

Minnesota Department of **Human Services** _____

Characteristics of December 2007 Minnesota Family Assistance Programs: Cases and Eligible Adults

August 2008

Revised: October 2008

Program Assessment and Integrity Division
Minnesota Department of Human Services

This report was revised in October 2008. On page 20, the second column headed "Percent of State Cases" was corrected.

Characteristics of December 2007 Minnesota Family Assistance Programs: Cases and Eligible Adults

This is the eleventh annual report in this series that provides a snapshot of the universe of cases and participants in Minnesota's public assistance programs for families. A supplement to the 2006 report, *Minnesota's Family Cash Assistance Caseload: A Ten-Year Retrospective*¹, showed select results from all ten previous reports to highlight trends in the family cash assistance caseload since 1997. This report describes characteristics of eligible adults and active cases receiving family cash assistance through either the Minnesota Family Investment Program (MFIP) or the Diversionary Work Program² (DWP) in December 2007. Information on the demographics of the eligible adult and teenage caregivers; family composition, residence, and challenges; and economic status of paid cases is provided by state, county, and region. The Data Definitions and Policy Information sections that follow each table are essential for interpreting the data.³

Federal Temporary Assistance for Needy Families (TANF) provides funds for MFIP cases except cases with two eligible natural, adoptive, or step-parents. In February 2008, Family Stabilization Services (FSS) began to enroll participants. MFIP cases that meet the criteria for FSS will also be state funded.⁴ TANF, first enacted in 1996, was reauthorized as part of the federal Deficit Reduction Act (DRA) of 2005. The original TANF legislation set program requirements such as the five-year lifetime limit on welfare receipt, a work-first emphasis, work participation requirements, and other rules. DRA retained these program requirements and, among other changes, narrowed the definition of work activities and broadened the definition of which participants are "work-eligible." Some MFIP-ineligible caregivers that had previously not been considered work-eligible are now required to participate in work activities. These new requirements went to effect October 1, 2006.

Findings that parallel this report for five major racial/ethnic groups and immigrant subgroups among blacks and Asians will follow as a report in the Department of Human Services series on *Welfare Report Outcomes of Racial/Ethnic and Immigrant Groups in Minnesota*.

Input from readers is invited, both reactions to this report and suggestions for data to include in future reports. The next annual report in this series will describe the family assistance caseload in December 2008. The December 2008 report will also include information on FSS, which provides case management support and services to families that are not making significant progress on MFIP or DWP due to specific barriers to employment.

¹ This report can be found on the DHS website at <http://edocs.dhs.state.mn.us/lfservlet/legacy/DHS-4219I-ENG>.

² DWP is a state-funded, short-term assistance program that offers intensive employment services for the purpose of diverting families from longer-term receipt of assistance through MFIP.

³ Public assistance data were extracted from MAXIS and medical data were extracted from MMIS, both in the DHS Data Warehouse. Child support data were provided by the DHS Child Support Enforcement Division (CSED).

⁴ For more information about FSS, please see DHS Bulletins #07-11-07 and #08-11-01.

Statewide Data

For reporting purposes, the MFIP population was divided into three categories: child-only cases in which the grant includes children but not their adult caregivers, cases with one eligible adult, and cases with two eligible adults. The DWP population, which cannot include child-only cases, is divided into cases with one or two eligible adult caregivers. The Mille Lacs American Indian Tribal Council administers MFIP-eligible cases in its jurisdiction. Their Tribal TANF program is a separate program from MFIP. Tribal TANF cases are only included in Table 1 of this report.

Table 1 (page 2) provides the distributions of MFIP, DWP, and Tribal TANF cases, eligible adults, and eligible children. Figure 1 (page 3) shows the history of MFIP and DWP caseloads since 2001.⁵ Table 2 (pages 5 – 6) gives the demographic characteristics of eligible adults: age, gender, education, marital status, race/ethnicity, and citizenship status. Table 3 (pages 8 – 9) reports case-level statistics on family composition, residence, and challenges. Table 4 (pages 13 – 16) quantifies economic characteristics of cases.

