ALENT	LESS STRIN-GENT	MORE STRIN-GENT	BROADER IN SCOPE
system" definition in alphabetic order						
SUBPART CC - AIR EMISSION STANDARDS FOR TANKS, SURFACE IMPOUNDMENTS, AND CONTAINERS						
APPLICABILITY						
replace "generated" with "placed in the unit"; replace "the result" with "a result"; add comma after "3004(v)"; replace comma with semicolon after "3008(h)" and after "authorities"	264.1080(b)(5)	7045.0549	IBR			
WASTE DETERMINATION PROCEDURES						
add new paragraph; average VO concentration of waste stream shall be determined before first time material in hazardous waste stream is placed in unit exempted under 264.1082(c)(1) from using air emission controls, thereafter concentration shall be determined for each averaging period that hazardous waste is managed in unit; and	264.1083(a)(1)(i)	7045.0549	IBR			
add new paragraph; perform new determination when changes to generating source are likely to cause concentration to increase to level equal to or greater than limit specified in 264.1082	264.1083(a)(1)(ii)	7045.0549	IBR			
add new paragraph; average VO concentration of waste stream shall be determined before first time material in treated	264.1083(b)(1)(i)	7045.0549	IBR			

	FEDERAL REQUIREMENTS	FEDERAL RCRA CITATION	ANALOGOUS STATE CITATION	STATE ANALOG IS: EQUIV-ALENT	LESS STRIN-GENT	MORE STRIN-GENT	BROADER IN SCOPE
	waste stream is placed in exempt unit, thereafter update determination information at least once every 12 months; and						
	add new paragraph; perform new determination when process generating or treating waste stream changes are likely to cause concentration to increase such that 264.1082(c)(2) treatment conditions are not achieved	264.1083(b)(1)(ii)	7045.0549	IBR			
	STANDARDS: TANKS						
i	replace “in the event...unsafe condition” with “under either of the following conditions as specified in paragraph (h)(3)(i) or (h)(3)(ii) of this section”	264.1084(h)(3) intro	7045.0549	IBR			
	add new paragraph; when opening safety device is required to avoid unsafe condition	264.1084(h)(3)(i)	7045.0549	IBR			
	add new paragraph; when purging of inerts from tank is required and purge stream is routed to closed-vent system and control device designed & operated according to 264.1087	264.1084(h)(3)(ii)	7045.0549	IBR			
	STANDARDS: CONTAINERS						
	add new paragraph; transfer of hazardous waste in or out of container using Container Level 3 controls shall be conducted to minimize	264.1086(e)(6)	7045.0549	IBR			

FEDERAL REQUIREMENTS	FEDERAL RCRA CITATION	ANALOGOUS STATE CITATION	STATE ANALOG IS:			
			EQUIV-ALENT	LESS STRIN-GENT	MORE STRIN-GENT	BROADER IN SCOPE
exposure to atmosphere; examples of acceptable container loading procedures						
PART 265 - INTERIM STATUS STANDARDS FOR OWNERS AND OPERATORS OF HAZARDOUS WASTE TREATMENT, STORAGE, AND DISPOSAL FACILITIES						
SUBPART CC - AIR EMISSION STANDARDS FOR TANKS, SURFACE IMPOUNDMENTS, AND CONTAINERS						
APPLICABILITY						
replace “generated” with “placed in the unit”; replace “the result” with “a result”; removed “RCRA” from after “under the”; insert “RCRA sections” before “3004(u)”; add comma after “3004(v)”; replace comma with semicolon after “3008(h)” and after “authorities”	265.1080(b)(5)	7045.0649	IBR			
WASTE DETERMINATION PROCEDURES						
add new paragraph; average VO concentration of waste stream shall be determined before first time material in hazardous waste stream is placed in unit exempted under 265.1083(c)(1) from using air emission controls, thereafter concentration shall be determined for each averaging period hazardous waste is managed in unit; and	265.1084(a)(1)(i)	7045.0649	IBR			
add new paragraph; perform new determination when changes to generating source are likely to cause concentration to increase to level equal to or greater	265.1084(a)(1)(ii)	7045.0649	IBR			

FEDERAL REQUIREMENTS	FEDERAL RCRA CITATION	ANALOGOUS STATE CITATION	STATE ANALOG IS:			
			EQUIV-ALENT	LESS STRIN-GENT	MORE STRIN-GENT	BROADER IN SCOPE
than limit specified in 265.1083(c)(1)						
after first sentence, insert new sentence "All of the samples for a given waste determination shall be collected within a one-hour period."	265.1084(a)(3)(ii)(B)	7045.0649	IBR			
add new paragraph; sufficient information to document waste quantity and operating conditions represented by samples	265.1084(a)(3)(ii)(D)	7045.0649	IBR			
revise paragraph; analysis	265.1084(a)(3)(iii)	7045.0649	IBR			
add new paragraph; average VO concentration of waste stream shall be determined before first time material in treated waste stream is placed in exempt unit, thereafter update determination information at least once every 12 months; and	265.1084(b)(1)(i)	7045.0649	IBR			
add new paragraph; perform new determination when process generating or treating waste stream changes are likely to cause concentration to increase such that treatment conditions are not achieved	265.1084(b)(1)(ii)	7045.0649	IBR			
after first sentence, insert new sentence "All of the samples for a given waste determination shall be collected within a one-hour period."; remove "source or"; insert "or treating" after	265.1084(b)(3)(ii)(B)	7045.0649	IBR			

	FEDERAL REQUIREMENTS	FEDERAL RCRA CITATION	ANALOGOUS STATE CITATION	STATE ANALOG IS: EQUIV-ALENT	LESS STRIN-GENT	MORE STRIN-GENT	BROADER IN SCOPE
	"generating"						
	add new paragraph; sufficient information to document waste quantity and operating conditions represented by the samples	265.1084(b)(3)(ii)(D)	7045.0649	IBR			
	revise paragraph; analysis	265.1084(b)(3)(iii)	7045.0649	IBR			
	STANDARDS: TANKS						
1	replace "in the event...unsafe condition" with "under either of the following conditions as specified in paragraph (h)(3)(i) or (h)(3)(ii) of this section"	265.1085(h)(3)	7045.0649	IBR			
ii	add new paragraph; when opening safety device is required to avoid unsafe condition	265.1085(h)(3)(i)	7045.0649	IBR			
	add new paragraph; when purging of inerts from tank is required and purge stream is routed to closed-vent system and control device designed & operated according to 265.1088	265.1085(h)(3)(ii)	7045.0649	IBR			
	STANDARDS: CONTAINERS						
	add new paragraph; transfer of hazardous waste in or out of container using Container Level 3 controls shall be conducted to minimize exposure to atmosphere; examples of acceptable container loading procedures	265.1087(e)(6)	7045.0649	IBR			

---

i There is a typographical error in the revised paragraphs: “under either or the following conditions” should be “under either <u>of</u> the following conditions”.

ii States should be sure to add a new paragraph at 265.1085(h)(3)(i), and not replace 265.1085(i), which currently follows 265.1085(h)(3).

RCRA REVISION CHECKLIST 179

Land Disposal Restrictions Phase IV -- Technical Corrections
and Clarifications to Treatment Standards
64 FR 25408-25417
May 11, 1999
(RCRA Cluster IX, HSWA/non-HSWA provisions)

Note that the revisions to 262.34(d)(4), 268.2(h), 268.2(k), 268.7(a)(4)/table, 268.7(b)(3)(ii)/Table, 268.7(b)(4)(iv), 268.9(d)(2) intro, 268.9(d)(2)(i), 268.40(i), 268.40(j), 268.40/Table, 268.48(a)/Table, 268.49(c)(3) intro, 268.49(c)(3)(A)&(B) were made pursuant to HSWA. The revisions to 261.2(c)(3), 261.2(c)(4)/Table, 261.2(e)(1)(iii), first paragraph 261.4(a)(16), 261.4(a)(17) introductory paragraph, 261.4(a)(17)(v), and 261.4(b)(7)(iii)&(iii)(A) were made relative to non-HSWA authority. Those provisions designated as HSWA are identified by a " ♦" (diamond symbol) in this checklist.

TREATMENT STANDARDS FOR HAZARDOUS WASTES
[Note: NA means not applicable]

Waste Code	Waste Description and Treatment/Regulatory Subcategory[1]	Regulated Hazardous Constituent: Common Name	Regulated Hazardous Constituent: CAS[2] No.	Wastewaters: Concentration in mg/l[3]; or Technology Code[4]	Nonwastewaters: Concentration in mg/kg[5] unless noted as "mg/l TCLP"; or Technology Code
U408	2,4,6-Tribomophenol	2,4,6-Tribomophenol	118-79-6	0.035	7.4
*	*	*	*	*	*

[1] The waste descriptions provided in this table do not replace waste descriptions in 40 CFR 261. Descriptions of Treatment/Regulatory Subcategories are provided, as needed, to distinguish between applicability of different standards.

[2] CAS means Chemical Abstract Services. When the waste code and/or regulated constituents are described as a combination of a chemical with its salts and/or esters, the CAS number is given for the parent compound only.

[3] Concentration standards for wastewaters are expressed in mg/l and are based on analysis of composite samples.

[4] All treatment standards expressed as a Technology Code or combination of Technology Codes are explained in detail in § 268.42 Table 1--Technology Codes and Descriptions of Technology-Based Standards.

[5] Except for Metals (EP or TCLP) and Cyanides (Total and Amenable) the nonwastewater treatment standards expressed as a concentration were established, in part, based upon incineration in units operated in accordance with the technical requirements of 40 CFR Part 264, Subpart O, or Part 265, Subpart O, or based upon combustion in fuel substitution units operating in accordance with applicable technical requirements. A facility may comply with these treatment standards according to provisions in § 268.40(d). All concentration standards for nonwastewaters are based on analysis of grab samples.

* * * * * * *

[7] Both Cyanides (Total) and Cyanides (Amenable) for nonwastewaters are to be analyzed using Method 9010 or 9012, found in "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods", EPA Publication SW-846, as incorporated by reference in 40 CFR 260.11, with a sample size of 10 grams and a distillation time of one hour and 15 minutes.

* * * * * * *

[8] These wastes, when rendered nonhazardous and then subsequently managed in CWA, or CWA-equivalent systems are not subject to treatment standards. (See § 268.1(c) (3) and (4)).

* * * * * * *

[10] The treatment standard for this waste may be satisfied by either meeting the constituent concentrations in this table or by treating the waste by the specified technologies: combustion, as defined by the technology code CMBST at §268.42 Table 1 of this Part, for nonwastewaters; and, biodegradation as defined by the technology code BIODG, carbon adsorption as defined by the technology code CARBN, chemical oxidation as defined by the technology code CHOXD, or combustion as defined as technology code CMBST at § 268.42 Table 1 of this part, for wastewaters.

[11] For these wastes, the definition of CMBST is limited to: (1) combustion units operating under 40 CFR 266, (2) combustion units permitted under 40 CFR Part 264, Subpart O, or (3) combustion units operating under 40 CFR 265, Subpart O, which have obtained a determination of equivalent treatment under 268.42(b).

RCRA REVISION CHECKLIST 179: Land Disposal Restrictions Phase IV -- Technical Corrections and Clarifications to Treatment Standards (cont'd)

	FEDERAL REQUIREMENTS	FEDERAL RCRA CITATION	ANALOGOUS STATE CITATION	STATE ANALOG IS: EQUIV-ALENT	LESS STRIN-GENT	MORE STRIN-GENT	BROADER IN SCOPE
	UNIVERSAL TREATMENT STANDARDS						
♦,viii	add footnote number 6 in column one, under the heading Regulated Constituents/Common Name, after the following chemical names: "Aldicarb sulfone", "Barban," "Bendiocarb," "Benomyl," "Butylate," "Carbaryl," "Carbenzadim," "Carbofuran," "Carbofuran- phenol," "Carbosulfan," "m-Cumenyl-methylcarbamate," "Dithiocarbamates (total)," "EPTC," "Formetanate hydrochloride," "Methiocarb," "Methomyl," "Metolcarb," "Mexacarbate," "Molinate," "Oxamyl," "Pebulate,""Physostigmine," "Physostigmine salicylate," "Promecarb," "Propham," "Propoxur," "Prosulfocarb," "Thiodicarb," "Thiophanate-methyl," "Triallate," "Triethylamine," and "Vernolate;"; add footnote 6 "6. Between August 26, 1998 and March 4, 1999, these constituents are not "underlying hazardous constituents" as defined in Sec. 268.2(i) of this part."	268.48(a)/Table		IBR			
	ALTERNATIVE LDR TREATMENT STANDARDS FOR CONTAMINATED SOIL						

RCRA REVISION CHECKLIST 179: Land Disposal Restrictions Phase IV -- Technical Corrections and Clarifications to Treatment Standards (cont'd)

	FEDERAL REQUIREMENTS	FEDERAL RCRA CITATION	ANALOGOUS STATE CITATION	STATE ANALOG IS: EQUIV-ALENT	LESS STRIN-GENT	MORE STRIN-GENT	BROADER IN SCOPE
♦,†★	no revision made	268.49(c)(3) intro		IBR			
♦,†★	replace "also contains analyzable constituents," with "contains only analyzable and nonanalyzable organic constituents,"; replace "treatment of those analyzable constituents" with "treatment of the analyzable organic constituents"	268.49(c)(3)(A)		IBR			
♦,†★	replace "method specified" with "method(s) specified"	268.49(c)(3)(B)		IBR			

†★ These changes are conditionally optional. If the State has adopted the optional revisions to the recordkeeping and paperwork requirements in Revision Checklist 157 and 167 C, then the State is required to adopt the changes to 262.34(d)(4), 268.7(a)(4)/Table (entries 1 and 3), 268.7(b)(3)(ii)/Table, 268.9(d)(2) intro, and 268.9(d)(2)(i) in this checklist. Also, if the State has adopted the optional treatment standards for contaminated soils in Revision Checklists 167 B, then the State is required to adopt the changes to 268.2(k), 268.7(a)(4)/Table (entry 8), 268.7(b)(4)(iv), and 268.49 in this checklist.

---

i The provisions at 261.2 that are amended by this checklist were introduced by Revision Checklist 167 D. Note that EPA has withdrawn Revision Checklist 167 D to conform with a vacatur by the U.S. D.C. Circuit Court of Appeals. States should refer to EPA's guidance on the summary for Revision Checklists 167A-E for information on how to deal with the vacatur.

ii The May 26, 1998 (CL 167D) rule inadvertently removed the provision language at § 261.2(e)(1)(iii) and replaced it with the additional language which was intended to be added at the end of the paragraph. The original language has been reinserted by Revision Checklist 179 at the beginning of the paragraph, and the May 26, 1998 (CL 167D) addition (now the last sentence of the provision) has been revised to indicate the correct internal reference. Note, however, that EPA has withdrawn Revision Checklist 167 D to conform with a vacatur by the U.S. D.C. Circuit Court of Appeals as explained in endnote 1.

iii Paragraph 261.4(a)(16) was added by 63 FR 28556 (May 26, 1998, Revision Checklist 167 D). A second paragraph 261.4(a)(16) was added in error by the 63 FR 33782 (June 19, 1998, Revision Checklist 168) rule. The first paragraph 261.4(a)(16) was redesignated by the May 11, 1999 (64 FR 25408, Revision Checklist 179) rule as

261.4(a)(17). Note, however, that EPA has withdrawn Revision Checklist 167 D to conform with a vacatur by the U.S. D.C. Circuit Court of Appeals as explained in endnote 1.

iv A typographical error exists at the redesignated § 261.4(a)(17)(iii). The internal reference "paragraph (a)(15)(iv)" should be "paragraph (a)(17)(iv)". Note, however, that EPA has withdrawn Revision Checklist 167 D to conform with a vacatur by the U.S. D.C. Circuit Court of Appeals as explained in endnote 1.

v The changes to entry 8 in the 268.7(a)(4)/Table are only applicable to State's that adopted the optional requirements for contaminated soils in Revision Checklist 167 B. The other changes to this table should be made by States that have adopted the optional revisions to the recordkeeping and paperwork requirements in Revision Checklists 157 and 167C.

vi Paragraph 268.40(i) was added by 63 FR 46332-46334 (August 31, 1998, Revision Checklist 170) and a second paragraph 268.40(i) was added 63 FR 47410-47418 (September 4, 1998, Revision Checklist 171). The instructions for the 64 FR 25408 rule (May 11, 1999, Revision Checklist 179) indicate that the first paragraph (i) is redesignated as 268.40(j) and that paragraph (i) is revised. The rule addressed by Revision Checklist 179 should have redesignated the second paragraph (i) as (j) and revised the first paragraph (i). The October 20, 1999 final rule (64 FR 56469; Revision Checklist 183) corrected this error by replacing paragraph (j) with the old second paragraph (i).

vii Revision Checklist 165 added U408 to the 268.40 table. Revision Checklist 165 has been withdrawn, and the U408 entry removed; therefore, only States retaining the Revision Checklist 165 provisions should made the Revision Checklist 179 revisions to the U408 entry. The May 11, 1999 rule (64 FR 25416, Revision Checklist 179, contains typographical errors at the K156 and K159 entries. These netires should not include footnote 10.

viii 63 FR 47410-47418 (September 4, 1998, Revision Checklist 171) incorrectly removed footnote 6 from 268.48(a)/table. The footnote has been reinserted by Revision Checklist 179 (May 11, 1999, 64 FR 25408).

RCRA REVISION CHECKLIST 183

Land Disposal Restrictions Phase IV -- Technical Corrections
64 FR 56469-56472
October 20, 1999
(RCRA Cluster X, HSWA/Non-HSWA)

Note that the revisions to 262.34(a)(4), 268.7(a)(3)(iii), 268.40(j), 268.40 Table, 268.49(c)(1)(A) and 268.49(c)(1)(B) were made pursuant to HSWA. The revisions to 261.32 were made relative to non-HSWA authority. Those provisions designated as HSWA are identified by a "♦" (diamond symbol) in this checklist.

	FEDERAL REQUIREMENTS	FEDERAL RCRA CITATION	ANALOGOUS STATE CITATION	STATE ANALOG IS: EQUIV-ALENT	LESS STRIN-GENT	MORE STRIN-GENT	BROADER IN SCOPE
	PART 261 – IDENTIFICATION AND LISTING OF HAZARDOUS WASTE						
	SUBPART D – LISTS OF HAZARDOUS WASTES						
	HAZARDOUS WASTES FROM SPECIFIC SOURCES						
i,†	remove entries for K064, K065, K066, K090 and K091	261.32	7045.0135, 1a, C	Incorporated by reference (IBR)			
	PART 262 – STANDARDS APPLICABLE TO GENERATORS OF HAZARDOUS WASTE						
	SUBPART C – PRE-TRANSPORT REQUIREMENTS						
	ACCUMULATION TIME						
†★,♦	replace "268.7(a)(4)" with "268.7(a)(5)"	262.34(a)(4)	7045.0292, 1, G	X			
	PART 268 – LAND DISPOSAL RESTRICTIONS						
	SUBPART A – GENERAL						
	TESTING, TRACKING, AND RECORDKEEPING REQUIREMENTS FOR GENERATORS, TREATERS, AND DISPOSAL FACILITIES						
†★,♦	add new paragraph; if waste changes, generator must send new notice & certification to receiving facility, & place copy in files; generators excluded under 261.3(f) are not subject to these	268.7(a)(3)(iii)	7045.1390	IBR			

	FEDERAL REQUIREMENTS	FEDERAL RCRA CITATION	ANALOGOUS STATE CITATION	STATE ANALOG IS: EQUIV-ALENT	LESS STRIN-GENT	MORE STRIN-GENT	BROADER IN SCOPE
	requirements						
	SUBPART D - TREATMENT STANDARDS						
	APPLICABILITY OF TREATMENT STANDARDS						
♦	replace old 268.40(j) with new paragraph; effective September 4, 1998, treatment standards for certain "P" and "U" wastes specified in 261.33 may be satisfied by either meeting constituent concentrations in "Treatment Standards for Hazardous Wastes" table, or by treating the waste by technologies specified	268.40(j)		IBR			
ii,♦	revise K088 entry as shown at 64 FR 56471	268.40/Table		IBR			
	ALTERNATIVE LDR TREATMENT STANDARDS FOR CONTAMINATED SOIL						
†★,♦	add "except carbon disulfide, cyclohexanone, and methanol"after "non-metals"	268.49(c)(1)(A)		IBR			
†★,♦	add "and carbon disulfide, cyclohexanone, and methanol"after "metals"	268.49(c)(1)(B)		IBR			

†★ These changes are conditionally optional. If the State has adopted the optional revisions to the recordkeeping and paperwork requirements in Revision Checklist 157, then the State is required to adopt the change to 262.34(a)(4) in this checklist. Also, if the State has adopted the optional treatment standards for contaminated soils in Revision Checklists 167 B, then the State is required to adopt the changes to 268.7(a)(3) and 268.49(c)(1) in this checklist.

