# MN.IT Services – Information Technology for Minnesota Government

April 20, 2012

**April 23, 2012** -- The Office of Enterprise Technology has announced a new brand for the organization: MN.IT Services.

MN.IT Services applies to all executive branch information technology and everything that is done at both the MN.IT central and agency-based offices, and to the services that continue to be provided to other Minnesota government entities.

The information technology staff at 70 State of Minnesota agencies, boards and commissions were consolidated into a single IT organization through interagency agreements signed in October 2011.

The change occurs at the time that the new organization has developed and published operational strategies for the consolidated organization that will now function as a single entity that makes enterprise-wide decisions and manages resources collectively.

A new name acknowledges the change that is happening everywhere, and begins to build the brand and mindset among staff and customers that all of the State's IT services are MN.IT Services. The new name provides additional clarity on roles and relationships among MN.IT offices and staff, and helps to describe the organization in a clear and consistent way.

Through a strategic planning process, the new organization has developed a new mission statement: "We provide government with high quality, secure and cost-effective information technology that meets the needs of government, fosters innovation, and improves outcomes for the people of Minnesota."

MN.IT Services has also released a new state Master Plan that describes the technology goals and priorities for executive branch over the next five years.

## City of Saint Paul to Share Email Services with State of Minnesota

August 31, 2011

St. Paul, MN August 29, 2011 - The city of Saint Paul will become the first Minnesota municipality to enter into a shared service agreement with the State of Minnesota's Enterprise email service.