Caseload Data

Caseload Trends. As shown in Figure 1, Minnesota’s family cash assistance caseload has decreased by 5 to 8 percent each year since 2002. December 2007 showed a break in that trend; the total family cash assistance caseload decreased by less than 1 percent over the last year. The proportions of case types have remained the same since December 2006. Previous years had seen increases in MFIP child-only cases as eligible-adult cases decreased.

Table 1. December 2007 Counts and Percentages of MFIP, DWP, and Tribal TANF Paid Cases and Eligible Persons

Counts of Cases	MFIP and Tribal TANF Paid Cases						DWP Paid Cases		
	Tribal TANF Cases	All MFIP Paid Cases	Child-Only Cases	MFIP Cases with Eligible Adults			DWP Cases with Eligible Adults		
				One Eligible Adult	Two Eligible Adults	Total Cases	One Eligible Adult	Two Eligible Adults	All Cases
Paid Cases	269	32,263	10,353	19,048	2,862	21,910	2,894	839	3,733
	100.0%	100%	32.1%	59.0%	8.9%	67.9%	77.5%	22.5%	100%

	100.0%	100%	0.0%	76.9%	23.1%	100.0%	63.3%	36.7%	100.0%
Eligible Children	478	62,852	19,438	35,820	7,594	43,414	4,741	1,952	6,682
	100.0%	100%	30.9%	57.0%	12.1%	69.1%	71.0%	29.2%	100.0%

⁵ DWP began enrolling its first participants in July 2004 so DWP history is only available from 2004 onward.

Figure 1. December MFIP and DWP Caseloads, December 2001 to December 2007

Data Definitions and Policy Information: Table 1 and Figure 1

An eligible adult is an adult caregiver or minor parent who meets MFIP or DWP eligibility requirements and receives a MFIP or DWP grant. Cases with two caregivers in which one caregiver was ineligible for MFIP or DWP are included in the one-eligible-adult cases column. Cases receiving MFIP cash or food grants or DWP cash grants are known as “paid cases”; this excludes active cases suspended for the month because they have income great enough to cancel out the cash grant and, for MFIP cases, the Food Portion grant. This typically occurs in months with five weekly or three biweekly pay periods.

Percentages summed across subgroups sometimes do not equal 100 percent due to rounding.

Demographic Characteristics

MFIP-eligible Caregivers. As seen in Table 2, the typical MFIP participant was a 30-year old, black female who had never been married, had completed high school, and was a U.S. citizen. Although the average age was 30, 58 percent of MFIP-eligible adults were age 29 years or younger. Nearly 60 percent of MFIP-eligible adults had a high school diploma or General Educational Development (GED). Fifteen percent of MFIP-eligible adults were currently married and living with a spouse, including 50 percent of adults in two-eligible-adult cases. More than two-thirds of MFIP-eligible adults had never married. Black adults and white adults each constituted 38 percent of MFIP-eligible adults; the next largest racial/ethnic group was American Indians (10 percent of MFIP-eligible adults). This report is the first in this series where the percentage of black and white cases was equal. In previous reports the percentage of cases headed by white adults was larger than that of black adults. Eighty-five percent of MFIP-eligible adults were U.S. citizens.

DWP-eligible Caregivers. The demographic make-up of DWP-eligible adults did not look like that of MFIP-eligible adults. Asian, black, and American Indian adults were under-represented in DWP cases as compared to MFIP cases. While 38 percent of MFIP-eligible adults were black, 26 percent of DWP-eligible adults were and while 10 percent of MFIP-eligible adults were American Indian, 4 percent of DWP-eligible adults were. White adults made up a much larger proportion of DWP-eligible adults than MFIP-eligible adults; 55 percent of DWP-eligible adults compared to 38 percent of MFIP-eligible adults. DWP-eligible adults were also more likely to have at least a high school diploma (72 percent compared to 58 percent of MFIP-eligible adults) and to have been married now or in the past (49 percent compared to 34 percent of MFIP-eligible adults).

These demographic differences can be attributed to differences between the programs. DWP is a short-term program lasting up to four months while MFIP is a long-term program that is usually limited to 60 months of participation, potentially lasting as long as minor children reside in the home for cases that are extended beyond the limit due to certain documented criteria. Long-term MFIP participants are more likely to face significant barriers to employment, such as a lack of education, single parenthood, and racism, whereas participants that are diverted to DWP are considered more likely to gain employment quickly and, regardless of employment status, must exit the program after four months. Those without employment are likely to enroll in MFIP upon leaving DWP.