[i] The listings of K064, K065, K066, K090, and K091 were initially added to the Federal code by the September 12, 1988 final rule addressed by Revision Checklist 53 (53 FR 35412). However, the listings were remanded by the U.S. Court of Appeals for the D.C. Circuit in American Mining Congress v. EPA, 907 F.2d 1179 (D.C. Cir. 1990). As such, Revision Checklist 53 was modified to not include the addition of these listings. Therefore, States may never have added these listings to their regulations.

[ii] There are typographical errors in the K088 entry at 64 FR 56471. "Benz(a)anthracene" should be "Benzo(a)anthracene" and "Indeno(1,2,3,-c,d)pyrene" should be "Indeno(1,2,3-cd)pyrene". The second error was in the Federal code prior to this checklist.

RCRA REVISION CHECKLIST 185

Organobromine Production Wastes Vacatur
65 FR 14472-14475
March 17, 2000
(RCRA Cluster X, HSWA)

Notes: 1) The rule addressed by this checklist also makes changes to 40 CFR Part 148 (addressing Underground Injection Programs) and 40 CFR Part 302 (addressing Reportable Quantities under CERCLA). These changes are outside the RCRA Subtitle C program and are not addressed by this revision checklist.

2) The rule addressed by this checklist vacates the May 4, 1998 listing of K140 and U408 wastes (64 FR 24596; Revision Checklist 165) to conform with an order issued by the U.S. Court of Appeals for the D.C. Circuit in *Great Lakes Chemical Corporation v. EPA* (Docket No. 98-1312). States that have not adopted Revision Checklist 165, do not need to adopt Revision Checklist 185. For States that have adopted Revision Checklist 165, Revision Checklist 185 is optional. A State may decide to be broader in scope than the Federal program..

	FEDERAL REQUIREMENTS	FEDERAL RCRA CITATION	ANALOGOUS STATE CITATION	STATE ANALOG IS: EQUIV-ALENT	LESS STRIN-GENT	MORE STRIN-GENT	BROADER IN SCOPE

RCRA REVISION CHECKLIST 187

Petroleum Refining Process Wastes – Clarification
64 FR 36365-36367
June 8, 2000
(RCRA Cluster X, HSWA provisions)

Note: The rule addressed by this checklist makes changes to 40 CFR Part 148 addressing Hazardous Waste Injection Restrictions. These changes are outside the RCRA Subtitle C program and are not addressed by this revision checklist.

	FEDERAL REQUIREMENTS	FEDERAL RCRA CITATION	ANALOGOUS STATE CITATION	STATE ANALOG IS: EQUIV-ALENT	LESS STRIN-GENT	MORE STRIN-GENT	BROADER IN SCOPE
	PART 261 - IDENTIFICATION AND LISTING OF HAZARDOUS WASTE						
	SUBPART D - LISTS OF HAZARDOUS WASTES						
	HAZARDOUS WASTES FROM NON-SPECIFIC SOURCES						
†★	revise the entry for F037 by replacing in the second sentence "flow, sludge" with "flow. Sludge"	261.31(a)/table	7045.0135, 1a, B				
	PART 268 - LAND DISPOSAL RESTRICTIONS						
	APPENDIX VII TO PART 268						
	LDR EFFECTIVE DATES OF SURFACE DISPOSED PROHIBITED HAZARDOUS WASTES						
i	unchanged	268 Appendix VII	7045.1390	Incorporated by reference (IBR)			

†★ This change is conditionally optional. If the State has adopted the optional revised description of waste F037 in Revision Checklist 169, then the State is required to adopt the change to F037 in 261.31(a)/table in this checklist.

[i] Note that in the preamble to the June 8, 2000 rule, it states that the Agency neglected to delete the reference to U408 in Appendix VII of 40 CFR Part 268 in the March 17, 2000 rule (65 FR 14472; Revision Checklist 185). However, there was no entry for U408 in that Appendix. The actual amendment for the rule incorrectly removes the entry for U048 from Appendix VII to 40 CFR Part 268. Therefore, States should not adopt any changes to this

Appendix. This error was corrected by Revision Checklist 192B (66 FR 27266, May 16, 2001).

RCRA REVISION CHECKLIST 189

Chlorinated Aliphatics Listing and LDRs for Newly Identified Wastes
65 FR 67068-67133
November 8, 2000
(RCRA Cluster XI, HSWA)

* * * * * * * * * * * *			

PART 268 – LAND DISPOSAL RESTRICTIONS

SUBPART C – PROHIBITIONS ON LAND DISPOSAL

ii WASTE SPECIFIC PROHIBITIONS -- CHLORINATED ALIPHATIC WASTES						
add new paragraph; effective May 8, 2001, wastes K174 and K175, soil and debris contaminated with these	268.33(a)	7045.1390	IBR			

FEDERAL REQUIREMENTS	FEDERAL RCRA CITATION	ANALOGOUS STATE CITATION	STATE ANALOG IS:			
			EQUIV-ALENT	LESS STRIN-GENT	MORE STRIN-GENT	BROADER IN SCOPE
wastes, radioactive wastes mixed with these wastes, and soil and debris contaminated with radioactive wastes mixed with these wastes are prohibited from land disposal						
add new paragraph; requirements of 268.33(a) do not apply if:	268.33(b) intro	7045.1390	IBR			
wastes meet treatment standards specified in 268 subpart D;	268.33(b)(1)	7045.1390	IBR			
exemption from a prohibition pursuant to petition granted under 268.6, with respect to wastes and units covered by the petition;	268.33(b)(2)	7045.1390	IBR			
wastes meet treatment standards established pursuant to petition granted under 268.44;	268.33(b)(3)	7045.1390	IBR			
hazardous debris has met treatment standards in 268.40 or alternative treatment standards in 268.45; or	268.33(b)(4)	7045.1390	IBR			
extension to effective date of prohibition granted pursuant to 268.5, with respect to wastes covered by extension	268.33(b)(5)	7045.1390	IBR			
add new paragraph; to determine if identified hazardous waste exceeds 268.40 treatment standards, initial generator must test waste, or use knowledge of waste; if waste contains regulated	268.33(c)	7045.1390	IBR			

FEDERAL REQUIREMENTS	FEDERAL RCRA CITATION	ANALOGOUS STATE CITATION	STATE ANALOG IS: EQUIV-ALENT	LESS STRIN-GENT	MORE STRIN-GENT	BROADER IN SCOPE
constituents in excess of 268 subpart D levels, waste is prohibited from land disposal, and all requirements of part 268 are applicable, except as otherwise specified						
add new paragraph; disposal of K175 wastes complying with 268.40 treatment standards must also be macroencapsulated in accordance with 268.45 Table 1 unless waste is placed in:	268.33(d) intro	7045.1390	IBR			
Subtitle C monofill containing only applicable K175 wastes that meet 268.40 treatment standards; or	268.33(d)(1)	7045.1390	IBR			
dedicated Subtitle C landfill cell in which other co-disposed wastes are at pH≤6.0	268.33(d)(2)	7045.1390	IBR			
SUBPART D – TREATMENT STANDARDS						
APPLICABILITY OF TREATMENT STANDARDS						
iii add entries to F039 in alphabetic order, add in alphanumeric order new entries for K174 and K175, and add new footnote 12 as shown at 65 FR 67128-67131	268.40/Table	7045.1390	IBR			
UNIVERSAL TREATMENT STANDARDS						
iv add following to the subgroup *"Organic Constituents"* in alphabetical order	268.48(a)/Table	7045.1390	IBR			

UNIVERSAL TREATMENT STANDARDS NOTE: NA means not applicable

REGULATED CONSTITUENT	CAS[1] Number	Wastewater	Nonwastewater

FEDERAL REQUIREMENTS	FEDERAL RCRA CITATION	ANALOGOUS STATE CITATION	STATE ANALOG IS:			
			EQUIV-ALENT	LESS STRIN-GENT	MORE STRIN-GENT	BROADER IN SCOPE
Common Name			Standard Concentration in mg/l[2]		Standard Concentration in mg/kg[3] unless noted as "mg/l TCLP"	
* * * * * *	*	* *	* *	*		
1,2,3,4,6,7,8-Heptachlorodibenzo-p-dioxin (1,2,3,4,6,7,8-HpCDD).....		35822-46-9	0.000035		0.0025	
1,2,3,4,6,7,8-Heptachlorodibenzofuran (1,2,3,4,6,7,8-HpCDF)		67562-39-4	0.000035		0.0025	
1,2,3,4,7,8,9-Heptachlorodibenzofuran (1,2,3,4,7,8,9-HpCDF)		55673-89-7	0.000035		0.0025	
* * * * * *	*	* *	* *	*		
1,2,3,4,6,7,8,9-Octachlorodibenzo-p-dioxin (OCDD)		3268-87-9	0.000063		0.005	
1,2,3,4,6,7,8,9-Octachlorodibenzofuran (OCDF)		39001-02-0	0.000063		0.005	
* * * * * *	*	* *	* *	*		

[i] Note the following typographical errors in the November 8, 2000 rule, in the entry for K174 on page 67127:

- There should be a closing bracket following "Octachlorodibenzo-p-dioxin" in line 4 of the "Hazardous constituents for which listed" column;
- There should not be a hyphenation between "tetrachlorodi" and "benzo-p-dioxins" in line 5 of the "Hazardous constituents for which listed" column; and
- Both "tetrachlororodibenzo-p-dioxins" and "tetrachlorodibenzofurans" should be initially capitalized as with other constituents, in line 5 of the "Hazardous constituents for which listed" column.

[ii] This is a new section added by the 65 FR 67068 (November 8, 2000) rule. Originally, 268.33 dealt with "Waste Specific Prohibitions – First Third Wastes," but pursuant to 62 FR 25998-26040 (May 12, 1997; Revision Checklist 157), the section was removed and reserved effective August 11, 1997. Revision Checklist 165 (63 FR 24596; May 4, 1998) added a new section at 268.33 but this rule was vacated on April 9, 1999. The July 1, 2000 CFR reserved section 268.33.

[iii] Note that in addition to adding a new footnote 12 to the table, the November 8, 2000 rule (Revision Checklist 189) also republished footnotes 1-5 and 11. The only changes to these footnotes were revising upper case "Part" and "Subpart" to lower case "part" and "subpart" in footnotes 5 and 11.

[iv] Note that although the amendatory language states the footnotes are republished without change, "mg/l" is incorrectly revised to "mg/L" in footnote 2. Also note that lower case "part" and "subpart" were incorrectly revised to upper case "Part" and "Subpart" in footnote 3. States should not adopt these revisions.

RCRA REVISION CHECKLIST 190

Land Disposal Restrictions Phase IV -- Deferral for PCBs in Soil
65 FR 81373-81381
December 26, 2000
(RCRA Cluster XI, HSWA)

FEDERAL REQUIREMENTS	FEDERAL RCRA CITATION	ANALOGOUS STATE CITATION	STATE ANALOG IS: EQUIV-ALENT	LESS STRIN-GENT	MORE STRIN-GENT	BROADER IN SCOPE
PART 268 – LAND DISPOSAL RESTRICTIONS						
SUBPART C – PROHIBITIONS ON LAND DISPOSAL						
† WASTE SPECIFIC PROHIBITIONS -- SOILS EXHIBITING THE TOXICITY CHARACTERISTIC FOR METALS AND CONTAINING PCBS						
add new paragraph; effective December 26, 2000, the following wastes are prohibited from land disposal: soil exhibiting the toxicity characteristic solely because of metals (D004-D011) and containing PCBs	268.32(a)	7045.1390	Incorporated by reference (IBR)			
requirements of 268.32(a) do not apply if:	268.32(b) intro	7045.1390	IBR			
wastes contain halogenated organic compounds in total concentration less than 1,000 mg/kg; and	268.32(b)(1)(i)	7045.1390	IBR			
wastes meet 268 subpart D treatment standards for D004-D011, as applicable; or	268.32(b)(1)(ii)	7045.1390	IBR			
wastes contain halogenated organic compounds in total concentration less than 1,000 mg/kg; and	268.32(b)(2)(i)	7045.1390	IBR			
wastes meet 268.49 alternative treatment standards for contaminated	268.32(b)(2)(ii)	7045.1390	IBR			

	FEDERAL REQUIREMENTS	FEDERAL RCRA CITATION	ANALOGOUS STATE CITATION	STATE ANALOG IS: EQUIV-ALENT	LESS STRIN-GENT	MORE STRIN-GENT	BROADER IN SCOPE
	soil; or						
	persons have been granted an extension from prohibition pursuant to 268.6 with respect to wastes and units covered by petition; or	268.32(b)(3)	7045.1390	IBR			
	wastes meet alternative treatment standards pursuant to 268.44 petition	268.32(b)(4)	7045.1390	IBR			
	SUBPART D – TREATMENT STANDARDS						
	UNIVERSAL TREATMENT STANDARDS						
†	add reference to new footnote “8” to “Total PCBs (sum of all PCB isomers, or all Aroclors)” entry; add new footnote “8” as shown at 65 FR 81381 (December 26, 2000)	268.48(a)/Table UTS	7045.1390	IBR			
	ALTERNATIVE LDR TREATMENT STANDARDS FOR CONTAMINATED SOIL						
†,i	replace “40 CFR” with “§”; remove comma after “268.48"; replace “and” with a comma after “vanadium”; insert “that” after “zinc, and”; at end of paragraph insert new sentence: PCBs are not a constituent subject to treatment in soil which exhibits the toxicity characteristic solely because of metals	268.49(d)	7045.1390	IBR			
	APPENDIX III TO PART 268						
†,ii	add new appendix: “List of Halogenated Organic Compounds Regulated Under § 268.32"	Appendix III	7045.1390	IBR			

† Optional.

[i] There is a typographical error in the December 26, 2000 rule (65 FR 81373; Revision Checklist 190). "PCBs are not constituent subject to treatment" should be "PCBs are not a constituent subject to treatment".

[ii] The amendatory language in the December 26, 2000 rule (65 FR 81373; Revision Checklist 190) erroneously states "Appendix III to Part 268 is added to subpart C". Appendix III should instead be added to the section reserved for it at the end of Part 268.

RCRA REVISION CHECKLIST 192 A

Mixture and Derived-From Rules Revisions
66 FR 27266-27297
May 16, 2001
(RCRA Cluster XI, HSWA/Non-HSWA)

Name of State:

State Statutory Authority:

Title of Regulations: _____ Effective Date:

Date Checklist Completed:

Notes: The revisions to 40 CFR 261.3(g) and 261.3(h)(1)-(3) are promulgated pursuant to HSWA. The HSWA revisions are considered less stringent than the existing Federal regulations and therefore, are immediately effective only in those States not authorized for the base RCRA program. The revisions to 40 CFR 261.3(a)(2)(iii) and (iv), and 261.3(c)(2)(i) are promulgated pursuant to non-HSWA authorities and do not go into effect in an authorized State until the State adopts and receives authorization for the revisions. HSWA provisions are identified by a "✠" (diamond symbol) in this checklist.

	FEDERAL REQUIREMENTS	FEDERAL RCRA CITATION	ANALOGOUS STATE CITATION	STATE ANALOG IS:

RCRA REVISION CHECKLIST 194

Mixture and Derived-From Rules Revision II
66 FR 50332-50334
October 3, 2001
(RCRA Cluster XII, HSWA/Non-HSWA)

Name of State:

State Statutory Authority:

Title of Regulations: _____ Effective Date:

Date Checklist Completed:

Notes: The addition of 40 CFR 261.3(g)(4) is promulgated pursuant to HSWA. The HSWA revision is considered less stringent than the existing Federal regulations and, therefore, is immediately effective only in those States not authorized for the base RCRA program. HSWA provisions are identified by a "⌘" (diamond symbol) in this checklist.

FEDERAL REQUIREMENTS	FEDERAL RCRA CITATION	ANALOGOUS STATE CITATION	STATE ANALOG IS:			
			EQUIV-ALENT	LESS STRIN-GENT	MORE STRIN-GENT	BROADER IN SCOPE
PART 261 – IDENTIFICATION AND LISTING OF HAZARDOUS WASTE						
SUBPART A – GENERAL						
DEFINITION OF HAZARDOUS WASTE						

[1]Note that in the on-line version of the 2001 CFR, 40 CFR 261.3(a)(2)(iv) intro does not include the revisions from the May 16, 2001 rule but it does include subparagraphs (A)-(G).,†	unchanged even though included in this rule	261.3(a)(2)(iv)	7045.0102, 2, F	X			

[1] The October 3, 2001 rule contains potentially confusing information. In the preamble (p. 50332), it states that EPA inadvertently deleted subparagraphs A-G of 40 CFR 261.3(a)(2)(iv) in the May 16, 2001 rule (Revision Checklist 192 A) and is, therefore, reinserting the deleted subparagraphs. Additionally, on page 50333, the amendatory language states that 40 CFR 261.3 is amended by revising paragraph (a)(2)(iv). However, the May 16, 2001 rule does not contain instructions to remove 40 CFR 261.3(a)(2)(iv)(A)-(G). In comparison to the May 16, 2001 rule, the October 3, 2001 rule merely reprints 40 CFR 261.3(a)(2)(iv) intro and subparagraphs (a)(2)(iv)(A)-(G) unchanged.

		261.3(a)(2)(iv)(A)	7045.0102, 2, F, (1)	X			
		261.3(a)(2)(iv)(B)	7045.0102, 2, F, (2)	X

DOCUMENT TYPE: Rules and Regulations
CFR: 40 CFR 261, 268, 271
NUMBERS: FRL-3973-8; RIN 2050-AD20
DATES: Effective: 19910808
CONTACT INFORMATION: RCRA Hotline, 800-424-9346,, 703-9209810,; or; Waste Treatment Branch, 703-308-8434,; or; Laura Lopez, 703-308-8457,; or; Bob Kayser, 202-382-4770
ACTION: Final rule
INTERNAL DATA: (FR Doc. 91-19347 Filed 8-16-91; 8:45 am)
Word Count: 13491

SUMMARY: The Environmental Protection Agency (EPA) is today finalizing treatment standards under the land disposal restrictions (LDR) program for a subcategory of the hazardous waste K061 (electric arc furnace dust) treatability group, namely nonwastewaters that contain equal to or greater than 15% total zinc (i.e., high zinc subcategory), determined at the point of initial generation. These treatment standards are based on the performance of high temperature metals recovery (HTMR) processes; specifically, the standards are based on analysis of slags from these processes. The Agency is also finalizing a generic exclusion from the derived-from rule for HTMR nonwastewater slag residues generated from processing K061, provided that these slag residues meet designated concentration levels, are disposed of in subtitle D units, and exhibit no characteristics of hazardous waste. Furthermore, today's rule finalizes a conditional exclusion from classification as a solid waste for K061 HTMR splash condenser dross residue.