Data Definitions and Policy Information: Table 2

Characteristics with no bearing on program eligibility may not be routinely updated after the initial application, including education, marital status, and citizenship. Thus, high school graduation and achievement of U.S. citizenship may be underreported.

The coding method for race/ethnicity follows the 2000 U.S. Census methodology, with participants asked their racial choice (yes or no) of each of five racial categories (American Indian, Asian, black, Pacific Islander, and white) and ethnicity (Hispanic or non-Hispanic). Hispanics of all races were listed as Hispanic. Pacific Islanders and Asian groups were combined due to very small numbers of Pacific Islanders.

Race/ethnicity data were missing for 127 MFIP-eligible adults and 47 DWP-eligible adults.

Family Composition, Residence, and Challenges

MFIP Family Composition. The typical family that participated in MFIP or DWP in December 2007 was a parent caring for two children that were his or her own biological, adopted, or step children. The average age of the youngest child was 4 years in eligible-adult MFIP cases and 5 years in DWP cases. One-third of MFIP families lived in Hennepin County and one-third lived in Greater Minnesota. Families that participated in DWP were more likely than MFIP participants to reside in Greater Minnesota (42 percent compared to 32 percent of MFIP) and the Metro Suburban counties (21 percent compared to 14 percent).

More than half (56 percent) of families in child-only cases were parents caring for their own biological, adopted, or step children and 44 percent were caregivers caring for their relatives' children. One quarter of child-only cases had two caregivers. While child-only cases averaged the same number of children as eligible-adult cases, the youngest child was older. The average age of the youngest child was 9 years, and 30 percent of children in child-only cases were aged 13 or older compared to 10 percent of children in MFIP-eligible-adult cases. As in eligible-adult MFIP cases, about one-third lived in Hennepin County and one-third in Greater Minnesota.

Ineligible Caregivers. Six percent of one-eligible-adult MFIP cases also included an ineligible second caregiver. Nearly 70 percent of these second caregivers were parents ineligible for MFIP due to receipt of SSI for a disability and 13 percent were ineligible because they reached the 60-month limit and opted out of the grant to allow the other caregiver and children to continue receiving MFIP. Caregivers in child-only cases were most commonly relative caregivers (46 percent) or parents eligible for SSI (41 percent). Twelve percent of caregivers in child-only cases were non-citizens without documents to prove their residency status.

Serious Mental Health and Chemical Dependency Diagnoses. More than one-third of MFIP-eligible-adult cases had a caregiver who was diagnosed with a serious mental health condition in the past three years; one-quarter of cases had a caregiver who was diagnosed with chemical dependency over the same period. Caregivers in child-only cases had similar rates of mental health diagnoses, but a smaller percentage had been diagnosed with chemical dependency (13 percent compared to 23 percent). Caregivers in DWP cases had fewer of these diagnoses, but this may not be due to lower incidence so much as fewer DWP caregivers receiving publicly health care in the past three years than MFIP caregivers.

Data Definitions and Policy Information: Table 3

Table 3 provides case-level statistics, except for person counts in the sections on ineligible caregivers and counts of children.

Family Composition. The Family Type section defines households by the relationship of the caregivers to the children. The three types of families were parents caring for their biological, adopted, or step children; caregivers caring for a relative's children; and pregnant women (and sometimes a spouse) with no other children. A household with both biological, adopted, or step children and a relative's children were considered natural/adopted/step children households.

Ineligible Caregivers. Ineligible caregivers may be parents that receive SSI for a disability, have relative caregiver status, lack documentation of their non-U.S. citizenship status, are disqualified due to fraud, or have reached their 60th month of MFIP eligibility and opted out of the case. A caregiver may not opt out once they reach 60 months for the purpose of continued eligibility for their children, but when caregivers in a two-caregiver household have different numbers of counted months the caregiver with 60 months may opt out and the other caregiver and children continue to receive a grant. Children in MFIP or DWP cases may also be ineligible to receive DWP or MFIP. Children may be ineligible due to receipt of SSI, lack of documentation of their non-U.S. citizenship status, lack of documentation of the Social Security number, or coming in or out of foster care.

Region. The counties where households lived were grouped into the following regions: Hennepin County, Ramsey County, Twin Cities metropolitan suburbs (Anoka, Carver, Chisago, Dakota, Isanti, Scott, Sherburne, Washington, and Wright Counties), and Greater Minnesota (the remaining 76 counties).

Family Challenges. Family violence was indicated by whether a case had a time limit exemption or extension for a family violence waiver at any time between 2000 and 2007. These numbers greatly underestimate the occurrence of family violence because they only include cases where the caregiver reported the abuse and also acted on a plan during months receiving MFIP.

A serious mental health diagnosis identifies caregivers who were known to have been diagnosed with psychosis, depression, personality disorder, post-traumatic stress disorder, or anxiety state during 2007 or during the three-year period 2005 to 2007. Chemical dependency diagnosis identifies caregivers who received that diagnosis (not including tobacco) during 2007 or during the three-year period 2005 to 2007. Both of these measures may underestimate the actual number of adults with these diagnoses because they only include cases that receive publicly paid health care recorded in administrative records. On the other hand, these diagnoses may be a secondary diagnosis and do not indicate whether treatment services were received. Starting in the 2004 report, the mental and chemical health histories of all caregivers were considered rather than only eligible caregivers.

Economic Characteristics

MFIP Time Limit, Exceptions and Exemptions, and Extensions. Except under particular circumstances explained in the following two paragraphs, a MFIP participant may only use 60 months of cash assistance between ages 18 and 60. In December 2007, eligible-adult MFIP cases averaged 26 months counted toward the limit. Fifty-five percent of eligible-adult MFIP cases had 24 or fewer counted months and 23 percent were within 12 months of reaching their lifetime limit. Nearly half (48 percent) of DWP cases had at least one MFIP counted month from previous time on MFIP.

Eleven percent of eligible-adult MFIP cases had a caregiver whose months were not counted toward the time limit due to an exception or exemption because they were a minor parent complying with educational requirements, an 18 or 19-year old parent complying with high school education requirements, age 60 or older, experiencing family violence, living on an American Indian reservation with a not employed rate of at least 50 percent, or there was a child or adult in the household that met certain special medical criteria.

Twelve percent of eligible-adult MFIP cases were extended beyond the time limit due to a documented hardship. The most common extension reasons were being ill or incapacitated for more than 30 days (34 percent of extended cases), meeting Special Medical Criteria (17 percent), and having an IQ between 70 and 80 (15 percent). Extended cases averaged 27 months in extension, with 31 percent having 12 extension months or less and 30 percent having 36 or more extension months.

New Family Cash Assistance Cases. The percentage of eligible-adult MFIP cases that were new to family cash assistance in Minnesota decreased since December 2006 (24 percent to 21 percent of all cases). While the percentage of DWP cases that were new to family cash assistance increased from 46 percent of all DWP cases in December 2006 to 50 percent of December 2007 cases, new cases were still a smaller percentage than they had been in December 2005 (54 percent) or December 2004 (65 percent).

The proportion of new eligible-adult MFIP cases that were also new or returning Minnesota residents has remained stable in recent years, but the proportion of DWP cases that were new residents has decreased each year since 2004, the year that DWP started enrolling participants. In December 2007, 34 percent of new DWP cases had moved into Minnesota during 2007, which was a decrease from 40 percent in December 2006, 42 percent in December 2005, and 49 percent in December 2004.

The most frequent states from which new residents in both programs had moved into the state were Illinois (408 cases), Wisconsin (241 cases), and Texas (173 cases). The number of new cases that moved to Minnesota from a foreign country decreased by almost half between December 2006 and December 2007, from 509 cases to 281 cases.

Decreased Earned Income and Work Hours. The percentages of MFIP and DWP cases with at least one working caregiver did not change since December 2006 (38 percent of MFIP eligible adult cases and 44 percent of DWP cases). Although there had been no decrease in the percentage of working caregivers, the average number of hours worked and

average income from working both continued to decrease. Eligible-adult MFIP cases worked an average of 99 hours for the month, with 14 percent working 120 or more hours per month (about 30 hours per week); this was a decrease from 108 average hours in December 2006 and 113 hours in December 2005. December 2007 average reported monthly income was \$896, which was a decrease from \$961 in December 2006 and \$1,106 in December 2005.