TEXT:

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Parts 261, 268, and 271

(FRL-3973-8)
RIN 2050-AD20

Land Disposal Restrictions for Electric Arc Furnace Dust (K061)

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: The Environmental Protection Agency (EPA) is today finalizing treatment standards under the land disposal restrictions (LDR) program for a subcategory of the hazardous waste K061 (electric arc furnace dust) treatability group, namely nonwastewaters that contain equal to or greater than 15% total zinc (i.e., high zinc subcategory), determined at the point

of initial generation. These treatment standards are based on the performance of high temperature metals recovery (HTMR) processes; specifically, the standards are based on analysis of slags from these processes. The Agency is also finalizing a generic exclusion from the derived-from rule for HTMR nonwastewater slag residues generated from processing K061, provided that these slag residues meet designated concentration levels, are disposed of in subtitle D units, and exhibit no characteristics of hazardous waste.

Furthermore, today's rule finalizes a conditional exclusion from classification as a solid waste for K061 HTMR splash condenser dross residue.

EFFECTIVE DATE: This final rule is effective on August 8, 1991.

ADDRESSES: The official record for this rulemaking is identified as docket F 91-K61P-FFFF, and is located in the EPA RCRA Docket, room 2427, 401 M Street SW., Washington, DC 20460. The docket is open from 9 a.m. to 4 p.m., Monday through Friday, except on federal holidays. An appointment must be made to examine the docket by calling (202) 475-9327. Up to 100 pages of a regulatory document may be copied at no cost; beyond 100 pages the cost is 15 cents per page.

FOR FURTHER INFORMATION CONTACT: For general information, contact the RCRA Hotline at (800) 424-9346 (toll free), (703) 920-9810 locally. For information on the final rule, contact the Waste Treatment Branch, Office of Solid Waste (OS-322W), U.S. Environmental Protection Agency, 401 M Street SW., Washington, DC 20460, (703) 308-8434. For information on the BDAT treatment standard, contact Laura Lopez, Office of Solid Waste (OS-322W), U.S. Environmental Protection Agency, 401 M Street SW., Washington DC 20460, (703) 308-8457. For information on the generic exclusion, contact Bob Kayser, Office of Solid Waste (OS-333), U.S. Environmental Protection Agency, 401 M Street SW., Washington, DC 20460, (202) 382-4770.

SUPPLEMENTARY INFORMATION:

Outline

I. Background

A. Summary of the Hazardous and Solid Waste Amendments of 1984 and the Land Disposal Restrictions Framework

The Hazardous and Solid Waste Amendments (HSWA) to the Resource Conservation and Recovery Act (RCRA), enacted on November 8, 1984, generally prohibit the land disposal of untreated hazardous wastes. HSWA

requires the Agency to set "* * * levels or methods of treatment, if any, which substantially diminish the toxicity of the waste or substantially reduce the likelihood of migration of hazardous constituents from the waste so that short-term and long-term threats to human health and the environment are minimized" (RCRA section 3004(m)(1)). Wastes that meet the treatment standards established by EPA may be land disposed. For the purposes of the restrictions, HSWA defines land disposal to include any placement of hazardous waste in a landfill, surface impoundment, waste pile, injection well, land treatment facility, salt dome formation, salt bed formation, or underground mine or cave (RCRA section 3004(k)).

The land disposal restrictions are effective when promulgated, unless the Administrator grants a national capacity variance from the otherwise applicable statutory prohibition date and establishes a different date (not to exceed two years) based on "* * * the earliest date on which adequate alternative treatment, recovery, or disposal capacity which protects human health and the environment will be available" (RCRA section 3004(h)(2)). The Administrator may also grant a case-by-case extension of the effective date for up to one year, renewable once for up to one additional year, when an applicant successfully makes certain demonstrations (RCRA section 3004(h)(3)). (See 55 FR 22526 for a more detailed discussion on national capacity variances and case-by-case extensions.)

In addition to prohibiting the land disposal of hazardous wastes, Congress prohibited storage of any waste which is prohibited from land disposal unless "* * * such storage is solely for the purpose of the accumulation of such quantities of hazardous waste as are necessary to facilitate proper recovery, treatment or disposal" (RCRA section 3004(j)).

B. Final Rule

Today's rule revises and finalizes treatment standards for K061 nonwastewaters in the high zinc subcategory (i.e., containing equal to or greater than 15% total zinc, determined at the point of initial generation).

K061 wastes are defined in 40 CFR 261.32 as "Emission control dust/sludge from the primary production of steel in electric furnaces." Concentration-based treatment standards for K061 high zinc nonwastewaters are based on the analysis of nonwastewater slag residues from HTMR processes. (Although these residues have been commonly referred to as "slag," there is some question whether all of the HTMR processes technically generate slags. Slag is generally considered a residue from a thermal process in which metals have been in a molten mixture. Since this does not necessarily occur in all HTMR processes, the nonwastewater residues from some of these processes technically would not be slags. In addition, HTMR processes generate residues other than slag. Section II.C.6. below discusses the regulatory status of certain non-slag HTMR residues.)

Today's rule also finalizes a generic exclusion for K061 nonwastewater residues if: (1) They are generated from the HTMR process; (2) they meet the generic exclusion levels for all constituents; (3) they are disposed of in a Subtitle D unit; and (4) they exhibit no hazardous waste characteristics.

Furthermore, today's rule finalizes an exclusion from classification as a solid waste under 40 CFR 261.4(a), for certain materials that are partially but not fully reclaimed. This variance applies to HTMR splash condenser dross residue provided it is shipped in drums (if processed off-site) and provided that it is not land disposed at any point before recovery occurs.

II. Detailed Discussion of Final Rule

A. History of K061 Treatment Standards

EPA first promulgated treatment standards for nonwastewater forms of K061 in the First Third final rule on August 8, 1988 (53 FR 31162-31164). The Agency established two subcategories for nonwastewater forms of K061: The low zinc subcategory (less than 15% total zinc) and the high zinc subcategory (equal to or greater than 15% total zinc). EPA determined that zinc could be recovered on a routine basis from K061 wastes containing equal to or greater than 15% total zinc utilizing HTMR. Although HTMR technologies can recover zinc from some K061 containing less than 15% total zinc, EPA determined that the 15% level represented a reasonable cutoff for distinguishing between the two subcategories for K061 wastes. The treatment standard for the low zinc subcategory was based on the performance of stabilization. For the high zinc subcategory, the final standard was expressed as "no land disposal" based on the determination that HTMR represents BDAT (53 FR 31221). Due to a shortage in HTMR capacity, an interim numerical standard based on the performance of stabilization was established until August 1990.

In the proposed Third Third rule (54 FR 48456-48457), the Agency requested comments on extending the existing interim standard of stabilization for another year. Because of the capacity storage, the Agency decided to extend the interim standard for one additional year.

The Agency also proposed in the Third Third to amend the existing treatment standard for the high zinc subcategory K061 wastes to be resmelting in a high temperature metal recovery furnace. However, EPA decided not to amend the existing standard in the final rule, as the metals recovery standard was under review by a panel of the District of Columbia Circuit Court of Appeals (55 FR 22599). In a June 26, 1990 decision, the court remanded the issue to EPA for further consideration (API v. EPA, 906 F.2d 726 (D.C. Cir. 1990)).

Although EPA determined in the First Third rulemaking that HTMR was BDAT for treating high zinc K061 hazardous wastes, the Agency concluded that it probably lacked the authority to establish any treatment standards under the K061 waste code for the residues resulting from the metals reclamation process. In particular, the Agency indicated that a jurisdictional bar could exist on regulating K061 dust as a "solid waste" within the meaning of RCRA Subtitle C once it entered a reclamation furnace where it functioned as, and was similar to, ordinary raw materials customarily processed in the industrial furnace. Therefore, residues derived from the reclamation process would not be derived from treating a hazardous waste. For purposes of the land disposal restrictions program, therefore, the residues would not be covered by the prohibition for K061 waste. The treatment standard of "no land disposal" reflected EPA's belief that slag residues from HTMR no longer carried the K061 waste code, so that no K061 waste was being disposed.

In its June 1990 decision, the court found it equally plausible that the K061 remained discarded throughout the waste treatment process and that residues from the process could still be classified as K061 (906 F.2d at 740- 741). According to the court, the delivery of K061 waste to a metals reclamation facility is part of a mandatory waste treatment plan specified by EPA, and EPA can still consider it a solid waste under RCRA. Id. Therefore, the court held that EPA must reconsider its basis for declining to establish a treatment standard for K061 residues and remanded EPA's determination that HTMR slag residues are not covered by the K061 prohibition. In doing so, the court created a situation where a hard hammer (an absolute prohibition on waste disposal except in a no migration unit) could apply to these residues.
This is because the existing interim treatment standard, based on the performance of stabilization technology, will lapse on August 8, 1991.

In this proceeding, the Agency is acting primarily to keep this absolute

prohibition from occurring. We are not making any definitive determination on some of the broader issues raised by the court's opinion regarding which materials are and are not solid wastes when destined for recycling. In our view, the court's remand reinstituted existing Agency rules without any jurisdictional override imposed by the indigenous principle. Under these rules, K061 destined for metals reclamation is a solid waste. 40 CFR 261.2(c)(3). Non-product residues from the metals reclamation process remain hazardous wastes under the K061 waste code by virtue of the derived-from rule in 40 CFR 261.3(c)(2). The court noted the legal validity of these rules in the course of its opinion. 906 F.2d at 740-42.

Many commentors urged the Agency to find that K061 waste reclaimed by HTMR process is not a solid waste, either through interpretation of current rules, or by reference to the initial opinion of the DC Circuit on recycling (AMC I, 824 F.2d 1177 (DC Cir. 1987)). They also maintained that by deferring comment on the issue, the Agency was in fact deciding that these materials must be solid wastes.

EPA disagrees. We repeat that we are allowing the Court's opinion and mandate to operate, at least for the time being. The status quo created by the Court's mandate and the existing regulations thus continues in effect. We repeat that this means that K061 waste destined for reclamation via HTMR is a solid waste under existing rules because it is a listed waste being reclaimed (40 CFR 261.2(c)) and because at present there is no indigenous principle operating to cut off application of the derived-from rule. 906 F.2d at 740- 41.

Nevertheless, the Agency is presently engaged in a comprehensive reevaluation of its rules on recycling, and may ultimately articulate new principles which bear on the issue of the status of K061 and the slag and other residues resulting from the HTMR process. Before that reevaluation is completed, however, EPA is acting pursuant to the current regulatory regime as described above.

The Agency notes in response to comment that it is reexamining its approach in making waste/non-waste determinations. The Agency is considering linking decisions on status as solid waste with environmental consequences of recycling activities. The API and AMC II (907 F.2d 1179 (DC Cir. 1990)) opinions invite a pragmatic, environmentally-based approach with their focus on whether a particular material destined for recycling is part of a waste disposal problem. Thus, the Agency would anticipate in future rulemakings on these issues that it would propose to examine not only that recycling is occurring but also the way these materials are managed before, during, and after recycling.

To the extent it is deemed necessary for EPA to address the policy implications of preserving the regulatory status quo (i.e., continuing to regulate K061 going to HTMR as a solid and hazardous waste and applying the derived-from rule to non-product residues), the Agency notes that this result is consistent with RCRA's cradle-to-grave mandate in that there will be strict supervision of toxic constituents from K061 throughout all phases of its management, including partitioning into non-product residues of the HTMR process. The fact that the residue output of the HTMR process can be used in a manner constituting disposal shows that the continued management of residues is potentially part of the waste disposal problem (906 F.2d at 740), and thus that assertion of jurisdiction is warranted to further RCRA's traditional safety objectives. The Agency notes further, however, that it may be possible to advance these objectives, as well as RCRA's resource conservation and recovery purposes, by means other than full-scale regulatory controls. The Agency's disposition of the status of the splash condenser dross residue (see section II.C.6 below) illustrates how accommodation of both of these goals can be possible. Thus, we reiterate that today's action is not intended to forestall further Agency rulemaking dealing with questions of solid waste status and developing a regulatory

scheme that may further both of the dual statutory purposes.

B. Development of Concentration-Based Treatment Standards Based on Recovery for K061 High Zinc

1. Summary of Treatment Performance Data

For the First Third rule in August, 1988, EPA had two sets of TCLP (referring to the Toxicity Characteristic Leaching Procedure according to Sec. 261.24) data on the nonwastewater residues resulting from two different HTMR processes that were recovering zinc from K061 wastes in the high zinc subcategory. One of these HTMR processes consists of a series of Waelz kilns (a Waelz kiln is a type of rotary kiln), while the other was the SKF plasma arc furnace. At that time, however, EPA chose not to establish concentration- based treatment standards.

In September, 1990, additional TCLP data on residues from the recovery of zinc from K061 wastes in the high zinc subcategory (low in nickel and chromium) were submitted to the Agency by Horsehead Resource Development Company (HRD). This system uses a series of Waelz kilns, generating a crude zinc oxide and an iron-rich residue (referred to as "slag" in some FR notices, and in the API opinion) from the first kiln. The crude zinc oxide is typically sent to a second kiln for further separation after which it is normally suitable for smelting, while the iron-rich residue has been typically used as road aggregate. Based on the TCLP data for the iron-rich residue and the two sets of TCLP data submitted for the First Third rule, the Agency developed concentration-based treatment standards for 14 metals that were presented in the proposal.

During and after the close of the public comment period, the Agency received additional treatment performance data for other HMTR processes for K061 wastes. Treatment performance data representing properly designed and operated systems were received, in particular, from International Mills Service (IMS) and International Metals Reclamation Company, Incorporated (Inmetco).

Data submitted by IMS demonstrate recovery of zinc, lead, and cadmium from K061 high zinc wastes utilizing a plasma furnace with an Imperial Smelting Process (ISP) zinc splash condenser. The splash condenser can produce prime western grade zinc (i.e., 98 percent zinc, less than 1.4 percent lead and 0.5 percent cadmium) and metallic lead as products (i.e., materials put to direct use without smelting. IMS submitted a total of 16 TCLP results for 14 metals from the slag residual generated in the primary furnace.

Inmetco submitted three sets of TCLP results for the slag residual generated during the recovery of nickel, chromium, and iron from K061 high zinc subcategory. Inmetco's HTMR system consists of a rotary hearth furnace with a wet scrubber followed by an electric furnace with a baghouse. Zinc-rich materials containing lead and cadmium are also recovered as baghouse dusts and scrubber sludges and sent (as K061 hazardous waste) for further recovery of zinc.

Other data submitted on residues from HTMR processes were determined by EPA to be insufficient to represent full scale operations or were determined not to be representative of a properly operated system. Data and rationale for these determinations are provided in the background document for this rulemaking.

In a July 2, 1991 letter to all commenters on the proposed rule, EPA provided notice of additional data from HRD (collected during the First Third), and data submitted during the comment period by IMS and Inmetco. EPA also noticed for comment revised treatment standards derived from data

used to develop the proposed standards and these new data.

2. Response to Major Comments on BDAT

EPA's responses to all comments are found in the Response to Comment Background Document. The following discussion summarizes the Agency's responses to the major comments on the development of BDAT treatment standards.

a. Use of HTMR Data from Recovery of Metals from Low Zinc K061. Commenters remarked that zinc is recovered from wastes containing less than 15 percent zinc; therefore, EPA should establish standards based on HTMR for all K061 wastes regardless of the zinc content. At the very least, commenters said that the Agency should use data that indicate the treatment performance of HTMR for wastes containing less than 15 percent zinc in the treatment standard calculation for K061 wastes in the high zinc subcategory. Commenters emphasized that it is common practice, especially for commercial recovery facilities, to blend these subcategories to achieve appropriate feed compositions for recovery (some of which are only slightly below the 15 percent cutoff); hence, commenters argued that EPA must consider recovery performance for low zinc wastes since the high zinc standards would be most stringent and take precedence over the K061 low zinc standards based on stabilization. The high zinc/low zinc dilemma also affects facilities utilizing site-specific HTMR units since the zinc content of K061 can vary depending on the grade of steel produced (i.e., most facilities produce many different types depending on demand) and the amount of galvanized steel scrap fed to the electric furnace (i.e., zinc concentration in K061 increases as the amount of galvanized steel scrap feed increases).

The Agency agrees with the commenters and has used data demonstrating the HTMR performance of K061 wastes containing a mixture of high and low zinc subcategories but having an overall zinc content less than 15 percent to develop final treatment standards. The treatment standards adopted today, however, only apply to the high zinc subcategory. Commenters may be correct that the continued subcategorization of K061 (i.e., into high zinc and low zinc subcategories) is unwarranted given that HTMR treatment (and probably other forms of treatment as well) are equally effective for each subcategory.
Given the short time frame of this rulemaking, the Agency is not prepared to make a final decision on the issue at this time but may initiate further rulemaking in the near future. The Agency notes in addition, however, that mixtures of high and low zinc K061. This is because EPA regards this standard as more stringent than the low zinc K061 standard (the high zinc standard applies to more constituents), and because the HTMR process is the BDAT technology due to its resource recovery and waste minimization potential (plus effective metal immobilization). The Agency is adding language to 40 CFR 268.41(b) to clarify that mixtures of low and high zinc K061 are subject to the high zinc treatment standard.

b. Use of Stabilization Data. Several commenters submitted data for stabilization of K061 wastes. The data did not, however, include concentration data for zinc, nickel, or chromium in the untreated K061 wastes, leachate analyses for all 14 metals in the stabilized residual, design and operating conditions, binder-to-waste ratios, water-to-waste ratios and/or waste-to-waste ratios. In the First Third final rule, EPA determined that HTMR represented BDAT for K061 wastes. These additional data did not cause the Agency to change it's decision. However, stabilization technologies may be used to achieve the treatment standards in today's rule (provided the standards are achieved through bona fide treatment rather than impermissible dilution).

c. Regulation of 14 Metals. Based on the new data discussed above, EPA is, today, promulgating treatment standards for all 14 of the metals that were proposed for regulation in K061 nonwastewaters in the high zinc subcategory.

Except for vanadium, numerical standards for metals in TCLP leachates have been established. (As discussed below, the treatment standard for vanadium is promulgated as "reserved".)

In general, the Agency has decided to regulate all 14 metals for several reasons. First, information suggests that all 14 metals have a reasonably high potential for being present in any given K061 waste due to the nature of the steel manufacturing process from which the K061 is generated. Data on the composition of K061 indicate that these 14 metals are present at varying concentrations in K061 wastes from different generating facilities. This appears to be related to the types of scrap materials smelted in the electric furnace, the metals added to make certain types of steel alloys, and/or the grade of steel produced. Additional information on the potential for K061 wastes to contain all 14 metals is provided in the BDAT background document for today's rule.

Second, since all 14 metals have the potential to be present in K061, they all, consequently, have the potential to be in the HTMR residues depending upon where the metals partition in the recovery process. Improper operation of the HTMR process could result in shifts in partitioning of certain metals to products (e.g., metal alloys), intermediates requiring further smelting, slag, or other nonwastewater residues. HTMR processes are highly dependent, at least in part, upon parameters such as the operating temperature of the heat zones, composition of metals and other elements in the feed, zone residence times, flow rates, oxidation/reduction conditions, and mixing. (See also the BDAT background document for an explanation of how the 14 metals typically partition in an HTMR unit and the principles behind the partitioning.) There is also an inherent metallurgical interdependency between certain metals, based on their atomic structure. Such factors have led the Agency to the conclusion that all metal-bearing materials placed into the HTMR processes could affect the ultimate composition and leachability of metals from HTMR nonwastewater residues. The Agency believes, therefore, that regulation of all of the metals will provide a means of ensuring that the HTMR processes, when used to treat K061 wastes, are well-designed and well- operated (i.e., truly BDAT) with due consideration of all feed materials.

Third, since all 14 metals are potentially present in the treatment residues and are either hazardous to human health or the environment, EPA has developed treatment standards that will ensure the control of the leachability of all 14 metals. (See also the discussion of the regulation of zinc and vanadium, below.)

In general, commenters did not provide technical support or evidence to dispute that the fourteen metals should not be regulated. Rather, the commenters raised four major areas of concern regarding the regulation of all 14 metals: (1) Only the four previous regulated metals should be regulated because not all 14 metals are present and that EPA regulated only four as interim standards; (2) the four metals currently regulated in K061 wastes will control the leachability of the other metals; (3) HTMR does not treat all 14 metals; and (4) regulation of 14 metals will create an unnecessary analytical cost burden. The Agency disagrees with the commenters for the following reasons:

i. Previous Regulation of Four Metals.--The Agency is not restricting the treatment standards to just the four previously regulated metals for the following reasons: (1) Waste characterization data for untreated K061 wastes indicates the presence of all 14 metals in various concentrations; (2) additional information on how K061 wastes are generated indicate that all 14 metals also have a reasonably high potential for being present in any given untreated K061 waste; (3) the previous standards for the four metals were based on preliminary stabilization data rather than data from HTMR (which was determined to be BDAT); and (4) the previous standards for

high zinc K061 wastes were only interim.

While the agency had previously promulgated a treatment standard of "No Land Disposal" based on the use of HTMR, interim standards based on stabilization were established until HTMR capacity could come on-line. These standards regulated only four metals in K061 wastes based on the available treatment data and were considered interim until the Agency could better examine performance data from HTMR units. At the time of the establishment of these interim standards, the Agency was unaware of the wide variety in metals composition K061 wastes and did not, at that time, establish stabilization standards for all 14 metals.

ii. Control of Leachability.--Based on the principles of the pyrometallurgical processes and the potential presence of all 14 metals in HTMR residues, the agency does not believe regulation of only the four previously regulated metals will control the leachability of all 14 metals from these residues. Different metals partition to different HTMR residues (or products) at different concentrations depending on the design and operating conditions of the HTMR process. (There are, however, some chemical and physical properties of the metals that allow prediction and control of partitioning.) As a result, regulation of all 14 metals is necessary in order to account for the variability in potential differences in partitioning. In addition, data does not support that the leachability of any one particular metal (or group of metals) can be used to monitor the leachability of all of the other metals.

In fact, differences in the treatability of metals have also been demonstrated by conventional stabilization processes. Arsenic, selenium, barium, mercury, and hexavalent chromium have been demonstrated, for example, to be particularly difficult to stabilize using simple cementitious reagents.

In addition, many wastes require special recipes of stabilization reagents in order to achieve optimum stabilization. (HTMR does, however, appear to be less sensitive than stabilization to variations in concentrations and less dependent on the chemical composition of the wastes.)

iii. HTMR as Treatment for Other Metals--HTMR provides treatment of all 14 metals through a combination of thermal recovery of metals (into products) and thermo-chemical stabilization (of residues). Treatment of the 14 metals is directly related to partitioning of the metals (based on the melting and boiling points of the metals and their compounds) as the waste is exposed to the high temperatures of the primary furnace. In general, HTMR provides treatment of the low-boiling point metals present in K061 by volatilization and subsequent recovery, while high-boiling point metals are thermo-chemically stabilized in HTMR residues such as slags. This thermo-chemical stabilization of the non-volatile metals occurs due to the high temperatures present, the relatively efficient mixing conditions, the oxidation-reduction conditions in the primary furnace, and the presence of other inorganic constituents that act, in effect, as stabilization reagents. In fact, many of the same conventional cementitious stabilization reagents such as calcium, silica, and alumina are also used as additives in some HTMR processes to achieve desirable HTMR operating conditions as well as to enhance desirable slag properties.

In confirmation, since most of the leachability data for all 14 metals from HTMR residues show very low, non-detectable levels in TCLP leachates, the Agency concludes that the HTMR process does indeed treat all of the toxic metals.

iv. Potential Analytical Burden of 14 Metals--Several commenters said that the Agency should regulate only those metals for which K061 is listed, because requiring analysis of the additional metals will be burdensome. EPA disagrees. First, eight of the metals are included in the determination that the material is not TC toxic (i.e., D004-D011) prior to disposal. In

addition, five more are currently regulated to verify that the waste can be delisted. Moreover, it is the initial sample preparation that generally impacts the cost of metals analysis, rather than the instrumental analysis. In fact, most metals are analyzed using the same analytical instrument and the analysis for all 14 metals is performed simultaneously. As such, the addition of the other metals is not considered unduly burdensome.

d. Regulation of Zinc and Vanadium. Some commenters particularly stressed that zinc and vanadium should not be regulated. The Agency proposed to regulate zinc as an indicator of proper HTMR performance (i.e., indicating effective treatment). The Agency continues to believe that zinc is a good indicator of how effectively the system is recovering zinc. Poor zinc recovery seems to be related to poor maintenance of proper operating temperatures which can lead to less recovered material. This, in turn, will lead to more metals in the slag causing greater slag volumes and the potential for more metals to leach into the environment. This is significant because part of the reason EPA has selected HTMR as the BDAT technology is its resource recovery and volume reduction potential. The treatment standard for zinc helps ensure that these expected environmental benefits of using HTMR will occur. Improper removal of zinc can be, likewise, related to immobilization of hazardous constituents that is not optimum. For example, the Agency has data demonstrating that when zinc is concentrated and leaches at higher levels in the slag, other constituents, such as lead, are also concentrated and leach at higher levels.

In addition, zinc has been shown to be an aquatic toxin. Since surface runoff of treated K061 wastes could potentially enter waterways, the Agency is concerned that improper recovery of zinc could lead to unacceptable zinc leachate levels entering aquatic ecosystems. Disposal of such a waste might still be unprotective of human health and the environment under the second prong of the land disposal prohibition test, notwithstanding that Appendix VIII hazardous constituents are immobilized. See NRDC v. EPA, 907 F.2d 1146, 1171-72 (DC Cir. 1990) (dissenting opinion). EPA is also considering adding zinc to 40 CFR part 261 Appendix VIII, but is not doing so at this time. (It is also currently regulated under section 304 of the Clean Water Act as an aquatic toxin.)
Hence, EPA is finalizing a treatment standard for zinc as a means of ensuring that HTMR is operated optimally and thus achieves the statutory goals of immobilization of hazardous constituents, resource recovery and waste minimization.

With respect to vanadium, the Agency continues to believe that it is important to monitor vanadium concentrations in the TCLP leachate of K061 HTMR residues because there purportedly exist generators of K061 wastes containing high vanadium concentrations and certain vanadium compounds appear to be toxic. (Two vanadium compounds are specifically listed in Appendix VIII.) The Agency calculated a numerical standard for vanadium in K061 wastes based on a limited amount of detection limit data for vanadium; however, the Agency is promulgating the standard for vanadium as "reserved" for the following reasons: (1) Vanadium, when present in K061 wastes, will partition in an HTMR unit to the slag residues (thus, eventual regulation is appropriate); (2) the form of the vanadium as it leaches from the slags or other HTMR residues is unknown; however, it is expected to be toxic (again, eventual regulation is appropriate); (3) EPA currently has no leachate data for K061 wastes containing high levels of vanadium, but such wastes probably exist (thus, EPA's current data may not be representative of those wastes); (4) several commenters indicated that vanadium leaches at levels higher than those proposed by the Agency, but submitted no data to demonstrate this phenomena; and (5) commenters also indicated potential problems in detecting vanadium at the levels proposed. As a result of all of the above, the Agency has chosen to reserve the standard for vanadium until sufficient data and information become available. EPA also plans to resolve the issue of vanadium as a hazardous constituent in a later

proceeding.

EPA notes further, however, that it is including a standard for vanadium as part of the generic exclusion from the derived-from rule for treated K061 dusts. See section II.C below. Since vanadium is a constituent of K061 that can make the waste hazardous, the Agency believes it appropriate (particularly because there is a verified health-based level for vanadium) to include this constituent within the exclusion. See RCRA section 3001(f). The Agency's present inability to establish a reliable treatment standard for this constituent in all treated K061 wastes is likewise no bar to including vanadium within the exclusion.

3. Development of Final Concentration-based Standards

a. Data Used as the Basis of the Standards. EPA has determined that it is appropriate to develop treatment standards for K061 based on the performance of all properly designed and operated HTMR processes that have been demonstrated to recover metals from high zinc K061 wastes or mixtures containing high zinc K061 wastes. Data that meet these requirements include: (1) Three TCLP leachate analyses for all 14 metals and nine TCLP leachate analyses for the eight TC metals in the slag (i.e., IRM) generated by the HRD Waelz kiln process; (2) 16 TCLP leachate analyses for all 14 metals in the slag generated by the IMS plasma furnace process; (3) one TCLP leachate analysis for 10 metals in the slag generated by the SKF plasma furnace process; and (4) three TCLP leachate analyses for all 14 metals in the slag generated by the Inmetco electric furnace process.

b. Calculation of the Standards. These HTMR processes typically result in nonwastewater residues (e.g., slags) that leach relatively low levels (and in most cases nondetectable levels) of metals in a TCLP leachate. Commenters were concerned with the potential detection limit problems based on analytical equipment variability and TCLP digestion problems for the slag matrix. In addition, several commenters mentioned concerns about process variabilities due to different system configurations and feed variabilities caused by on-site recovery systems with sole-source feeds versus commercial recovery systems that blend many different K061 wastes.

The Agency has decided to develop treatment standards that reflect the performance of all of the various well-operated HTMR technologies. This results in limits higher than those proposed. However, given that all of these technologies are capable of achieving substantial immobilization of hazardous constituents (though not identical levels of performance), EPA believes this result is appropriate. EPA notes further that certain apparent differences in performance result from different reported detection limits.

Thus, for many of the metals, all of the reported data shows non-detectable levels of metals in the HTMR slag, but different limits of detection due to different slag matrices (or perhaps due to differing levels of performance by analytic laboratories). In these cases, EPA used the highest analytic detection limits in order to accommodate performance of as many of the well- operated HTMR technologies as possible. (EPA believes that is appropriate for this rulemaking, but would not necessarily adopt the same approach for other treatment standards, since it might not always reflect best treatment performance.)

As a result, the final standards have been calculated using the following BDAT methodology. First, treatment standards were determined for each process individually. Then, the four sets of standards were compared to each other.

Based on this comparison, the Agency selected the highest standard for each metal from each of the five processes to allow for process variability and detection limit difficulties. This approach derives limits achievable by all of the major HTMR technologies (and probably achievable by

stabilization as well) since, properly operated, these technologies all appear capable of substantially reducing the mobility of metals in HTMR slags.

By establishing standards that are not based on a single optimized type of HTMR technology, the Agency recognizes that metal mobility in K061 residues may not be minimized to the maximum extent. However, EPA believes that the treatment standards developed today are appropriate. First, as noted above, these standards represent significant reduction in metal mobility. See section 3004(m) and 55 FR 6640, 641 n. 1 ("minimize" standard in section 3004(m) does not require the elimination of every conceivable threat posed by disposal of a hazardous waste). Second, a more stringent standard, based on a particular HTMR technology, would be a type of technology-forcing standard that Congress did not appear to have in mind in promulgating section 3004(m).
130 Cong. Rec. S 9178 (daily ed. July 25, 1984) (statement of Sen. Chafee); 56 FR at 12354. Third, the Agency notes that today's action is similar to standards developed for other wastes codes (notably the K048-K052 wastes) where the Agency based treatment standards on treatment technologies may not achieve complete destruction or removal, but nevertheless achieve substantial reductions of toxins. 55 FR at 22596.

EPA notes that some of the treatment standards have increased slightly over the existing interim standards based upon performance of stabilization. Thus, the standards for both lead and cadmium are slightly higher in today's rule.
The Agency does not regard the small difference (hundredths of parts per million) as of significance, particularly because the actual reported HTMR values in most cases are non-detectable in any event. In addition, the value for nickel based on HTMR performance is considerably higher (over an order of magnitude) than the existing interim standard. However, the standard based on stabilization was transferred from another waste (because the only K061 wastes for which EPA had data contained levels of nickel too low to be treated (see K061 Background Document for the First Third rulemaking)), whereas the standard in today's rule reflects treatment of a high nickel K061 waste. EPA thus believes that the higher nickel level adopted today more accurately reflects treatment performance. In addition, EPA would probably have to create a further subcategory (high nickel/chromium K061) to accommodate treatment of high nickel/chromium wastes, which would result in a further and unnecessary complication of the rules, in the Agency's view.
Thus, EPA does not believe that the higher nickel standards (or slightly higher lead and cadmium standards) promulgated today calls into question whether HTMR is the appropriate technology on which to base treatment standards.

To create an incentive for use of the more optimized HTMR technologies, however, the Agency is going forward with the proposed generic exclusion from the derived-from rule for residues meeting health-based standards (which for most of the metals are lower than the treatment standards). Based on the treatability data provided the Agency, slag residues from many of the newer processes should achieve these levels. The older processes, if properly operated (or possibly modified) also may be able to achieve these levels.

c. Standards for K061 High Zinc Nonwastewaters. The specific treatment standards are as follows:

BDAT Treatment Standards for K061
(Nonwastewaters--High Zinc Subcategory)
Maximum for any single composite sample, Regulated TCLP (mg/ constituent l)
Antimony 2.1 Arsenic 0.055 Barium 7.6 Beryllium 0.014 Cadmium 0.19

Chromium (Total) 0.33 Lead 0.37 Mercury 0.009 Nickel 5.0 Selenium 0.16 Silver 0.30 Thallium 0.078 Vanadium (/1/) Zinc 5.3
/1/ Reserved.

d. Decision not to Adopt the Proposed High Chromium/High Zinc Subcategory. In the proposal, EPA developed concentration-based treatment standards for K061 nonwastewaters in the high zinc subcategory based on HTMR as BDAT; however, EPA proposed to establish different treatment standards for these wastes based on their chromium/nickel content. While most of the high zinc subcategory K061 wastes are generated from the manufacturing of carbon steel and contain low concentrations of chromium and nickel, certain K061 wastes generated from stainless and specialty steel manufacturing, besides having a high zinc content, may also contain recoverable levels of chromium and nickel (i.e., containing equal to or greater than 1.5% total nickel and chromium in combination). These wastes can be used to produce a remelt alloy containing nickel, chromium, and iron that can be used as a feedstock for stainless steel production.

In the proposal, the Agency stated that the HTMR process for recovering chromium/nickel from these K061 wastes may achieve a different level of treatment performance than the HTMR processes that are based primarily on the recovery of zinc from K061. EPA believed this was due to the differences in metal concentrations of the feed materials (in particular, with respect to zinc, nickel, and chromium) and the inherent differences in design and operation of the respective HTMR processes. Consequently, EPA proposed to divide the K061 high zinc subcategory into those wastes containing less than or equal to 1.5% nickel/chromium combination and those wastes containing greater than 1.5% nickel/chromium combination.

For the high zinc K061 wastes containing greater than 1.5% nickel/chromium combination, the Agency proposed to reserve the standards for nickel and chromium based on the assumption that the treatment performance would be different for these wastes and the lack of data demonstrating actual performance. The decision to divide high zinc K061 based on the chromium/nickel content has been reevaluated and the Agency has determined, based on data submitted during the comment period, that the chromium/nickel HTMR recovery process achieves a similar level of performance as the HTMR processes designed and operated to recover only volatile metals such as zinc, lead, and cadmium. In addition, as discussed earlier, EPA has adopted a nickel standard reflecting treatment performance of a high nickel/chromium waste by HTMR. For these reasons, the Agency does not believe it necessary to promulgate a further regulatory subcategory for K061, nor to reserve treatment standards for nickel and chromium. Thus, the final rule establishes standards for chromium and nickel applicable to residues from the treating of all high zinc K061 nonwastewaters.

4. Use of Other Technologies

The Agency received several comments indicating that other non-HTMR recovery processes exist that can be used to recover metals from K061 nonwastewaters in both the low zinc and high zinc subcategories. These processes use a series of primarily hydrometallurgical technologies, including chemical precipitation, ion exchange, and electrowinning. These non-HTMR recovery processes, along with stabilization processes, are not precluded from use by today's rule, provided the residues comply with the concentration-based standards prior to land disposal (assuming that land disposal occurs) and provided that these levels have not been achieved through the use of impermissible dilution.

C. Generic Exclusion of HTMR Nonwastewater Residues

1. Conditions for Exclusion

Residues from HTMR of K061 wastes in units identified as rotary kilns, flame reactors, electric furnaces, plasma arc furnaces, slag reactors, and rotary hearth furnace/electric furnace combinations or industrial furnaces (as defined in 40 CFR 260.10(6), (7), and (12)) are excluded from the hazardous waste regulations when disposed of in a Subtitle D unit, provided the residues meet the generic exclusion levels for all constituents, and provided the residues do not exhibit one or more of the hazardous waste characteristics. The reasons for specifying HTMR for the exclusion are provided in the section below called "Applicability to Other Types of Treated K061." In addition, the residues will be subject to the testing and tracking requirements described below.

The generic exclusion finalized today is the same action that was proposed; however, it was referred to as a "generic delisting" in the proposed rule. Today's action is more accurately termed a generic exclusion from the derived-from rule under Sec. 261.3(c)(2). The term "delisting" is commonly used to describe the rulemaking process established under 40 CFR 260.20 and 260.22 to amend part 261 on a waste-specific basis (by facility). The decision to generically exclude nonwastewater HTMR K061 residues was based on the fact that the treatment process is well-defined and thus does not require an in-depth evaluation of each facility's process. The Agency is determining that the "derived-from" rule's presumption of hazardousness no longer should apply to HTMR K061 residues with toxic metals treated to specified levels.

The Agency has made this determination after considering the factors in RCRA section 3001(f) and after satisfying the underlying philosophy of the delisting provisions.

The generic exclusion levels include all of the toxic metals that might reasonably be expected to be present in the nonwastewater residues from processing K061 wastes by HTMR. (This is consistent with RCRA section 3001(f) requiring EPA to evaluate whether constituents in addition to those for which a waste is listed could make a waste hazardous.) The Agency has evaluated the treatment standard levels using its vertical and horizontal spread (VHS) landfill model, which predicts the potential for groundwater contamination from wastes that are landfilled. See 50 FR 7882, 50 FR 48896, and the RCRA public docket for this notice for a detailed description of the VHS model and its parameters. Using the maximum contaminant levels (MCLs) or action levels and a waste volume of greater than 8,000 cubic yards per facility (a worst case estimate for purposes of the VHS model), EPA determined the following "generic" concentration levels which it considers safe to human health and the environment.