DWP cases saw similar declines in earned income and work hours. DWP cases reported an average of 99 hours per month with \$973 in earned income, which were decreases from 104 hours and \$1,003 average report income in December 2006.

Consistent with declines in reported wages and hours for December 2007, there were also decreases in the percentage of cases with wages and the total average wages reported to the Unemployment Insurance (UI) system for April to June 2007 (second quarter of 2007). All programs and case types saw decreases in average wages reported to the UI system. Average quarterly wages for employed MFIP-eligible-adult cases decreased from \$3,509 in the second quarter of 2006 to \$2,835 in 2007. Wages in DWP cases decreased from \$5,165 in the second quarter of 2006 to \$4,732 in the second quarter of 2007. MFIP one-eligible-adult and child-only cases saw a decrease in the percentage of cases reporting wages to the UI system; child-only cases reported an 11 percentage point decrease and one-eligible-adult cases a 6 percentage point decrease.

Data Definitions and Policy Information: Table 4

Months of Welfare Use. Counted MFIP months were defined as the maximum number of months of counted eligibility for TANF and/or MFIP between September 1996 and December 2007 of any eligible adult on the case. This includes Minnesota paid and federally paid months in Minnesota and federally paid months in other states, but excludes months exempt or excepted from the time limit.

Previous reports included total family assistance months that included months on AFDC, Family General Assistance (FGA), and other MFIP non-counted months. These data were dropped in the 2006 report because these measures no longer provide a picture of total time on family cash assistance pre- and post-AFDC as the nine-year window for reporting family cash assistance month no longer included time on AFDC or FGA. The difference between total family cash assistance months and MFIP counted months should now only be cases that are exempt or excepted from the time limit, child-only cases, food-only cases, and cases in extension. These data are reported in Table 4.

DWP is a four-month program and its months do not count toward the MFIP lifetime limit. A case is eligible for DWP if the applicant has not received MFIP in the previous twelve months and is deemed likely to benefit from intensive employment services. An applicant is ineligible for DWP if he or she has 60 MFIP counted months.

A MFIP case can be extended beyond the 60-month lifetime limit for a certain documented criteria that affect the caregiver's ability to obtain or retain employment. Extensions may be granted for cases that have an ill or incapacitated caregiver, a family member or caregiver that meets special medical criteria, a caregiver with an IQ score below 80, a caregiver that is needed in the home to care for an ill or incapacitated family member, a single parent working at least 30 hours or two parents working a total of 55 hours, and other reasons. A case sanctioned for non-compliance with Employment Services (ES) or child support requirements in month 60 can never be extended.

Cases can receive an exemption from the time limit for special medical criteria. Counted months before the time limit of 60 months was reached in which special medical criteria were present can be "banked" and used to extend eligibility beyond 60 months after the time limit has been reached. The following cases are excepted from the time limit (neither counted nor banked): living on a reservation with a not-employed rate of at least 50 percent, family violence cases cooperating with an alternative employment plan, caregivers aged 60 or older, a minor parent, or an 18 or 19-year old parent complying with an education plan.

New welfare cases in 2007 were December 2007 cases active in a family cash assistance program in Minnesota for one or more months in 2007 but active zero months in 1992 to 2006 (the period covered by the state administrative database). Cases new to the state had a 2007 state entry date. Minnesota residents were either lifelong residents or had moved to the state before 2007. This definition is consistent with definitions in the December 1999 through December 2006 reports.

Cash and Food Grant Amounts. MFIP includes a cash grant and a food portion that can only be spent on food. As families work their way toward leaving assistance, their cash grant is decreased first so that some families only receive a food portion. A family can opt out of the cash portion, receiving only the food portion, and those months do not count toward their lifetime limit. If a household member is not eligible for MFIP, that person may be eligible to receive Food Support, Minnesota's Food Stamps program. These cases are referred to as "Uncle Harry" cases in Minnesota. DWP provides only a cash grant, but families are categorically eligible to receive Food Support as well. MFIP cases that received Food Support that were not an Uncle Harry case were most often "expedited" cases, which meant that the household met the criteria for immediate Food Support assistance but their MFIP cases was not opened until later in the month.