Concentration Levels of K061 HTMR Residuals From VHS Modeling
(Nonwastewaters)
Maximum for any single composite sample, TCLP (mg/ Constituent l)
Antimony 0.063 Arsenic 0.32 Barium 6.3 Beryllium 0.0063 Cadmium 0.032 Chromium (total) 0.63 Lead 0.095 Mercury 0.013 Nickel 0.63 Selenium 0.32 Silver 0.32 Thallium 0.013 Vanadium 1.26

EPA notes that the BDAT standards and VHS-based levels are not identical, since each set was calculated for a different purpose: The BDAT standards are technology-based levels, while the VHS results derive from health-based modeling. In order to be eligible for the generic exclusion, the residues must meet the following concentration levels:

Generic Exclusion Levels of K061 HTMR Residues
(Nonwastewaters)
Maximum for any single composite sample, TCLP (mg/ Constituent l)
Antimony 0.063 Arsenic 0.055 Barium 6.3 Beryllium 0.0063 Cadmium 0.032 Chromium (total) 0.33 Lead 0.095 Mercury 0.009 Nickel 0.63 Selenium 0.16

Silver 0.30 Thallium 0.013 Vanadium 1.26

For five of these constituents (arsenic, chromium, mercury, selenium, and silver), the technology-based treatment standards are slightly lower than the exclusion levels based on VHS modeling. EPA does not regard these values as significantly different, however (the difference ranges from .003 ppm (mercury) to .3 ppm (chromium)). Given that the Agency is excluding these wastes generically, rather than after a more individualized examination as part of a facility-specific delisting, EPA believes that it is prudent to use the slightly lower value for this exclusion. We note that today's action is consistent with the Agency's position in the Third Third rule, where it maintained that land disposal prohibitions can apply to wastes that are hazardous when they are generated, even if they are not hazardous when disposed of (see 55 FR 22652-22653). However, EPA is not invoking that principle to justify its decision here, given that the exclusion is generic and the values practically equivalent in any case.

We thus do not view the final rule as presenting the issue raised in comments of exclusion levels being based on technology-based levels. As just discussed, the final exclusion levels are either generated directly from a health-based model, or are so close to those levels as to be warranted for a generic exclusion.

EPA received numerous comments related to the general proposal of establishing generic waste exclusions. One commenter recommended that the Agency establish generic exclusion levels for all listed hazardous wastes, not just the nonwastewater HTMR K061 residues. The Agency notes that it has modified the definition of solid and hazardous wastes in the past, and, in particular, has modified the "derived-from" rule of 40 CFR 261.3. During the development of the BDAT standards for nonwastewater HTMR K061 residues, the Agency recognized that these wastes do not always contain significant levels of leachable inorganic constituents. As a result, the Agency decided to couple the generic exclusion concept with the part 268 provisions. The Agency may investigate other candidate waste types and modify the "derived-from" rule in the future, on a waste-specific basis, for wastes which warrant exclusion.

Another issue involved the decision to use Toxicity Characteristic Leaching Procedure (TCLP) rather than Extraction Procedure (EP) leach test values for the exclusion. One commenter questioned whether EPA was contemplating revisiting the existing exclusions, not only for K061 but for other metal- bearing wastes, to require TCLP testing to ensure regulatory and environmental consistency. The Agency is currently considering revisiting facility-specific exclusions where petitioners are required to test waste prior to disposal as nonhazardous. In addition, the Agency notes that it currently requires that petitioners provide TCLP data in lieu of EP toxicity testing when submitting new petitions. However, any decision to require TCLP testing for existing exclusions based on EP data will be addressed in a separate Federal Register notice.

One commenter urged EPA to abolish the concept of a generic exclusion under 40 CFR 261.3 for nonwastewater HTMR K061 waste as EPA did not evaluate all of the factors involved in its own delisting protocols as part of the considerations for the exclusion. The commenter believed that EPA should separate the actions related to a generic exclusion from this land disposal restrictions rule. As discussed previously, today's action is not a "delisting," as the procedural requirements for delisting apply to persons seeking exclusion of a waste at a particular generating facility. However, in response to the commenter's concern about the Agency's assessment of the potential hazard of these wastes, the Agency believes that it has sufficiently assessed those hazards using the VHS landfill model.

Furthermore, the Agency is establishing exclusion levels for all

constituents that might make the waste hazardous. The Agency also believes that it has sufficient data demonstrating that nonwastewater HTMR K061 residues are not hazardous if they meet the specified conditions.

The Agency received comments stating that the VHS model greatly exaggerates potential ground water contamination. One commenter felt that the assumptions used in the model are all conservative and that, although some of the assumptions may not represent absolute worst-case conditions when considered individually, in total the model represents an extreme worst case. As a result, the commenter believed that exclusion levels calculated through the application of the VHS model's minimum dilution factor will be unduly conservative. Another commenter believed that delisting the K061 residue using solely the VHS model does not fully acknowledge the persistence and bioaccumulation potential of toxic metals (from the K061 residue) in the environment.

The Agency disagrees with these commenters. As modified, the generic exclusion requires facilities managing nonhazardous HTMR residues to dispose of the material in a Subtitle D disposal unit. As such, the Agency believes that it is appropriate to estimate the transport of contaminants using a ground water model that evaluates disposal conditions that could be encountered in a Subtitle D disposal setting, such as the VHS model. In applying the model, the Agency makes a variety of assumptions to account for a reasonable worst-case disposal scenario. The VHS model assumes that the waste is disposed in an unlined landfill (a normal Subtitle D situation). The model mathematically simulates the migration of toxicant-bearing leachate from the waste into the uppermost aquifer, and the subsequent dilution of the toxicants due to dispersion within the aquifer. The Agency uses this model to predict the maximum concentration of the diluted toxicants at a hypothetical receptor well (or compliance point) located 500 feet from the disposal site.
These are all situations that could arise in Subtitle D disposal settings.
The VHS model was developed to be conservative, and because it is used as an evaluation tool to identify wastes to be excluded from regulation as hazardous, the Agency believes that its use is justified here.

Six commenters believed that the dilution and attenuation factor (DAF) employed by the Agency is inappropriately conservative. For the reasons just stated, the Agency believes a DAF of 6.3 is justified and necessary to ensure that wastes meet the Agency's levels of concern prior to being disposed of as nonhazardous.

The Agency notes that the generic exclusion levels for lead were lowered to reflect the new action level of 0.015 mg/l contained in an Office of Drinking Water regulation (56 FR 26460) which was promulgated after the proposed K061 rule. Several commenters believe that it is inappropriate to base the maximum allowable exclusion level on the new action level for lead, instead of the MCL. The commenters noted that the recent lead rule did not immediately revoke the existing MCL, and allows the MCL to remain effective until November 9, 1992. Furthermore, they argue that the lead action level of 0.015 mg/l is not an enforceable, health-based standard, citing EPA's preamble language to the rule that states that the action level is not equivalent to an MCL. Commenters also noted that past delisting evaluations have used existing MCLs as the bases for delisting decisions, and that the current MCL of 0.05 mg/l should be used in today's rulemaking.

The commenters are correct in stating that delisting evaluations have used -MCLs to derive acceptable delisting levels. However, in the absence of formal MCLs, the Agency has also used other appropriate health-based levels to establish delisting levels. In the absence of a new MCL for lead, the Agency believes that prudence requires that the exclusion level be established using the more conservative action level of 0.015 mg/l. EPA

established the new treatment standard for lead instead of a MCL because, as EPA concluded in the preamble to the final rule there is no apparent threshold for various health effects associated with lead. Given that the Agency's goal is to minimize lead exposure among sensitive populations, however, the treatment standard with an action level was established. While the action level is not a formal MCL, EPA stated in the preamble to the lead rule that the level of 0.015 mg/l is "associated with substantial public health protection." (See 56 FR 26477.)

While the commenters are also correct in stating that the existing lead MCL of 0.05 mg/l will remain in effect until November 9, 1992, the Agency believes the use of this level in setting the exclusion level would be inappropriate. The effective date for the action level and accompanying treatment standard for lead were delayed in order to allow public drinking water systems sufficient time to comply with this new rule. The Agency does not believe that to establish exclusion levels using an old MCL that will soon be superseded by a more stringent standard is sufficiently protective of public health.

2. Product Uses of Residues From K061 Treatment

The generic exclusion of K061 residues in this rule applies only to residues which are disposed of in Subtitle D units (i.e., landfills or piles). As EPA noted at proposal, the majority of these slags are not landfilled, but rather are used in a manner constituting disposal as road base material, or (less often) as an anti-skid material (56 FR 15024). EPA solicited comment on methods to evaluate exposures from road base and anti-skid uses. Several commenters believed that the reliance on the VHS model for analyzing HTMR residues is inappropriate and unprotective when the material is used as an anti-skid or road bed material, since not all potential exposure pathways are evaluated. On the other hand, one commenter believed that the use of the VHS model greatly exaggerates the degree of ground water contamination that could result from use of HTMR residues as a road base material.

Although EPA received comments concerning possible risks from road uses (in particular, inhalation due to improper handling during transportation, and exposure to lead accumulation in dust and surface soils), no data, methods, or models were submitted. The Agency has decided that its regulatory tools for evaluating road base and anti-skid uses are too uncertain for the Agency to make a final decision at this time--particularly given the very short time-frame of this rulemaking--as to whether residue used as road base or anti-skid material should be excluded. The VHS model evaluates possible risks posed by landfill disposal. It may also be suitable for evaluating residue used as a road base material, since this situation may be viewed as similar to (or more protective than) a capped landfill. The Agency has not had time to make a full technical assessment of this point. The VHS model alone may not be fully suitable for evaluating the safety of slag used as an anti-skid material, because this apparently uncontrolled use may present exposure pathways (i.e., airborne inhalation and surface runoff) that the model does not consider. Thus, the exclusion levels apply only for those modes of management that EPA currently feels confident in evaluating with the VHS model, namely disposal in a land disposal unit.

This case differs from other delistings in that EPA has never before evaluated a situation where the waste would be used in a manner constituting disposal, raising the concern that the VHS (or other groundwater model) no longer simulates a worst-case scenario. (EPA notes in addition that it has considered air blown dust exposure pathways in other delistings, but views the situation presented in today's action as different. Previous situations involved possible exposures from air-born losses in transit whereas today's action potentially involves continual

deposit of waste over a wide expanse of road systems.) Thus, EPA does not view today's action as calling into question determinations made in earlier, site-specific delistings.

Under current regulations, if a hazardous waste is used in a manner constituting disposal, it is exempt from further regulation, provided it undergoes a chemical reaction so as to be inseparable by physical means, and provided it meets the land disposal restrictions treatment standards for each hazardous constituent that it contains (40 CFR 266.20). Thus, under today's rule, such practices as use of the HTMR residue as road base or anti-skid material are not immediately prohibited (provided the residue meets the treatment standard). EPA intends shortly to propose amendments to 40 CFR 266.20 that may, if ultimately finalized, require further controls on all hazardous waste-derived products used in a manner constituting disposal, including a demonstration by the producer of such materials that the materials are used legitimately and safely. EPA intends to further evaluate the uses of K061 HTMR residue as part of that proceeding.

3. Tracking Requirements

The generic exclusion for K061 HTMR residues that meet the exclusion levels (in part 261) and treatment standards (in part 268), and that do not exhibit any hazardous characteristics, is limited, as already discussed, to such waste that is disposed of in Subtitle D units. Because K061 HTMR residues are hazardous at the point of initial generation, EPA believes that tracking and certification are needed to ensure proper handling. A modified tracking system for the waste, like that promulgated in the Third Third rule for characteristic wastes that have met the treatment standards and exhibit no hazardous characteristics (55 FR 22662-22664), will apply. Under this tracking system, a notification and certification must be sent to the appropriate EPA Regional Administrator or State authorized to implement the part 268 requirements for each shipment sent to a Subtitle D unit.

4. Testing Requirements

The land disposal restriction program imposes site-specific testing requirements in order to verify that regulatory requirements have been satisfied. The Agency proposed that, for the purpose of determining eligibility for the generic exclusion, testing of residues from HTMR of K061 be required at a frequency specified in the waste analysis plans of treatment facilities. The Agency solicited comment on whether more detailed testing requirements are necessary. Some commenters argued that quarterly testing of composite samples of nonwastewater residues resulting from HTMR processing of K061 should be sufficient to demonstrate compliance with the exclusion criteria; other commenters indicated that a more frequent and detailed testing regime than occurs under waste analysis plans was necessary. Various commenters recommended monthly, weekly, or daily testing.

The Agency has decided to require that treatment facilities which wish to meet the exclusion requirements must test treated wastes at a frequency specified in their waste analysis plan in order to determine whether they have met the exclusion levels. See 40 CFR 268.7(b) and 55 FR 22669. In the case where treatment is performed at the generator's site is a way not requiring a permit, testing is required at a frequency specified in the self- implementing waste analysis plan required by 40 CFR 268.7(a)(4). However, at a minimum, a facility's waste analysis plan (or a generator's self- implementing waste analysis plan) must specify that composite samples of the K061 HTMR slag residues be collected and analyzed quarterly and/or when the process or operation changes (see 40 CFR 264.13(a)(3) and

265.13(a)(3)). The Agency believes that it is appropriate to allow the frequency of testing beyond the quarterly minimum to be determined in the waste analysis plan, taking into account facility-specific factors such as waste types, waste variability, quantity, batch size, and type of treatment unit. The Agency believes that permit writers will consider these factors when establishing testing conditions in the waste analysis plans.

5. Applicability to Other Types of Treated K061

The exclusion discussed above applies only to those nonwastewater residues generated by HTMR processes, and not to others such as hydrometallurgical processes or stabilization. The Agency has insufficient data to fully evaluate the residues from hydrometallurgical processes; however, the limited available information indicates a high leachability. Moreover, given the Agency's current paucity of information, EPA has no idea what an appropriate testing regime for residues from hydrometallurgical processes would be, even assuming that these residues could meet the exclusion levels. EPA thus believes it unwarranted to make residues from hydrometallurgical recovery processes eligible for this generic exclusion at this time.

There are several reasons for not excluding stabilized residues generically. The HTMR residues demonstrate consistent leaching behavior whereas stabilized matrices are quite variable. The chemical bonding that occurs in the high temperature and oxidation/reduction conditions within the HTMR units is inherently different than the bonding that forms the basis of cementitious and pozzolanic stabilization. In addition, the kinetics of the reaction forming the bonds in these HTMR processes are superior to the kinetics of bond formation in cementitious reactions. (Cement is not typically considered set until at a minimum of 72 hours and often not considered fully cured until after 28 days.) Stabilization has also been documented as a process that is highly matrix-dependent and prone to chemical interferences. (Data in support of this conclusion is located in the background documents to the First, Second, and Third Third rules.) Most commercial stabilization facilities have to develop special mixes for each waste type by selecting additives that will enhance curing time and/or product integrity (often measured by comprehensive strength).

Another reason for not allowing stabilized residues to be generically excluded is the possibility of impermissible dilution, which must be considered on a case-by-case basis with stabilization, but not with HTMR. Hence, facility-specific delistings are preferred for stabilized wastes so that the Agency can evaluate waste-to-binder and waste-to-waste ratios and make a determination about treatment versus dilution. Finally, the Agency believes that HTMR is a preferred technique for managing the K061 waste over stabilization technologies, in light of its resource recovery potential, and in light of the differences in volumes of treated wastes. Stabilization generally increases volumes, while HTMR generally decreases volume. Thus, the Agency does not believe it warranted to develop a somewhat technically sketchy generic exclusion for stabilization.

EPA notes that it is not precluding the use of stabilization by today's rule, and that facility-specific delisting remains an option for stabilized K061 wastes. However, due to the inherent differences between HTMR and stabilization stated above and the fact that insufficient data currently exists to propose a generic exclusion for stabilized K061 wastes, the Agency has determined that the generic exclusion levels are not applicable to stabilized K061 residues. The Agency believes that more individualized consideration of stabilization is warranted before residues from the process are delisted.

6. Regulatory Status of Certain K061 Nonwastewater Residues From HTMR

A number of commenters raised the issue of the regulatory status of nonwastewater residues from HTMR processes. Commenters suggested that the Agency approach the issue as an interpretation of the existing federal rules regarding recycling. We have responded to this point above. Other commenters questioned the regulatory status of other side streams, and urged that one side stream in particular, a dross from the splash condenser in an HTMR process which is sent off-site for zinc recovery or re-processed on-site in the HTMR process, not be classified as a solid waste.

Under the federal regulations, hazardous wastes destined for reclamation remain classified as solid and hazardous wastes until reclamation is completed. Reclamation is normally incomplete until the end-product of the process is fully recovered. 50 FR at 633, 634, 655. The line the Agency has traditionally drawn between partially and fully reclaimed material when thermal metal recovery is involved is that secondary materials remain wastes until smelting is completed. Id. at 634 (recovered metals only needing to be refined (the processing step following smelting) are products, not wastes).
This interpretation is consistent with RCRA's cradle-to-grave mandate by retaining authority until a usable metal is recovered. Cf. API v. EPA, 906 F.2d at 741.

The rules also provide for a variance from solid waste classification for materials that have been partially but not fully reclaimed. 40 CFR 261.30(c).
Criteria for granting a variance include the degree of processing that the material has undergone and the degree of further processing required, the value of the material after it has been reclaimed, the degree to which the initially-reclaimed material is like an analogous raw material, the extent to which an end market for the material is guaranteed, and (perhaps most importantly), the extent to which the initially-reclaimed material is handled to minimize loss. 40 CFR 260.31(c).

Applying these rules to the dross from HTMR splash condensers, EPA has decided to amend its rules by excluding from Subtitle C jurisdiction the splash condenser dross residue (hereafter referred to as SCDR) generated by certain HTMR processes. This material is specifically generated as the non-product skimming from the splash condenser, along with recovered zinc and lead meeting Western grade zinc metal specifications (i.e., 98% pure metals), which are products under the rules (see Sec. 261.3(c)(2) final sentence). The dross is presently a solid waste because it is partially but not fully reclaimed (i.e., it still requires smelting or other recovery before a usable metal is extracted), and thus would remain a K061 waste unless it is excluded from the rules. See 40 CFR 261.2(a)(1) and 56 FR at 7144. Based on public comment and corroborating information contained in the record for today's rule, the SCDR is collected directly from the splash condenser and drummed.
It is then stored for short periods (not exceeding two weeks) and sold to a thermal zinc processing facility where it is used as a source of zinc, or reused on-site in the HTMR process, or reprocessed by HTMR on-site. (The SCDR normally contains 50-60% zinc.) At the thermal processing facility (where SCDR is shipped off-site), the drums are stored indoors in a secure manner (on concrete flooring, and with controls against airborne migration). The material is then processed for recovery by crushing, and, in combination with other feedstocks, grinding, and by thermal recovery of zinc.

The SCDR stream is small in volume. In addition, most of the toxic metals that originate in the K061 do not partition to the SCDR: Approximately 90% partition to zinc and lead products or to baghouse dusts. Those toxic metals remaining in the SCDR have reduced mobility from the original K061.

The SCDR does not exhibit a characteristic of hazardous waste. SCDR is also changed in physical form from the original K061. It is no longer a dust, but rather is a solidified matrix.

The Agency evaluated the material against the criteria for determining whether a waste that is partially but not fully reclaimed should still be classified as a solid waste (40 CFR 260.31(c)). Although these criteria were established for a variance determination, EPA believes that they are relevant in determining whether this material should be considered to be "discarded" within the meaning of Sec. 261.2(a)(1). The Agency has received adequate information in this case to exclude the material by rule. In particular, the Agency finds that the SCDR results from substantial processing (as shown by the volume reduction, partitioning of toxic metals to other outputs of the process, change in physical form, and reduction in mobility of toxic metals) (see Sec. 260.31(c)(1)); that the material is sold for value (or reprocessed on-site to recover high concentrations of zinc) (see Sec. 260.31(c)(2)); that the material contains zinc concentrations comparable to those of other non- waste secondary sources of zinc (and more zinc than natural ores) (see Sec.
260.31(c)(3)); that an end market for the material appears assured (see Sec.
260.31(c)(4)); and that it is handled safely up to the point of final reclamation (see Sec. 260.31(c)(5)).

Based on these factors, the Agency has decided to exclude the SCDR from RCRA jurisdiction when it is utilized as a source of zinc in zinc recovery operations, provided it is shipped in drums (if it is sent off-site) and that there is no land disposal of the material before it is recycled. Thus, for example, the material remains a solid waste if it is stored in piles on the land. In such a case, it would be "part of the waste disposal problem," and hence discarded. American Mining Congress v. EPA, 907 F.2d at 1186. In addition, in order for this exclusion to be implementable and to serve as a check against mishandling, EPA is interpreting current rules to require that the HTMR facility maintain a one-time notice in its operating record or other files stating that the SCDR is generated, then excluded, and what its disposition is. See Sec. 268.7(a)(6), 56 FR 3878.

D. Capacity Discussion

In the proposed rule to establish treatment standards under the land disposal restrictions for high zinc K061 wastes, EPA determined that sufficient capacity exists to treat these wastes and requested comments on its capacity analysis. EPA notes that the inquiry is in some ways academic, given that the time for granting national capacity variances for K061 ended in August 1990. See RCRA section 3004(h)(2). Nevertheless, the information on capacity should be useful to the regulated community and has a bearing on whether portions of today's rule are adopted pursuant to HSWA; therefore, we are presenting it here. It also has some bearing on whether there is any need to perpetuate the existing standards based on stabilization.

Commenters to the proposed rule focused on HTMR capacity. The Agency received comments suggesting that there may not be sufficient HTMR capacity to treat the volumes of high zinc K061 that are generated. Other commenters submitted information to EPA suggesting that other treatment technologies in addition to HTMR (stabilization and extractive metallurgy) can meet the treatment standards for high zinc K061. While the Agency has determined that HTMR is BDAT for high zinc K061, today's rule does not preclude the use of other treatment technologies that can meet the treatment standards established for this waste. For today's rule, the Agency has confirmed the generation volume of high zinc K061 and the available treatment capacity for these wastes.

1. Waste Generation

In the proposed rule, EPA estimated that approximately 500,000 tons of high zinc K061 are generated annually. EPA contacted Horsehead Resource Development Company (HRD) and the American Iron and Steel Institute (AISI) to obtain estimates of the annual generation of high zinc K061. HRD is the primary commercial facility that is currently recovering zinc from K061 wastes in HTMR units. HRD's most recent estimate is that the national generation of high zinc K061 will be approximately 415,000 tons in 1991.
AISI, a trade association representing a substantial portion of the generators of all K061 wastes, provides a different estimate of K061 generation. Based on steel production in 1989, AISI estimates that approximately 285,000 tons of high zinc K061 were generated in 1989, which is consistent with data from the TSDR Survey. In this capacity analysis, EPA is using the higher and more recent estimate of 415,000 tons of annual generation of high zinc K061.

2. Current Management Practices

The Agency has received data indicating that most high zinc K061 (about 90 percent) that is treated currently goes through HTMR. The volume of high zinc K061 being stabilized and subsequently land disposed is thus quite low. The Agency believes that this may be due to the existing incentives to recycle high zinc K061. Stabilization and landfilling costs are high, and some states have provided tax incentives not to land dispose of hazardous wastes. Thus, the generators of high zinc K061 that are treating their wastes are doing so primarily by recycling their wastes through HTMR.

3. Available Capacity

In the proposed rule, EPA estimated that the total available HTMR capacity (both commercial and non-commercial) was 553,000 tons per year. The Agency received comments indicating that some of this capacity may not be available and that a substantial portion of HTMR capacity is used to treat low zinc K061. The Agency has confirmed that approximately 550,000 tons of HTMR capacity are currently available to recover zinc through HTMR. However, the bulk of this capacity comes from older processes that may not be capable of achieving the better levels of performance characteristic of more recent HTMR.

Michigan Disposal, Inc. submitted a comment to EPA claiming that chemical fixation and stabilization techniques can meet the K061 treatment standards.
Michigan Disposal's current stabilization capacity for high zinc K061 is approximately 100,000 tons per year. In addition to HTMR and stabilization, extractive metallurgy technologies are available to recover zinc from K061 wastes. Encycle submitted a comment to the Agency showing that their metal recovery process can successfully recover zinc from K061 wastes. Encycle's current extractive metallurgy treatment capacity is approximately 30,000 tons per year. No commenter submitted data to challenge the claim that technologies other than HTMR can meet the treatment standards for high zinc K061.

4. Capacity Implications

Based on the information presented above, sufficient HTMR capacity exists to handle the 1991 demand for zinc recovery from K061 wastes, and excess stabilization and extractive metallurgy capacity is also available.

Therefore, the Agency has determined that there is sufficient capacity to handle the volumes of high zinc K061 requiring treatment. However, if substantial portions of HTMR capacity become unavailable, the situation would differ. This point is relevant in determining whether the exclusions in today's rule are promulgated pursuant to HSWA authority.

III. State Authority

A. Applicability of Rule in Authorized States

Under section 3006 of RCRA, EPA may authorize qualified States to administer and enforce the RCRA program within the State. Following authorization, EPA retains enforcement authority under sections 3008, 3013, and 7003 of RCRA, although authorized States have primary enforcement responsibility. The standards and requirements for authorization are found in 40 CFR part 271.

Prior to HSWA, a State with final authorization administered its hazardous waste program in lieu of EPA administering the Federal program in that State.

The Federal requirements no longer applied in the authorized State, and EPA could not issue permits for any facilities that the State was authorized to permit. When new, more stringent Federal requirements were promulgated or enacted, the State was obliged to enact equivalent authority within specified time frames. New Federal requirements did not take effect in an authorized State until the State adopted the requirements as State law.

In contrast, under RCRA section 3006(g), new requirements and prohibitions imposed by HSWA take effect in authorized States at the same time that they take effect in nonauthorized States. EPA is directed to carry out these requirements and prohibitions in authorized States, including the issuance of permits, until the State is granted authorization to do so. While States must still adopt HSWA-related provisions as State law to retain final authorization, HSWA applies in authorized States in the interim.

B. Effect on State Authorizations

Today's final rule for treatment standards is finalized pursuant to section 3004(d) through (k) and (m) of RCRA. Therefore, it will be added to Table 1 in 40 CFR 271.1(j), which identifies the Federal program requirements that are promulgated pursuant to HSWA and take effect in all States, regardless of their authorization status. As noted above, EPA will implement today's rule in authorized States until their programs are modified to adopt these rules and the modification is approved by EPA. Because the rule is finalized pursuant to HSWA, a State submitting a program modification may apply to receive either interim or final authorization under RCRA section 3006(g)(2) or 3006(b), respectively, on the basis of requirements that are substantially equivalent or equivalent to EPA's. The procedures and schedule for State program modifications for either interim or final authorization are described in 40 CFR 271.21. The deadline by which the States must modify their programs to adopt today's rule is July 1, 1993. It should be noted that HSWA interim authorization will expire on January 1, 1993 (see 40 CFR 271.24(c)).

An issue arises as to whether the generic exclusion from the derived-from rule and the conditional exclusion from being a solid waste for splash condenser dross residue in the rule are adopted pursuant to HSWA. EPA views this entire rule, including the exclusions, as a HSWA regulation because it is a necessary part of the process of setting prohibitions and treatment standards for K061 wastes. The Agency has determined that the HTMR process is BDAT for K061 wastes. Comments have indicated persuasively that without relief from the derived-from rule and solid waste status a number of HTMR

processes will not be commercially viable. This is particularly true of the newer, optimized HTMR processes that are capable of generating residues below the generic exclusion levels. See, e.g., Comments of International Mill Service, Inc., pp. 49-57. The Agency believes it important to assure existence of the truly best available technology, namely the newer, optimized HTMR operations, to process K061 wastes. The generic exclusion from the derived-from rule and conditional exclusion from being a solid waste is a necessary step in assuring existence of this optimized capacity, and so is an integral part of the whole prohibition/treatment standard process.

Consequently, the Agency views these exclusions to be adopted pursuant to HSWA.

Section 40 CFR 271.21(e)(2) requires States that have final authorization to modify their programs to reflect Federal program changes and to submit the modification to EPA for approval. The deadline by which the State must modify its program to adopt this regulation will be determined by the promulgation of the final rule in accordance with 40 CFR 271.21(e). These deadlines can be extended in certain cases (see 40 CFR 271.21(e)(3)). Once EPA approves the modification, the State requirements become Subtitle C RCRA requirements.

Authorized States are only required to modify their programs when EPA promulgates Federal regulations that are more stringent or broader in scope than the existing Federal regulations. For those Federal program changes that are less stringent or reduce the scope of the Federal program, States are not required to modify their programs. This is a result of section 3009 of RCRA, which allows States to impose regulations in addition to those in the Federal program. EPA has determined that the generic exclusion and the conditional exclusion for splash condenser dross residue are less stringent or reduce the scope of the Federal program. Therefore, authorized States are not required to modify their programs to adopt regulations that are equivalent or substantially equivalent.

States with authorized RCRA programs may already have requirements similar to those in today's rule. These State regulations have not been assessed against the Federal regulations being finalized today to determine whether they meet the tests for authorization. Thus, a State is not authorized to implement these requirements in lieu of EPA until the State program modification is approved. Of course, States with existing standards may continue to administer and enforce their standards as a matter of State law.

In implementing the Federal program, EPA will work with States under agreements to minimize duplication of efforts. In many cases, EPA will be able to defer to the States in their efforts to implement their programs rather than take separate actions under Federal authority.

States that submit official applications for final authorization less than 12 months after the effective date of these regulations are not required to include standards equivalent to these regulations in their application.

However, the State must modify its program by the deadline set forth in 40 CFR 271.21(e). States that submit official applications for final authorization 12 months after the effective date of these regulations must include standards equivalent to these regulations in their application. The requirements a State must meet when submitting its final authorization application are set forth in 40 CFR 271.3.

IV. Regulatory Impact

A. Executive Order 12291

Executive Order 12291 requires that the regulatory impact of potential

Agency actions be evaluated as part of the process of developing regulations.

In addition, Executive Order 12291 requires that regulatory agencies prepare a Regulatory Impact Analysis in connection with major rules (Section 3).

Major rules are defined in section 1(b) as those which are likely to result in an annual effect on the economy of $100 million or more, a major increase in costs or prices for consumers or individual industries, or significant adverse effects on competition, employment, investment, productivity, innovation, or international trade.

Today's rule establishes treatment standards for a waste originally regulated in the First Third land disposal restrictions rule (53 FR 31162). The Regulatory Impact Analysis (RIA) for the First Third rule costed the K061 high zinc wastes based on HTMR. The post-regulatory cost for a volume of K061 high zinc waste of approximately 172,000 tons was estimated to be $58 million per year (1987 dollars).

Today's rule establishes numerical treatment standards based on HTMR. Currently, due to construction of additional recovery process capacity, the Agency has determined that there is adequate HTMR capacity for K061 high zinc wastes. The Agency estimates that 415,000 tons of K061 high zinc are generated each year. Of this volume, the Agency estimates approximately 90% to be undergoing treatment by use of HTMR, with the remaining 10% going to stabilization.

Therefore, in the worst case assumption, only 10% of high zinc K061 would be affected by today's rule. If the 10% annual generation portion of high zinc K061 which is now being treated by stabilization was to be treated by HTMR, the incremental cost of this change is estimated to be $1 million per year. This alteration in management practices represents the most severe cost scenario which could be incurred as a result of this rule. However, generic exclusion of the residue from the HTMR process will spare the industry Subtitle C disposal costs; this savings has not been reflected in the annual incremental cost estimate provided above, and would make the cost lower than the $1 million estimated. Therefore, it is estimated that this rule will not impose a large cost upon industry, and is estimated to be a minor rule according to Executive Order 12291.

This rule was submitted to the Office of Management and Budget (OMB) for review as required by Executive Order 12291.

B. Regulatory Flexibility Act

Pursuant to the Regulatory Flexibility Act, 5 U.S.C. 601 et seq., whenever an agency is required to issue a general notice of rulemaking for any final rule, it must prepare and make available for public comment a Regulatory Flexibility Analysis which describes the impact of the rule on small entities (i.e., small business, small organizations, and small government jurisdictions). The Administrator may certify, however, that the rule will not have a significant economic impact on a substantial number of small entities. Since the rule allows the regulated community to continue to use existing management practices, and in the worst case scenario only affects 10% of high zinc K061 waste, the Administrator certifies that this regulation will not have a significant economic impact on a substantial number of small entities, and therefore, does not require a Regulatory Flexibility Analysis.

C. Paperwork Reduction Act

The information collection requirements in this rule were promulgated in

previous land disposal restriction rulemakings and approved by the Office of Management and Budget (OMB) under the Paperwork Reduction Act, 44 U.S.C. 3501 et. seq., and have been assigned OMB control number 2050-0085. No new information collection requirements are being promulgated today.

Send comments regarding any aspect of this collection of information to Chief, Information Policy Branch, PM-223Y, U.S. Environmental Protection Agency, 401 M St., SW, Washington, DC 20460; and to the Office of Information and Regulatory Affairs, Office of Management and Budget, Washington, DC 20503, marked "Attention: Desk Officer for EPA."

V. List of Subjects in 40 CFR Parts 261, 268, and 271

Administrative practice and procedure, Designated facility, Environmental protection, Hazardous materials, Hazardous materials transportation, Hazardous waste, Intergovernmental relations, Labeling, Packaging and containers, Penalties, Recycling, Reporting and recordkeeping requirements, Waste treatment and disposal.

Dated: August 8, 1991.

F. Henry Habicht,
Acting Administrator.

For the reasons set out in the preamble, title 40, chapter I, of the Code of Federal Regulations is amended as follows:

PART 261--IDENTIFICATION AND LISTING OF HAZARDOUS WASTE

1. The authority citation for part 261 continues to read as follows:

Authority: 42 U.S.C. 6905, 6912(a), 6921, 6922, and 6938.

2. In Sec. 261.3 paragraph (c)(2)(ii)(C) is added to read as follows:

Sec. 261.3 Definition of hazardous waste.

* * * * *

(c) * * *
(2) * * *
(ii) * * *
(C) Nonwastewater residues, such as slag, resulting from high temperature metals recovery (HTMR) processing of K061 waste, in units identified as rotary kilns, flame reactors, electric furnaces, plasma arc furnaces, slag reactors, rotary hearth furnace/electric furnace combinations or industrial furnaces (as defined in 40 CFR 260.10 (6), (7), and (12)), that are disposed in subtitle D units, provided that these residues meet the generic exclusion levels identified below for all constituents, and exhibit no characteristics of hazardous waste. Testing requirements must be incorporated in a facility's waste analysis plan or a generator's self-implementing waste analysis plan; at a minimum, composite samples of residues must be collected and analyzed quarterly and/or when the process or operation generating the waste changes.
The generic exclusion levels are:

Maximum for any single composite sample Constituent (mg/l)
Antimony 0.063 Arsenic 0.055 Barium 6.3 Beryllium 0.0063 Cadmium 0.032 Chromium (total) 0.33 Lead 0.095 Mercury 0.009 Nickel 0.63 Selenium 0.16

Silver 0.30 Thallium 0.013 Vanadium 1.26

For each shipment of K061 HTMR residues sent to a subtitle D unit that meets the generic exclusion levels for all constituents, and does not exhibit any characteristic, a notification and certification must be sent to the appropriate EPA Regional Administrator (or delegated representative) or State authorized to implement part 268 requirements. The notification must include the following information: (1) The name and address of the Subtitle D unit receiving the waste shipment; (2) the EPA hazardous waste number and treatability group at the initial point of generation; (3) the treatment standards applicable to the waste at the initial point of generation. The certification must be signed by an authorized representative and must state as follows: "I certify under penalty of law that the generic exclusion levels for all constituents have been met without impermissible dilution and that no characteristic of hazardous waste is exhibited. I am aware that there are significant penalties for submitting a false certification, including the possibility of fine and imprisonment."

* * * * *

In Sec. 261.4 paragraph (a)(11) is added to read as follows:

Sec. 261.4 Exclusions.

(a) * * * *

(11) Nonwastewater splash condenser dross residue from the treatment of K061 in high temperature metals recovery units, provided it is shipped in drums (if shipped) and not land disposed before recovery.

* * * * *

PART 268--LAND DISPOSAL RESTRICTIONS

1. The authority citation for part 268 continues to read as follows:

Authority: 42 U.S.C. 6905, 6912(a), 6921, and 6924.

2. In Sec. 268.41, Table CCWE is amended by revising the entry for K061 (High Zinc Subcategory--greater than or equal to 15% Total Zinc--Effective until August 7th 1991) and by revising paragraph (b) to read as follows:

Sec. 268.41 Treatment standards expressed as concentrations in waste extract.

(a) * * *

* * * * *

Table CCWE--Constitute Concentrations in Waste Extract

Regulated Commercial hazardous Waste code chemical name See also constituent

* * * * * * * K061, High Zinc, Electric Arc Table CCW in Antimony Subcategory Furnace Dust 268.43 Arsenic Barium Beryllium Cadmium Chromium (Total) Lead Mercury Nickel Selenium Silver Thallium Vanadium Zinc

(b) When wastes with differing treatment standards for a constituent of concern are combined for purposes of treatment, the treatment residue must meet the lowest treatment standard for the constituent of concern, except that mixtures of high and low zinc nonwastewater K061 are subject to the treatment standard for high zinc K061.

* * * * *

Sec. 268.42 (Amended)

3.-4. In Sec. 268.42, Table 2 is amended by removing the entry for K061.

PART 271--REQUIREMENTS FOR AUTHORIZATION OF STATE HAZARDOUS WASTE PROGRAMS

1. The authority citation for part 271 continues to read as follows:

Authority: 42 U.S.C. 6905, 6912(a), and 6926.

Subpart A--Requirements for Final Authorization

2. Section 271.1(j) is amended by adding the following entry to Table 1 in chronological order by date of promulgation in the Federal Register, and by adding the date of publication and the Federal Register page numbers to the following entry in Table 2:

Sec. 271.1 Purpose and scope.

Liners and Leak Detection Systems for Hazardous Waste Land Disposal Units

Agency: Environmental Protection Agency.

Action: Notice of final rulemaking.

Summary: The Environmental Protection Agency (EPA) is today amending its current regulations under the Resource Conservation and Recovery Act (RCRA) concerning liner and leachate collection and removal systems for hazardous waste surface impoundments, landfills, and waste piles. EPA is also adding new regulations requiring owners and operators of hazardous waste surface impoundments, waste piles, and landfills to install and operate leak detection systems at such time as these units are added, laterally expanded, or replaced. EPA is promulgating most of these regulations in response to the requirements of the 1984 Hazardous and Solid Waste Amendments (HSWA) to RCRA.

Effective Date: July 29, 1992.

Addresses: The public docket (docket reference code F-92-LLDF-FFFFF) for this rule is in room M2427, US EPA, 401 M Street SW., Washington, DC 20460, and is open from 9 am to 4 pm, Monday through Friday, excluding holidays. Call 202-260-9327 for an appointment to review docket materials. Up to 100 pages may be copied free of charge from any one regulatory docket. Additional copies are $0.15 per page.

For Further Information Contact: The RCRA/Superfund Hotline at 1-800-424-9346 (toll free), or 703-920-9810 in the Washington, DC area. For information on technical aspects of this rule, contact Ken Shuster, Office of Solid Waste (OS-340), U.S. Environmental Protection Agency, 401 M St SW., Washington, DC 20460, 202-260-2214.

Liners and Leak Detection Systems for Hazardous Waste Land Disposal Units

AGENCY: Environmental Protection Agency.

ACTION: Notice of final rulemaking.

SUMMARY: The Environmental Protection Agency (EPA) is today amending its current regulations under the Resource Conservation and Recovery Act (RCRA) concerning liner and leachate collection and removal systems for hazardous waste surface impoundments, landfills, and waste piles. EPA is also adding new regulations requiring owners and operators of hazardous waste surface impoundments, waste piles, and landfills to install and operate leak detection systems at such time as these units are added, laterally expanded, or replaced. EPA is promulgating most of these regulations in response to the requirements of the 1984 Hazardous and Solid Waste Amendments (HSWA) to RCRA.