The means for MFIP and DWP cash grants and MFIP food portions were calculated using the grant amounts for all cases, including zero cash portion for some MFIP cases. The means for all other Food Support amounts include only cases with benefit amounts greater than zero.

Income, Earnings, and Work Hours. Total income was either actual or projected December 2007 income of eligible adults and other adults whose earnings were deemed for the case. The amount used was either

verified earnings for December 2007 or zero for cases still active in February 2008 with no income reported for December 2007 (required to be reported by February 2008) or prospective December 2007 income for new cases with retrospective data missing and for all migrant cases. Total income was gross income except for the self-employed where it was gross less expenses, with a minimum of zero. Mean total income excluded cases with no verified or expected income from eligible or deeming adults in December 2007.

The work hours reported for eligible and other deeming adults with earned income are defined in the same manner as earned income. The hours are totals for the case. The percentages of all cases with hours reported are slightly smaller than the percentages reported working because of hours that were not entered into the administrative database. Mean hours only included cases with any reported hours.

Budgeted earnings are total earnings with certain kinds and percentages of earnings subtracted to yield an amount that is then deducted from the MFIP grant level for work status and family size to determine the size of the MFIP grant paid. The budgeted earnings used to calculate the December 2007 grants were based on verified income earned in October 2007 or, for new cases and migrants, prospective earnings for December 2007. Mean budgeted earnings in the table were computed for cases which had budgeted earnings greater than zero.

Employers covered by the Unemployment Insurance (UI) system, which excludes federal government, religious, seasonal, and temporary workers, must report wages to the state. The table provides second quarter 2007 wages reported for participants' jobs covered by UI in Minnesota as a measure of recent work history and earnings. The second quarter predates DWP application (the earliest any of these DWP cases started was September), so for many or most DWP cases the second quarter was before the occurrence of whatever caused them to apply, often the loss of a job. They had either never been on MFIP or had been off for at least one year before starting DWP. Some MFIP participants were on DWP in the second quarter; many were on MFIP. Therefore, it is not surprising that there were differences between average incomes of participants when making program comparisons.

Sanctions, Deductions, and Child Support. MFIP cases not complying with Employment Services (ES) requirements can be sanctioned with a reduction of the grant amount. For one eligible adult not complying in 2007, the first sanction was 10 percent and for two eligible adults not complying the first sanction was 30 percent. If not resolved, the sanction is increased the next month to 30 percent. In July 2003, the Minnesota Legislature instituted a policy that after the sixth occurrence of non-compliance a case may face closure, or 100 percent sanction. Table 4 reports the number of cases with 10 percent and 30 percent sanctions in December 2007 and the number of cases with six unresolved sanction months in December 2007.

This is the final report that will include the SSI deduction to the MFIP grant that ended February 1, 2008. In July 2003, the Minnesota Legislature mandated deductions from MFIP grants for cases including a family member who receives SSI (\$125 maximum deduction per SSI-eligible person) and cases with housing subsidies (\$50 maximum deduction per case).

Also in July 2003, the Minnesota Legislature instituted the family cap, which does not allow a cash grant increase for cases with children conceived when the family was receiving MFIP. Any births after 10 consecutive months of eligibility did not result in a grant increase as they would have previously.

Child support disbursements were paid to families receiving MFIP or DWP in December 2007 from support payments on behalf of children on the cases. This included both current payments and payments made for arrears on past months. All current support was passed through to custodial families and counted dollar-for-dollar against the grants.

County and Regional Data

The following section presents data by county and geographic region. Each table, except for poverty rate data in Table 6, is drawn from the statewide tables. Please refer to the Data Definitions and Policy Information section for each statewide table for notes crucial to understanding the data. Note that all percentages and means will be less stable and extreme values more common for counties with small caseloads. Unless stated, data are for all counties and geographic regions. Due to the small number of DWP cases, some DWP data are presented by large counties and regions only.