EFFECTIVE DATE: July 29, 1992.

ADDRESSES: The public docket (docket reference code F-92-LLDF-FFFFF) for this rule is in room M2427, US EPA, 401 M Street SW., Washington, DC 20460, and is open from 9 am to 4 pm, Monday through Friday, excluding holidays. Call 202-260-9327 for an appointment to review docket materials. Up to 100 pages may be copied free of charge from any one regulatory docket. Additional copies are $0.15 per page.

FOR FURTHER INFORMATION CONTACT: The RCRA/Superfund Hotline at 1-800-424-9346 (toll free), or 703-920-9810 in the Washington, DC area. For information on technical aspects of this rule, contact Ken Shuster, Office of Solid Waste (OS-340), U.S. Environmental Protection Agency, 401 M St SW., Washington, DC 20460, 202-260-2214.

SUPPLEMENTARY INFORMATION: Copies of the following documents are available for purchase through the National Technical Information Services (NTIS), U.S. Department of Commerce, Springfield, VA 22161, phone 1-800-553-6847 or 703-487-4650: (1) U.S. EPA, "Compilation of Current Practices at Land Disposal Facilities", January 1992; (2) U.S. EPA, "Action Leakage Rates for Leak Detection Systems", January 1992.

Preamble Outline

I. Authority

These regulations are being promulgated under authority of sections 3004, 3005, 3006, and 3015 of the Solid Waste Disposal Act, as amended by the Resource Conservation and Recovery Act, as amended, 42 U.S.C. 6924, 6925, 6926, and 6936.

II. Background

On November 8, 1984, Congress enacted the Hazardous and Solid Waste Amendments (HSWA) to the Resource Conservation and Recovery Act (RCRA), placing stringent new requirements on the land disposal of hazardous waste. Among other requirements, Congress amended section 3004 of RCRA and added section 3015 to impose specific design standards for land disposal units.

Section 3004(o)(1)(A) of RCRA, added by HSWA, requires each new landfill and surface impoundment, and each replacement and lateral expansion of a landfill and surface impoundment for which an application for a final permit determination is received after November 8, 1984, to install two or more liners (i.e., a double-liner system) and a leachate collection system above (for landfills) and between the liners. Section 3004(o)(5)(A) of RCRA requires EPA to promulgate regulations or issue technical guidance implementing the requirements of section 3004(o)(1)(A) by November 8, 1988. These HSWA requirements for double liner systems are intended to prevent the migration of hazardous constituents to ground water from land disposal units. Until the effective date of regulations promulgated under section 3004(o)(5)(A), Congress provided that an interim statutory double-liner standard in section 3004(o)(5)(B) could be used to meet the section 3004(o)(1)(A) double-liner system requirement.

Section 3004(o)(4) of RCRA requires EPA by May 8, 1987, to promulgate standards requiring new landfills, surface impoundments, waste piles, land treatment units, and underground hazardous waste tanks to use approved leak detection systems. The statute defines an "approved leak detection system" as a system or technology that EPA determines to be "capable of detecting leaks of hazardous constituents at the earliest practicable time." The term "new units" is defined as those units on which construction commences after the date of promulgation of the Agency's rule for leak detection systems. The impact of this language upon the applicability of this rule between today's promulgation and the effective date July 29, 1992 is discussed elsewhere in this preamble (See Section IV.A.).

Section 3015(a) of RCRA establishes standards for interim status waste piles. Any new waste pile, or replacement or lateral expansion of an existing waste pile at an interim status facility, must comply with requirements for liners and leachate collection systems or equivalent protection provided in regulations issued by EPA under section 3004 of RCRA before October 1, 1982, or revised under section 3004(o) of RCRA with respect to waste received beginning May 8, 1985.

Section 3015(b) of RCRA establishes standards for interim status surface impoundments and landfills. Any new unit, or replacement or lateral expansion of an existing unit at an interim status facility, is subject to the requirements promulgated under section 3004(o)(1) (relating to double-liners and leachate collection systems), with respect to waste received beginning on May 8, 1985.

The HSWA requirements described above either directly amended or directed the Agency to amend the existing RCRA liner standards for new hazardous waste landfills, surface impoundments, and waste piles issued by EPA on July 26, 1982 (47 FR 32262). On July 15, 1985, EPA issued a final rule (50 FR 28702) amending the existing liner standards by codifying the new liner standards of sections 3004(o)(1)(A), 3004(o)(5)(B), and 3015 (a) and (b) that

were to become effective immediately or shortly after the enactment of HSWA, as directed by the statute.

On March 28, 1986 (51 FR 10706), under section 3004(o)(5)(A) of RCRA, EPA proposed amendments to the statutory double-liner and leachate collection system standards for surface impoundments and landfills codified in EPA's regulations on July 15, 1985. The proposal set forth two types of designs for double-liner systems. One design consisted of a geomembrane (then referred to as a flexible membrane liner (FML)) as the top liner and a composite bottom liner consisting of a geomembrane underlain by compacted soil material to minimize flow through the geomembrane component should a breach occur, and having a hydraulic conductivity of no more than 1×10^{-7} cm/sec. The other proposed double-liner design consisted of a geomembrane top liner and a bottom liner constructed to prevent migration through the liner through the post-closure period and of at least 3 feet of compacted clay or other compacted soil material with a hydraulic conductivity of no more than 1×10^{-7} cm/sec. On April 17, 1987, EPA published a notice (52 FR 12566) requesting additional comments on certain aspects of the March 28, 1986 proposal. Specifically, EPA requested comments on data that demonstrated the advantages of a composite bottom liner versus a compacted soil material bottom liner. EPA also noticed the availability of two draft technical guidance documents for the design, construction, and operation of single- and double-liner systems and leachate collection systems. EPA solicited comments from the general public on the draft technical guidance documents.

On July 14, 1986 (51 FR 25422), EPA promulgated leak detection system requirements for underground hazardous waste tanks. In promulgating these regulations, EPA partially fulfilled its mandate under section 3004(o)(4) of RCRA to establish leak detection system requirements.

On May 29, 1987 (52 FR 20218), EPA proposed a rule establishing leak detection system requirements to fully implement section 3004(o)(4) of RCRA. The proposal specified design standards for leak detection systems for new and replacement landfills, surface impoundments, land treatment units, and waste piles, and for lateral expansions of these units at both permitted and interim status facilities. The proposal also expanded the double-liner requirements to waste piles. The proposal also included a requirement for a construction quality assurance program to be implemented by owners and operators to ensure the proper construction, installation, and closure of these units. Finally, the proposal included a requirement to develop a response action plan specifying actions that would be taken in reaction to liquid flow into the leak detection system above action leakage rates proposed by the owner or operator and approved by the Regional Administrator.

Today's rule finalizes EPA's proposed actions of March 28, 1986 and May 29, 1987, and completes the Agency's statutory rulemaking responsibilities imposed by RCRA sections 3004(o)(4) and 3004(o)(5)(A). EPA has not included additional leak detection standards for permitted land treatment units in today's rule because, as explained later in today's notice, existing unsaturated zone monitoring requirements in §§ 264.278 and 265.278 for such units are sufficient to ensure the detection of leaks at the earliest practicable time.

III. Summary of Today's Rule

A. Summary of Rule

Today's rule modifies the existing double-liner and leachate collection and removal system requirements for new and replacement surface impoundments and landfills and for lateral expansions of these units, including those units at interim status facilities. New surface impoundment and landfill units for which construction commences after January 29, 1992, and replacement units reused after and lateral expansions of existing units for which construction commences after July 29, 1992 must have a double liner consisting of a top liner designed to prevent the migration of hazardous constituents into the liner during the active life and post-closure period (e.g., a geomembrane) and a composite bottom liner consisting of a geomembrane underlain by at least 3 feet of compacted soil material having a hydraulic conductivity of no more than 1×10^{-7} cm/sec. EPA is also extending the revised landfill double-liner and leachate collection and removal system requirements to new waste pile units for which construction commences after January 29, 1992, and replacement units reused after and lateral expansions of waste pile units for which construction commences after July 29, 1992.

Today's rule also requires a leak detection system for each new surface impoundment, waste pile, and landfill for which construction commences after January 29, 1992, and each replacement surface impoundment, waste pile, and landfill reused after, and each lateral expansion of these units for which construction commences after July 29, 1992. The leachate collection and removal system drainage layer immediately above the bottom composite liner at these units must be used as the leak detection system. The drainage layer functioning as the leak detection system must meet minimum design criteria and ensure that leaks are detected at the earliest practicable time. Specifically, the drainage layer bottom slope must be one percent or more. If granular material is used in the drainage layer, it must have a minimum hydraulic conductivity of 1×10^{-2} cm/sec for waste piles and landfills and 1×10^{-1} cm/sec for surface impoundments and a minimum thickness of 1 foot. If synthetic drainage material is used in the drainage layer, the drainage material must have a minimum hydraulic transmissivity of 3×10^{-5} m²/sec for waste piles and landfills and 3×10^{-4} m²/sec for surface impoundments. These transmissivities are equivalent to the above hydraulic conductivities and thickness specifications for granular drainage layers. EPA is requiring that each unit have a leak detection sump to collect and remove liquids, sized to prevent liquids from backing up into the drainage layer. In lieu of meeting these requirements, the owner or operator may receive a variance for an alternative leak detection system that functions in an equivalent manner.

EPA is establishing a site-specific action leakage rate that specifies a liquid flow rate detected in the leak detection system sump that warrants followup actions by the owner or operator. Owners and operators are required to develop a response action plan specifying monitoring, inspection, and corrective measures to be implemented if the action leakage rate is exceeded.

The Agency is requiring owners and operators of units affected by today's rule to develop a construction quality assurance (CQA) program for various components of surface impoundments, waste piles, and landfills. The program will be implemented through a construction quality assurance plan that the owner or operator prepares to ensure that the constructed unit meets or exceeds all design criteria, plans, and specifications.

Owners or operators of facilities applying for a permit for new surface impoundments, waste piles, and landfills must submit information on liners and leak detection system designs, the action leakage rate, the response action plan, and CQA plans as part of the permit application. For new and replacement surface impoundment, waste pile, and landfill units, and lateral

expansions of existing units at permitted facilities, owners and operators must submit this information as part of a permit modification request. For affected units at interim status facilities, the owner or operator must submit proposed action leakage rates, response action plans, and a certification that construction has been completed according to the design specifications in the CQA plan to the Agency in advance of the receipt of wastes. Liner and leak detection system designs and CQA plans need not be submitted to EPA, but must be maintained on site.

B. Achievement of EPA Program Goals

In developing today's rule, EPA paid careful attention to several principles that now guide its environmental programs: Pollution prevention, ground-water protection, cost-effective policies which provide protection of human health and the environment, flexibility in implementation, and fostering of an effective State-Federal partnership. Today's rule incorporates each of these principles.

The primary focus of today's rule is on pollution prevention and, more specifically, on ground-water protection. Effective liner and leak detection systems will minimize the potential for releases of hazardous constituents from hazardous waste land disposal units to underlying ground water. In this way, today's rule complements the Agency's waste minimization policies, which seek to reduce the quantities of waste produced, and the RCRA land disposal restrictions programs. Today's liner and leak detection standards contribute to pollution prevention by providing for the containment and isolation of hazardous waste after final disposal.

In today's rule, EPA has taken an important step in implementing its Ground-Water Principles, recently published in the Agency's "Protecting the Nation's Ground Water: EPA's Strategy for the 1990's (21Z-1020, July 1991). A central theme in EPA's ground-water policy, enunciated in the principles, is that prevention of ground-water contamination is often more cost effective and environmentally more desirable than remediation of ground-water after contamination. Experience in the RCRA and Superfund programs demonstrates that improperly designed landfills, surface impoundments, and waste piles can result in ground-water contamination. At the same time, remediation of contaminated ground-water has proved to be time-consuming, expensive, and in some cases technically infeasible. On the other hand, the release of hazardous constituents from landfills, surface impoundments, and waste piles can largely be eliminated through good design and construction.

Regarding costs, it should be noted that most of the standards incorporated into today's rule are already widely in use at hazardous waste facilities and are generally considered good engineering practices. Because HSWA required new landfills and surface impoundments, and lateral expansions and replacements of existing landfills and surface impoundments, for which an application for a permit is received after November 8, 1984, and those units in interim status receiving waste after May 8, 1985, to be designed with double-liner and leachate collection systems, most facilities already meet many of the design standards of today's rule. In addition, many facilities have designed units that are in compliance with today's final rule in anticipation of the promulgation of a final rule based on the March 28, 1986, and May 29, 1987 proposed rules. Thus, for a relatively small increase in cost (to those facilities that are not already meeting the standards of today's rule), the rule may save large corrective action costs. However, since all new units must comply with all the provisions of this rule and bear the corresponding costs, EPA has carefully chosen the minimum technical standards that adequately protect human health and the environment.

Although today's rule includes specific design standards, EPA has taken care to ensure that its requirements can be flexibly implemented. The presence of specific standards in the rules will simplify compliance by the regulated community, implementation by EPA and State permit writers, and enforcement by EPA and state officials. EPA, however, recognizes that national design standards may not be appropriate for every site and that technologies may improve. Therefore, today's rule allows EPA or an authorized State to approve alternative designs, as long as they achieve comparable or better levels of performance.

Similarly, today's rule requires construction quality assurance—a critical feature in land disposal unit construction—but it does so through general narrative performance standards. Thus, facility owners or operators can tailor the details of their construction quality assurance plans to the specifics of their facilities. These and similar provisions of today's rule ensure that the rule can be flexibly implemented, in a way that accommodates each regulated unit.

Finally, in today's rule EPA has paid special attention to eliminating the frequent strains resulting from the joint implementation of RCRA by EPA and the States. In proposals for this rule, EPA laid out a complicated State authorization process, which would require EPA to implement some parts of the rule for selected land disposal units and the States to implement other parts for the same units, over different timeframes. After radically simplifying the proposal, EPA is now promulgating most of the rule under HSWA, which avoids much of the confusion of joint implementation at individual units. In this way, today's rule is consistent with the Agency's attempt to simplify and rationalize Federal and State implementation of RCRA. Today's rule also requires fewer reports and mandatory Agency reviews than the proposal while still providing opportunity for Agency reviews.

IV. Detailed Discussion of the Final Rule

A. Scope of the Rule

The double liner and leak detection standards in today's final rule apply to new and replacement landfills, surface impoundments, and waste piles, and lateral expansions of these units. Today's rule applies, as it was proposed in May, 1987, to these units regardless of their permit status, including facilities that were issued permits prior to and after the enactment of HSWA and facilities that are still in interim status. In consideration of the explicit language of section 3004(o)(4) defining a new unit as a unit for which construction commences after the promulgation date of today's rule, the Agency maintains that the permit does not act as a shield with respect to the leak detection requirements under today's rule for new units. Because lateral expansions and replacement units are comparable in their environmental impact, the Agency has, as a policy matter, decided to similarly remove the permit as a shield for leak detection systems at replacement units and lateral expansions of existing units. EPA believes that the opportunity for constructing replacement units and lateral expansions of existing units to meet today's requirements is similar to that for new units. In addition, by requiring replacement units and lateral expansions at existing units to meet today's requirements, EPA is ensuring that these units meet the same minimum technological requirements and provide the same protection of human health and the environment. Therefore, the Agency is amending § 270.4 to require

owners or operators to apply for a permit modification to meet the standards of today's final rule. Owners and operators at permitted facilities may not begin construction of units subject to today's requirements, until the permitting Agency has approved the owner or operator's permit modification (see § 270.42).

Today's rule exempts certain replacements of permitted surface impoundment, waste pile, and landfill units from today's double-liner and leak detection system requirements. However, EPA has modified the scope of the exemption since the May 29, 1987 proposal. Sections 264.221(f), 264.251(f), 264.301(f), 265.221(c), 265.254(a), and 265.301(c) in today's rule exempt replacements of surface impoundments, waste piles, and landfills from the double-liner system and leak detection requirements if the replacements meet the following conditions: (1) The existing unit was constructed in compliance with the design standards for double-liner and leachate collection systems in sections 3004 (o)(1)(A)(i) and (o)(5) of RCRA; and (2) there is no reason to believe that the liner system is not functioning as designed. Of course, any replacement surface impoundment, waste pile, or landfill unit that otherwise qualified for a variance from the double-liner and leachate collection system requirements pursuant to sections 3004(o)(2), 3004(o)(3), or 3005(j) of RCRA remains exempt from today's double-liner and leak detection requirements.

In the May 29, 1987 proposed rule, EPA considered exempting replacements that were constructed in compliance with existing part 264 single-liner requirements for surface impoundments, waste piles, and landfills. EPA acknowledges that the arguments for this exemption in the proposed rule were erroneous and has decided not to exempt replacements of permitted single-lined surface impoundments, waste piles, and landfills in today's final rule, because owners or operators of these units have no early method of detecting whether the single liner is leaking. Owners or operators of such units would have to rely on ground-water monitoring to determine if the single liner was leaking. EPA agrees with the commenters that this is inconsistent with the statutory goal of leak detection at the earliest practicable time and of preventing leakage out of the unit.

The May 29, 1987 proposal indicated an effective date for most of the provisions, including the leak detection requirements, of six months after promulgation. The July 29, 1992 effective date of today's rule is consistent with that proposal and with section 3010(b) of RCRA. It is important to note that section 3004(o)(4)(B)(ii) defines "new units" as those units on which construction commences after date of promulgation (versus the effective date) of the Agency's rule for leak detection systems. Therefore, due to the clear language of the statute, construction of new landfills, new surface impoundments, and new waste piles is defined with respect to the promulgation date but today's final regulations become effective 6 months after promulgation. This interpretation is consistent with the Agency's definition of "new tank systems" discussed in the final hazardous waste tank requirements (51 FR 25446).

During the six month time period between promulgation and the effective date, owners and operators of new units have time to determine and then make any necessary adjustments to their designs, contract specifications, and other pre-construction plans so that the requirements of today's rule are satisfied by the effective date. This also allows adequate time, in the Agency's opinion, for preparation and submission to the Agency of documents and requests for approvals that are prerequisites to construction and operation. For permitted facilities, this includes permit modification requests. Similarly, any interim status facility that adds a new unit following the promulgation date is expected to comply with the requirements in today's rule to submit, along with their notification under §§ 265.221(b), 265.254(a), or 265.301(b), proposed action leakage rates and a response action plan, if the due date for that notification (i.e., at least 60 days prior to receipt of waste in the new unit) falls before the effective date.

Thus, the Agency anticipates that at the few facilities (both permitted and interim status) that plan to develop new units during this six month period, most of the effort will be the preparatory design and administrative work needed to comply by the effective date. If owners or operators at interim status facilities should commence construction of new units during this period, the construction would be subject to Agency review upon the effective date of today's requirements.

Replacement landfills, surface impoundment, or waste piles, or lateral expansions to those units are, in the absence of specific statutory direction, subject to this rule after July 29, 1992 (i.e., six months after promulgation as normally provided under section 3010(b) of RCRA).

It should be noted that EPA interprets the term "construction commences," as used in the "new unit" definition of section 3004(o)(4)(B)(ii) and in today's rule, according to its definition within the § 260.10 definitions of "existing hazardous waste management (HWM) facility" and "existing tank system." That is, a unit has commenced construction if (1) the owner or operator has obtained the Federal, State and local approvals or permits necessary to begin physical construction, and either (2)(i) a continuous on-site, physical construction program has begun; or (ii) the owner or operator has entered into a contractual obligation—which cannot be canceled or modified without substantial loss—for physical construction of the facility to be completed within a reasonable time. Therefore, any new unit that has commenced construction, according to this long-standing Agency definition of the term, prior to the promulgation date (i.e., today's **Federal Register** publication date) is outside the scope of today's rule. Similarly, any replacement unit that is reused (unlike new units and lateral expansions, construction is not a necessary step prior to reuse of a replacement unit) or lateral expansion on which construction commences prior to the effective date (i.e., six months after today's **Federal Register** publication date) of this rule is also beyond the scope of today's rule.

Today's rule includes a definition of "replacement unit" in § 260.10. EPA is today defining a replacement unit as a unit (1) from which all or substantially all of the waste is removed, and (2) that is subsequently reused after July 29, 1992 to treat, store, or dispose of hazardous waste. This definition, which is similar to the May 29, 1987, proposal, is consistent with the definition EPA has used in implementing the statutory liner requirements of section 3004(o)(5)(B) for replacement units.

In the 1987 proposal, EPA excluded from the definition of replacement units those units from which waste was removed and treated in preparation for closure and only the treated waste was replaced in the unit. EPA explained in the proposal that replacement units are units that remain in service for active waste management, not units that are permanently taken out of service through closure. EPA believed this approach not only reflected statutory intent, but also would encourage (or at least not discourage) environmentally beneficial activities during closure (e.g., waste treatment), because owners or

operators would not have to retrofit closing units from which waste was removed and replaced.

Today's definition of "replacement unit," like the proposal, exempts certain units undergoing closure. However, th exemption is slightly expanded in that today's definition of replacement unit would also exempt those closing units that receive compatible wastes from other closing units and/or corrective action areas at the facility, provided that such use of the closing unit is approved by EPA (or an authorized state) in the facility's closure plan or corrective action program. The Agency believes that the expanded exemption is a logical extension of the proposal since it is similarly necessary to encourage environmentally beneficial activities (e.g., treatment and consolidation of compatible wastes from on-site closing units into one unit, waste removal to inspect a liner, expeditious closure of other on-site units) that may not otherwise occur if the owner or operator had to retrofit the closing unit to meet today's liner and leak detection system requirements.

Thus, units and activities qualifying for exemption from the "replacement unit" definition are limited to the following conditions and safeguards: (1) The activity must be reviewed and approved by EPA or an authorized state as part of the closure plan or corrective action approval process, including a corrective action order; (2) only closing units that have notified EPA in accordance with § 264.113 or § 265.112 or notified an authorized State, may qualify; and (3) only compatible waste and debris that are from closing units or corrective action areas on-site may be deposited in these units. For a unit to qualify for this exemption, off-site waste, new waste generated on site, and waste from active units on site may not be disposed of in the unit.

The situations EPA envisions as qualifying for this exemption from the "replacement unit" definition include: (1) Waste is removed from a closing unit, treated (e.g., incinerated, dewatered, or solidified), and returned to the same unit; (2) waste is removed from a closing unit to inspect and/or repair the liner, and the waste is returned to the same unit; (3) scenario 1 or 2, plus waste from other closing units is disposed in the original unit; and (4) scenario 1 or 2, plus waste that is the result of corrective action at the same facility, is placed into the original unit.

Finally, EPA also proposed in the May 29, 1987, rule that the liner and leak detection system requirements apply to significant unused portions of existing units, where those portions did not have double liners and leachate collection systems meeting the minimum technological requirements. Today's rule has dropped this requirement. A number of commenters on the proposal pointed out the difficulty of defining "significant" unused portions of a unit, and EPA was unable to develop an unambiguous definition. Furthermore, after reviewing land disposal units constructed and permitted since 1984 (which is the universe most likely to have portions of units not yet covered by wastes), EPA noted that virtually all of these units were required in their permits to incorporate double liner and leak detection requirements into their respective designs. Therefore, EPA has concluded that it is no longer necessary to extend today's rule to significant unused portions of existing units. It should be noted, however, that lateral expansions of existing units remain subject to today's rule.

B. Standards for Liners and Leak Detection Systems

1. Technical Standards for Liner Systems

Today, EPA is promulgating regulations containing design standards for double liners in accordance with the requirements of section 3004(o)(1) and (o)(5)(A) of RCRA. These standards replace those contained in the interim statutory design provision of section 3004(o)(5)(B) of RCRA that were codified on July 15, 1985 (50 FR 28702).

Today's rule amends the double-liner requirements for surface impoundments and landfills in §§ 264.221(c), 264.301(c), 265.221(a), and 265.301(a). The major change from the existing rule is that the final rule requires owners or operators to install a composite bottom liner. Based on available data and public comments received by the Agency, the double liner system specified in today's rule, with the composite bottom liner, represents the best available technology with respect to: (1) Preventing hazardous constituent migration out of the unit during the active life and post-closure care period, (2) detecting leaks through the top liner at the earliest practicable time, and (3) maximizing the efficiency of the leachate collection and removal system.

Today's rule does not change the existing top liner performance standard for surface impoundment and landfill units. Owners or operators of affected units must still design the top liner to prevent the migration of hazardous constituents into the liner throughout the active life and post-closure period. EPA notes that for purposes of today's rule, the top liner is the liner directly above the leachate collection and removal system serving as the leak detection system (see Technical Standard for Leak Detection Systems in Section IV.B.2 of today's preamble).

The Agency, in the preambles to the July 26, 1982 rule (47 FR 32274) and the March 28, 1986 proposal (51 FR 10709), endorsed geomembranes as meeting the top liner performance standard. EPA was aware of a number of landfill unit designs that included a composite top liner consisting of a geomembrane upper component and a compacted soil or a soil/bentonite blanket lower component. Consequently, EPA raised several questions in the preamble to the May 29, 1987 proposal concerning the use of a composite liner as a top liner and the effect the compacted soil component would have on other components of the double liner system, principally the early detection of a leak through the upper geomembrane.

The Agency received several comments on this issue, all of which were in favor of allowing the use of a composite liner as a top liner. One comment on appropriate standards for a composite liner favored minimum thickness requirements for a compacted soil lower component. Most commenters, however, favored no restrictions on the use of top composite liners.

In response to these comments, EPA is not prohibiting the use of composite top liners in today's rule. A parenthetical reference to geomembranes has been included as an example to illustrate that the performance standard can be met through use of a geomembrane. EPA does not intend that this reference be interpreted to mean that the geomembrane is the only top liner design that will meet the performance standard. EPA does not want to discourage owners or operators from using top composite liners because such liners can provide additional environmental benefits by minimizing the flow rate through a leak in a geomembrane liner and potentially minimizing migration of hazardous constituents by attenuation. Although not specified in today's rule, EPA maintains that the soil component of the top liner, however, should generally not be more than three feet thick since a thickness of 2 to 3 feet adequately serves the purpose of minimizing the flow through the geomembrane component (a lesser thickness may be appropriate for soil/bentonite blankets). EPA finds that this depth balances the increased environmental protection afforded by top composite liners and the ability to detect leaks at the earliest

practicable time. The Agency does not intend, however, to imply that multiple liner systems (including multiple composite liners) or that thicker soil components of bottom liners (e.g., 4 or 5 feet) should be precluded.

EPA notes that such general performance standards provide flexibility which is essential since liner and leak detection system technologies have advanced significantly over the past several years and are continuing to do so. Some examples include the use of geonets, the use of geotextile fabric filters, and better seaming and construction quality assurance. Recent EPA studies show soil/bentonite blankets may be effective and reliable complements to top liners, resulting in a new type of composite top liner. As technologies improve, today's performance standards will allow different materials and designs to be used and specified in permits as site-specific considerations.

Today's rule amends the requirements for bottom liners at surface impoundment and landfill units to require owners and operators of units subject to today's rule to use a composite bottom liner instead of a compacted-soil bottom liner allowed by the interim statutory design. The composite bottom liner required by today's rule specifies that the upper component of the bottom-liner must consist of a geomembrane, and the lower component of the bottom-liner must consist of a minimum of 3 feet of compacted soil with a hydraulic conductivity of no more than 1×10^{-7} cm/sec. The compacted soil component must be able to minimize hazardous constituent migration in the event of a breach in the geomembrane.

In the March 28, 1988 proposal, EPA offered two options for the bottom liner of the double-liner system. One option corresponded to a compacted soil liner with a maximum hydraulic conductivity of 1×10^{-7} cm/sec and sufficient thickness (minimum 3 feet) to prevent hazardous constituent migration through the liner during the active life and post-closure care period (51 FR 10710). The other proposed option was the composite liner specified in today's rule, consisting of a top component that would prevent hazardous constituent migration into the top component (a geomembrane) and a bottom compacted-soil component with a maximum hydraulic conductivity of 1×10^{-7} cm/sec and the preamble to the proposal recommended a minimum thickness of 3 feet (90 cm).

EPA received comments supporting both bottom liner options. Several commenters argued that the compacted soil bottom liner, coupled with the leachate collection and removal system between the top and bottom liners, would provide adequate protection of the environment. Some of these commenters also proposed the use of a composite top liner with a compacted soil bottom liner. Others supported the use of composite bottom liners as the design best able to enhance leachate detection, collection, and removal efficiency of the leachate collection and removal system between the liners. Several commenters favored the promulgation of performance standards in the rule and the specification of designs and materials in accompanying guidance documents.

After the proposal, EPA compiled information and data on performance of these two bottom liner systems with respect to maximizing leachate detection, collection, and removal, and preventing hazardous constituent migration out of the unit. The liners were evaluated based on leachate collection efficiency, leak detection capability, and leakage through the bottom liner. Results from computer simulations and engineering calculations showed that, on a comparative basis, the composite bottom liner will perform significantly better than the compacted soil liner with respect to the three criteria. The results were summarized in the April 17, 1987 Notice of Availability of Information (52 FR 12566–12575), with more detailed discussion of the calculations and analytical approach contained in the "Bottom Liner Performance in Double-Lined Landfills and Surface Impoundments" (EPA/530-SW-87-013). In the May 29, 1987 proposed rule on leak detection systems, the Agency indicated that it was likely to finalize a rule on double liners that would require a composite bottom liner as the generally applicable standard (52 FR 20251).

EPA also conducted a review of applications submitted for RCRA hazardous waste facility permits between November 8, 1984 and February 1987 to determine the type of bottom liner selected for installation at new landfills and surface impoundments. Of some 183 units for which permit applications were submitted as of February 1987, only seven units were to be constructed with compacted soil bottom liners. The vast majority of owners or operators selected the composite bottom liner rather than a compacted soil bottom-liner. More recent data available to EPA also confirms that the majority of owners and operators are using composite bottom-liners in their designs of hazardous waste surface impoundment and landfill units (Supporting Document #3 "Compilation of Current Practices of Land Disposal Facilities," 1992).

In summary, today's rule requires composite bottom liners, based on: (1) Available information that composite bottom-liners perform significantly better than compacted soil liners in terms of maximizing leachate detection, collection, and removal, and preventing hazardous constituent migration out of the unit; and (2) evaluation of current hazardous waste industry practices.

Consistent with existing requirements for single liners at surface impoundments and landfills, today's rule in §§ 264.221(c)(1)(ii), 264.301(c)(1)(ii), 265.221(a), and 265.301(a) requires that each liner that is included in the unit's design must be chemically resistant to the waste, placed on a structurally stable foundation, and large enough to cover all areas likely to be exposed to the waste.

Double liner systems must be constructed of materials that have appropriate chemical properties and sufficient strength and thickness to prevent failure due to pressure gradients (including static head and external hydrogeologic forces), physical contact with the waste or leachate to which they are exposed, climatic conditions, the stress of installation, and the stress of daily operation. The liners must be placed upon materials capable of providing support to the liners and resistance to pressure gradients above and below the liners to prevent failure of the liners due to settlement, compression, or uplift. They must also be installed to cover all surrounding earth likely to be in contact with the waste or leachate.

2. Technical Standards for Leak Detection Systems

EPA is today establishing design standards for the leak detection systems for new landfills, surface impoundments, and waste piles, and replacements and lateral expansions of these units (§§ 264.221(c)(2), 264.251(c)(3), 264.301(c)(3), 265.221(a), 265.254(a), and 265.301(a)). These leak detection standards are designed to detect a leak through the top liner at the earliest of practicable time. Today's final rule also establishes the following design criteria for leak detection system drainage layers for affected landfills, surface impoundments, and waste piles: (1) A minimum bottom slope of 1 percent; (2) a minimum thickness of 1 foot and a minimum hydraulic conductivity of 1×10^{-2} cm/sec for granular materials used for the drainage layer for waste piles and landfills and 1×10^{-1} cm/sec

for granular materials used in surface impoundments; (3) a minimum hydraulic transmissivity of 3×10^{-5} m²/sec for synthetic materials used in drainage layers for waste piles and landfills and 3×10^{-4} m²/sec for synthetic drainage materials used in surface impoundments; and (4) sump design and operating requirements.

Location of leak detection systems. EPA proposed in the May 29, 1987 preamble (52 FR 20229) that the leachate collection and removal system adjacent to and below the top liner and above the bottom liner be designated as the leak detection system, but requested comments on the proper location of the leak detection system in a system with more than two liners. Commenters on this aspect of the rule stated that the leak detection system should be located immediately above the bottom liner. These comments claimed that specifying additional leachate collection and removal systems above the bottom liner as leak detection systems would create a regulatory disincentive for owners and operators to design systems with more than two liners by requiring these additional (intermediate) leachate collection and removal systems to meet the requirements for leak detection systems and to implement response actions in accordance with the unit's response action plan. As a result of these comments, EPA is today specifying that the leak detection system is the leachate collection and removal system drainage layer located immediately above the bottom composite liner. Under today's final rule, any additional leachate collection and removal systems located above the leak detection system are not required to meet the design and performance standards for leak detection systems.

Leak detection time. The design standards being promulgated today for leak detection systems will ensure that these systems meet the requirement in section 3004(o)(4) of RCRA for the detection of leaks of hazardous constituents at the "earliest practicable time". EPA has interpreted the term "earliest practicable time" to be the time lapse from the time a liquid has passed through a breach in the top liner to the time a technology-based leak detection system can detect the liquid, assuming saturated, steady-state flow. Without these simplifying assumptions, modelling flow rates in the leak detection system is difficult given the complexity and uncertainty of fluid flow under unsaturated conditions. After careful consideration of public comments on the proposal, EPA has decided not to specify 1 day (i.e., 24 hours) as the earliest practicable time for the detection of a leak through the top liner.

Commenters on the proposed 1-day leak detection time requirement argued that it was unnecessary and overly restrictive. Another commenter stated that the detection time could not be verified by field measurements. EPA agrees with the commenters that the proposed 1-day leak detection time requirement is unnecessary given that the Agency is promulgating minimum design specifications for leak detection systems. In addition, the Agency acknowledges that field measurement of leak detection times is a problem. EPA has determined that a leak detection system meeting today's design requirements will be capable of detecting leaks "at the earliest practicable time" consistent with the statutory mandate. Therefore, EPA is simplifying the rule by deleting the 1-day performance standard.

Leak detection sensitivity. EPA is also not finalizing the proposed leak detection sensitivity value of 1 gallon per acre per day (gpad) that was proposed. When developing a leak detection sensitivity performance standard for the May 29, 1987 proposed rule, EPA conducted comparative studies between the performance of composite bottom liners versus compacted soil bottom liners (Background Document "Bottom Liner Performance in Double-Lined Landfills and Surface Impoundments", 1987). These studies showed that composite bottom liners have a much more sensitive leak detection capability than do compacted soil-only bottom liners. For example, a compacted soil liner with a hydraulic conductivity of 1×10^{-7} cm/sec will allow some liquid migration into the liner; as a result, a simple, one-dimensional theoretical model predicts that a leak will not be detected until the flowrate through the top liner is approximately 80 gpad. In contrast, simple, one-dimensional theoretical models predict that the leak detection sensitivities of landfills and surface impoundments with composite bottom liners similar to those required in today's rule range from 0.001 to 0.1 gpad. Because EPA is today stipulating the use of a composite bottom liner, the Agency is confident that lower leak detection sensitivities will be achieved for all units affected by today's rule. Consequently, a separate requirement for leak detection sensitivity is no longer necessary and EPA has dropped this requirement from the final rule.

Slope. EPA is today finalizing a minimum slope requirement for the leak detection system. After further consideration of the slope requirement, the Agency has determined that a minimum 1 percent slope will provide adequate drainage at land disposal units at which proper construction quality assurance is used to minimize settlement (§§ 264.221(c)(2)(i), 264.251(c)(3)(i), 264.301(c)(3)(i), 265.221(a), 265.254(a), and 265.301(a)). The purpose of the requirement is to promote good drainage in the leak detection systems of units affected by today's rule. This slope requirement applies to all planar components of the leak detection system.

In the May 29, 1987 proposed rule, EPA proposed a 2-percent minimum slope but requested comments on whether the minimum bottom slope should be increased to a value between 2 and 4 percent. One commenter preferred that a 3-percent bottom slope be used to account for settlement in the final slope value. However, most commenters argued that the minimum should not be above 2 percent, expressing opposition to raising the minimum slope value above 2 percent. Many of these commenters pointed out that other improvements included in the proposed rules, such as construction quality assurance and an increased transmissivity value for synthetic drainage materials, would obviate the need for a slope greater than two percent. One commenter argued that slopes of less than 2 percent should be allowed for certain circumstances provided that the leak detection system meets other minimum design criteria and performance goals and the owner or operator can demonstrate that post-construction settlement/consolidation will be minimized or eliminated. The Agency agrees that with good CQA a lesser slope can be adequate.

Based on these comments, EPA carefully evaluated the minimum bottom slope requirement for today's rule. EPA recognizes that slope is one of several factors that will affect the performance of the leak detection system. For example, the hydraulic conductivity of materials used in the drainage system is important. In addition, the appropriate minimum slope required will also depend on the spacing of leachate collection laterals in the leak detection system; closer spacing will allow for a flatter slope. All of these design factors should be considered in selecting the appropriate slope for the system.

EPA agrees with commenters that today's rule sets in place improvements that affect the minimum slope that is needed to construct an effective leak detection system. First, the new

rapidly draining synthetic drainage materials promote more rapid drainage on flatter slopes.

Because of these improvements, EPA believes that minimum bottom slopes of less than 2 percent should be allowed where the owner or operator uses proper construction quality assurance to minimize settlement and resultant ponding of any leachate, as required by §§ 264.19 and 265.19 of today's rule. Such construction quality assurance should include surveying and other inspection techniques to measure the horizontal and vertical alignment of the bottom slope to minimize ponding and ensure leachate flow to the sump. Some owners or operators may elect to design leak detection systems using bottom slopes of greater than 1 percent. EPA emphasizes that the requirements promulgated today are minimum technical standards; owners and operators can always adopt more stringent designs at their discretion.

Thickness of granular drainage layer. Today's rule also requires that a granular drainage layer be a minimum of 12 inches in thickness for use in leak detection systems of new and replacement landfills, surface impoundments, and waste piles, and for lateral expansions of these units (§§ 264.221(c)(2)(ii), 264.251(c)(3)(ii), 264.301(c)(3)(ii), 265.221(a), 265.254(a), and 265.301(a)). EPA received no comments on this requirement in the May 29, 1987 proposed rule, and therefore is finalizing the 12-inch thickness requirement as proposed. The purpose of this minimum thickness is to decrease the chance that the underlying geomembrane will be damaged by equipment during placement of the drainage material. Current equipment used to install granular layers can only place drainage material to an accuracy of a few inches. The Agency is concerned that if granular drainage layers are designed to less than 12 inches, this equipment could damage layers, had a specified thickness of 12 inches.

Hydraulic conductivity of granular drainage materials. EPA proposed to require that granular materials used in leak detection systems have a minimum hydraulic conductivity of 1 cm/sec. The Agency contended that greater permeability afforded by granular materials having 1 cm/sec hydraulic conductivity was necessary to minimize capillary tensions present in leak detection system granular materials and to satisfy the proposed leak detection time performance standard of 1 day.
